Many Americans have suggested a league of the neutral nations, but few imagined that the initiative would come from a nation so remote from the European conflict and of so little weight in international politics as the republic of Mexico. On February 12, a note from the de facto government of Mexico to the United States and to all other neutrals was made public. This note deplored the misery and bloodshed which the Great War had caused and suggested that the neutral nations make a joint proposal to the belligerent powers to end the conflict either by direct negotiation or by accepting the friendly mediation of the neutrals. The note proceeds to suggest that if within a reasonable time peace cannot be established by this means the neutral countries should refuse to the belligerents all merchandise useful for war, and even stop traffic with these nations altogether until the end of the war is achieved.

This astonishing diplomatic paper is regarded as the product of German influence. If the neutrals agree to the proposed embargo, only the Entente Allies will greatly suffer since the Central Powers are in any case cut off from the ordinary traffic of the world by the British blockade. If Mexico alone should declare an embargo against all belligerents it would at least cut off that part of the oil supply of the Allies which is now imported from the Tampico oil fields. Great Britain could not interfere to protect the Mexican oil trade without running counter to the

IN THE AIR

Two new ideas exhibited at the recent Aero Show in New York, the first of its kind ever held in this country. The limousine with wings is a Curtiss machine, of probable tho hardly proved practicability. At any rate it was one of the most popular features of the show—particularly from the feminine viewpoint. The crowd that hung around the Davis non-recoil gun was rather more masculine, exceedingly interested in the possibilities of a gun that will fire both ways at once. Instead of being closed at the breach end the Davis gun is left open and a charge of fine lead shot fired from this end, with a momentum equal to that of the projectile fired from the forward end. The chief advantage of this means of taking up the recoil is a reduction in the weight of the gun and an increased accuracy of firing

principles of the Monroe Doctrine, and risking the displeasure of the United States. But it is doubtful if the Mexican government will persist in its embargo plan unless the United States will lend it moral support.

Secretary of War Baker announces that orders have been sent to General Funston to send all the remaining national guard units from the Mexican border to their home states for immediate muster out of the national service. By the end of March it is expected that no militia will remain in active service. It is somewhat remarkable that the withdrawal should be now ordered since disturbances on the border have recently increased rather than diminished. Villista rebels occupy the parts of Northern Mexico recently policed by American soldiers, and there have been a few minor skirmishes between isolated insurgent bands and the Americans. On February 13 a band of armed Mexicans crost the border, raided a ranch, killed three Mormon cowboys and took prisoners for ransom. General Salazar is thought to be behind the raid and to plan new invasions of American soil. José Murguia, a general attached to the de facto government, is in pursuit of Salazar.

The American Government seems confident in the ability of First Chief Carranza to cope with his present difficulties. The de facto government of Mexico has appointed as ambassador to the United States Ignacio Bonillas, one of Carranza's representatives on the Mexican-American Joint Commisison, and Mr. Fletcher, the American ambassador to Mexico is proceeding to his post of office. This exchange of ambassadors means the resumption of normal diplomatic relations between the two countries. As a consequence of the American embargo upon arms the Mexican government has been driven to foreign markets to secure the munitions of war essential to the campaign against Villa and his partizans. A Mexican commission has just completed an agreement for the purchase of arms in Japan. It is said that the Mexicans also attempted to buy ships but that the Japanese would not sell.

Eleventh Hour Preparedness

On February 13, a naval appropriation bill authorizing the expenditure of more than $368,000,000 passed the House of Representatives by a vote of 354 to 22. Most of the little navy minority were Democrats and among them was the majority leader of the House, Mr. Kitchin of North Carolina. This naval budget, the largest in the history of the country, is the second installment of the three-year building program which Congress authorized last year. The bill provides for the purchase of airship patents, for the development of aviation stations, for the improvement of navy yards and for the construction of warships of various types. In time of war the Government is empowered to commandeer private shipyards and munitions plants. The sub-committee of the Senate Naval Affairs Committee has decided to add to the House bill many new appropriations, including a lump sum of $150,000,000 to expedite construction and to meet any emergency which might arise before Congress could again meet to vote the necessary funds.

IN CHARGE OF AIR DEFENSE

The recently appointed head of the United States Aviation Corps is Lt. Col. George O. Squier, previously United States military attaché at London. Lt. Col. Squier has been captain of the army signal corps and was in command of the cableship "Burnside" during the laying of the Philippine cable-telegraph system in 1900

Army questions are interesting Congress and the President as well as naval preparedness; but with this difference, that there is no large group in either branch of Congress opposed to a large building program for the navy, whereas there is the greatest diversity of opinion as regards the army. The Army General Staff has laid before the War Department a plan for universal military service more drastic even than the Chamberlain bill in that it requires a full year of military training instead of six months only. President Wilson is giving the plan his fullest consideration, but whether he will decide to indorse the principle of universal service or not is still an open question. Even should the President approve, Congress would probably be disinclined to make such a revolutionary change in the military system of the country except in time of actual war.

The National Defense Council has selected chairmen for seven special committees: Medicine, Dr. Franklin H. Martin, of Chicago; Labor, Samuel Gompers; Transportation, Daniel Willard, of Baltimore; Science and Research, Dr. Hollis Godfrey, of Philadelphia; Raw Materials, Bernard Baruch, of New York; Munitions, Howard E. Coffin, of Detroit; Supplies, Julius Rosenwald, of Chicago. These are the men who will be the agents of the nation if it becomes necessary to mobilize American industries and resources. The executive committee of the American Railway Association has organized a

A remarkable photograph: the survivors of the British Transport "Ivernia" which was torpedoed in the Mediterranean. Most of the men crowded together on the life rafts until they were picked up by a passing trawler

special committee on national defense which will coöperate with the National Defense Council in securing the assistance of every railroad in the country in the event of a national crisis.

The Federal Reserve Board is planning to conserve the financial resources of the nation in instant readiness for any sudden strain upon them which may come as a result of international complications. There are at present on deposit with Federal Reserve agents some three hundred million dollars in cash and a reserve of twice that sum is available in Washington. As a precautionary measure the Federal Reserve Board has requested the engraving of a large additional sum of reserve notes which will be ready for use in case the need should arise. The Government is reassuring depositors of foreign birth that it will not confiscate their bank accounts in time of war.

Civil War in Cuba The close election in the Cuban republic threatens to thrust the island back into that unhappy condition of internal anarchy which brought on the Spanish-American War and which, in later times, has more than once compelled the United States to intervene in Cuban affairs. President Menocal, leader of the Conservative party, is candidate for reëlection and believes that he was lawfully chosen in the presidential election of last November. But Dr. Alfredo Zayas, the Liberal candidate, is equally certain that he was then elected president. In order to settle the question a special election was ordered in the Provinces of Santa Clara and Oriente and set for the 14th of February. The Liberals, however, did not trust the government to conduct the special election honestly, in view of the fact that the existing administration had enough at stake to tempt it to use corrupt methods. Ex-president Gomez, a Liberal leader, demanded that officials in charge of the election be removed and more impartial men be substituted. President Menocal denied that the government intended to exercise any undue influence over the election and refused to alter the existing arrangements.

The election was not suffered to pass off quietly. On the eve of the voting four lieutenants of the Cuban army were arrested on the charge of a conspiracy to kidnap President Menocal. The arrests were followed by local outbreaks and rioting in various parts of the republic, and the government issued a decree calling for volunteers to crush the rebellion. But not all of the regular Cuban army were loyal to the government; in many places army officers as well as civilian officials went over to the side of the insurrection. The greater part of the province of Santiago broke away from the government, and in several provinces Liberal politicians became guerrilla leaders and took command of insurgent bands. Orestes Ferrara, the Liberal Speaker of the Cuban House of Representatives, demanded that President Menocal resign, but this he indignantly refused to do.

The United States Government has no intention of remaining neutral during the revolution. The so-called "Platt amendment" gives this nation wide powers of intervention to restore order and to protect life and property. The sympathies of Washington are wholly with the existing Cuban government; partly because President Wilson believes that the United States should encourage Latin American republics to abandon their evil tradition of settling their political conflicts on the battlefield instead of at the polls, and partly because a revolution so near our shores would demand the attention of our army and navy at a time when international affairs of far graver import need all our watchfulness. It is even rumored, whether justly or not, that Germans and German sympathizers are aiding the rebellion in order to distract our attention from the submarine campaign.

Secretary of State Lansing has sent an urgent and eloquent appeal to the Cuban people to solve their political problems in a peaceable and constitutional manner, reminding them that the United States has faced and solved similar difficulties in the course of our own history. The American government is giving the Cuban government material as well as moral support and is supplying the republic with arms and ammunition.

Senate Passes Postal Bill On February 16 the much contested post-office appropriation bill passed the United States Senate. The measure carries over $330,000,000. It has already been approved by the House of Representatives, but there will be a conference on the changes introduced into the bill while it was before the Senate.

The most contested provision bars from the mails all letters, postal cards, circulars, newspapers and publications of every kind advertising intoxicating drinks if sent to any address within a state or territory in which it is unlawful to advertise or solicit orders for such drinks. The penalty for disregarding this prohibition may be a fine not to exceed one thousand dollars and imprisonment not to exceed one year; the penalty originally provided was even more severe, but it was modified by common consent. An important effect of the bill will doubtless be to induce all newspapers and magazines of national scope to refuse liquor advertisements in order not to lose their circulation in prohibition states. Another provision prohibits the shipment of intoxicating liquors into any state which does not allow their manufacture or sale.

An attempt to suspend the Senate rules to permit the consideration of amendments increasing the postage rates on newspapers and periodicals and reducing them on local letter mail failed by a vote of 37 to 34. The main arguments emphasized by the opponents of the change were the heavy burdens now endured by publishers in consequence of the advanced cost of print paper and the lack of time remaining for adequate consideration of the question during the present session. Another proposed change which met defeat was Postmaster General Burleson's plan to abolish or reduce the pneumatic tube service in the large cities. This was negatived by 45 votes to 25, the vote not following party lines.

Fixing the Price of Paper The principal newsprint paper manufacturers have proposed that the Federal Trade Commission shall determine a reasonable price for paper from the 1st of March to the 1st of September of this year. The offer of the paper manufacturers is the outcome of an investigation into the cost of news print paper which the Federal Trade Commission has been conducting for the last eight months. In its public statement the commission asserts that as a result of public hearings and the work of economists, accountants and experts it had ascertained that the paper shortage was in a measure artificial, that prices were excessive and that competition had practically ceased to exist. The facts established by this investigation were turned over to the Department of Justice in order that it might institute prosecutions under the provisions of the anti-trust law. By the present agreement the Federal Trade Commission is requested to determine the increased cost of paper production and the price which a hundred pounds of paper should bear at the mill in view of the expense of production and other relevant considerations. The manufacturers are to carry out existing contracts even if at lower prices than those allowed by the commission, but they will limit each contract purchaser to his necessary requirements only and sell to customers who have not yet concluded contracts only sufficient paper to meet their imperative needs. The manufacturers have also promised to coöperate with the commission to work out some feasible plan for securing relief to the small publishers and enabling them to obtain news print paper at practically the same rate as that enjoyed by the larger publishers.

Ohio Women Win On February 14 the Ohio Senate passed the Reynolds bill giving women the privilege of voting for presidential electors. The measure had already passed the House and is sure to secure the approval of the Governor. Illinois was the pioneer in the granting of woman suffrage by legislative enactment instead of by constitutional amendment. Woman suffrage in this form, of course, does not extend to the state offices which have been created by the state constitution and the franchise for which can only be altered by amending it. A constitutional amendment in Ohio necessitates a referendum of the electorate and the voters of Ohio have twice defeated a woman suffrage amendment at the polls. Of course woman suffragists regard presidential suffrage as an anomalous intermediate stage and continue their agitation for complete equality, but they appreciate the importance of such partial victories as increasing the influence of women in national politics. Counting the presidential suffrage states of Illinois, North Dakota and Ohio, together with the eleven complete suffrage states, we find that women share with men the election of 120 presidential electors out of a total of 531 electors for the whole nation. An amendment to the Porto Rican citizenship bill which may be accepted by Congress would permit women as well as men to vote who are able to read and write either Spanish or English. There is much discussion as to what shall be the qualifications for the suffrage in the Danish West Indies when they pass into the possession of the United States. In Denmark women may vote at all elections, and in the popular referendum which approved the sale of the Danish islands both sexes took part; many Americans hold, therefore, that it would be a step backward to confine the franchise to the men of the islands.

THAT FLIVVER SUBMARINE

Cartoonists have jeered and conservative manufacturers have scoffed at Henry Ford's plan for a one-man submarine. But "the pill on a pole" seems to be as invulnerable to jokes as "the tin Lizzie," and perhaps it may prove as practicable. At any rate, this sample, tied up for inspection, looks rather neat to a landlubber

Opening the Campaign in France Last year the Germans opened the spring campaign on February 21 by an attack on Verdun. It seems probable that if the weather permits this season's campaign may start about as early, altho where is still in the dark. Indications are pointing to the west rather than the east as the scene of the titanic struggle which is expected to decide the war. The German troops which were employed in the conquest of Rumania are being transported west. The London *Times* military expert estimates that the Germans had 130 divisions on the western front in the fall, and that they have brought from the Balkans some ten divisions. He surmizes that the new German law which gives to the Government the right to mobilize all able-bodied men between 16 and 60 will enable them to raise some twenty fresh divisions. A division contains about 14,000 combatants.

If the Germans take the offensive this year as they have in the past it seems likely that the German Crown Prince will be given another chance to retrieve the reputation he lost at Verdun. He recently renewed his efforts to take the hills on the other side of the Meuse from Verdun, and on February 15 he delivered a sharp attack west of this, on the old Champagne battlefield. In this charge the Germans penetrated four lines of French trenches on a front of a mile and a half, and captured 858 prisoners and twenty machine guns.

The French have not undertaken any offensive so far this year, but the British pound away persistently in the angle between the Somme and the Ancre. Since the beginning of the year they have advanced their line about three-quarters of a mile on the average along a front of nearly six miles, and captured 2000 prisoners. The Germans are giving way gradually in this sector without stubbornly contesting every foot of ground and making repeated counter-attacks to regain it as they did last year. This may be interpreted as a weakening of their power, but British military critics are disposed to suspect that they are merely falling back upon the shorter line of strong entrenchments which they are known to have prepared for such an emergency. The British are confident of their ability to smash these fortifications as they have the old line, and with less expenditure of time and men. In their recent raids on the German trenches the British have brought back more prisoners than they lost men.

AMERICANS AND GERMAN-AMERICANS

THEIR MUTUAL OBLIGATIONS

BY

GEORGE A. PLIMPTON
PRESIDENT OF THE WORLD PEACE FOUNDATION
TREASURER OF THE CHURCH PEACE UNION

KUNO FRANCKE
CURATOR OF THE GERMANIC MUSEUM AT HARVARD
AUTHOR OF "GERMAN IDEALS OF TO-DAY"

WE in the United States trace our origin to no one nationality. While our original settlers before the Revolutionary War were the English, Spanish, French and Germans, since then every nationality on the face of the earth has contributed more or less to the upbuilding of our country. The greatness of America and the position which it holds in the world today are due to no one of these races, but to the contributions of all. Our country has been rightly called the melting pot of the world. Here all races become Americans.

A war with the mother country of any of our fellow-citizens should make the rest of us exceedingly charitable and liberal towards these fellow citizens in all our dealings. We should take especial care to guard ourselves from taking an attitude of suspicion towards them. We should always act on the assumption, stated in some of our German-American newspapers, "They are now American citizens, and they should be treated as American citizens." Of course, if any overt acts should be committed the offenders will be punished.

My feeling is, however, that in case of a war with Germany we should find that some of the very strongest upholders of our Government would be our German-American citizens, whether naturalized or not. I cannot conceive of any German here wishing to see America worsted. There are many reasons why we should feel confident of the patriotism of our German population.

In the first place, the Germans have come to this country to better their condition, and statistics show that no part of our population have prospered more generally or contributed more to the prosperity of the community. Successful Germans will be found in every class of our population: our bankers, our manufacturers, our farmers, our educators, our musicians, our scientists, our skilled mechanics, and these classes all add to our law-abiding citizens.

Second, a large number of our German population came to this country to escape the very institution for which Germany now predominantly stands before the world—her military system. They do not believe that a nation should be dominated by its military caste—they believe that the army and the navy should be subject to the civil authorities.

Third, while those whose early life was spent in Germany naturally have an affection for the home country—just as Englishmen have for England, Frenchmen for France and the Spaniard for Spain—this affection is not so dominating or so unaffected by reason as to lead the German to stand by Germany, right or wrong, or to approve of unlawful acts which she may commit.

Another thing for us to remember, too, is that the major part of our German population is not of recent immigration, but has been here for at least a full generation, and their German ideas and feelings are honeycombed, so to speak, by American influences.

I feel, therefore, that we have no reason to doubt the loyalty of our German fellow citizens, in any event. I have also confidence in the sanity and tolerance of all Americans. As a people, we must bear in mind, in case of a war, that the war is with the German Government, and not with the German people.

Japan, notwithstanding her stand with the Allies and against Germany, is not only allowing the Germans within her borders to transact their business and go about their work unmolested, but she is treating these Germans with especial courtesy and graciousness, considering that these Germans are her guests. Surely America can be even more just and generous to our fellow citizens of German descent.

New York City

ALMOST never has citizenship involved harder tasks for any group of people than it involves at present for German-Americans. For they are confronted with the task of living up to their oath of allegiance to America in a dispute which makes war between the country of their fathers and the country of their children a threatening, if not unavoidable, catastrophe.

As long as this catastrophe has not actually happened, the most pressing task for German-Americans seems to me to try their utmost to prevent it. They owe it to their oath of allegiance to America to do so. For they more clearly than any other class of American citizens must feel what a nameless calamity such a war would be for the United States. For obvious reasons, the great mass of German-Americans are fervently on the side of Germany in the European war. An alliance between this country and the enemies of Germany would therefore seem to them a crushing blow to their own most cherished feelings; it would make it extremely difficult for them to coöperate in the same friendly spirit as before with the political parties responsible for the alignment of this country on the side of Germany's opponents. Racial embitterment and resentment would poison public life in town, state, and Union. The very foundation of our national existence, freedom from racial rivalry and hatred, would be endangered. Knowing all this, the German-Americans should consider it their first duty to the country of their adoption to preserve it from the fatal effects of tribal strife by helping to stop its source: American participation in the European war.

The oath of allegiance does not absolve a citizen from the duty to criticize what seem to him mistakes in the conduct of our public affairs; on the contrary, it makes such criticism a part of citizenship. It is therefore not only a right but a duty of German-Americans to criticize frankly whatever steps taken or omitted by our Government may seem to them to bring the danger of war nearer. They ought to insist, in private and in public, that the danger of war might have been averted altogether, if our Government had issued a warning to Americans against traveling or taking service on belligerent ships; just as a few years ago it issued a warning against settling in Mexico. They ought to insist that such a warning be issued even now, at the eleventh hour. And they ought to insist that the policies of our Government in the critical months to come be confined to the protection of American vessels on the high seas. In taking this stand they will find themselves at one with large masses of the American people, irrespective of racial affiliations.

The German-Americans, it seems to me, should refrain at the present moment from special protestations of loyalty. Their whole history, from the Revolutionary War until today, has proved their sturdy and undivided citizenship. That in the European conflict their sympathies are ardently with Germany does not encroach upon their citizenship. Loud proclamations of American loyalty would only tend to cast a doubt upon their motives. They must show, and I trust they will show, by their whole conduct that they are guided in the present crisis by the one thought of America's welfare. And they will have conferred the greatest blessing upon our whole nation, if in common with all other patriots not carried away by partizan passion, they succeed in keeping the United States out of a war the fundamental issues of which must be fought out by Europe.

But perhaps it is now too late; perhaps the dread event of war between America and Germany is bound to come. In that case German-Americans will remember that their oath of allegiance to this country knows no reservations.

Gilbertsville, New York

GOVERNOR STANLEY

THE GOVERNOR AND THE MOB

BY THOMAS RANDOLPH

"GIVE us the nigger or we'll hang the judge," was the cry of the mob which thronged the street in front of the New Murray Hotel, at Murray, Kentucky, on the morning of January 10. The mob had just broken up a sitting of the Circuit Court of the Third Judicial District, Commonwealth of Kentucky, because the presiding judge had spirited Lube Martin, an ignorant, penniless and friendless negro out of the county overnight to protect him from their fury. Judge Charles H. Bush had gone to his room in the hotel and the mob had followed him.

"Bring back the nigger," they insisted—for, in the choice lexicon of the "po' white trash," there is no such word as negro. The mob not only filled the street in front of the hostelry, but crowded into the office and patroled the hall upstairs, its spokesmen incessantly repeating the blood-cry, "We'll hang the nigger or we'll hang the judge."

But they didn't hang the judge. That was because Judge Charles H. Bush, after being besieged in his hotel room for two hours, gave the order to "bring back the nigger."

And they didn't hang the negro. That was because Governor A. O. Stanley sent the mob word that he would give them the opportunity "to hang the Governor of the Commonwealth first and then wreak their vengeance on the negro later," and made good the promise.

Thomas Randolph is not the real name of the author, a correspondent of a leading Kentucky paper, for there is still so much mob ugliness in Murray that he found it wise to use a pseudonym in collecting evidence for this article. "I think I talked with half the population of Murray," he says, "and I received exactly the same story everywhere." The story is a graphic contrast between the courage of one man and the cowardice of many. — THE EDITOR.

Lube Martin had committed three offenses which, in the opinion of some of the good citizens of Calloway County, Kentucky, in the heart of the famed "Black Patch" where the Night Riders were wont to make life a terror, could be adequately atoned for only when Lube was swung on a rope from a tree in the courthouse yard and when his body had been made the receptacle for a few hundred bullets, more or less. When Guthrie Diuguid, the town policeman of Murray, had conceived the idea that Lube had been hired to kill him, and had sent Lube word that he would kill him on sight, Lube had made it a point to "dodge" the policeman, and that was his first offense. When Diuguid, who then was an ex-policeman, had met him on the public highway and taken four or five shots at him, Lube, seeing escape by means of further "dodging" impracticable, had killed him, and that was his second offense. And now, on January 9, Lube had committed the third offense, which so infuriated the mob that they were determined to hang the judge if the judge did not deliver Lube into their hands. That offense consisted in Lube's sworn statement that he was unwilling to go to trial while the only witnesses who could swear his life had been threatened and that they saw him shoot in self defense were out of the state, and his consequent petition for a postponement in the date of the trial.

The shooting had occurred in November, and Martin was at once hurried to Hopkinsville for safe keeping.

On the eighth day of January the grand jury of Calloway County was convened in Murray and a thousand or more citizens from out in the Black Patch, so called because of the famous black tobacco it produces, rode into the city to watch the wheels of justice turn round. Martin was promptly indicted and his case was immediately docketed for trial the next day. However, by means of a technicality peculiar to Kentucky State law, Martin's attorney, J. P. Holt, obtained a continuance, for he knew it would never do to try him the next day, for the chances were a thousand to one that any jury from the Black Patch tobacco country would convict his client, and that if such a thing as an acquittal should

happen, Lube Martin would never get away from the courthouse yard alive.

So when in the morning the thousand interested citizens came into Murray to see the wheels of justice grind, they were greeted upon opening of court by the official announcement that the trial of Lube Martin had been postponed to the next term of court since his attorney had obtained a continuance, and that by order of Judge Charles H. Bush the prisoner had been taken to Hopkinsville to be placed in the jail of Christian County.

When announcement of the continuance was made, with the added statement that the negro had been taken out of the county, pandemonium broke loose. Immediately the solid citizens became a mob. They followed the judge to the hotel where he had gone after the court had adjourned. They filled the block, and low murmurings of dissatisfaction were frequently punctuated with angry cries of "Give us the nigger." Loud-mouthed citizens walked back and forth, inciting the crowd to further agitation.

Noses were prest against the plate glass front of the New Murray Hotel, and when the door was opened the cry "Give us the nigger" became louder. Then the crowd entered the office and surged up the stairs.

Judge Bush sent word to the mob several times that he would never order the negro brought back; that he would die first; and every such communication incensed the mob still further, and they shouted that they would hang the judge.

WITNESSES have said the mob members had blood in their eyes and that they had no doubt Judge Bush would have been hanged if he had not ordered the negro back. Anyway, the judge did order the negro back. When he did so he left the hotel and walked a block away to a bank, and the mob followed him into the bank. They watched him an hour or so, to make sure that he had not played them false. Then when they made sure the order had been given for the negro's return, they went back into the country, saying they would return the next morning when the negro was due. And it was at 8 o'clock that night that an anonymous law-abiding citizen (who was afraid to telephone from Murray) telephoned from Paris, Tennessee, to Governor Stanley, at the Seelbach Hotel in Louisville, telling him he believed the negro would be lynched the next morning, for he was being brought back from Hopkinsville. After a conference with several State officials who were in his room at the time, a course of procedure to save the State of Kentucky from the degradation of another lynching was agreed on.

Governor Stanley immediately called up the New Murray Hotel and asked to speak to Judge Bush. Whoever it was that answered replied that he was Judge Bush, and said, "Yes, I issued an order for the return of the negro to Murray. I was compelled to do so to save my own life, the mob having threatened to blow me up with a bomb if I did not comply with its request." Judge Bush now denies having made such a statement to the Governor or anybody else, or having talked with the Governor at all, but admits ordering the negro back to Murray at the command of the mob.

The state militia being on the Mexican border could not be sent to Murray. Neither could a company be hastily organized in Louisville, because there was no equipment nearer than the state arsenal, at Frankfort. All that could be done was for the Governor to keep the negro away from Murray (which he did by countermanding the judge's order that he be brought back), then go and face the mob and, by the strength of his own manhood and the majesty of the office he held, send its members back home cowed and ashamed. And that was what he did.

WHEN the Governor reached Murray he found that excitement had been so high that most of the stores had remained open all night. He visited many of them, amazing some of the citizens by telling them that the negro certainly would not be returned to Murray, and that he intended to face the mob himself in a few hours. Then he went to the hotel, held a conference with Judge Bush, Smith and a few others, and sent out invitations to all who might be in Murray at 9 o'clock to meet him at the courthouse. Many of Murray's leading citizens were there, but the house was mainly filled with men from the Black Patch who had come back to be present when the negro was returned and perhaps to have a little fun, and who had gone inside "just to see the face" of the Governor who had dared oppose them.

Governor Stanley did not mince his words. He began by telling them that courthouses and reverence for law and order marked the one difference between savage and civilized communities. In the very second sentence he said: "If a man murders my brother, or my son, and I, after having had time to deliberate, arm myself with a deadly weapon and pursue and kill him, I, too, am a murderer, just as guilty in the eyes of the law as the wretch I slew; and if, lacking the courage to do the deed alone, I associate with me a thousand men, each of those men who participates in such a deed is a wilful murderer."

The Governor was not applauded, but such expression as "God, but he's nervy," and "Good God, but that man's got guts" were heard. The Governor spoke about twenty minutes, and concluded as follows:

"The Circuit Judge and the Commonwealth's Attorney at your behest agreed to produce at this hour the body of the accused. I countermanded that order and I directed the sheriff of McCracken County to hold that prisoner in Paducah and to protect him from violence at all hazards until I was assured that he could and would receive a fair and impartial trial without the possibility of intimidation of the court or violence to the prisoner. The Commonwealth's Attorney and the Judge have acted in good faith with you and but for my order this prisoner would have been here at this hour.

"I, and I alone, am responsible. I am here without troops, without police protection, practically alone, absolutely unarmed, but I am hedged about by that which is stronger than a cordon of bayonets—the majesty of the law. I am here as the chief magistrate of this commonwealth in the discharge of a sacred duty, and for one I do not fear that any man within the sound of my voice is so lost to every sense of justice and decency as to attempt to force me to choose now between death and dishonor.

"This County of Calloway has been noted for its churches, for its schools, for its respect for law and order and religion. No county in this state has a greater number of citizens owning their own homes. I cannot believe that men, that householders, Christians, men who believe that murder is a crime and that courts are sacred, will do the things that I am told you have threatened to do."

When the Governor concluded one long, lean and hungry looking woodsman rose and shouted at the top of his voice, "Say, Guv, you've got the guts; I'm fer you." This seemed to be a cue, and practically every member of the audience went forward and shook the Governor by the hand.

The Commonwealth Attorney, the Judge, the Governor and Lube Martin's attorney then held a conference and agreed that the trial would be held February 5. Later, it was discovered that Judge Bush must be in Trigg County on that date, and the trial was set for February 19.

Judge Bush now denies that he ordered the negro back to deliver him into the hands of the mob. His conduct is approved by the citizens of Murray. Twenty-five of them, including the postmaster, county officials and other men and women of the very highest standing, have signed a paper giving him a clean bill of health.

KENTUCKY is one of the states where the Ku-Klux flourished. Kentucky crushed the Ku-Klux. Governor Stanley has announced that every member of the mob can be punished under the old Ku-Klux statute. Commonwealth Attorney Smith has *not* announced that he will attempt to punish the gangsters under the Ku-Klux statute or any other statute, and Judge Bush has *not* instructed him to do so. Citizens of Murray do not approve of the actions of the would-be lynchers. They are ashamed of the thousand who strove for Lube Martin's life and proud of the Governor who saved it. And they are wondering whether the Judge and the Commonwealth Attorney whom they elected last summer will do anything, or attempt to do anything, to wipe out this last foul stain upon the name of Kentucky.

WAGES VS. CROPS

BY BOLTON HALL

AUTHOR OF "FREE AMERICA," "THE GARDEN YARD"

THERE is no reason to think that when the war ends, the advances in prices will end also. The demands of hungry and naked nations who are willing and able to work may still further and still more largely raise the prices of our food and raiment; "dumping" goods from European countries can't begin until their stomachs are full, their bodies clothed, and they have a surplus, because their own consumption will require all they produce.

While preparing to feed the nations our problem now is to feed ourselves without spending all our money to do it. We have the same economic problem that the warring countries have, only, so far, it is worse with them.

Wages have increased here, which tends to raise the cost of most other things, at least temporarily; but the cost of our living has increased much more.

Wages have climbed the stairs—prices have gone up in the elevator. The prices of food, the first necessity, have advanced so much that most wage earners who have large families are worse off, except for more steady employment, than they were at the old rates. Salaried men are generally absolutely poorer since the advances. This affects a large class, as $6.00 a day is "wages," but $15.00 a week is a "salary." Our charity organization is calling for more funds, instead of less, because they tell us distress has increased with our prosperity.

THE plan to which the Allies are at last driven in order to cheapen living may be a solution also for our difficulty.

The English Food Controller, Baron Devonport, has awaked to the fact that if Germany should have a success at sea or should invent some kind of U-boat as invulnerable as a tank "Willie," England would suffer hunger. She would suffer hunger solely by her own fault, in face of the lesson taught by Germany—because she does not use her own lands. Empty lots mean empty stomachs for soldiers and for workers, too. Idle lands that are needed mean idle hands that are in need.

I have two brothers who married Germans and who practically live in Germany; they write me that every available vacant lot and plot and field in Germany is utilized to raise something. Rye, grass, potatoes, I believe, are the main crops, with vegetables near the cities. The officials notify the owner what he should do with his land, and if he does not, they do it themselves for his account. The Defense of the Realm Act gives the English Government the same tyrannical powers.

If England were now to force into its proper use all the land that could be used, food would be cheaper in England than before the war—and the country would be richer in spite of its expenditures. Like rule, like case. If we in America forced our land into use, food would at once become cheaper here and now, than ever before.

As economists tell us, price depends upon whether demand or supply be the greater; then it must be true that making the supply more nearly equal to the demand lowers the cost of food and of other products.

Baron Devonport, who, as a great grocer, understood the food problem, knew that since the Government has assumed arbitrary power for "The Defense of the Realm" the practical thing to do, a thing far more urgent and important for military success than any help that can be given in armaments—is to see that the fighting forces, civil and military, at home and abroad, are fed, and cannot be cut off from their food. He has accordingly arranged to have all lands in London which are needed for cultivation used by women, children or old men. He has ordered these vacant lots to be seized and divided into small plots, and expects to employ two hundred thousand persons in London alone. This would be but a drop in the bucket, but the plan is to be extended in many directions.

REPORTS show that all the belligerent countries are suffering from lack of food, or what amounts to the same thing, from the high cost of food. Germany and Austria doubtless suffer most, both because outside supplies are partly shut off and because their working classes ordinarily live so scantily that there is less margin on which to skimp. Germany, however, has vast public domains and long ago began to make some use of all of them.

Nevertheless Germany and all the European nations are getting poorer owing to the destruction by war.

The poor and the well-to-do suffer alike from war prices; they suffer alike from the scarcity of food. "There is no poverty like the poverty of gentlefolks." For poverty is only lack of wealth. Not only food but all wealth comes from land by labor; therefore, the application of labor to land should and would reproduce wealth for all, and gentlefolks are least able to labor.

The most effective way then to relieve poverty, as the Allies are beginning to learn, is to get the people to the land. School gardens have shown us the benefit of this when applied to institutions such as orphan asylums. Most of our charitable and public institutions, sanatoriums, hospitals, reformatories and prisons have special opportunities to help not only their own people but at the same time to help the nation, as they have plenty of lands and plenty of hands, both looking for a job.

Vacant lot garden associations have proved that with small plots of ground even the inexperienced, under the advice and direction of a competent superintendent, can rival the best farming records. The associations provide rough plowing, seeds, some fertilizer, and the use of tools for the cultivators, many of whom raise enough garden truck for summer use, with some for sale, and sometimes a surplus for winter use. These cultivators are not only the disemployed or insufficiently employed day laborer, but women and children and the sick, the despondent, the consumptive and the inebriates, from all ranks of life—the classes that are hardest to take care of in times of stress.

IT is not a new or untried plan to set either individuals or institutions to feed themselves by hand. I will gladly send details of methods and results to any one who is interested. At the Stony Wold Sanatorium for Consumptive Girls at Lake Kushaqua, domestic cultivation has been a pronounced success, altho the location, high up in the Adirondacks, prevents its being an ideal farming place. Yet here, where as late as April snowshoeing may still be good, one man's work supplies a hundred and fifty persons with all the garden truck they eat from May to November. If you don't believe it, go see for yourself, as I did. Besides summer crops, the superintendent reported that forty-five bushels of potatoes and a large quantity of root crops were laid away for the winter, tho only two and three-quarter acres were cultivated.

A little bit of land will supply a big community with both food and instruction. How much can be raised without scientific farming is shown by such instances as the Meenahga Hotel up on a mountain near Kingston, New York, the proprietors of which write in 1916:

"Our vegetable garden is less than half an acre (exactly 80x250 feet). It furnished garden truck for an average of one hundred and fifty people thru July, August and September, in addition to which we probably feed fifty people or more from such vegetables as are ready to eat in June, and we also carry over in the fall bushels of carrots, beets and other roots for the following spring, as well as for the use of three families connected with the management during the winter.

This result seems incredible, but as far as possible I have verified it myself, and the proprietors are most reliable people.

In this country we are appointing endless commissions to inquire into the cost of this, that and the other thing, and always to indict somebody for conspiring to raise prices. No one seems to have thought of inquiring why the most available parts of the earth are kept vacant, the very places where food should be raised and raw material procured.

Perhaps this, as well as efficiency in organization and thrift in expenditures, is one of the lessons we shall learn from the war.

New York City

HER GIFT

BY HELEN EMERY SMITH

My love has built me a little house
On the slope of an orchard hill.
The world is near, but our little house
Is sheltered, and fresh, and still.

No sound I hear but the drowsy birds,
Or the rustling of fairies' feet,
As they slip from the larkspur by the wall,
To gather my day-dreams sweet;

The dreams so softly, shyly spun
From the hopes of the future years,
Of a time when our little house shall wake
To cooings, and smiles, and tears.

Then I shall have given to my love
The dreams that have come to be;—
A heart and a soul for the little house
My love has built for me.

ATOMS FOR DEFENSE

BY L. H. BAEKELAND

MEMBER OF THE UNITED STATES NAVAL CONSULTING BOARD

THERE are at present about 20,000 chemists in the United States. Of these, about 8500 are members of the American Chemical Society, a membership decidedly larger than that of the Deutscher Chemischer Gesellschaft, the British Chemical Society and the Société Chimique de Paris all added together. These chemists are engaged in the most varied occupations ranging from analytical or consulting work, to teaching and to the endless diversity of manufacturing encountered in different industries. The latter are not limited to purely chemical industries; most up-to-date manufacturing enterprises have come to realize that however mechanical an industry may appear at first sight, each of them has chemical problems which require the attention of a chemist.

Many of these chemists have a general training and knowledge of chemistry without special training or special experience in one branch and on this account, they are of no direct use wherever such special skill or experience is required, which is the case in most manufacturing problems. It takes quite some time before a chemist has mastered a special branch of chemical manufacturing in which he has had no opportunity to get preliminary training. This explains the hesitations and delays which occurred when this country had to make itself independent, for some of its chemical products, of foreign importations.

At the beginning of the war, we found ourselves unprepared in many branches of chemical manufacturing for which we were dependent upon Germany. But this does not indicate by any means that our chemists were incompetent or inferior to chemists of any other country. American capital and enterprise in chemical industries had simply directed their efforts along lines best adapted to the obvious needs of the country and where financial returns seemed to be best assured.

In this way had been built up the largest sulphuric acid industry of the world, the largest sulphite-cellulose industry, the largest petroleum industry, the largest electrochemical plants and many other specialized branches of chemical industry in which this country not only was a leader but a pioneer.

On the other hand, some chemical industries, as for instance the manufacture of coal-tar dyes, had been neglected and this for many good reasons, some of which were the relatively small financial returns of an industry of the kind in comparison to the complicated problems connected therewith. This will be better understood if it is mentioned that the importation of coal-tar dyes in 1913 in the United States amounted scarcely to nine million dollars and that this sum of money covered about a thousand varieties of different products, rendering it an industry of detail and small units. These factors were decidedly unfavorable for American conditions where skilled labor is very expensive and where manufacturing under small units is unprofitable. Furthermore, an industry of this kind dwindles into insignificance even if compared to some of our lesser industrial enterprises.

But this war has demonstrated the fact that one should not rate the importance of an industry by the capital it represents nor by the money value of its products. For instance, these dye-stuffs are so indispensable in an endless number of industries, even if they are used in relatively small amounts compared to the total value of the finished product, that the unavailability of these dyes may paralyze a giant industry like that of the manufacture of textiles.

We have also come to understand that Germany had an immense advantage over the Allies in the beginning of the war because she could turn her dye-stuff factories into so many plants for the manufacture of modern explosives. Indeed, the same raw materials, the same equipment and the same processes which are used for dye-stuffs can be easily adapted for the manufacture of explosives. The very same chemists, engineers, foremen and workmen who have become trained in the manufacture of dye-stuffs can be made immediately available for the manufacture of nitrated explosives. It took the Allies until the end of last year to make up for this deficiency and it took this country just about as long to get in shape for producing the immense amount of explosives which our chemical manufacturers had contracted to deliver to the Allies. It was not lack of chemical knowledge which caused these delays—simply lack of raw materials, of equipment and of experience of men and foremen. All this swallows time.

What has been accomplished since then is simply amazing. New chemical industries which never heretofore had existed in the United States have been established and are run now on a scale which seems almost incredible. Only those who have been conducted with all the difficulties and disappointments which marked the earlier attempts when work had to be started with green workmen and an inexperienced staff, know what a herculean task has been accomplished.

NEVER before has this country realized how indispensable a chemist is in the fabric of our modern economic conditions. England, too, has been awakened when she realized this fact and found it necessary to call back from the trenches those of her chemists who had volunteered as soldiers and whom she needed much more at home in her munition factories and industrial plants. The result here has been that chemists who had acquired skill or experience in a particular line of manufacturing are now at a premium. Many who had adopted the teaching career have taken better paying engagements in manufacturing establishments. Others have been instrumental in developing new chemical industries, with such modifications as to adapt them more particularly to American conditions. In more than one instance, important simplifications and improvements have thus been introduced which, strange to say, have never been contemplated or attempted in Europe. So that, generally speaking, our chemical industries are in an incomparably better condition than they were in 1914. We have realized our weaknesses. We have found how important it is that this country should be self-contained and independent of other countries, regardless of any exaggerated theoretical notions of free-traders or high-

protectionists. Most of the new chemical industries introduced in this country are bound to stay unless our lawyer-politician legislators in Washington do their utmost to kill them.

The average layman does not realize that chemistry permeates seemingly most remote industries. Motor trucks or motor cars of good quality and moderate price, produced on a large scale, would be an impossibility but for the use of the new steel alloys, the new methods of welding and cutting introduced by the oxyacetylen method, the new milling devices involving the employment of artificial abrasives like carborundum, alundum and endless other devices, all the result of modern chemical invention.

The complaint of our lack of dyes during the beginning year of the war penetrated every corner of the land, and yet this disturbance would have appeared almost insignificant to the absolute break-down of most of our big industries in the United States if we had been dependent upon other countries for any of the chemical products in which this country is the leader.

All this was very well realized when the Naval Consulting Board, thru its committee on the mobilization of industries, undertook the census of the chemical manufacturing plants of this country. This work has now been finished under the able leadership of Mr. Howard E. Coffin. We have now in Washington an up-to-date record of what our chemical plants of the United States can furnish. We know the capacity and location of the plants which can provide us with the raw materials required in case of war. We know the extent of the equipment of these plants and we know how and where they can be rapidly increased. For the first time in the history of the United States, we are able to ascertain what our real manufacturing resources are.

For instance, we can now determine immediately how many tons of picric acid or other explosives could be furnished and where the plants are situated. The same holds good for caustic soda, sulfuric acid, nitric acid, etc. If our munition factories require chlorbenzol, they know accurately where it can be obtained and in what quantities. The most remarkable thing is that all this has been accomplished without Congressional red tape or Congressional appropriation, simply under the enthusiastic leadership of the engineers and the scientists of this country, enlisting the good will of our manufacturers. This task has been terminated in time, but not too soon.

We should go one step further. The American Chemical Society, in conjunction with the American Electrochemical Society and the American Institute of Chemical Engineers, ought to establish immediately a census of all its members so as to ascertain how each of them could be made available in case of war; whether it be for serving the army and the navy in a technical or advisory capacity, or whether it be for taking an engagement in the munition factories or any industrial establishments relating thereto. Qualifications, experience, age, present employment and all other desirable data ought to be accurately recorded, so that at short notice, the necessary chemists could be selected who are best adapted for particular needs in the many chemical problems which will confront us.

Yonkers, New York

CANADA'S HALF MILLION

BY DOROTHY McILWRAITH

CANADA has raised 434,539 men for service overseas. This is 120.000 more than Great Britain asked for, and not far from the 500,000 troops whch Canada has pledged herself to dedicate to the cause of justice, freedom and the Empire. Of these 400,000 odd, 175,000 have seen active service and 70,000 have figured on those casualty lists which have grown so familiar to Canada's unaccustomed eyes.

It is now nearly two years since at St. Julien and Festubert the Canadians held grimly on and blocked the German drive on Calais. Since those early days an ever growing stream of men has been continually crossing the Atlantic; men eager to take their place in the British lines and to fill up the depleted ranks. These men are no longer fired by love of adventure, but conscious of an honorable cause, they are determined to make every sacrifice in order that that just cause may triumph.

Half a million men means that one sixteenth of Canada's total population has volunteered and as the battalion numbers mount it means ever increasing activity at home.

More men overseas means more casualties, so Red Cross work in Canada is continually increasing, and there is an ever growing need for workers and supplies.

More men means more destitute families, so the Patriotic Fund committees from Halifax to Vancouver are working night and day that there may be no starving children as a reproach to Canada. And this fund is distributed not only among the families of Canada's own soldiers, but also to those of soldiers gone from Canada to fight in any of the Allied armies.

More men means more prisoners of war, so money and parcels must be sent week after week to German and Turkish prison camps, for Canada must not show herself ungrateful.

More men means more vacant positions at home, so women are taking their places in munition factories, banks, shops, and as civil servants, that the troops may not lack ammunition and that the life of the country may go on.

More men means more returned soldiers, so parliament is legislating on schemes for settling disbanded soldiers on the land, and many plans are being formed to provide training and employment for the disabled.

More men means more socks, toothbrushes, coffee, cigarettes, fruit, sweets, scarfs, sweaters, shoes, sewing kits, books, papers and the countless things that love and enthusiasm can think of for the boys in the trenches. And these are being sent every week in parcels, boxes, bales, cars and shiploads.

More men means a greater share in the responsibilities of the Allies; so societies and individuals are working for Belgian, Serbian, Armenian, Jewish and French relief. In spite of her own calls, Canada has contributed more per capita to these funds than has the United States.

Canada realizes too that more men means more history when the stories of her gallant battalions are added to those of the troops of the older, richer, greater, but surely not more chivalrous nations.

More men means more taxes, yet in spite of that, funds for these activities are provided over and over again.

The war is teaching the Canadians the lesson of how to give. To give not money alone, but time and thought as well. To give not as prosperity or enthusiasm prompt, but over and over and over again as need arises. To give without any thought of the sacrifice involved, but because every one must help the Empire to "carry on."

But Canadians share the Briton's spirit of self depreciation. The more they are doing the less will they admit that they are doing anything. In a pamphlet recently distributed thruout the Dominion, Dr. Stephen Leacock warns his fellow countrymen and women that they must work and save and sacrifice far beyond their present efforts. He says: "If we do not—if that is the kind of nation that we are—let us call our soldiers home from the Western front. They are fighting under a misunderstanding. The homes that they are saving are not worth the sacrifice." Be it said that Canada will never let that happen.

The Canadians will tell you of what England is accomplishing, sing the praises of the British Navy, say how much greater efforts the other colonies are making than Canada's own, how small is her share in comparison with the mighty sacrifices of the Allied Nations. On their own efforts they are silent. Such humility is good for the soul of a nation.

New York City

A SCULPTOR OF DEMOCRACY

BY MILTON BRONNER

The George Grey Barnard statue of Abraham Lincoln, which is reproduced on the cover of The Independent, is a gift to the city of Cincinnati from Mr. and Mrs. Charles P. Taft. At present it is on exhibition in New York City, but it is soon to be dedicated in Cincinnati, probably by ex-President William H. Taft. — THE EDITOR.

THE workshop of George Grey Barnard is perched way up on what in Revolutionary days was Fort Washington, a steep rocky hill taken by the British and then recaptured by Washington's men. Even now it is hard to realize there that one is in the metropolis. There are real country estates on one side of the brow of the hill, and on the other a steep, tree-grown declivity. The nearest towering apartment houses are across the valley, a good five blocks away.

Barnard's studio looks as if once it had been a church. The day I was there it seemed like a temple or a shrine dedicated to Lincoln. Coming in, I was confronted by the heroic-sized plaster model from which was cast the Lincoln statue, shortly to be erected in Cincinnati. In another part of the room was a huge head of Lincoln, twelve feet high. Scattered all about were studies of Lincoln's face and part masks, which were studies for his mouth and nose.

I had come to Barnard as a reporter for the *Cincinnati Post*, and I asked all sorts of questions, which the famous artist answered with great patience and kindness. I was curious about this Lincoln, because Barnard's fame had been made in a far different line of work. Hitherto he had treated allegorical and classical subjects. I remember asking him whether he had not filled himself with Lincoln literature before starting on his great work, which I believe is the finest of all the statues of the martyr President.

"Of course I know and love the story of Lincoln's wonderful life," said he, "but here is what I get my Lincoln from." He showed me a mask of Lincoln's face. "His death mask?" I queried.

"No," said he. "It is his life mask, taken shortly before he went to Washington to assume the duties of the Presidency. You made the same mistake all do to whom I show this mask. You will note the utter lack of self-consciousness in this mask. In most men you get this only when they are dead. In Lincoln it was there when he was alive.

"I simply took this mask and studied it for 100 days. I wanted to read its riddle. I wanted to find the flow of its features. This face is the exterior of the temple which housed his great spirit. The face and the body—in the statue—must, if possible, reveal the soul of the man who was Abe Lincoln. Note the lines in this mask, the markings graven by care and toil and suffering and deep thought. Look at the mouth—not without its attributes of beauty—but firm and patient and strong and humorous. And see this side of the mouth, the mother side I call it. It is all tenderness and pity and compassion.

"When I had finished studying this and dreaming over it, I made that huge Lincoln head twelve feet high. It is not a copy of the mask. It is my conception of what I got out of it. See the lines in the face, as some one very beautifully said: 'furrowed as by rivers of tears.' You will observe I did not have the eyes open in this huge head. I wanted to fix in my own mind the other features first. The eyes—they most fully reveal the soul. They came later.

"When I had finished with the face there came the all-important subject of the hands. Lincoln's were big hands. They were the hands of a man who had toiled long and hard with them. They were gnarled. The veins stood out high. So I made them that way and I folded them patiently across each other.

"And Lincoln's feet were big. He stood firmly planted on earth. So I made his feet that way. I was trying to get at the real Lincoln. I was not trying to make a statue of a mere President. We will go on having Presidents for a thousand years, but I doubt whether we will have another Lincoln. I have tried to show Lincoln, the great noble leader arisen from the plain people.

"This wonderful statue makes you the sculptor of democracy," I observed.

"Lincoln is our song of democracy. I am but the poor singer of the divine song," he replied.

He told me how he sought for over a year to get a model to pose for the figure of Lincoln. Finally and fittingly he found a Kentuckian, named Thomas, who was born and who lived only fifteen miles from Hodgenville, Kentucky, where Lincoln was born. Thomas brought with him his father's old broadcloth suit and boots, the kind men used to wear in 1858 when they went to gala affairs. Thomas had worn the trousers to work in. So they were baggy and, as Barnard exprest it: "Full of his form." They exprest the man who had toiled in them.

"I made him put on that old-fashioned coat and vest. The clothes fell on him as if they belonged. The shirt was the kind Lincoln wore—soft, with a rolling collar, one flap of which was always turning up above his coat. He wore the same kind of little bow tie Lincoln affected. And he stood with big generous feet planted on the soil just as Lincoln did. Also, he was about the right hight, six feet, four inches."

This Lincoln of the statue is the smooth shaven Lincoln in whose face all the hills and hollows are plainly to be seen. The wart is visible. So is the protruding Adam's apple. His deep-set eyes are those of both doer and dreamer. The hands, so peacefully folded, appear as if he had just finished one task and was waiting for another. There is nothing conventional anywhere in the figure. The back of the coat shows a bulge. The coat sleeves show wrinkles. The trousers are plainly bagged. The shoes are plainly coarse. As Barnard put it: "Even as there is a sense of gnarl in his face, so I have put it in his hands and his clothes."

Not long ago an old man was privileged to be one of the first to see the model of the statue. He was born in Springfield, Illinois. When he was a lad Lincoln lifted him higher than any one else could. The old man stood gazing at the figure and then whispered: "That's him. That's the nearest to his living self I've ever seen."

Somehow you cannot avoid that impression. As I turned with Barnard to leave the studio, I took a last look at the model. And it would not at all have surprized me to have seen the lips move and to have heard a voice say: "Here I am, Lord. What work have you for me to do?"

WHAT IT COSTS TO LIVE

BY WILLIAM B. WILSON

UNITED STATES SECRETARY OF LABOR

NOTHING is of greater interest to the average citizen than the cost of living, regardless of whether it be the high cost of living or the cost of high living. The cost of living is of importance to every householder, because it is the difference between the monthly or yearly average of expenditures for life's necessaries and the monthly or yearly average of a householder's earning capacity which determines how successfully the household is managed for the given period. Needless to say, this applies to the normal family, in the meaning of the United States census. And herein lie the interesting details of American life, which have been brought to light by expert investigators of the Government. While the official reports go into the minutest details, the statistics which follow are those which form the average for the entire country. While there are some slight or fractional differences in statistics on any one subject between sections geographically grouped, it is my purpose to make use only of the general averages.

Two questions of paramount importance had to be answered with reasonable exactness. Of how many persons does the average family in America—either native or foreign-born—consist? What must be the highest average of earning capacity for these families?

The necessity for comprehensive and dependable data relative to these subjects and the desirability of supplementing the same by information as to the retail prices charged for the principal staple articles of food during a series of years, in the localities in which working people reside and in the stores patronized by them, has resulted in a report issued by the Government, which is based on the items of expenditure for one year of 25,440 workingmen's families (or 124,108 persons) located in the principal industrial centers of the United States. Inasmuch as the families canvassed were distributed over thirty-three states and the proportion in each geographical division corresponds very closely to its importance in an industrial sense, and owing to the large number of families investigated, selected without reference to industry, it is believed that the data given relative to the cost of living are fairly representative of the conditions existing among wage earners in the whole country.

In order to arrive at a definite understanding of how much it costs to live, it was necessary for the investigators to limit themselves to the staple articles in daily use. The average of these prices has been reached thru the same painstaking calculations employed in answering the preceding questions. A thoro canvass of the same localities was made for information as to retail prices of the principal staple articles of food for a series of years. Monthly quotations have been secured for each article. Approximately 725 retail dealers in forty-four of the principal industrial cities of the United States make monthly reports to the Bureau of Labor Statistics.

To make the comparisons simple for the reader, it may be said that the investigation was limited to the families of wage workers and of persons on salaries not exceeding $1200 per year, no attempt being made to cover families of persons engaged in business on their own account. Both the native and foreign-born elements of the population were covered. Of necessity much of the information was given from memory, altho some families were found that kept correct book accounts of income and expenditure, while many kept partial accounts, and many had store pass-books.

THE "normal" family, for the purpose of this official study, is one which has the husband at work; a wife; not more than five children, and none over fourteen years of age; no dependent, boarder, lodger or servant. On the basis of this estimate it was assumed as generally true that all husbands consume a like amount of food; that the wife consumes 90 per cent as much food as the husband; that a child from eleven to fourteen years of age, inclusive, consumes 90 per cent as much food as the father; that a child from seven to ten years of age, inclusive, consumes 75 per cent as much as the father; a child from four to six years of age, inclusive, consumes 40 per cent as much as the father, and a child three years of age or under consumes 15 per cent as much food as the father.

Certain groupings of the articles for which retail prices were secured are necessary in order to bring them within the classification reported in the family budgets. Fresh beef is represented by two articles: roasts or stews, and steaks; salt hog products by salt bacon, dry or pickled pork, and salt ham; other meat by mutton or lamb and veal; poultry by chickens only; fish by fresh fish and salt fish; flour and meal by wheat flour and corn meal, altho wheat flour is given twice the importance of cornmeal. Bread is considered separately. Fruit is not represented at all in the table of retail prices, as it was impossible to secure complete series of prices for fruits. Neither are vinegar, pickles and condiments represented, retail prices not always being obtainable for articles of this class.

The average of detailed expenditures, as worked out in the accompying tables, represents the cost of living for 2567 families. The only basis of selection of these families was their ability to give the information sought in the desired detail. The families that were able to give such information respecting their income and expenditure were reported as being generally somewhat more intelligent and better educated than the average family canvassed. The average size of this smaller group of families was of 5.31 persons, as compared with an average of 4.88 persons for all families. The average income and expenditure of these 2567 families were a little larger than the averages of the total 25,440 families investigated.

The average income of the 2567 families was $827.19, and the average expenditure was $768.54, while the average income of the 25,440 families was $749.50, and the average expenditure was $699.24. When due allowance is made for the larger family, the difference in income and expenditure is small.

From the table of studies in detail of these 2567 families a fairly accurate idea may be gained of the per cent of families having an expenditure for each purpose and the average amount of such expenditure. The figures are given with detail sufficient to admit of other summaries being made by any one who desires to give the subject further study.

It is interesting to note, altho it is not shown in this table, that the official report discloses that the

WHAT THE AVERAGE FAMILY SPENDS

Item of Expenditure	Average Cost	Per cent of total expenditure
Food	$326.90	42.54
Rent	99.49	12.95

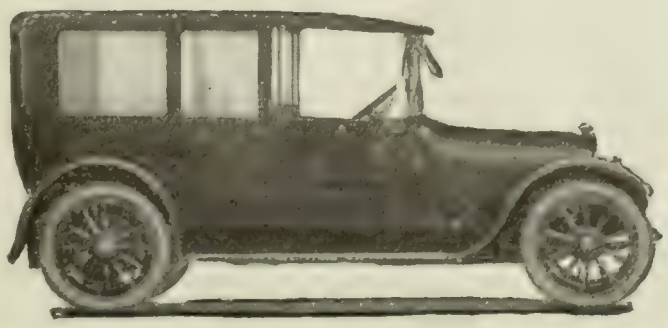
Cadillac
Standard of the World

The Superlative Degree in Motoring Luxury



THOSE whose social prestige suggests that their mode of motoring be in keeping with their position, will recognize in the Cadillac Landaulet a car whose grace of contour and richness of design and appointments, stamp it as a creation of dignity and distinction.

It is a car for 365 days in the year.

With the passenger compartment closed, it is an ideal equipage for inclement weather. With the rear section laid back, the unusually spacious opening provides the advantages of an open car.

With the super-smoothness of Cadillac mechanism, the deep soft upholstery and scientific spring suspension, its riding qualities are truly a revelation; there is experienced a delightful sense of ease and relaxation impossible of description.

It would be difficult for you to suggest to yourself any qualities which could contribute more thoroughly to your comfort and your enjoyment.

The complete line of Cadillac cars is as follows:—Seven-Passenger Touring Car;—Four-Passenger Phaeton;—Two-Passenger Roadster;—Four-Passenger Club Roadster;—Four-Passenger Convertible Victoria;—Seven-Passenger Convertible Touring Car;—Four-Passenger Coupe;—Five-Passenger Brougham;—Seven-Passenger Limousine;—Seven-Passenger Imperial;—Seven-Passenger Landaulet.

Cadillac Motor Car Co. Detroit, Mich.

average rent in the families having no children was higher than that of families having children. Expenditures for fuel tend to increase as the size of the family increases. The cost of lighting increases with the size of the family until the families of five children are reached, when the average expenditure drops off a little. The cost of clothing per family increases regularly, tho not proportionately, with the size of the family; and the same is true of food. The average expenditure for sundries rises in the families having one child each; drops a little in the families having two and three children each; rises again in the families having four children each, and then drops materially in the families having five children each.

Needless to add, the total expenditure increases with the size of the family.

It has been shown that the average income per family is $827.19, while the average expenditure is $768.54. The table on the preceding page gives some interesting figures on the average expenditure of an American family.

Another very important table, compounded from separate tables into one, shows the comparative prices of food in November, 1912, and November, 1916. This table is not only interesting because it may enable each family to compare and check up its own average with this American average, but it will also enable each family to compare with no little accuracy the individual cost of each article, its quantity, and its relative value in food units.

The forty cities included in this report, for the purposes of retail prices of food study, are important industrial cities representing thirty-two states. In a general way the city selected in each section of the country, from the Atlantic to the Pacific, was the city having the largest population in that section; but in addition two smaller cities were included, one a textile center and the other situated in the anthracite coal region of Pennsylvania. Within the forty cities live *one-fifth of the total number of people, two-fifths of the urban population, and approximately one-third of the total number engaged in gainful occupations* (not including those in agricultural pursuits) *in continental United States.*

The grade of articles quoted is that sold in each city in stores patronized largely by the families of American, English, Irish, German and Scandinavian wage-earners.

It must be remembered that it is manifestly unfair to compare prices between cities widely separated or between localities where qualities, market conditions and freight rates vary greatly. For almost every article it is absolutely impossible to quote prices on an identical grade thruout the forty cities, as the grade varies not only from city to city, but also from firm to firm within the same city, and even varies to some extent from month to month within the same store. Likewise methods of cutting beef and other meats vary considerably in different cities, and to some extent this affects retail prices. In all cases, however, the article quoted is the *best grade* on sale in the store selected.

As shown by the table, the staple articles which enter into the cost of living, so far as food goes, are sirloin steak, round steak, rib roast, pork chops, smoked bacon, smoked ham, pure lard, hens, strictly fresh eggs, creamery butter, fresh milk, wheat flour, corn meal, potatoes and granulated sugar.

A comparison of prices from November 15, 1912, to November 15, 1916, shows an advance in the price of all articles combined of 27 per cent, each article for which prices were carried for the five year period showing an advance. Round steak advanced 21 per cent, which was a greater advance than shown for any other meat, wheat flour advanced 72 per cent, and potatoes 121 per cent, a greater advance than was made by any other article.

Another interesting item from the Government's report pertains to rent, about which no attempt has been made to show increases and changes. It has been shown that the average rent paid by the 20,615 families paying rent was $118.40. In connection with the investigation as to the cost of living an effort was made to ascertain the conditions of the homes as to sanitation, furnishings and cleanliness. As the agents of the Bureau of Statistics obtained all of their information by the courtesy of the household, they could judge of these conditions only from what could be observed during the interview with the family.

It appears that 61.46 per cent of all families lived under good sanitary conditions; 32.59 per cent lived under fair sanitary conditions, and 5.95 per cent under bad sanitary conditions. A comparison of native and foreign families shows a larger percentage of native families living under good sanitary conditions, and a larger percentage of foreign families under fair sanitary conditions, and a larger percentage of native families under bad sanitary conditions.

As to general cleanliness, 79.63 per cent of the homes were reported as being in good condition, 14.66 per cent in fair condition, and 5.71 per cent in bad condition. The fact that nearly 80 per cent of the families were found in a good condition as to cleanliness, while only 61 per cent lived under good sanitary conditions and had homes well furnished, indicates that there was a disposition to live under as good conditions as possible. Many families that could not afford to have their homes well furnished, could be, and were, cleanly.

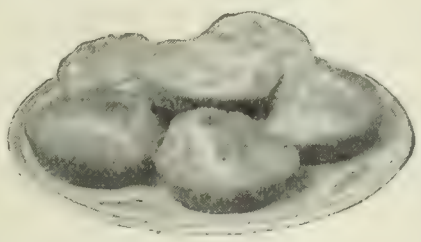
EVEN the bank where plaster and lath were dumped two years ago is now luxuriant with burdocks and sweet clover; and yet people who pass that dump every day say that they can grow nothing in their own yard because the soil is so poor! Yet, I venture that those same persons furnish most of the pigweed seed which I use on my garden. . . . There is no soil—where a house would be built—so poor that something cannot be grown. If burdocks will grow, something else will grow; or if nothing else will grow, then I prefer burdocks to sand and rubbish. The burdock is one of the most striking and decorative of plants, and a good piece of it against a building or on a rough bank is just as useful as some plant which costs money and is difficult to grow. I had a good clump of it under my study window, and it was a great comfort, but the man would persist in cutting it down when he mowed the lawn. When I remonstrated, he declared that it was nothing but burdock; but I insisted that, so far from being burdock, it was really Lappa major, since which time the plant has enjoyed his utmost respect. —*L. H. Bailey.*

With the use of Royal Baking Powder, fewer eggs are required and in some recipes, may be omitted altogether

Just use an additional quantity of Royal, about a teaspoon, for each egg omitted and you will obtain excellent results and effect great economy. The following tested recipes are given as practical illustrations.

A new and economical way to make a fine sponge cake



SPONGE CAKE

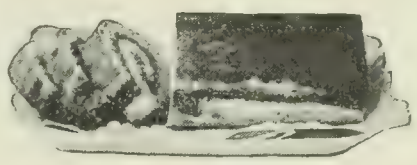
1 cup sugar
½ cup water
3 eggs
2 teaspoons Royal Baking Power
1 cup flour
1 teaspoon salt
⅛ cup cold water
1 teaspoon flavoring

The old method called for 6 eggs and no baking powder

DIRECTIONS:—Boil sugar and water until it spins a thread and add to the stiffly beaten whites of eggs, beating until the mixture is cold. Sift together three times, the flour, salt and baking powder, and add alternately to the white mixture with the yolks of the eggs beaten stiff. Add ⅛ cup cold water and flavoring. Mix lightly and bake in moderate oven about one hour.

Eggs are not necessary to make these excellent muffins

EGGLESS MUFFINS



2 cups flour
1 cup milk
4 teaspoons Royal Baking Powder
2 tablespoons sugar
1 teaspoon salt
2 tablespoons shortening

Makes 18 Muffins

The old method for plain muffins called for 2 eggs

DIRECTIONS:—Mix and sift dry ingredients. Add milk, stirring until all lumps are out; add melted shortening. Beat well and bake in greased muffin tins in hot oven from 20 to 25 minutes.

A delicious, inexpensive dessert easily made at home

JELLY ROLL

1 cup sugar
1½ cups flour
1 egg
3 teaspoons Royal Baking Powder
6 tablespoons hot water

The old method called for 3 eggs

DIRECTIONS:—Mix and sift dry ingredients; stir in well-beaten egg; add hot water; beat well until smooth; pour into well-greased pan. The batter should be not more than ¼ inch thick to roll nicely. Bake in slow oven. When baked, turn cake on sheet of brown paper, well dusted with powdered sugar. Beat jelly with fork and spread on cake. With sharp knife trim off all crusty edges and roll it up by lifting one side of the paper. The cake will break if allowed to cool before rolling. To keep the roll perfectly round, roll up in cloth until cool.

THE NEW BOOKS

OUR IMPENDING DOOM

The Passing of the Great Race, by Madison Grant, is an ethnological interpretation of history of a very familiar type. It is the same thesis that has been repeated in a thousand books from Gobineau to Houston Chamberlain; that there originated long ago in northern Europe a tall, long-headed, blond race which is responsible for all the real progress of mankind; that it furnished the ruling class of Greece, Rome, Persia, India and other mighty empires of the past, which declined when the noble blond strain ran out; that it tends forever to be pushed to the wall by dark, round-skulled men with much vitality but no other merits, and that with it civilization will fall to ruin.

Mr. Grant has improved the old race myth by disentangling it from questions of language, and therefore talks about "Nordics" rather than the old-fashioned "Aryans"; in all other respects he is a voice from the days of Max Müller. It passes patience, for example, to read today of the decadence of France under democracy; one would think that the author had never heard of the Great War. The author advocates every means which will preserve the superior Nordic strain from being overwhelmed by lower peoples; restriction of immigration, aristocratic political institutions, social barriers between races and classes, even slavery (p. 8).

Like Nietzsche, he mentions with approval the castes of India, and he deplores the activity of philanthropists who save the lives of inferior types whether in Africa or in the slums of the big city. Mr. Grant's account of the distribution of the different races is interesting and no doubt as accurate as such speculations can be made, but the superstructure of theory and policy which he builds thereon must be judged by each reader for himself.

The Passing of the Great Race, by Madison Grant. Charles Scribner's Sons. $2.

DANTE

The clearest explanation of the physical conformation of Dante's universe we have ever seen is in the introduction to *Dante and How to Know Him*, by Alfred M. Brooke. The choice of illustrative extracts in this attempt to make the Italian epic popular is excellent in that less space is given to the Inferno than to the less known Purgatorio and Paradiso. The translation, in prose, is by Professor Brooks. It seems a bit odd that there is slight note of the verse form of the original, or of other translations, or of the contemporary writers and the later Dante scholars, knowledge of whom, for readers of today, is the greatest aid in understanding this poet who was so essentially of his own time, and so erudite with the learning of his own time.

The essay on *Dante* by J. B. Fletcher, in the Home University Library emphasizes the man, his life, his beliefs, his character and thru these his art. The reader should begin with the very sympathetic conclusion.

Certainly in the forefront of English studies of the Italian poet should be placed Professor Grandgent's *Dante*, in the Master Spirits of Literature Series. Its thoro and wide scholarship is so handled as to be neither dry nor oppressive, common defects it must be admitted in attempts to make clear the complexities of medieval life and thought. Dante's personal life; the political and social setting; the temporal and spiritual influence of the church; the development of the Italian tongue, and of the Romance literatures are all made immensely interesting and illuminating. Dr. Grandgent has at times chosen his own satisfying translation, but much of the quotation is from Longfellow's rendering, which as it seems to us, most scholars unwisely neglect in favor of Cary's more precise but stilted verse.

For the many who will never care to read much of the Divine Comedy, yet who wish to understand something of its historical value and its beauty, this book is quite beyond most essays in breadth of information and in interest.

Dante and How to Know Him, by A. M. Brooks. Bobbs-Merrill Company. $1.50. *Dante*, by J. B. Fletcher. Henry Holt & Co. 50 cents. *Dante*, by C. H. Grandgent. Duffield & Co. $1.50.

BOOKS FOR DEBATERS

The University Debater's Annual 1915-1916, gives briefs on seven topics as argued in American colleges; international police force, preparedness, compulsory military service, federal ownership of telegraph and telephone, city manager, national prohibition, literacy test and compulsory industrial insurance. (White Plains, New York: H. W. Wilson Company, $1.80.)

A series of papers, printed in the *New York Times* under the title *The Basis of Durable Peace*, deals with the status of international agreements up to the war, the desires of each of the belligerents and the inherent justice or injustice of these claims. Much information clearly and briefly given. (Charles Scribner's Sons, 30 cents.)

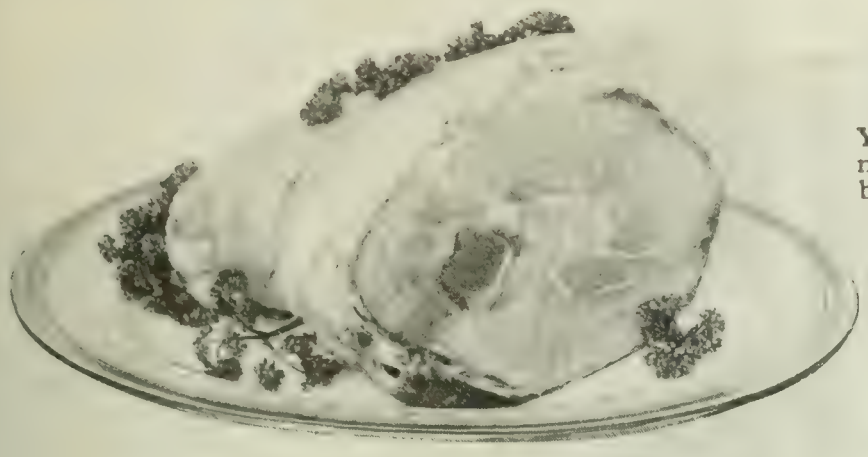
Selected articles on *Non-Resistance* and on *Athletics*, with briefs and references for both sides of the questions are the two new issues of the Abridged Debater's Handbooks. These give an amazing amount of data in small space. (White Plains, New York: H. W. Wilson Company, 35 cents each.)

Uncommon attention is paid to English style in *Essentials of Argument*, by Professors Stone of Harvard and Garrison of Worcester, but beyond that the fundamentals of debate rather than details are considered. Informally written from class room talks. (Henry Holt & Co., $1.30.)

The Debater's Manual, compiled by E. M. Phelps, tells how to organize a society, prepare a debate and suggests topics and references. Second edition. (White Plains, New York: H. W. Wilson Company, $1.)

A pocket edition of the *Constitution of the United States*, with slight bibliography and ample analytical index, by F. N. Thorpe, appears in a new edition containing the two amendments since 1895. It is a handy tool for the debater. (Hinds, Hayden & Eldridge, 25 cents.)

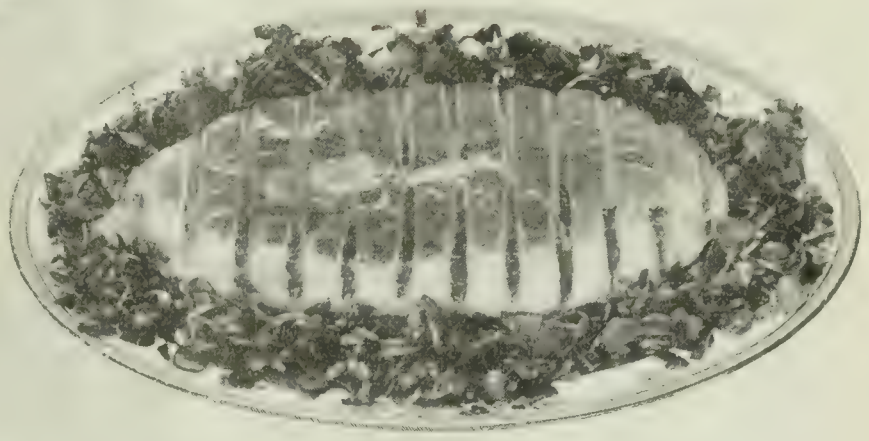
New issues of the Debater's Handbooks are on the *American Merchant Marine* and a third edition of *Government Ownership of Railroads*. (White Plains, New York: H. W. Wilson Company, $1 each.)



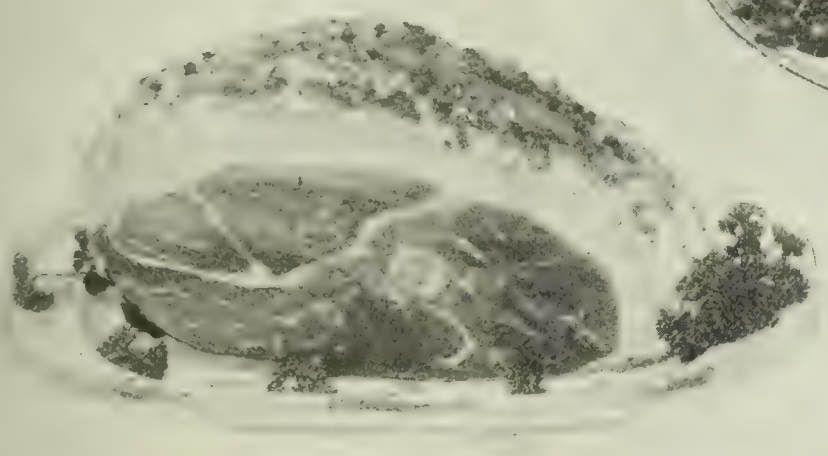
A timely and much needed work is the handbook compiled by Corinne Bacon, containing data and argument on *Prison Reform*. (White Plains, New York: H. W. Wilson Company, $1.25.)

LEGACIES FROM 1916

There was never a time, perhaps, when it was so easy for a casual reader to examine a cross-section of contemporary poetry—in this country at least—as now. Braithwaite's *Anthology of Magazine Verse*, no matter how irritated one may be by its arbitrary little asterisks to mark the "poems of distinction," is undeniably a very fair representation of the output of verse year by year. It could not have been so representative in the days when the magazines were devoting themselves wholly to the conservation of the literary ideals of the past generation, nor in the hands of an uncatholic editor. But now that liberalism has invaded the regular periodicals, and the radicals have established their own (some of which Mr. Braithwaite is not above quoting), the book is surprizingly varied in content.



A less sober comment on current tendencies and idiosyncrasies in verse-making is Louis Untermeyer's *—And Other Poets*. This is too funny to be a critique and too serious to be a parody; most of the imitations are done with remarkable fidelity, even tho confirmed admirers of this or that man will feel a touch of injustice in some of them.



It remains to gather up some of the remaining threads of the poetry of 1916, and to mention briefly a few of the little books, good or indifferent, which have not yet been discussed in these pages. One would expect the dominant note in all this work to be the war, but it is surprizing to find how small a part it plays, by and large, in the body of American verse. One of the most deeply serious volumes of the year, and one devoted to this subject with unusual singleness of purpose, is *Harvest Moon*, by Josephine Preston Peabody. The burden of the book is the burden of womankind in war, and the theme is handled in a small group of musical, intense and delicate verses. They fall short of greatness chiefly because the ratio of delicacy to directness is too high. But

Your family will ask for more and more when you serve the shank, boiled. It is so tender—so delicious.

They will enjoy it when you serve the savory center slices broiled or fried without parboiling.

All the rich, yet mild flavor is brought out in baking the butt.

Buy it whole — so delicious your family will want it often

So popular are they for their flavor, that thousands of women buy "Swift's Premium" Hams whole.

They find that with a whole Premium ham they can give their families a greater variety of dishes than with any other meat—each dish so good that the family asks for it over and over again.

You would understand why the flavor of "Swift's Premium" Ham is so delicious if you could see the care and skill which is lavished on every detail of preparation. Experts select the very choicest hams. They are given a special cure which takes longer, is more expensive and troublesome than that ordinarily used, but which produces a far more delicious flavor. In the spicy, fragrant smoke of hickory wood, all the mellowness, all the savor is brought out. Even with all this care, only one ham out of five is considered so perfect as to be branded "Swift's Premium."

Get one of these hams today and see how much your family enjoys its flavor—how quickly it disappears once they taste it.

Swift & Company
U. S. A.

"Swift's Premium" Ham

Do not parboil before broiling or frying

Concrete Road between Bismarck and Alvin. Part of a system of 144 miles of concrete being built in Vermilion Conuty, Ill. The Eclipse Construction Company. of Winnetka, Ill., has the contract. P. C. McArdle was Superintending Engineer

How to Plan, Build and Pay for Permanent Highways

Vermilion County, Illinois, an Excellent Example

From the standpoint of effective planning of routes, of wise construction and of sound financing of the cost, Vermilion County, Illinois, is well worth the careful study of any county or state in the country.

What Is Being Done: A system of permanent highways is being built in one immediate undertaking, to connect all towns and villages with each other and with Danville, the county seat. Of the total mileage, 144 miles are concrete. This is the largest mileage of permanent highway ever undertaken at one time in a single county.

How Little It Costs: The total cost of building these roads is about $1,500,000. The county is not raising this money all at once by direct tax, nor is it attempting to build a few miles each year out of current road funds; it is issuing serial bonds for the full amount, which are retired by twenty annual payments of about $100,000, including the interest.

THESE PAYMENTS IMPOSE AN AVERAGE ANNUAL TAX OF ONLY 83-4 CENTS PER ACRE OF FARM LAND AND LESS THAN 90 CENTS UPON THE AVERAGE TOWN LOT. AFTER TWENTY YEARS THE DEBT IS WIPED OUT BUT THE ROAD SYSTEM REMAINS TO RENDER MANY MORE YEARS OF SERVICE.

An Incalculable Benefit: The benefits of good roads are too obvious to need comment. But everybody does not realize how much these benefits are dependent upon a **continuous system** of highways, instead of small, scattered stretches which leave long gaps between them of mud, holes and ruts. To all such the example of Vermilion County is a splendid object lesson.

Concrete is the recognized material for building permanent highways just as it has long been the recognized material for important engineering works and structures demanding solidity and strength.

Get posted on concrete roads; write for Bulletin No. 136 and then see your road authorities; that's the first step in securing durable roads in your community.

CONCRETE FOR PERMANENCE

she speaks forcefully, nevertheless. Here is an example short enough to be quotable:

SEED-TIME

Woman of the field.—by the sunset furrow,
Lone-faring woman. woman at the plough.
What of the harrow?—there so near their foreheads.
Can there be harvest, now?

"My one Beloved sowed here his body;
Under the furrows that open so red.
All that come home now, have we for our children—
They will be wanting bread."

There is a good deal of the Henry van Dyke manner in Amelia Josephine Burr's *Life and Living*. It devotes some space, but without much emphasis, to the Great War, its main interests lying elsewhere. Her work is finely conceived, smooth, sonorous, often eloquent, but hardly afire. It is enlightening to note how the one essay at free verse in this volume rises at a bound to a frank vigor not often displayed in her rimed poems.

Duncan Campbell Scott goes back to the War of 1812 for the title poem of *Lundy's Lane*, written from the Canadian point of view and without very much distinction. The other poems are disappointing because they are occasionally so good. Mr. Scott moralizes in a commonplace way; he is generally unlyrical and often prosaic. But he does put on paper a rich outdoor flavor caught from the Canadian wilderness, and now and then he displays a redeeming felicity of imagination.

John G. Neihardt makes a regrouping of poems already published, with some new verses, in *The Quest*. He is at his best in an "Invictus" mood; when he writes of sex he sometimes captures a spacious metaphor, but he is generally wordy and sometimes tawdry. There are several fine prairie pictures in the book, notably in "Prairie Storm Rune."

A still more sectional poet is Robinson Jeffers, who calls his first book *Californians*. But he conveys Californian externals to the reader much more successfuily than Californian people. His poetical methods are those of the early nineteenth century, and as an expression of Western life today the volume is disappointing, tho it contains some fine passages of conventional verse, and constantly studies California's land and seascapes in an interesting and intimate way.

Buffalo Bill is gone and Frederic Remington is dead, but there still remains one exponent of the Wild West in the person of Henry Herbert Knibbs. In *Riders of the Sky* there is not much more than the ordinary run of frontier verse, but the title poem is an amusing addition to the "General Booth Enters Heaven" school of celestial verse, and "The Far and Lonely Hill" makes good use of the vocabulary and imagery of the ranges to serve the purposes of genuine pathos.

Harold Trowbridge Pulsifer won the Garrison Prize at Harvard a few years ago with his "The Conquest of the Air," which still remains one of the best poems on the aeroplane, and its clean

The Man on the Dock

DOWN on a dock at New York, where ships come from afar to discharge their cargoes of crude rubber, is a man with a strange occupation.

He goes from case to bale marking the rubber.

His wonderful skill rejects or accepts the rubber according to its fitness, and the best of it goes to 47 factories of the United States Rubber Company, **the largest rubber manufacturer in the world.**

The man on the dock is the outpost of a scientific organization, a magnificent body of **260 chemists,** engineers and other technically trained men, who, with **841 inspectors,** stand guard over the integrity of the rubber goods made by the United States Rubber Company.

When the rubber moves from dock to factory it meets the advance guard of these men. They sample and test it by the most exacting methods known to the chemistry and physics of rubber. They divide it into classes according to the varying characteristics of its parts. They blend and treat each huge class to make it uniform.

They select and mix these different classes of rubber to get just the combination of desired properties.

This is because each kind of goods made—tires, shoes, garden hose—demands its own peculiar group of specialized characteristics.

As these various products move through the factory, they pass at every step under the keen eyes of inspectors, alert for flaws and faults.

But not yet do they reach the selling force. The finished factory products are tested repeatedly to see that they conform to the quality standard set for strength, elasticity, softness, resistance to wear, and the effect of heat and light. They are run on special machines that in a few hours duplicate the wear and tear of months of use; and finally pass the last ordeal of severe actual service tests.

The consummation of all this skill and care is found in every product you buy under the United States Rubber Company's trade-marks.

From the forest tree to the purchaser, this scientific control shines out in all our enormous production—**all styles of rubber footwear; canvas rubber-soled shoes; weatherproof clothing; tires for automobiles, motor trucks and all other vehicles; druggists' rubber goods, insulated wire; soles and heels; belting, hose, packing, mechanical and moulded rubber goods of every description.**

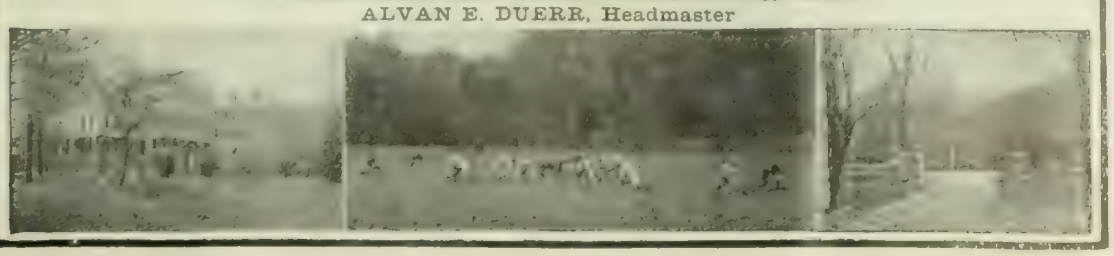
THE PULLMAN COMPANY

Women and children form a large proportion of the passengers of the Pullman Company. The safety of the cars, due to their unusually sturdy construction; the sanitary condition in which they are maintained; the numerous conveniences which their equipment affords, and the courtesy of the Pullman employes are all factors contributing to the increased comfort and enjoyment of railroad travel.

In the Pullman car only a limited number of passengers are accommodated; there is no crowding. Operating over practically every railroad in the country, it is rarely necessary for the passengers to change cars from departure to destination. Both of these conditions contribute to the safety and comfort of unescorted women and children.

For fifty years the Pullman Company has directed its efforts to the determination of the needs of the traveling public, and the development of a service to meet these requirements. That twenty-nine per cent of Pullman conductors and twenty-five per cent of Pullman porters have been in the continuous service of the Company for over ten years indicates the high personnel of the employes by whom the service is rendered.

THE STONE SCHOOL
Cornwall-on-Hudson, Box 5, New York
FIFTIETH YEAR
A School in the Heart of the Open Country. For Boys from 9 to 19.



LOCATION: [illegible] miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted [illegible] and simple out-of-door life.

WORK: Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase [illegible] efficiency. Small classes; A teacher for every six boys.

ATHLETICS: Two [illegible] excellent facilities for all sports, under supervision; hiking, woods life

Visitors welcomed [illegible] and [illegible] for year. Catalog sent on application.

ALVAN E. DUERR, Headmaster

phrasing and vigor make it the best thing he has yet done. Two or three of the poems of motherhood in *Mothers and Men* are sincere and delicate, and show a homely tenderness not very characteristic of our young poets.

Ships in Port, by Lewis Worthington Smith, displays an uneven talent. There is some good lyric verse and several psychological studies of considerable intensity, but they are badly mixed with poorer stuff. The verses often lapse into prosiness and pettiness, even the colorful things that give the book its name and flavor are a little lacking in buoyancy and fervor. But Mr. Smith's power to reconstruct an emotion makes the book distinctive.

Under the title, *Salt Water Poems and Ballads,* Masefield's verse dealing with the sea has been gathered together in one illustrated volume. It is interesting to have in such close juxtaposition the calculated crudities of the Salt Water Ballads and the superb sea-pictures which form parts of The Story of a Round House and other of his longer poems. Only two of the verses have not been published before in book form; neither is equal to his finest work, tho as usual Mr. Masefield phrases beautifully his final description of the vessel in The Ship and Her Makers. The drawings by Mr. Pears, whether in color or black and white, are disappointing.

Perhaps the most extraordinary poem of the year is Conrad Aiken's *Jig of Forslin.* It is announced by the publisher as "a novel of adventure in verse based on the Freudian psychology." The author explains that it treats of "the process of vicarious wish fulfilment by which civilized man enriches his circumscribed life and obtains emotional balance." One might say that its chief fault is that, with those introductions, it is not extraordinary enough. Forslin, who is generic man, passes through a series of emotional adventures borrowed from the lives of other men and women. The adventures are told, for the most part, in brilliant narratives. The intermediary states are not unsuccessfully rendered as dream moods of exceeding vagueness. It is in the synthesis of these elements that the poem fails to be convincing. The author has not quite completed the dramatization of his narratives. They are poignant as stories of other men and women, as dramatic monologs, if you will, but in spite of painstaking efforts on Mr. Aiken's part their vicarious significance in Forslin's life does not really emerge from the fluid mixture.

Anthology of Magazine Verse for 1916, ed. by W. S. Braithwaite. Laurence J. Gomme. $1.50. — *And Other Poets,* by Louis Untermeyer. Henry Holt & Co. $1.25. *Harvest Moon,* by Josephine Preston Peabody. Houghton, Mifflin Company. $1.25. *Life and Living,* by Amelia Josephine Burr. G. H. Doran Company. $1. *Lundy's Lane,* by Duncan Campbell Scott. G. H. Doran Company. $1.25. *The Quest,* by John G. Neihardt, The Macmillan Company. $1.25. *Californias,* by Robinson Jeffers. The Macmillan Company. $1.25. *Riders of the Sky,* by Henry Herbert Knibbs. Houghton, Mifflin Company. $1. *Mothers and Men,* by Harold Trowbridge Pulsifer. Houghton, Mifflin Company. 50 cents. *Ships in Port,* by Lewis Worthington Smith. G. P. Putnam's Sons. $1.25. *Salt Water Poems and Ballads,* by John Masefield. The Macmillan Company. $2. *The Jig of Forslin,* by Conrad Aiken. The Four Seas Company. $1.25.

THE EQUITABLE

LIFE ASSURANCE SOCIETY OF THE U. S.

120 BROADWAY, NEW YORK

The 57th Annual Report of the Society shows substantial gains in all items of essential importance, including an increase in the interest rate, and decreases in the expense and mortality rates.

The New Insurance paid for amounts to $209,706,988.

An increase over the previous year of $51,250,376.

The Outstanding Insurance amounts to $1,607,089,581.

An increase of $77,203,528.

Payments to Policyholders in 1916, $58,915,422.

Total since organization, $1,100,057,839.

ASSETS, December 31st, 1916		$562,381,599
INSURANCE RESERVE		$459,860,621
OTHER LIABILITIES		10,886,279
SURPLUS RESERVES:		
For Distribution to Policyholders in 1917	$16,266,040	
Awaiting apportionment on deferred dividend policies	63,854,448	
For Contingencies	11,514,211	91,634,699
		$562,381,599

In addition to the ordinary forms of life insurance the Equitable makes a specialty of the following:

Insurance to protect business firms and corporations.

Group Insurance, by which employers protect families of employes.

A flexible contract which can be converted by the insured into an Ordinary Life, Limited Payment Life, or Endowment Policy.

A Bond giving the investor an income for his declining years.

A new policy is offered under which the insurance is DOUBLED if death results from ACCIDENT. This policy also embodies the following advantages if the person whose life is insured becomes totally and permanently disabled:

1. Thereafter the Equitable will carry the insurance—The Insured will have nothing further to pay.
2. The Equitable will pay the Insured an annual income for life equal to one-tenth of the face of the policy.
3. Upon the death of the Insured the full amount of the insurance will be paid to the Beneficiary (or double the amount if death is due to accident) without deduction on account of the income paid to the Insured while living.

(See the policy for conditions and details.)

The Annual Report embodying the Financial Statement, verified by Public Accountants, and further details regarding the Equitable's policies will be sent to any address on request.

Fifty Times Better Than a Turkish Bath

When compared with a Turkish bath the Electric Light Bath is fifty times better because you bathe in the light and there are no deprssing after-effects. The Electric Light Bath removes all poisonous wastes from the system and is a wonderful tonic. It is an almost perfect substitute for sunshine. That the Electric Light Bath has nearly all the invigorating, up-building, and life-giving effects of sunshine is proved by the successful use of the electric light in forcing the growth of flowers and plants in greenhouses when there is a scarcity of sunshine.

The noted medical scientists—Winternitz, Kellogg, Pope, Hare, Snow, McIntosh and others—have found from their clinical experience that the Electric Light Bath is the most effective force known for relieving Nervousness, Rheumatism, Bronchial trouble, Indigestion, Kidney and Liver disorders, Anemia, Obesity, Neuralgia, Arteriosclerosis and other ills. It treats these diseases successfully because it removes their causes.

Sunshine and exercise are Nature's healers. The Electric Light Bath gives you the benefits to be derived from exercise and sunshine—and more. You can't take a sun bath any time; but the Electric Light Bath is ready at a turn of the switch.

30 Days FREE Trial

We want you to try the Sanequo Electric Light Bath Cabinet in your home 30 days FREE—without one cent of expense. The Sanequo makes your home a sanitarium—a health resort, less the great expense of going away. Learn more about this new method of healing and preventing disease. Don't suffer a day longer. Resolve that you will get greater joy out of life by getting well and staying well. Ask for our special 30 day FREE offer, right now while the opportunity is before you. Address—

SANITARIUM EQUIPMENT COMPANY, 302 Washington Street, Battle Creek, Mich.

Independent Opinions

In your newest Germano-phobe editorials you seem to be in sympathy, tho you do not expressly state so, with the desire of France to take Alsace-Lorraine from Germany, and you also imply that it would be just to give Schleswig-Holstein back to Denmark, while at the same time lauding the Allies' hypocritical greedy note as "noble" and praising their pretended desire to reconstruct the map of Europe on the basis of nationality. If you would take the trouble to look up Alsace-Lorraine in any encyclopedia, including the Brittanica (I presume this would be considered unbiased toward Germany) you would find that Alsace-Lorraine is and always was 85 per cent German in language and sympathies, and then if you would take the trouble to read history a little you would find that it was "forcibly wrested" from Germany by France partly after the thirty years war, and partially later. Germany had it first, Germany had it last, it is of German nationality and spirit, so that France's desire to get it back is merely greed for power and the lowest kind of revengefulness. There are no two sides to it. Any statement that the French are entitled to those provinces is either hypocrisy or lamentable ignorance. As to Schleswig-Holstein it might also have been well to look up the history of the quarrel. The duchies had revolted before Prussia had ever been involved because of resentment toward the Danes for trying to forcibly introduce the Danish language into Schleswig (Holstein was a member of the German confederation so that it was impossible there.) There is no Danish to be found there (i. e., even Schleswig) except in the most northern belt. "The principle of nationality," then, as the Allies and their American mouthpieces would apply it, means that one per cent of non-Germans in a region have more right than 99 of Germans.

WALTER PETERSEN
Bethany College, Lindsborg, Kansas

The principle of nationality is praiseworthy, and we rejoice to see that the Allies have declared their intention to follow it in settling the territorial questions of the war. But, as we have repeatedly pointed out, it is not the sole consideration, and it is difficult, and in some cases impossible to be carried out strictly. In the Balkans, for instance, three or more distinct and antagonistic races occupy neighboring villages in the same district.

The two cases mentioned by Professor Petersen have been in dispute for half a century, but they have not been settled because no attempt has been made to settle them right, that is, in accordance with the will of the people concerned. As everybody knows, the people of Alsace and Lorraine bitterly resented their annexation in 1871, and they have been restive to the point of revolution ever since. Prussian rule as exemplified in the Zabern incident, was so oppressive that a large part of the German population would have joined with the French in voting to be freed from it. But they never had a chance to vote on the question. We hope they will when the war is over, if there are any of them left.

The Schleswig-Holstein question is

Grow Younger as You Grow Older

Younger in Body, Younger in Spirit, Younger in Ambition, Younger in Every Characteristic that Gives Greater Earning and Living Power, Greater Thought Power, Greater Pleasure Obtaining Power and Greater Health Promoting Power

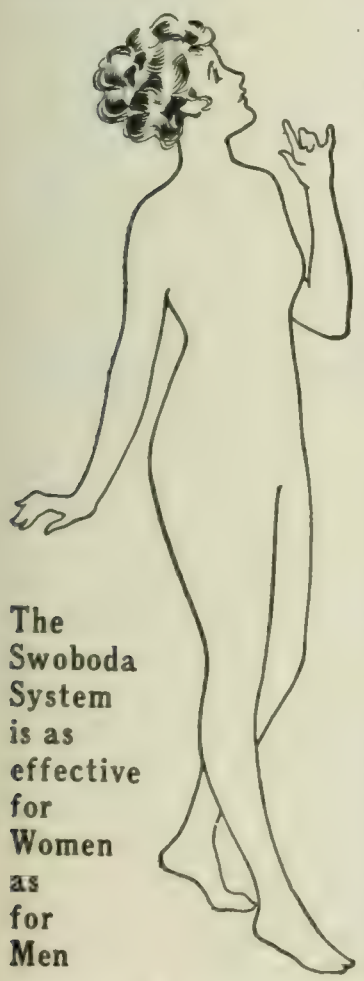
THE number of years a man has lived does not tell how old or young he is. A man is as old or as young as his energy, his vitality, his capacity for work and play, his resisting power against disease and fatigue.

A man is only as old or as young as his memory power, will power, sustained-thought power, personality power, concentration power and brain power. He is only as old or as young as his digestive power, his heart power, his lung power, his kidney power, his liver power. Age is measured by the age of our cells, tissues and organs, and not by the calendar!

Cultivate the Cells

Everybody knows that the body and brain are made up of millions of tiny cells. We can be no younger than those cells are young. We can be no more efficient in any way than those cells are efficient. We can be no more energetic than the combined energy of those cells.

By conscious cultivation of these cells, it is as natural as the law of gravity that we become more efficient, more alive, more energetic, more ambitious, more enthusiastic, more youthful. By consciously developing the cells in our stomachs, we must improve our digestion. By consciously developing the cells in the heart, we must increase its strength in exact proportion. By consciously developing the brain cells, the result can only be multiplied brain power—and so with every organ in the body.



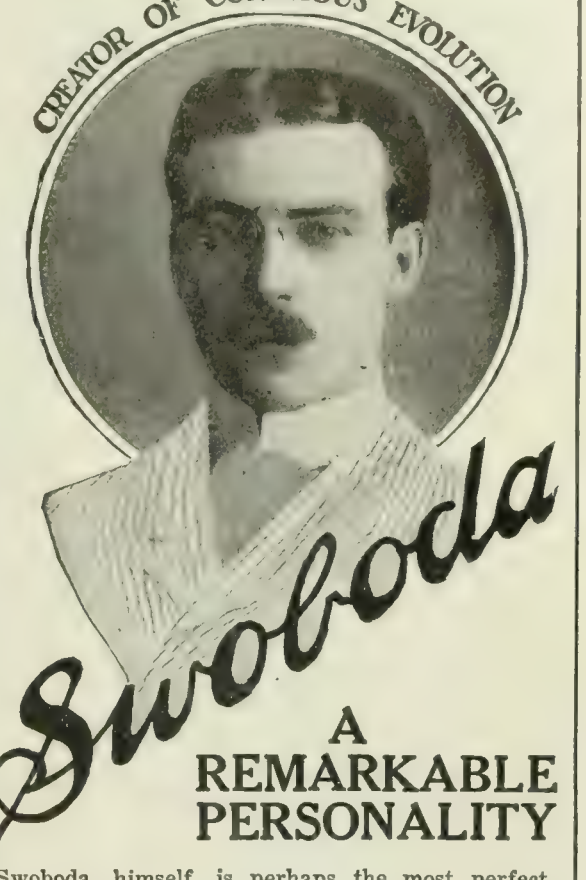
What we are and what we are capable of accomplishing depends entirely and absolutely on the degree of development of our cells. They are the sole controlling factors in us. *We* are only as young and as great and as powerful as *they* are.

There Is No Fraud Like Self-Deception

You may think you are young, strong, brainy, energetic, happy, yet when compared with other men or women, you are old, weak, dull, listless and unhappy. You do not know what you are capable of accomplishing because you have not begun to develop the real vital powers within you. The truth is you are only a dwarf in health and mind when you can easily become a giant through conscious development of every cell, tissue and organ in your body and brain. By accelerating the development of the powers within you, you can actually become younger, as you grow older—yes younger in every way that will contribute to your health, happiness and prosperity.

Conscious Evolution—the Secret

Swoboda proves that Conscious Evolution gives energy and vitality to spare, digestive power to spare, self-reliance to spare, and gives many other desirable characteristics to spare. He proves that Conscious Evolution makes people disease-proof, fatigue-proof. He maintains that to possess sufficient vitality and energy and to keep the body in normal health under the most favorable conditions is no more health prosperity than to have only enough money from day to day to meet current expenses. Great *reserve* health, great *reserve* energy is what we must acquire if we are to successfully nullify the ravages of *time*, and to easily overcome every adverse condition and thus enjoy the benefit of our health power and the advantage of our energy.

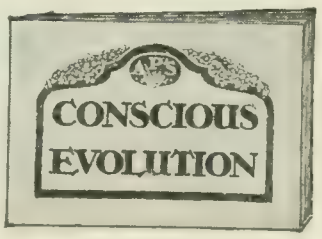


The Swoboda System is as effective for Women as for Men

Beware of Health Poverty

As Swoboda says, "there are individuals who seek work only when their last cent is gone. Likewise, individuals live from minute to minute and from day to day, seeking health and energy only as they need them badly."

Conscious Evolution is for them—for everyone. It is a simple scientific and practical system by means of which every part of the brain and body is energized, strengthened, awakened, so that we become possessed of a super health and mentality—the Swoboda kind of health and mentality. Conscious Evolution makes for good fortune by developing the resources and the ability and power of personality.



Strange as it may seem, this revolutionary method of consciously awakening and developing weakened and lifeless cells requires no drugs, medicines or apparatus of any kind. It does not require dieting, deep breathing, excessive exercising, cold baths, electricity or massage. It takes only a few minutes a day, yet so startling is the effect of Swoboda's system that you begin to feel younger, renewed, revitalized, re-energized after the first day.

A REMARKABLE PERSONALITY

Swoboda, himself, is perhaps the most perfect example of what Conscious Evolution can accomplish. As Swoboda gains in years, he grows younger in enthusiasm, younger in vitality, younger in health; he is becoming stronger, more energetic, more confident, more dominant and more alive by capitalizing his creative powers through Conscious Evolution. What Swoboda is accomplishing for himself, you, too, can accomplish—every individual can accomplish, for every individual is governed by the same laws and principles, and every individual has it within himself to make use of these laws and principles. Swoboda's mind and body are so alert and so active that in his presence one feels completely overpowered. His personality dominates everything with which it comes in contact; yet Swoboda is real—there is absolutely nothing mysterious about him. He knows not what fatigue is—he is a tireless worker. He delights in making sick people well and weak people strong. He loves his work because he feels he is of benefit to humanity—making a better, more vital, more potent race of men and women.

AN AMAZING BOOK FOR YOU

Swoboda has published for distribution a remarkable book which explains his system of Conscious Evolution and what it has already done. Write for this book—not because Conscious Evolution has meant so much to 200,000 other men and women, not because there is scarcely a prominent family in the country that hasn't at least one member a pupil of Swoboda, including Chas. E. Hughes, Rockefeller, the Vanderbilts, the Goulds, the Huntingtons, the Armours, the Cudahys, the Swifts—but write for the book because it means so much to YOU in multiplied living power, earning power and resisting power. It is a big book filled from cover to cover with the vital facts about yourself and how you can acquire the degree of perfection in body and mind that you so much desire. It exposes the dangers of excessive deep breathing, excessive exercise, and excessive muscular development

Regardless of how you may feel, of how efficient you may think you are—regardless of how active, energetic and alert you may consider yourself—regardless of how happy, how contented you may pride yourself on being—regardless of how healthy, wealthy or successful you may be, you cannot afford, in justice to yourself, to miss the interesting and instructive secrets explained for the first time in this startling new book.

A mere reading of "Conscious Evolution" will so fill you with enthusiasm and ambition, that you will not rest until you have yourself acquired the Swoboda kind of health and energy by cultivating and revitalizing intensely every cell, tissue and organ in your own system. Tear out the coupon on this page, write your name and address on it or write a letter or a postal card and mail it today. Even if you gain but one suggestion out of the 60 pages you will have been repaid a thousandfold for having read it. I urge you by all means not to delay, not to say "I'll do it later", but to send NOW, while the matter is on your mind.

Remember, the book is absolutely free for you to keep—there is no charge or obligation now or later. Write NOW. Address

DURAND
Steel Lockers

HERE is a typical installation of Durand Steel Lockers. There is hardly an office, store, school or factory in the United States that would not find such an installation—of the proper size—invaluable.

Durand Steel Lockers are fireproof, convenient, well-ventilated, economical and practically indestructible.

Write us your requirements.

We are also manufacturers of steel shelving, steel bins and general steel factory equipment.

DURAND STEEL LOCKER CO.

1572 Ft. Dearborn Bk. Bldg. Chicago — 972 Vanderbilt Bldg. New York

insoluble from a legal and historical point of view. The last man who was supposed to understand it, died in the nineteenth century. But it can be easily solved by the application of the principle of nationality. By the treaty of Prague Prussia is bound to allow populations of the north of Schleswig to reunite with Denmark "in the event of their expressing a desire so to be by a vote fully exercized." Fifty years have passed since this promise was made, but Prussia has never allowed such a referendum to be held. We hope that some day she will be forced to.

I have been a reader of The Independent for over forty years, so that, when I see you *weakening* on the great crime of Germany, now in full swing, I am filled with sorrow, surprize and disappointment. For instance, you are now saying such things as "let each side say what it is fighting for."

Don't we *know* what *Belgium* is fighting for!—and France, and England? Do you want a peace that will give Germany a chance to again get ready for her frightful swoops? My God, Mr. Editor, is there any question after what we have seen since August, 1914, of the duty of the Allies (as you call them) (and with *our* help, too), of putting an end to this monstrous beast that has done this thing!

T. R. ROBINSON
Pittsburgh, Pennsylvania

One correspondent thinks we are getting more "Germanphobe," another thinks we are "weakening." Thank Heaven, no one calls us neutral. But, anyhow, we are still of the opinion that both sides ought to state their aims and claims more definitely than either has yet done.

No, we don't know what Belgium is fighting for. Is it to free her soil from the invader? If that is all, she could stop any day, for the Germans would be only too glad to get out with whole skins. Is it to obtain an indemnity for the damage done? Germany offered that once formally, and they certainly would be more willing to pay it now than before.

What is France fighting for? Evacuation and indemnity? That is to be had for the asking, for Germany would be delighted to be freed from danger in the west so she could devote her attention to Russia. For Alsace-Lorraine, for Togoland, for Kamerun, for Syria, for Morocco? None of these is named in the Allies' note, yet they are implied or involved in the war settlement.

What is England fighting for? For the freedom of France and Belgium? But that battle has been virtually won. For Egypt, German East Africa, German Southwest Africa, Samoa, Kaiser Wilhelm's Land, lower Mesopotamia? But she already has these. Are England and France fighting to give back Poland to the Czar? So they say in the note of January 10. Are they fighting to give Constantinople to Russia? So states the Russian premier, but the note does not say so. Are they fighting to put an end to Germany, to destroy her political identity, to crush her so she will never again become a great power? They say they are not, and we believe them.

As for Germany, we are still more

—and not a single drop of ink can get out. It's SAFETY-SEALED—escape is completely cut off because there are *no holes in the wall*—it cannot leak when carried flat, upside down—any position

Address

Motor Editor, The Independent
119 West 40th Street, New York

in the dark, since what she has said of her aims is more vague and, in our opinion, less trustworthy. She says she is fighting for the "freedom of the seas," but by the way she sinks passenger ships and neutral merchantmen we do not believe her.

In August, 1914, The Independent declared itself in sympathy with The Allies, and the more we have seen of Germany's methods of warfare and administration the more we have turned against her. We think it quite likely that it may become the duty of the United States to enter the war on the side of the Allies, but before that we hope that they will define their aims more concretely and completely than they have yet done.

Your reference in the editorial on "The Atlantic Gulf" of January 15 to the late Sheriff of Erie County, New York, quoting him as to the attitude of the United States toward those things that differentiate us from the nations of Europe, might I write a few words taking exception to the conclusion drawn in your editorial, namely, that our love of republican institutions and opposition to monarchical institutions, gives the key to the present attitude of the people of the United States toward France.

Where was this great love of the republican form of government when Great Britain destroyed the two Boer Republics, with McKinley receiving Messrs. Wolmarans, Wessels and Fischer at the back door of the White House. Truly there was a lot of sympathy for the Boers, but not among Americans. The meetings addrest by the Boer envoys were attended chiefly by Germans, Irish, or their immediate descendants, Americans were few and far between.

Again. If, as Cleveland stated, we love the republican form so well, why permit "monarchical" Britain to save France, why do we bleed France financially, while Germany is bleeding her physically.

Frankly. We are too complacently selfish, now as in the past, as selfish, no doubt, as any other people would be circumstanced as we are, but selfish nevertheless. It is certainly *not* our love of republican institutions that governs our actions at present, else we would open our factories, our banks, pledge them along with our "sacred honor" and give freely and fully to France.

JOHN MCF. HOWIE

Buffalo, New York

I am unable to agree with our correspondent as to the lack of American sympathy for the Boer republics. It is true we did not go to war with Great Britain on their account, but there was a great deal of sympathy felt and exprest for the Boers. The Democratic Party espoused their cause with enthusiasm and embodied a resolution of sympathy in its platform. Since this platform received the support of half the people of the United States it cannot be called indifference. Besides we must remember that a good many Americans enlisted as individuals to fight against England in behalf of the Boers. Kipling tells a story of one of them. So we think The Independent is quite justified in thinking that if we go into the war against Germany it will be more for sympathy with France than sympathy with England, tho doubtless most of all in our own interests. Of course this would be what our correspondent calls selfishness, but we shall not dispute the term.

Weary Nerves that beg for help

THE stress of overwork and worry has exhausted them—worn them down; they are *starving*.

Let them beg in vain for help, and nervous breakdown will result. But feed them more of their vital foods—albumen and phosphorus—combined in readily assimilable union, as in Sanatogen, and you will indeed be delighted to note how intensively they are built up, and how quickly they impart renewed vitality to the whole system.

At least such have been the recorded observations of thousands of physicians and of countless users of Sanatogen, among them Arnold Bennett, the novelist, who writes:

"The tonic effect of Sanatogen on me is simply wonderful."

and of Col. Henry Watterson, the noted editor, who writes:

"I do not believe I could have recovered my vitality, as I have done, without Sanatogen operating equally upon the digestive organs and nerve centers."

Give Sanatogen the chance *today* to help your weary nerves.

Sanatogen is sold by good druggists everywhere, in three sizes, from $1.00 up.

Grand Prize, International Congress of Medicine, London, 1913.

—FREE SAMPLE OFFER—

On request we will send a 25-gram Sample Package of Sanatogen, also Richard Le Gallienne's booklet, "The Art of Living," telling of Sanatogen's kindly help. Address The Bauer Chemical Co., 26 R Irving Place, N. Y.

What 15c WILL BRING You FROM THE Nation's Capital The little matter of **15c** in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only **15c** to show that you might like such a paper, and we will send it on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box 38, Washington, D. C.**

MR. PURINTON'S EFFICIENCY QUESTION BOX

395. A Reader from Connecticut. "Having in charge a boy of sixteen, I fail to awake in him any ambition either for school or for other work. Tho he is not disobedient and reads quite a bit he is determined to have his own way and take his own time. Can you see any way to reach him, and stir his ambition?"

He reads much—*what* does he read? Here is your first clue. Find the great men he admires most, get their biographies, talk over their lives with him, see if he won't be moved to attempt big things where his heart interest lies. Encourage him to advance in any line where he *naturally excels*—no matter what; a good blacksmith is a greater man than a poor teacher, minister or merchant. Locate his chief talent or affection, make it the motive for study or action, keep it always to the front—and your lazy boy is likely to become a leader!

Obtain *The American Boy* from Sprague Publishing Company, Detroit, Michigan. Study it yourself; answer advertisements that might appeal to your boy; let him read the magazine, watch how he responds, act accordingly. Get vocational guidance books from Efficiency Publishing Company, Woolworth Bldg., New York; apply to your boy's career.

396. Mrs. L. V. S., New York. "For a number of years I have been ailing with nervous and digestive troubles. Medicines do not seem to help, tho doctor says nothing is organically wrong. One of my friends was greatly benefited by a course in physical culture, and wishes me to try some good system. (a) Please give addresses of any women specialists giving mail courses for women. (b) What books would help me to build up my health?"

(a) Such a course is offered by Susanna Cocroft, Michigan Boulevard, Chicago; and another by Annette Kellermann, 12 West Thirty-first Street, New York.

(b) Without knowing your condition more fully, we hesitate to advise. These books, however, should give suggestions of value: "Exercizes for Women," by Florence Bolton (price $1.00); "The Home Life in Order," by Dr. Alfred T. Schofield (price $1.50); "Power and Beauty of Superb Womanhood," by Bernarr Macfadden (price $1.00); "New Methods in Health Culture," by Dr. E. B. Lowry (price $1.00). These books may be had from Efficiency Publishing Company, Woolworth Bldg., New York.

397. An Enthusiastic Correspondent. "I have read your articles with great interest. I wish to know something of the demand in cities and towns for special teachers of nature study—wild flowers and birds in particular. (a) What is the situation financially? (b) What course should I follow to prepare myself for work of this kind? With a college degree, experience in teaching English, and a passionate love for nature, I believe I could reach the children of all grades."

(a) Field is limited, demand slight, financial reward uncertain. You might rather become a teacher of botany or other branch of nature study; a writer of special articles and books; a leader in some such national organization as the Camp Fire Girls of America, 461 Fourth avenue, New York, or the Woodcraft League founded by Ernest Seton Thompson, at Greenwich, Connecticut. As an independent teacher or lecturer, you would probably fail; but as an organizer, or other official of an established society, you would have a good chance to succeed.

(b) Write for literature and advice to Elliott R. Downing, Secretary American Nature Study Society and Editor *Nature Study Review*, care University of Chicago; to John H. Sage, Secretary American Ornithologists' Union, Portland, Connecticut; to Bradley M. Davis, Secretary American Society of Naturalists, care University of Pennsylvania, Philadelphia.

398. Mr. C. F., Virginia. "Please give me a list of the best periodicals useful to the following businesses: (a) Grocery; (b) Delicatessen; (c) Soda Fountain and Confectionery."

(a) *American Grocer*, 90 West Broadway; *National Food Magazine*, 45 West Thirty-fourth

street; *Producers' Price Current*, 175 Chambers street; *Good Storekeeping*, 119 West Fortieth street; *Produce Bulletin*, 97 Warren street; *Produce News*, 6 Harrison street; *Retail Grocers' Advocate*, 47 Watts street; *National Provisioner*, 116 Nassau street; *Grocer's Guide*, 89 Delancey street; all of New York.

(b) See reply to (a), a delicatessen store being only a modified grocery.

(c) *American Bottler*, 218 East Thirty-seventh street; *Confectioners' Gazette*, 366 Broadway; *Soda Fountain Journal*, 3 Park Place; all of New York.

---

399. Prof. A. R. B., Pennsylvania. "I am a teacher in a secondary school, and am asked to help choose a large number of new books for the school library, the purchase of which has been made possible by a donation to the school. (a) Can you refer me to a bibliography adapted to our needs? (b) Will you name the general subjects that we ought to cover in our list, for an efficient students' library?"

(a) Write the Commissioner of Education, Washington, D. C., for the U. S. Bureau of Education 1913 Bulletin No. 35 (whole number 545), entitled "A List of Books Suited to a High School Library." See also inside front cover of The Independent for August 14, 1916, where another list of good books for general reading was published.

(b) History and biography; science and mathematics; poetry and romance; ethics and philosophy; travel and folk-lore; invention and discovery; language and literature; business and commerce; manual training and domestic science; character analysis and vocational guidance; thrift and finance; home hygiene and personal efficiency; practical psychology and public speaking; games and athletics; social service and good citizenship; community welfare and scientific statecraft; boys' and girls' clubs.

---

400. Miss E. H., Pennsylvania. "It is my ambition to enter the nature cure movement by becoming a trained nurse in one of the institutions of drugless healing. I have been undergoing a living death from lack of a life work for six years, because I would not fall into that universal occupation for genteel women—school teaching, and because I am considered too delicate for nursing. However, strength was never gained except by the using. Can you suggest broad and sane institutions that offer a free, or exchange course of instruction for nurses?"

Ask Dr. Benedict Lust, President American Naturopathic Association, 110 East Forty-first Street, New York, regarding such possibilities. We personally believe that the old-fashioned system of training for nurses, while it overemphasizes drugs and neglects hygiene and psychology, forms a better basis for a nurse's life work than the crude and lax regime at the typical drugless resort. Consult Editor *Trained Nurse*, 38 West Thirty-second Street, New York, about schools and opportunities.

Have you considered other avenues in the health field? You might become a dietitian; a metaphysician; a household engineer; a secretary to a writer, a publisher, or a manufacturer; a social service worker; a special investigator for health boards and laboratories.

---

453. Miss E. B. J., Arizona. "Next year will be the third year of work in Home Economics done in our Woman's Club, and we hope to make it the best one yet. We would like to find some good course that we could take and carefully follow. Can you name such a course, or outline a program for study, or make other suggestions? Thank you very much."

The New York State College of Agriculture at Cornell University, Ithaca, New York, publishes a pamphlet on "Programs for Study Clubs in Home Economics" (Volume V, number 99); and the Extension Department of the College of Agriculture of your own State University would probably supply you with valuable material.

Write also for publications of the U. S. Department of Agriculture, Washington, D. C., of the American Home Economics' Association, Station N, Baltimore, Maryland; of the American School of Home Economics, Sixty-ninth Street, Chicago; of the Teachers College, Columbia University, New York; of the Housewives League, 25 West Forty-fifth Street, New York; of the Housekeepers National Alliance, Washington, D. C.

You should have a number of modern books on household engineering, for study and reference. Obtain list from Efficiency Publishing Company, Woolworth Bldg., New York.

WASHROOM IN THE PLANT OF THE NATIONAL ACME CO. CLEVELAND, O.

Compare these Factory Washrooms

"Standard" Plumbing Fixtures Make the Difference—In Appearance and Efficiency

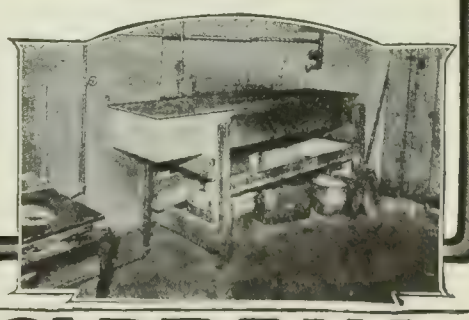
EVERY factory or other institution with plumbing conditions like those shown below is *losing money* because of the decreased human efficiency caused by such a state of affairs. Every concern with the clean, wholesome conditions created by a "Standard" installation like the one shown above is *adding to its profits*—to say nothing of the satisfaction in having such sanitary surroundings in a place where many people are employed.

How about *your* plumbing problems? Are your employes better for themselves—and better for *you*—as a result of modern, sanitary conditions in washrooms, etc.?

If not, you need our book on "Factory Sanitation"—with its helpful advice and illustrations. It is an able treatise, by men who know, and is sent free on request.

Then we have service men in most of the manufacturing centers who will be glad to discuss the question of good plumbing with you.

Write for book—call for a service man—and see "Standard" fixtures at any showroom listed herewith.



Standard Sanitary Mfg. Co.
Dept. FM Pittsburgh, Pa.

"Standard" Plumbing Fixtures for the Home

represent the complete, up-to-date line for Bathroom, Kitchen and Laundry. They have been *standard* for more than a generation. Their supremacy in the plumbing field is the result of experience, service and quality. Talk to your plumber about "Standard". Insist upon this proved, time-tried brand. Look for the Green and Gold label. If interested in plumbing fixtures for domestic use, write for free copy of "'Standard" Plumbing Fixtures for the Home," also new Sink booklet.

Bran Will Delight You

It is Nature's laxative.

It makes for joy and fitness.

It ends the need for drugs, and saves many a dull day.

In Pettijohn's it comes in luscious form, so the dish itself is delightful.

A dish a day will in one week convert you. You will never again omit bran.

Prove that this week.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only.

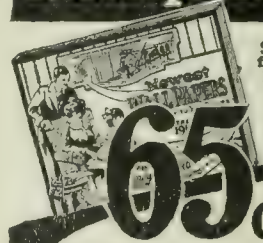
NARROW STOCK MARKET

On the New York Stock Exchange, the great activity caused by the publication, on the first day of the month, of Germany's plans for lawless submarine warfare, and by the dismissal of Am-Ambassador von Bernstoff a few days later, has been followed by days of extreme dulness. The 12th was a holiday. On the 13th, in a narrow market, there was an average net gain. Many who had been accustomed to trade declined to do so, being unable to form definite opinions as to the effect of a declaration of war upon share values. Others believed that prices would advance if this country should be drawn into the great conflict. The price of the Anglo-French loan bonds fell to 90⅝. Attention was directed to the statement of the British Chancellor of the Exchequer, on the preceding day, showing that Great Britain's war expenses had risen to $28,950,000 a day from about $25,000,000 one year ago. Part of the increase has been due to the higher cost of supplies. Nearly one-sixth of the day's business was done in steel shares, but their gain of one point was surpassed by the advances credited to a majority of the railroad stocks. The number of shares that changed hands on the 14th, 289,-950, was the smallest recorded in six months, and the movement was downward. As a rule, however, the net losses were small. Carranza's suggestion, in his reply to President Wilson's note, that neutral nations should prohibit the shipment of supplies to the belligerents, depressed the Mexican Oil Company's stock, which lost nearly four points. Oil fuel for the British navy is going from Mexican oil wells at the rate of 80,000 barrels a week. Some were saying that Carranza might forbid the shipment of this petroleum. Shares of the Cuba-American Sugar Company declined on account of the revolutionary disturbance on the island. New rumors about the New Haven Railroad Company's financial condition reduced the price of its stock to 37½. Average losses were a little less than the preceding day's gains.

Again, on the 15th, very little business was done, and the decline continued. The prevailing belief appeared to be that war could not be avoided. But price reductions were small. On Friday, the 16th, the market was still a narrow one, but there was no weak-



Diet and Indigestion

Indigestion, constipation and the ills to which they lead cause more deaths than war, pestilence and famine *combined.* Yet—these ills, and the pain and suffering they cause, are *needless.* This is fully explained in a new book called "Colon Hygiene," written by Dr. John Harvey Kellogg, Chief Medical Director of the Battle Creek Sanitarium and a recognized authority on the effect of diet on digestion. In his book, Dr. Kellogg tells you how to take care of yourself so as to avoid indigestion, constipation and the ills to which they lead. Only natural methods recommended. No drugs. Some diet restrictions, *if you need them,* but—nothing difficult. A little exercise but—no tiresome regime. Proper attention to hours for rest, sleep, recreation and work. These are the important items. In his book, Dr. Kellogg gives you full instructions. If you would be rid of indigestion, constipation and the ills to which they lead, send for this book today. The price is only $2. And—you take no risk for, if you are not entirely satisfied, the book may be returned at the end of five days, and we will promptly refund your money. Thus, we let you be the judge of this book. Over 400 pages, with many illustrations. Write for it today. Find out, at our expense, whether it can help you. Send your order direct to—

ness, and in the afternoon an upward movement was led by the copper shares. Sales of the metal had been made at 36½ cents a pound. The war news was comparatively favorable, including Germany's release of the Yarrowdale prisoners. But an "overt act" was expected. Some thought that it might be the sinking of the two freighters whose recent departure from New York with the intention of reaching Bordeaux was characterized by a prominent newspaper in Germany as a "wicked tempting of God." Anglo-French bonds rose to 92. Changes affecting railroad shares one way or the other were fractional. The companies would lose something, it was said, on account of congestion, car shortage, and embargoes. Below are shown the totals for the week's four full days of exceptional inactivity:

	Steel	Total
Tuesday, 13th.....	56.200	386.670
Wednesday	35.100	289.950
Thursday	48.900	291.455
Friday	54,150	328,150

A few months ago there was a long series of million-share days, and on Saturday, the 3d, nearly 1,000,000 were sold in the short business day of two hours.

STEEL AND COPPER

In the steel industry the demand continues with unabated force, and prices are still rising. Buyers are paying $8.25 a box for tin plate, which is almost three times the rate prevailing before the war. They fear that submarines will check the movement of the metal to this country from the Indian Ocean. The average price of eight leading steel products is $78.27 a ton, the highest ever known, and last week's addition was $1.40. Because products recently exported were to fill orders placed at $20 a ton below this average, it is predicted that the Steel Corporation's net earnings for the first and second quarters of the present year will largely exceed even those of the December quarter, which broke all records.

The submarine war has greatly increased the cost of ocean transportation, even when a carrier can be found. A Norwegian buyer, after paying $26 a ton for 4000 tons of iron, was discouraged when he ascertained that freight charges and insurance would be $64 a ton. But foreign governments pay prices and charges because they must have the metal. Last week 70,000 tons of iron were taken for Italy. Recent sales of shell steel to the Allies amount to 300,000 tons, and 500,000 tons more are wanted. The foreign demand for ship plates is so great that manufacturers have been able to accept not more than half of the offers. Orders on hand are said to cover capacity until the end of next year. Prices paid now are from 6 to 6½ cents a pound. At the beginning of the war the price was 2¼ cents. There are foreign inquiries for 250,000 tons. Great advances are seen in the cost of some things which the manufacturers must buy. The price of ferro-manganese has

THIS Cut Coal Cost $50.00 HERE

With a great deal more Comfort into the Bargain!

Open space all around this big 10 room house. And in a part of the country where the mercury tries to drop clear through the glass in winter. Makes no difference to the Williamson UNDERFEED, though. A fifty dollar coal-saving and more comfort in spite of it all. Read the letter:

"Mine is a ten-room house, and always cost me over $100 to heat with the old boiler. This winter cost $50 with the UNDERFEED, and we had a great deal more comfort, 72 or over in the coldest weather. A fuel saver, time saver and dirt saver."
(Signed) DR. W. J. MORGAN, Mineral Point, Wis.

WILLIAMSON UNDERFEED Furnaces Boilers

Cut Coal Bills ½ to ⅔ Guaranteed

Please let this fact sink in: A ½ to ⅔ saving in coal cost is actually guaranteed with the Williamson UNDERFEED, whether you heat with warm air, hot water, steam or vapor.

That is partly because the UNDERFEED burns the cheaper grades of coal as effectively as others burn the costlier grades. That's a big saving at the very outset—money you save by keeping it in your pocket. Another reason is the scientific principle of combustion. In the UNDERFEED coal is fed from below. The hot, clean fire is always on top—never smothered or chilled by fresh coal being dumped on. All smoke, soot and gas must pass up through the fire and so be transformed into clean, usable, effective heat.

No waste whatever. No clinkers. No partly burned coal. No soot-encrusted pipes.

Money-Saving Book Free

And a boy of twelve can operate the UNDERFEED successfully. No stooping. All done from a standing position.

There's an interesting book "From Overfed to UNDERFEED" which pictures and describes it all. Free for the asking. Simply send coupon. It will save you many a dollar when you come to install that new heating system. Remember, ½ to ⅔ coal cost actually guaranteed with a Williamson Underfeed. Send the coupon, now.

risen from $175 in December to $275, and orders for delivery in June can be placed at $350. There has been an extraordinary upward movement in the cost of the material used in lining furnaces. Cold weather, car shortage, and insufficient supplies of coke have recently affected the output, and 25 per cent of the productive capacity in the Central West has been idle. For want of coke, thirty of the Steel Corporation's furnaces were banked.

Copper has been sold at 36½ cents, the highest price in forty-five years. Two cents a pound were added last week. Large producers have disposed of their output until July.

CONGESTION OF TRAFFIC

Railway traffic congestion, the cause of much inconvenience and many complaints before February 1, has been intensified by the submarine warfare, which checks or retards the export movement and has compelled an accumulation of products at Eastern ports, where they await shipment to Europe. At these ports or near them are 50,000 loaded cars, many thousand in the same condition are held at points on the lines between the coast and the upper Mississippi, and 50,000,000 bushels of grain are tied up in Chicago's elevators. Factories in the interior cannot move their finished goods or get the raw material they need. Outputs of iron and steel have been restricted by lack of sufficient coal and coke. Demand has exceeded the capacity of railroad companies, whose orders for new cars can be filled only after long delay, although before-the-war prices have been doubled. For some time past, embargoes have prevented the transportation of anything except perishable commodities, live stock and fuel. Goods to be exported are not carried unless there is proof that ship room has been engaged and is waiting for them. On the 15th, representatives of thirty prominent railroads at a meeting in Washington agreed upon plans that will give some relief. There are to be two trains daily of fifty cars bearing flour from Minnesota to New England, New York and Philadelphia; loaded cars will be released if possible, and empty ones will be distributed. Additions to the piles of merchandise waiting for ships at Eastern ports will not be made. The problem is a very difficult one, but some improvement of conditions may reasonably be expected.

ARMY SUPPLIES

The only new foreign war order not related to the steel trade that excites interest is one from the French Government for 20,000 horses. It was placed at St. Louis a few days ago. Many contracts, suggested by present international relations and the contingencies that must be taken into account, are soon to be made by our own Government. About 10,000,000 yards of cloth will be bought, the purpose being to provide enough army clothing for at least 300,000 men. Advertisements for proposals, it is said, have been prepared.

REMARKABLE REMARKS

DAVID LLOYD-GEORGE—The war must be brought to a finish.

EDWARD BOK—A wife is either a husband's equal or his superior.

J. OGDEN ARMOUR—Enthusiasm is the dynamics of your personality.

PROF. JEREMIAH W. JENKS—The Chinese people are not too proud to fight.

SAMUEL HOPKINS ADAMS—An advertisement is known by the company it keeps.

DR. JOHN R. WIGHTMAN—I never quote poetry unless I'm shining my shoes.

GOVERNOR WILLIS—The people and business of Ohio are being inspected to death.

DR. GEORGE E. VINCENT—Idiots and children are the only ones you can hypnotize.

GEORG BRANDES—It is as a rule a curse for an author to be born in a small country.

SECRETARY LANSING—We must cease measuring accomplishments by dollars and cents.

PROF. WILLIAM HAMMOND PARKER—No great work can be done by any man who is isolated.

DR. S. H. WADE—I have always considered Romeo a very poor specimen of a young man.

CONGRESSMAN C. H. RANDALL—I would rather control the Rules Committee than be President.

BILLY SUNDAY—I'm sick and tired of hearing Christ called a dough-face and mollycoddle.

W. H. TAFT—The President feels that he is watched, rather than guarded, by secret service men.

LILLIAN RUSSELL—The day will likely come when the breakfast bell will sound from a music box.

DR. MAX NORDAU—No conclusion as to a war-like or peaceful future is to be drawn from the present world war.

EX-PREMIER ASQUITH—A notion that the struggle is about to come to a squalid end—a stalemate—is a mere dream.

FRANK GAMERL—If a salesman steals for you now—he'll steal from you later. If he lies for you now, he'll lie to you later.

DR. ANNA C. BLOUT—A Vassar graduate has an average of one-half a daughter and a Harvard graduate two-thirds of a son.

PRESIDENT A. C. BEDFORD—I am sincere when I say that the Standard Oil Company was founded on high moral principles.

CHARLES M. SCHWAB—If the college man thinks that his college education gives him a higher social status, he is riding for a fall.

PROF. ALBERT BUSHNELL HART—Please, Mr. President, in this time of national apprehension and tension be a little more human.

CHANCELLOR SAMUEL B. MCCORMICK—We shall welcome with gratitude all national fraternities into the University of Pittsburgh.

JUDGE C. D. FRIEBOLIN—Whenever a propaganda is started. I always look about to see how many are looking for the job of secretary.

JOHN KENDRICK BANGS—There are two undesirable classes in this country, one, what is known as the "400," and the other the I. W. W.

REV. CHARLES A. EATON—We would put Jesus Christ out of most of our churches, Catholic and Protestant, if he were to appear here today.

LADY DUFF-GORDON—Have you noticed how funny a costly diadem of supreme loveliness can look on a fat, middle-aged woman after a ragging fox trot?

NICHOLAS MURRAY BUTLER—I know positively that in one British port there are eighty-five captured submarines and the "Deutschland" is among them.

"Acceptances"

A big progressive step in Commerce and Banking

AMERICAN business men and bankers are rapidly increasing the use of this valuable instrument for financing trade, which is simply the buyer's acknowledgment of the correctness of an invoice with the agreement to pay for the goods at a stated time.

The use of the acceptance strengthens the credit of the buyer, enables him to buy to better advantage, systematizes his purchases and payments. For the seller, it reduces the burden and loss of the complicated and unproven open account. To the bank, it provides approved commercial paper. It turns the buyer's credit and the seller's wares into immediate money.

New and profitable business opportunities are now opened by this new line of financing for the banker, the business man, and the investor.

The general use of the acceptance in the United States had its actual beginning shortly after the outbreak of the European war. At that time, under the New York State Banking Law, the Guaranty Trust Company was the only institution in New York accepting sterling drafts payable at a future date.

How the American market for acceptances is being built up; why the acceptance is a readily-negotiable credit instrument, and why it is a sound, circulating medium of finance, commanding a low interest rate, is told in our descriptive booklet entitled, "Acceptances," which will be sent to any address upon request.

W. E. UNDERWOOD

AS TO GERMAN COMPANIES

In view of the fragile political relations now existing between the United States and Germany, it is only proper to reassure such of our readers as hold policies in German companies.

Before doing that, it is necessary they be warned against confusing American companies with German names — such as the German-American Insurance Company, the Germania Life Insurance Company, etc. — with companies, the domiciles of which are in Germany. There are a score or more of fire and life insurance companies organized under the laws of various American states by persons of German birth or origin which are as fully American as any other domestic companies, and their names should not serve to confound them with those coming from abroad.

Consulting the report of the New York Insurance Department I find the following fire insurance companies which are native to Germany: Aachen and Munich of Aix-la-Chappelle, *Cologne Reinsurance Company of Cologne, *Frankona Reinsurance Company of Frankfort-on-the-Main, *Hamburg Assurance Company of Hamburg, Hamburg-Bremen Fire Insurance Company of Hamburg, *Minerva Retrocession and Reinsurance Company of Cologne, *Munich Reinsurance Company of Munich, Nord-Deutsche Insurance Company of Hamburg, Prussian National of Stettin, *South German Reinsurance Company of Munich.

Doing a life business are the *Prussian Life Insurance Stock Company of Berlin and the *Mercury Reinsurance Company of Cologne. The only German company transacting a casualty and miscellaneous insurance business is the Frankfort General Insurance Company of Frankfort-on-the-Main.

The companies starred (*) do a reinsurance business; that is, all their transactions are with other insurance companies and not with the people.

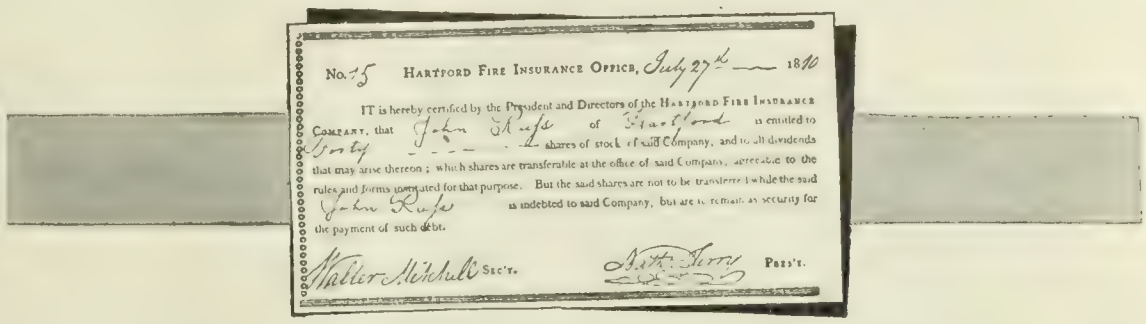
Now, just one more point. All foreign insurance companies operating in the United States must, and all do, maintain a deposit, usually $200,000, with the Insurance Department of the State in which they are entered. This corresponds with the capital of domestic companies. Some of them, in addition, are compelled to lodge a certain proportion of their assets with a board of American trustees. All the assets of the United States branches of foreign companies are under the jurisdiction of the Insurance Departments of the states in which the companies are entered, and may not be taken out without the approval of those officials. So, if we have trouble with Germany I apprehend

none between German companies and Americans holding their policies. Unless, I may add, Germany ingenuity is equal to getting their funds out in a way not yet suspected.

LIFE INSURANCE STOCK

A reader sends me an advertisement offering the stock of the Equity Life Insurance Company of Great Falls, Montana—a new organization—with the request that I comment on it. Let us examine the proposition. The capital is to be $500,000, divided into 10,000 shares of $50 each. There is nothing in the advertisement to indicate that the stock is to be sold at a premium. If that is so, no surplus is to be provided. Without a surplus at the beginning, the expense of organizing and creating a business will fall on the capital, which, at the end of the first year, will be seriously impaired. If a surplus is designed, the advertisement should name the price above par the promoters want for the stock.

The statement is also made that the company's expenses will be small; that life insurance will be written at "lower premium rates"; and that the intention is to accummulate a large sum of money to be loaned to members on a strictly six per cent basis. There is no substance in these representations. Business will have to be fought for in the competitive field, in which a new untried company is at a great disadvantage. Expenses cannot possibly be lower than those incurred by the big established companies; they would naturally be higher, for the policies of a new company are harder to sell than those of the old ones. Premium rates cannot possibly be lower, and the annual net cost to policyholders must be higher.



One representation made in the advertisement should receive attention. It is this:

"There is no class of securities which offers to the investing public such absolute safety of capital and large profit earning possibilities as life insurance stock. The law protects the capital invested, and with strong hands shields the interests of all."

This is an exaggeration. Between January 1, 1910, and May 15, 1916, according to *Best's Life Insurance Reports*, a dependable authority, ninety old line life insurance companies, none of them probably over ten years old, either failed or retired from business. Upon the faith of another recent authority, which I cannot now recall, investors in the stocks of new life insurance companies have lost since 1906 a sum approximating $50,000,000. The law affords no special protection, whatever, to stockholders; on the contrary, it makes the capital a pledge for all the debts of the company, especially all obligations to policyholders.

And yet I do not say that this, or any other new company, may not make a place for itself; altho the field is now overcrowded. Candor requires me to say that I do not regard such an investment in any light other than as a speculation.

Family holds Hartford Stock 107 Years

No. 15 HARTFORD FIRE INSURANCE OFFICE, July 27th 1810

IT is hereby certified by the President and Directors of the HARTFORD FIRE INSURANCE COMPANY, that John Russ of Hartford is entitled to Sixty shares of stock of said Company, and to all dividends that may arise thereon; which shares are transferable at the office of said Company, agreeable to the rules and forms constituted for that purpose. But the said shares are not to be transferred while the said John Russ is indebted to said Company, but are to remain as security for the payment of such debt.

Walter Mitchell SEC'Y. Pres't.

The stock originally issued in 1810 to John Russ, one of the founders of the Hartford Fire Insurance Company, of Hartford, Conn., has never been sold. It has been transferred by inheritance only, and is now held by his direct descendants in the fourth generation. In like manner the Hartford's traditions of financial strength and integrity have been handed down from generation to generation. Frequently the biggest inheritance a father leaves to his son is the right to represent the

INSURANCE *Service* OF THE TWO HARTFORDS

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life insurance. For over a century Hartford losses have been promptly and fairly paid in ever increasing amounts. Robert Fulton was experimenting with his first steamboat, the *Clermont*, when the Hartford began to write insurance. From that day to this its growth has kept pace with the wonderful development of the country's trade and commerce.

Are you fully insured? Look over the list below and check the forms of insurance which interest you. Ask your agent or broker to get you a Hartford policy, or write to us and we will tell you the name and address of an agent who can give you rates and particulars.

The Hartford Fire Insurance Co.
The Hartford Accident and Indemnity Co.

Hartford Fire Insurance Company, (Service Department 1-2), 125 Trumbull Street, Hartford, Conn.

Gentlemen: Please send information on the kind of insurance checked and name of Hartford agent to the name and address written on margin of this coupon.

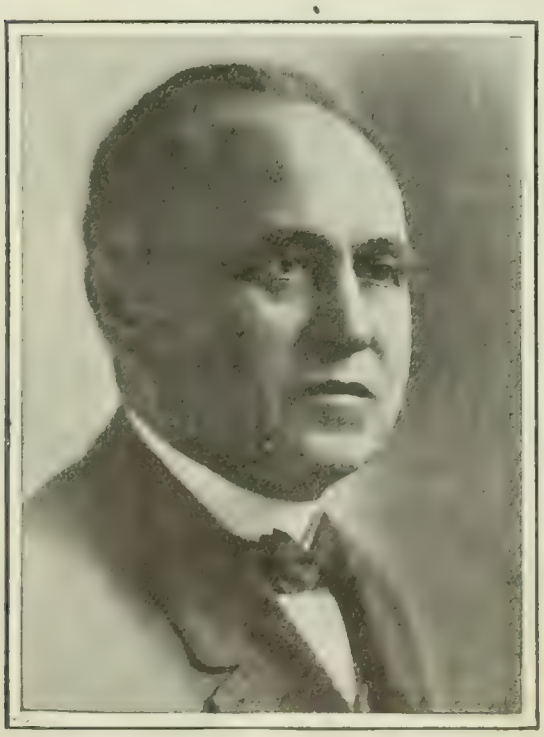
THE CHAUTAUQUA OF THE SOUTH

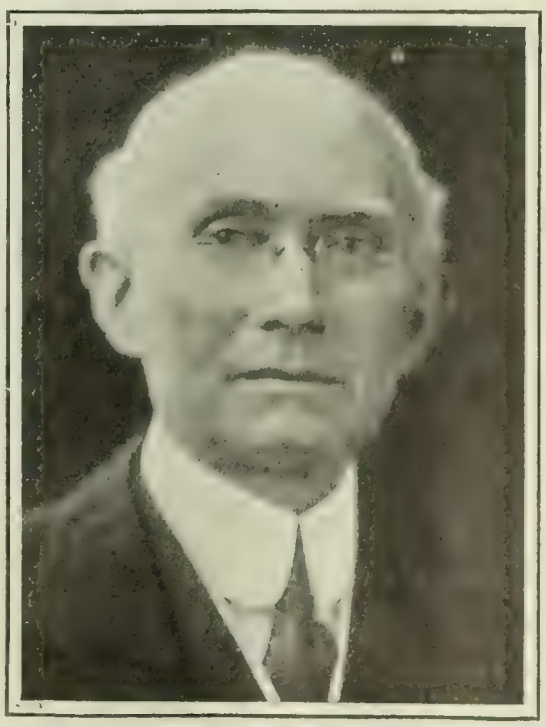
BY JUSTICE WILLIAM L. RANSOM

TRUSTEE OF CHAUTAUQUA INSTITUTION AND OF THE CHAUTAUQUA OF THE SOUTH

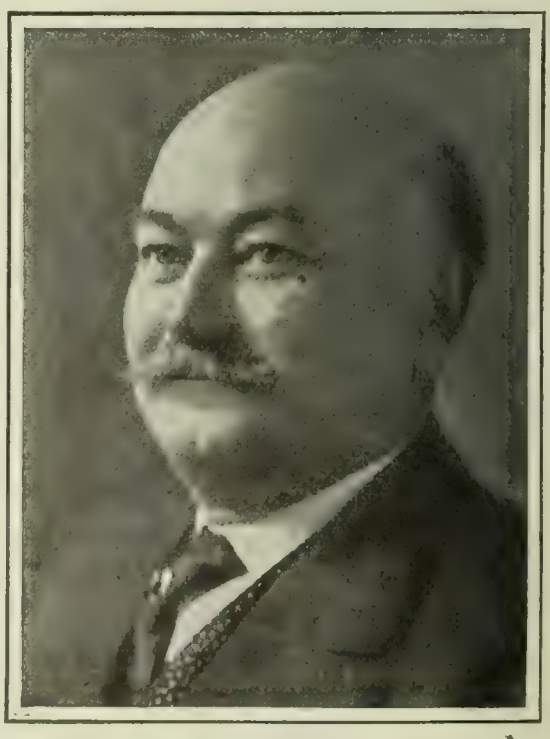
THE founding of "The Chautauqua of the South," at Macon, Georgia, has a nation-wide as well as sectional significance. To the State of Georgia and to the Southland, it means the establishment of a great rendezvous for its intellectual, social, industrial and civic life. To this center will be brought each winter the leaders of constructive enterprise and the country's foremost exponents of forward-looking thought on public questions. From this meeting point will also radiate, thruout the year, an organized impetus to study and discussion in countless community centers thruout the South. Thru the instrumentality of the Home Reading Course of the Chautauqua Literary and Scientific Circle, the accessory use of The Independent, and direct counsel afforded from the Macon office, it is planned to give a basis for all-the-year-round efforts in behalf of the constructive proposals threshed out in the winter conferences. By bringing to Macon the best there is in American music, art, science, religious guidance, industrial experience and political leadership, it is hoped to make "The Chautauqua of the South" mean to that section all that the parent Chautauqua Institution, during its forty-three years of activity, has meant to the nation.



The new civic and cultural center has been brought into being through the coöperation of two great educational organizations—Chautauqua Institution and the Southern Conference for Education and Industry. Each of these organizations has already demonstrated, over a period of years, its capacity for disinterested leadership and genuine service to democratic education. Their joining of hands in this project is thus believed to have a meaning and importance for the nation. The Southern Conference for Education and Industry has, for years, been bringing together many of the most progressive elements in the industrial and educational life of that part of the country. In the annual sessions of the conference, concrete problems of education, agriculture, country life, commerce and industry have been courageously and open-mindedly dealt with by the best experts available, and a program for the work of the ensuing year has been thereby evolved, to be carried out by the various affiliated bodies. It is the plan of the Southern Conference to hold its sessions hereafter upon the assembly-grounds of the new institution, and to give to those sessions the broader influence made possible by this affiliation.



For forty years Chautauqua has been the synonym for the most advanced movements in popular education and the development of public opinion for discriminating political action; it has given its own name as a new word, not only to the English language, but thru its extension in England, Russia, Japan and other foreign countries, really to World thought—a significant addition to the vocabulary of democracy; it has continued the prototype of assemblies and "circuits" thruout the world, each devoted in some measure to educational, political, social or cultural advance; yet, contrary to an impression sometimes encountered, the parent Chautauqua has never organized circuits or subsidiaries.



Now the parent Chautauqua has joined with the Southern Conference in founding a significant new institution at Macon. This timely combination of a great national instrumentality for popular education with the most potent educational force in the South, ought to mean much in the development of American education.

"The Chautauqua Idea" of a great, fearless forum, devoted to no particular propaganda, free from any suspicion of partizan or class antagonism, open impartially to all whose experience and authoritativeness of statement entitle them to speak, has been in many states the forerunner of a new and better political and industrial régime. What Chautauqua Institution has thus accomplished in northern and western areas, it is hoped will be achieved now in the South, thru the sessions held in the beautiful buildings of brick and stone which will soon be reared on a picturesque 750-acre tract in a riverside suburb of enterprising and hospitable Macon. Prominent leaders of Southern business and education are trustees of the new movement—the gifted President David B. Johnson, of Winthrop College, lately retired as president of the National Educational Association; Dr. A. P. Bourland, executive secretary of the Southern Conference; Governor Henderson, of Alabama; Judge J. D. Murphy, of Asheville, N. C.; business men like E. J. Willingham and Emory Winship; President A. A. Murphree, of the University of Florida; Dean Thomas J. Woofter, of the University of Georgia. President Arthur E. Bestor and Dr. Charles E. Welch of Chautauqua Institution are also trustees of the new organization, in token of the close coöperation between North and South. There is a new era ahead in the South—educationally, industrially, commercially, politically—and "The Chautauqua of the South" is one of its significant manifestations.

New York City

LEADERS OF THE SOUTHERN CHAUTAUQUA

The new Chautauqua is to be directed by men of prominence in Southern education and government. From left to right: the president of the Chautauqua of the South, President David B. Johnson of Winthrop College, recently president of the National Educational Association; Director of the Chautauqua of the South, Dr. A. P. Bourland, executive secretary of the Southern Conference; and Governor Charles Henderson of Alabama

WAR RELIEF NEEDS ARE IMMEASURABLY GREAT AND ARE ALL THE TIME GROWING. WHAT IS YOUR CHURCH DOING?

To the Pastors and Christian People of America:

With every new day of the great war the need for war relief increases and with this need increases also the obligation of the people of the Christian churches of America and the opportunity for an exhibition of Christian compassion not equaled in the history of the Christian church. We may be distracted for the hour by the new international developments which affect America so seriously, but the need on the other side does not stop for a moment. It grows hour by hour and will continue to grow in volume and intensity as long as the war shall last, and at the close of the war it will be greater than ever.

Are the churches of America doing their duty? Is your church doing its duty? Are you taking war relief offerings in some regular and adequate way? The church, whether large or small, rich or poor, which in a systematic way is helping to bind up the wounds of the men and women and little children in Europe and western Asia is surely, in these times of unparalleled distress, exhibiting a religion which is pure and undefiled.

America has given 50 cents per capita out of its total estimated wealth of nearly 200 billion dollars for war relief. The total amount given in this country is believed not to exceed 50 million dollars, and yet it is estimated that it would require 90 million dollars to equip merely the needed hospital beds in one country alone! The Commission for Belgian Relief, for example, has spent over 300 million dollars, yet of this vast sum America has contributed only 9 million dollars. Mr. Hoover and others have said that the profits from purchases for Belgian relief in this country are several times that amount.

WAR RELIEF DISTRIBUTION CHANNELS ALL OPEN

Reports from representative war relief organizations are to the effect that recent international developments are not interfering with the distribution of funds. In most cases money is sent and this is transmitted either by cable or wireless.

REPRESENTATIVE WAR RELIEF ORGANIZATIONS

American Committee for Armenian and Syrian Relief,
Treasurer, Charles R. Crane, 70 Fifth Avenue, New York.
Work not affected in the least. Most of the aid is financial and sent by cable. Funds sent uninterruptedly to Armenians and Syrians inside and outside of Turkey.

B. F. B. Permanent Blind Relief War Fund,
Treasurer, Frank A. Vanderlip, 590 Fifth Avenue, New York.
No slackening in our work and no noticeable diminution in gifts received. Send funds, chiefly to France, for assistance of men blinded in the war.

Commission for Relief in Belgium,
Treasurer, Alexander J. Hemphill, 120 Broadway, New York.
Work expected to go on with little interruption. This confirmed by latest cables. No anticipated slackening in efforts for gifts of supplies and funds.

Fund for Starving Children,
Treasurer, Frederick Lynch, 70 Fifth Avenue, New York.
No difficulty in sending funds to hungry and starving children in Belgium, Poland, Armenia and other countries. Work will go on regardless of future international developments.

Joint Distribution Committee, consisting of American Jewish Relief Committee, Central Relief Committee, and People's Relief Committee.
Treasurer, Felix M. Warburg, 174 Second Avenue, New York.
The work of collection and distribution is continuing uninterruptedly.

Polish Victims' Relief Fund.
Treasurer, Frank A. Vanderlip, Aeolian Bldg., New York.
All gifts are in the form of money. This is sent via Switzerland. Advices are that there is no change in the situation.

Serbian Relief Committee of America,
Treasurer, Murray H. Coggeshall, 70 Fifth Avenue, New York.
Gifts fluctuating more than usual, but work is uninterrupted and all distribution channels are open.

THE CHURCHES OF EUROPE

American Huguenot Committee,
Treasurer, Edmond E. Robert, 105 East Twenty-second Street, New York.
Our need is growing, but otherwise no change. No question about funds reaching destination safely.

Union Nationale des Eglises Reformées Evangeliques de France,
Treasurer, Alfred R. Kimball, 105 East Twenty-second Street, New York.
No risk whatever in sending funds.

The Federal Council of the Churches of Christ in America, constituted by 30 Protestant denominations, is under obligation to assist in stimulating the churches of America to generous participation in the greatest work of charity the world has ever seen.

The organizations named have requested the Federal Council to convey this information. They are doing their work efficiently and well. In most cases funds for administrative expense are secured from independent sources. There are, of course, other equally worthy relief organizations. We urge that your church and Sunday School take regular offerings for war relief. Full information may be secured by writing to Rev. E. W. Rankin, Assistant Secretary, whose time is given to this Christian service.

JUST A WORD

The photograph of "a bonfire of opium pipes in Shanghai," which illustrated Mr. Nathaniel Pfeffer's article "The End of the Opium Traffic," in The Independent for January 22, 1917, should have been credited to *World Outlook* instead of to Underwood & Underwood.

TRUE SPRING

What, spring, because a day is fair,
  Because a brook is flowing,
Because a maple here and there
  A flash of red is showing.

Because the frost has lost a tooth,
  And ice-packs jar and splinter?
You call it "spring" because, forsooth,
  It simply isn't winter!

No, spring has gladder signs than these;
  I'll know that spring is coming
When lilacs blow, when velvet bees
  In apple-boughs are humming.

When softer shadows fall aslant
  The fragrant meadow mazes:
I'll call it spring when I can plant
  One foot on seven daisies.

Arthur Guiterman in "The Laughing Muse," copyright by Harper & Brothers.

REMARKABLE REMARKS

ARNOLD DALY—Oh, these happy endings!

BILLY SUNDAY—God be with you, old scouts.

ED. HOWE—I deny the importance of New Thought.

CAPTAIN IAN HAY BEITH—Navies are always ready.

COUNT VON REVENTLOW—Thank God, Gerard has gone.

GEORG BRANDES—Insanity seems fated to reign forever.

EMPEROR WILLIAM—May God further vouchsafe his help.

ARTHUR HENDERSON, M. P.—Hell appears to be let loose.

FRANK A. VANDERLIP—We are a country of economic illiterates.

DR. PARKHURST—Our civilization broadly considered is a dead failure.

SIR RABINDRANATH TAGORE—My life when young was like a flower.

COUNT VON BERNSTORFF—I may come back to attend a peace conference.

LILLIAN RUSSELL—When the rag starts it is difficult to keep the feet still.

DOUGLAS FAIRBANKS—Thick, wavy hair is not essential to success in the movies.

HENRI BERGSON—Yale University I do not know, but the Yale University Press I know.

DR. CHRISTINE MANN—Most girls ought to be ashamed to look at themselves in the glass.

SECRETARY DANIELS—No conciliatory court is powerful unless it has a navy behind it.

DON MARQUIS—We hear the Kaiser is going to do without civilization again this year during Lent.

MARIAN HOLMES—There is no reason why a widow should change her usual way of wearing her ring.

ANNE MORGAN—We are living in an age where the effort of the individual is only a drop in the bucket.

T. J. MCCORMACK—The primal instincts of men surge thru all the fettering integuments of civilization.

MAX EASTMAN—Men of letters are just as prejudiced and perhaps a little more ignorant than anybody else.

MRS. WILLIAM K. VANDERBILT—An unwonted silence has come upon London since we can no longer whistle for cabs.

MAXIMILIAN HARDEN—How many countries have already spoiled their digestion by an attempt to swallow up Belgium!

LAURA JEAN LIBBEY—It is a great danger to allow young girls to be alone at night in company with inebriated youths.

LADY DUFF-GORDON—Dignity and grace are essential if the tiara is to look anything but out of place even on the loveliest head.

GOVERNOR STANLEY, of Kentucky—German culture is the culture of the head, there is no heart in it, there is no Christ in it.

ALLAN DALE—In modern comedy the heroine invariably goes to the rooms of her non-husband at midnight in full evening dress.

SENATOR STONE—I think we should give Mexico a little crushing now and then and let them know that they must behave themselves.

JOHN D. ROCKEFELLER, JR.—Compulsory military service is the one thing that is going to do away with the class feeling in this country.

W. H. TAFT—If the science of war advances in the next war as it has advanced in this over the last war there will be no room for neutrals.

MARY PICKFORD—It is almost impossible for me to pass a wee rose-bud of a baby on the street in a baby carriage without stopping to cuddle it.

WOODROW WILSON—I have held many theoretical opinions in my day, but I have found again and again that a small army of facts could put them to rout.

VISCOUNT BRYCE—I, personally, have never doubted that the entrance of America would be a most important factor and would naturally tend to shorten the war.

THE NEW PLAYS

Lilac Time, by Jane Cowl for Jane Cowl, is a war play with the war all off-stage, structurally slight, moving rather than thrilling. (Republic Theater.)

The original *deus ex machina* is an elevator boy—so much we learn from *Have a Heart*, a musical comedy of many jokes, some catchy music, several stars and a potential plot. (Liberty Theater.)

The Washington Square Players' new bill, tho entertaining, is by no means up to their previous work. Two new American plays are well handled; Maeterlinck's "The Death of Tintagile" is irretrievably "gloomed." (Comedy Theater.)

Come Out of the Kitchen. Four young autocrats pose as servants in their home, rented to a Northern millionaire. Of course the brogue of "Jane Ellen"—Ruth Chatterton—makes her Mrs. Millionaire. Charming, wholesome comedy. (George M. Cohan's Theater.)

The Little Man and *Magic.* O. P. Heggie, who played Androcles, in two whimsical, charming, elusive, delightful comedies by Galsworthy and Chesterton. An oasis in Broadway's parching waste for the lover of literary and dramatic art. (Maxine Elliott's Theater.)

Time is the Test

Ben Jonson was esteemed greater than Shakespeare, but nobody hears much about him now.

Time is the test of merit, whether it be in the making of plays or of table silver, and the mistaken judgments of one generation are rectified by the next.

Gorham Table Silver

has been famous for nearly a century, and more famous with each succeeding generation, because it has stood the test of time as the finest table silverware that American skill can produce or that American money can buy.

Gorham Sterling Silverware

is sold by leading jewelers everywhere, and bears this trade-mark

THE NEW COMMANDER OF THE SOUTH

MAJOR GENERAL JOHN J. PERSHING, "THE MAN WHO WENT AFTER VILLA," HAS BEEN APPOINTED COMMANDER OF THE SOUTHERN DEPARTMENT OF THE UNITED STATES ARMY, THE POSITION LEFT VACANT BY THE DEATH OF GENERAL FREDERICK FUNSTON

FORCED INTO ARMED NEUTRALITY

IN appealing to Congress for specific assurance of authority to proceed to a state of armed neutrality, President Wilson has ample justification in the facts of the case. He is well within the mark in declaring that "the situation is fraught with the gravest possibilities and dangers." Indeed as he was speaking, the news was coming that a great liner with American citizens among its passengers had been sunk by a German submarine. What are the actual facts as the President asks for the coöperation of Congress?

If you are an American having business to transact in Europe, or an American in Europe ready to come home, you can make the voyage only on a ship flying a belligerent flag. The high seas about Europe are closed to Americans. The German threat to sink all merchant vessels, belligerent and neutral, found by German submarines in the waters along the European coast is being diligently carried out. Our breaking off of diplomatic relations with Germany has had no effect whatever.

By luck, and apparently by luck only, no American ship has yet been destroyed under conditions which do not permit of extenuation, or American citizen killed—unless the later news from the "Laconia" shall establish the contrary. But the ships of the only passenger line flying the American flag between the United States and Europe no longer sail, because they could not obtain from the United States Government assurance of protection or assistance toward self-protection thru the mounting of guns. The steamers of the Holland-America line, the one other great neutral line between this country and Europe, are also held in port. In fact, one of the Dutch steamers, already more than half way to Europe when the German threat was launched, put back to New York.

The United States mails are no longer carried to Europe under the American flag. They go on ships of belligerent nationality.

German domination of the rights of American citizens and the American nation upon the high seas is complete. American shipowners and American travelers now take their orders from Berlin.

The condition is intolerable. To acquiesce in it would be a craven act.

We have taken one good step in severing diplomatic relations with Germany. The preservation of our national self-respect demands that we shall not halt there. Armed neutrality is the next step.

In having recourse to this good American practice, we are not resorting to or seeking war. "War can come," says the President, with perfect truthfulness, "only by the wilful acts and aggressions of others." But if it does come, the American nation will know how to meet even that dread emergency with a high spirit and a strong heart.

THE TWO PEACEABLE REPUBLICS

AMERICA has found a friend. When President Wilson appealed to the thirty-three neutral nations to follow his example and break off negotiations with Germany if she did not cease her U-boat warfare, one country came forward and took a stand by the side of the United States. That country was China, the youngest of republics, the oldest of nations.

This action is not so much of a surprize to America as it is to Europe. We reap what we have sown. Germany forced China to pay an extravagant pecuniary penalty for the damages caused by the Boxers; she seized Kiao-chau because of the murder of two missionaries; she forced the Chinese to erect an expiatory monument in Peking because of the assassination of her ambassador. The United States, on the contrary, remitted all the Boxer indemnity in excess of actual damages, and this money has been expended in educating Chinese students in our schools. These young Chinese, trained in a democratic atmosphere and inspired by American ideals, have freed their land from its Manchu tyrants and are now eager for an alliance with the United States.

China and the United States have hitherto pursued a policy of isolation and avoided any foreign entanglements, but it seems likely that this policy will have to be abandoned before long, and if so no alliance could be more advantageous to either party than a union of the two republics for defense and mutual aid. China must have what America can best give her, capital, modern science and occidental enterprize. China has the largest population of any country in the world and the greatest undeveloped resources. The Dual Alliance would have on the start 500,000,000 people and could if necessary raise and equip a larger army than either of the warring alliances. But the Chinese and the Americans are the most peaceably disposed people in the world. Our jingoes call them "the two pusillanimous republics." Let the sneer pass. But both the Chinese and the Americans can fight if they have to. A Chinese army led by Americans or by American-trained Chinese would be the strongest power in Asia. It was an American, F. T. Ward, who organized the "Ever-Victorious Army" that put down the Tai-ping rebellion in 1862.

The United States, being without territorial ambitions in Asia, is the only power to which China can appeal for protection against the powers which are devouring her piecemeal. Russia has practically annexed northern Manchuria and outer Mongolia. Japan is in possession of Formosa, Korea, southern Manchuria and Shantung. Great Britain occupies Wei-hai-wei and Hongkong, and controls Tibet. France is penetrating China from the south. Portugal has Macao. The complete partition of China seems inevitable unless such depredations are checked by the aid of the United States until China is so developed and organized as to be able to hold her own.

An alliance between China and the United States would also solve the problem of the Pacific. At present this ocean is absolutely dominated by the Russian-Japanese-British coalition, and the only possible way to restore the balance of power in the Pacific is thru the union of the greatest nation in America and the greatest nation in Asia. The two peoples are more alike than they seem to be on the surface. They have a common hatred of kings and nobles, and a common desire for a

complete democracy founded upon industry and commerce from which the soldier shall be as nearly eliminated as possible. United they might be able to maintain these ideals. Separate or allied with countries holding other beliefs they are likely to be overwhelmed by the tidal wave of militarism and autocracy now sweeping over the earth.

A SHAMEFUL PROCEEDING

NEW YORK CITY at the present moment has a postmaster who has been in the service for a generation. He has worked his way by sheer merit from the bottom to the top.

But he is to go. His place is to be taken by a man who has never been in the postal service, and whose only claim to appointment to the position is that he is a "good" Democrat, that he has failed of reëlection to Congress, and that he is acceptable to Tammany Hall. We know of nothing against the President's new appointee—except that these are the things urged in his favor.

The biggest post office in the land needs a postmaster, not a lame duck. Edward Morgan's thirty-five years of splendid service deserves better recognition than such brutal dismissal. How could a high-minded President consent to so shameful a proceeding?

THE AMERICAN SHORT STORY

THE series of American short stories which we start this week is not intended exclusively for students. On the contrary we have given space to it because we believe it will be one of the most attractive features of the magazine for the general reader, who will be glad to have his attention called to the masterpieces of his country. The art of writing short stories has been more extensively cultivated in America than anywhere else in the world, and they are poured forth in unprecedented profusion by daily, weekly and monthly publications. There is no need to add to their number; it is of more public service to pick out the stories of real merit from the host of the mediocre, and especially to call attention to those of permanent literary value which having been published in the past are in danger of being crowded out of our attention by the new stories of all sorts, which are thrust upon us from day to day. With this object we have selected, after careful consideration and consultation with librarians and professors of literature, eight short stories representative of the successive styles and periods of American literary history, beginning with him on whose infant head the hand of Washington rested in blessing and ending with O. Henry, who dropt his pen not many months ago.

The first story we have chosen, a legend of the Alhambra, happens to be peculiarly timely and appropriate, since now after more than half a century of comparative indifference, the attention of writers and readers is again being turned to Spanish. It was in this field that American scholarship won its first triumphs. Everett, Tichnor, Prescott, Motley, Longfellow, Bryant and Irving were all deeply interested in Spain and her American colonies, and never since their times, not even at the present when the study of Spanish is reviving, has so brilliant a group of poets and prose writers been engaged in interesting their fellow countrymen in Spanish literature and history. The present popularity of White's Paraguayan novel, "El Supremo," shows what a wealth of romantic material lies in these neglected fields. A century and a half ago Benjamin Franklin tried to get Spanish taught in all commercial schools, but only recently has his advice been followed. Philip V, whose page discovered the Rose of the Alhambra, ruled over more of America than ever did George III. He was equally weak-minded and brought as much evil upon the world, so there is no reason why the English King should monopolize our attention to the exclusion of the Spanish. To Washington Irving we owe a double debt of gratitude, for he kept in mind both lines of our historic inheritance and wrote with equal charm of Washington and Columbus, of Bracebridge Hall and the Alhambra.

THE MAN WHO ALWAYS MADE GOOD

IF the dictaphone had been invented in 1890 and had been installed in the buildings of Kansas State University, it might have recorded some such conversation as this:

"Say, did you hear? Funston has got the appointment as botanist on the Government Death Valley expedition."

"Who?"

"Fred Funston, you know him, that stubby, freckled-faced, red-headed sophomore that licked the big nigger down town one night."

"Of course everybody knows Timy Funston, but who ever knew he was a botanist? W'y, I don't believe he ever passed Professor Snow's first course. He got the job because his father was a congressman, that's how."

Now, whether this suspicion was merely the offspring of envy and disappointment who can say? The young man in question certainly had not a national reputation as a botanist, and his father was a congressman, "Farmer Funston" he was called by his friends, "Foghorn Funston" he was called by his enemies, a veteran of the Civil War and one of the pioneers in the agrarian movement that was later to sweep over the country.

But whether it was pull or perspicacity that picked young Funston for the post, it was a wiser selection than a competitive civil service examination would have made. For Funston made good. He saved the lives of his party by a hike over the scorching desert in search of water, and if anyone doubts his efficiency as a scientist, he has only to step into the nearest herbarium getting the Washington exchanges and he will see neatly pressed specimens of arid flora signed by the name that has recently been seen at the bottom of the despatches from the Mexican frontier.

So well did he do his work that the Department of Agriculture put him in charge of a collecting expedition to Alaska. Here, too, he did more than was expected of him. Not content with gathering easy specimens, he crost Alaska to the Arctic Ocean and came down the Yukon in a canoe with no companion but a reluctant and treacherous Indian.

When next we hear of him he was an artillery officer fighting under Gomez for Cuban freedom. For an artillerist he had about as much professional training as he had had for a botanist. He had once helped to fire a salute from a small cannon in honor of President Hayes

at a county fair in Kansas, and he had taken apart and put together a twelve-pounder in a room over a saloon on Third avenue, New York, where the Cuban insurgents met in secret. Nevertheless, he pitted his Hotchkiss against the Spanish Krupps—and made good. A still more risky job was soon put up to him. The Cuban Junta had been induced to buy a new-fangled piece of artillery, which the inventors declared would revolutionize warfare, but which the experts ridiculed, a "dynamite gun," throwing a ten-pound shell of blasting gelatine. This novel apparatus was set up by the amateur artillerists according to the book of directions sent with it and pointed at the fortifications of Victoria de las Tunas. The shell tore open the brick wall and so frightened the Spanish that the town soon surrendered. In this dynamite gun, here used for the first time in battle, we may recognize a precursor of the high explosives which are the decisive weapon of the present war.

Funston's Cuban career ended with him wounded, fever-stricken and captured by the Spanish, but he had barely recovered his health in his Kansas home when the United States espoused the cause of Cuba, and he was called by the Governor to take command of the Twentieth Kansas, being raised for the Spanish war. Here was a responsibility from which even Funston shrank, for he knew nothing of infantry drill and organization. But the Governor insisted that there was no better man, and the Governor was right. The people began to think so when they heard how he swam the Bagbag River, and they were sure of it when he captured Aguinaldo and put an end to the Filipino insurrection.

This exploit made him brigadier general in the regular army, but it also put him in a position more difficult in some ways than any he had previously filled. Officers in the regular army are disposed, not without reason, to look with mistrust upon those who are thrust into such high command without West Point training. Funston had tried in vain to get into West Point as a boy, but was shut out by shortage in stature and scholarship. For the service that Funston had seen courage and resourcefulness are the chief requisites, but garrison and departmental duties in time of peace require very different qualifications. Suffice it to say, General Funston overcame these difficulties and won the respect of professionally trained officers, even of those who were envious of his rapid rise. General Shafter, who had snubbed him when he offered his services as guide to the American army in Cuba, afterward became his fast friend.

When San Francisco was devastated by earthquake and fire Funston at once took charge and maintained order, supplied food and organized aid, relying upon Washington to authorize whatever was necessary to be done.

The troubles on the Mexican border have brought little glory to anybody, but it is well understood that the reasons why the situation has not been handled more satisfactorily were political rather than military. In Vera Cruz, where Funston had a free hand, our occupation is remembered with gratitude, even by the Mexicans.

The man whose body was laid in state in the Alamo was worthy of that historic place. He was a true American soldier, the type of man we love to honor, energetic, efficient, adaptable; willing to undertake any duties put upon him and competent to fulfil them. The things he did are not easy things to do even when one has been trained expressly for them. To accomplish them without proper preparation requires not merely natural ability of an unusual sort, but strong character and hard work. It is encouraging in this crisis to know that such qualities somehow receive recognition, and the men who ought to be at the top get there. Napoleon's army swept over Europe because he declared that every private carried a marshal's baton in his knapsack. That is the democratic idea, that is the winning idea.

FIFTY PER CENT LESS CRIME

WILL prohibition work? There is plenty of argument to the effect that it will not. But evidence is better than argument. Occasional bits of evidence crop up to show that prohibition *does* work.

Here are two telegrams from the mayors of two Western cities that have tried getting along without the saloon. The first of them is not injured a particle as evidence by Mayor Hill's honest confession and declaration of repentance. He is the mayor of Seattle, Washington; and he testifies thus:

> As for the actual effect of the law here from my observation (and I voted "wet" and am sorry for it), it has been splendidly beneficial in every possible respect. Generally merchants state that business is better, collections are much easier, and the effect of the act is beneficial rather than disastrous as many had anticipated. As to moral conditions, crimes have decreased fifty per cent according to court records.

Mayor Albee of Portland, Oregon, has this testimony to offer:

> Prohibition has revolutionized Portland, making business generally better. Collections are greatly improved in all legitimate trade lines. Bankers and merchants as well as other classes now pleased with results. Crime has been reduced at least half. Moral conditions are much better, many of former habitues of the underworld having left here. In many instances ramshackle buildings have been replaced with modern structures. Rents and realty values have not been hurt, according to William Ladd, president Ladd & Tilton Bank, a leading institution.

These telegrams are part of the ammunition being used by the Anti-Saloon League in New York to secure from the Legislature an Optional Prohibition law. The bill now before the Legislature would give to cities and sub-divisions of cities the right to vote on the question of eliminating saloons.

When prohibition shows that it can stand the pragmatic test like this, it is time for the liquor interests to look out.

THE LITTLE NATIONS

THE spokesmen of the Entente Allies, whenever they are asked by some inquisitive American journalist what is their underlying purpose in carrying on the war, reply with striking unanimity "We fight to ensure the safety and free development of the little nations." On the other side the same motive is avowed. German and Austrian statesmen are now showing a sentimental and altruistic interest in the welfare of Greece, Albania, Persia, Egypt, Ireland and Lithuania that they certainly never showed in time of peace. President Wilson's peace proposals centered wholly about the principle of nationality, which he especially invoked on behalf of the minor nationalities. Nearly every writer, pro-Ally, pro-German or neutral, who has discussed the reconstruction of the world after the war has predicted the establishment, re-

establishment or aggrandizement of a number of small European states.

The universal favoritism now displayed toward the little nations seems at first glance hard to justify. Certainly there is no virtue in merely being small; especially since "small" in this connection means not tiny in point of size or lacking in population, but weak in military power. The "little nations" in whose interest the sympathy of the world is so often requested include India with a population nearly three times that of the United States, Persia with an area three times that of Germany, and Brazil, which has nearly the area of the United States and a population greater than that of Spain. If Poland should be reconstituted as she was before the first partition she would be second in size only to Russia among the states of Europe and rank very respectably among her neighbors in population. Even China, with a quarter of the human race within her borders, does not rank among the Powers. The weakness which excludes a nation from the first rank is not usually a result of pacific principles or absorption in questions of internal reform, but of some fatal defect in the social, economic or political structure of the nation. We admit that the partition of Poland was a crime, but had it not been for the anarchic constitution of the country and the selfishness of the nobility the crime could not have been so easily accomplished. We admit that Japan has conquered Korea against the will of her people, but the fact that Japan was in a position to do so proves the superior efficiency and public spirit of the island empire over the peninsular province. Many little nations, such as Sweden, Spain, Holland and Portugal, were once great Powers and might still be but for the unwise ambitions and disastrous wars of previous generations. Germany could not even be a peril to the world if she had not mastered many of her internal problems and studied the secret of getting the ablest administration at the lowest possible cost. No nation can be formidable except it possess some at least of the civic virtues.

We should not, then, base our plea for the continued independence of Belgium or Serbia on the ground that because they are small nations they are necessarily more worthy than France or Germany, or conclude that because Mexico is not so powerful as the United States that it is therefore in the right when controversy arises between the two nations. One part of the case for the little states is obvious: they may not be worthier of protection than other countries but they are in greater need of it. Sheep are rarely aggressors against the rights of lions; not that they are less selfish but that they must make a virtue of necessity. A powerful Montenegro might be as grasping as Austria, but as between the two nations with their present relative power, Austria alone is in a position to conquer. But there is a more important reason for defending the existence of these states: the danger that with their political independence will disappear also the peculiar cultural contribution which their nation can make to the world. Only local self-government and the diversity which is its fruit can prevent the world from sinking into a monotony like that of China. What could have compensated civilization for the loss of the petty Hebrew tribes in the Babylonian Empire, the absorption of the Greek cities and islands in Persia, the conquest of the Swiss cantons by the Hapsburgs, the crushing of the cities of northern Italy by the forces of the medieval Holy Roman Empire?

But the Chestertonian ideal of a world of completely independent small states is an impossible one. Many states means many wars, and war means that the weaker nations are devastated and perhaps conquered. If we desire to conserve these nations from destruction by predatory imperialism we must establish larger and more inclusive political units. By entering into permanent federations and thus securing a common executive agency the nationalities, great and small alike, may save themselves from destruction. This is the American way. Thirteen independent States would have fallen victims to each other's ambition or to the foreign aggressor, but our present league of forty-eight States have by surrendering their sovereignty preserved their autonomy. Each may develop its own institutions and its characteristic culture with more freedom and greater security than would have been possible without a common organization to adjust their disputes with each other and protect them all against the foe of any one of them.

RALEGH'S LAZY ROOT

SINCE the time when Sir Walter Ralegh introduced the potato into the court of Queen Elizabeth the world has become more and more dependent upon what became known as his "lazy root." The first edition of the Encyclopedia Britannica referred to it as "that demoralizing esculent," and such it has proved to be to those who made it their staff of life. Requiring no capital and no machinery, little skill in the husbandman for the raising of it and little skill in the housewife for the cooking of it, the potato became too popular with the poor. When it was introduced into Ireland it raised the population, according to the Malthusian law, from three millions to eight millions and a half by 1845. Then came two crop failures in succession; one million starved to death and another million were driven into exile.

Now the potato has come to be the most important if not the decisive factor in the Great War. Last year Germany was saved from starvation and surrender by a good potato crop. This year the yield is poor. The Kaiser would willingly give up Bapaume to the English in exchange for potatoes. But England is not much better off and Lloyd George has taken control of the sale of potatoes. The Swedish Government has issued an edict prohibiting the peeling of potatoes before cooking. The Swiss Government is also laboring with the high price of potatoes.

Yet the price of potatoes in Switzerland, shut in by belligerents, and in England, blockaded by U-boats, is only half as high as it is in New York City with an open continent behind it. The rise in the price of potatoes from four to eight cents a pound in the past months brought a hungry mob of mothers from the East Side. Who is to blame and what can be done about it are hard questions to answer. In the meantime it is well to remember that potatos are not indispensable. Rice is also selling at eight cents a pound, and since rice contains only twelve per cent of water, while potatoes contain 78.3 per cent, it is evident that potatoes are about four times as expensive as rice. Bread and macaroni, all kinds of corn products and bananas can be used in the place of potatoes at less expense. The potato is a good servant but a bad master.

THE STORY OF THE WEEK

The Submarine War

The supreme issue at present and possibly the decisive factor in the war is the success or failure of the effort of Germany to blockade England by means of her U-boats. The German Admiralty claims success; the British Admiralty denies it. The outside world has nothing except the announced loss of shipping to go on and this is not sufficient to warrant any conclusion as to outcome. We do not know for instance how long the stock of food on hand in Great Britain would last if the blockade were absolute. Some say six weeks; others say six months. We do not know how large a part of her submarine power Germany has employed nor how many of the U-boats have been lost. Sir Edward Carson, now First Lord of Admiralty, pursues the policy of his predecessors in not giving out any information on the number of U-boats that have been sunk or captured, but he stated in the House of Commons that there had been forty encounters between British ships and German submarines and he gave details of four such cases in which the submarine had been sunk or captured. The German Admiralty on the other hand denies knowledge of any losses, tho it admits that not all the submarines sent out have been heard from. Up to and including February 24 the Allies had reported the loss of 170 vessels, of which 104 belonged to the British, 17 to other Allies, 2 to the United States and 48 to other neutrals. Their total tonnage amounts to over 420,000. The Germans exprest confidence in a speedy victory over England if they could sink a million tons of shipping a month. So far they have maintained a rate of destruction averaging about half that.

According to the semi-official estimates of the German Admiralty the total tonnage of English shipping amounts to about 20,000,000. Of this 8,600,000 is requisitioned for military purposes and only 7,000,000 or 8,000,000 tons are available for supplying the needs of the people of Great Britain. To this may be added 3,000,000 or more of Allied and neutral shipping making a total of something over 10,000,000 tons. If this German estimate is at all accurate the U-boats are now destroying the shipping on which England depends at the rate of five per cent a month.

The British Admiralty, figuring on a different basis, arrives at the conclusion "that the widely advertised campaign of ruthless murder on the high seas on which Germany has embarked has resulted in a loss of less than one ship for every hundred which have arrived or left British ports from February 1 to February 14." The average arrivals during this fortnight were 341 and the sailings 322. There are about 3000 ships in the danger zone at any one time. From these figures the reader may form his own opinion on the question.

American Missionary Drowned

On several of the ships sunk during the month there have been Americans, either as passengers or crew, but so far they have, with one exception, escaped. A Presbyterian missionary from Tennessee, the Reverend Dr. Robert A. Haden, was returning home from China on board the French steamer "Athos" when she was torpedoed by a submarine in the Mediterranean Sea, 210 miles east of Malta. When the ship was struck he went to the aid of the Chinese on board and was drowned, otherwise he might have been saved. The "Athos" was transporting Senegalese troops and Chinese laborers to France and was under convoy of two French destroyers. No warning was given by the submarine, but if the "Athos" is classed as a troopship and not as a passenger vessel a warning is not required by the rules of maritime war.

THE GREAT WAR

February 19—Russians sink nine ships in Black Sea. U-boats sink seven ships.

February 20—British close in on Kut-el-Amara. Ten ships sunk.

February 21—British declare intention to seize all ships not inspected. Eight ships sunk.

February 22—Lloyd George announces restriction of imports. Thirteen ships sunk.

February 23—German Finance Minister asks Reichstag for new war credit of $3,750,000,000. Thirteen ships sunk.

February 24—Greek troops all withdrawn to Peloponnesus at demand of Allies. Nine ships sunk.

February 25 — Germans evacuate trenches on Ancre Creek. Three ships sunk.

Seven Dutch Ships Struck

One of the most serious infractions of neutral rights committed by the U-boats was the attack on a fleet of Dutch vessels at the western entrance of the English Channel. The ships had been in Falmouth harbor for some time waiting for a favorable day to depart, and they left all together on February 22 at the order of the Dutch Government without consulting the British Admiralty as to its safety lanes. According to the statement of the Dutch Foreign Office this date was chosen by agreement with the German Government, which promised them "relative security" on that day, but no "absolute security" until March 17 when all the submarines could be notified.

But apparently instructions to that effect did not reach all the U-boats in time, for one of them held up the fleet a few hours out from Falmouth and ordered the crews to the boats within five minutes. Three of the ships were then sunk by torpedoes and four crippled by shell fire. The men were all safely landed.

The vessels attacked were among the largest and newest of Dutch merchantmen. Their combined tonnage amounted to 32,500 and their value was $8,000,000. Two of them were carrying wheat from the United States to Holland. Two were bringing home copra and fodder from the colonies. Their cargoes

ENGLAND SUGGESTS WE FIGHT WITH THESE

The one phase of preparedness in which the United States excels—financial readiness—has been mentioned in unofficial discussion in London as a solution of the present German problem. Without entering the war, we could adopt a policy of "benevolent neutrality," in other words give the Allies the assistance of our gold resources and free them from the necessity of sending shipments like this to us. These gold bricks represent $75,000,000 of our recently received war profits

were worth $3,600,000. Three were outward bound in ballast to get grain.

This attack upon neutral vessels virtually under the safe conduct of Germany has naturally aroused hot resentment in the Netherlands. The mine fields and danger zones laid by Germany and Great Britain in the North Sea both interfere with Dutch shipping, and Holland is continuously dependent upon foreign countries for a large part of her food, coal and material for manufacturing. At the urgent solicitation of the Dutch Government both the belligerents have modified their rules, for neither could well afford in this crisis to get Holland among her enemies. The German Legation at The Hague says the affair was "due to an extremely regrettable coincidence of circumstances not under control," and other Germans call it "a ghastly blunder." Whether such expressions of regret or more substantial reparation will suffice to allay Dutch wrath remains to be seen.

Lloyd George's Plan

The determination of the British people to win the war is shown by their voluntary subscription of $3,500,000,000 to the new war loan and, even more strikingly, by their cheerful submission to the unprecedented restrictions imposed upon their daily life. Great Britain has spent $21,000,000,000 since the war began and the daily expenditure has now risen to $29,000,000. By the end of the current year the national debt will be over nineteen billion dollars. But Parliament makes a new blanket appropriation of $2,750,000,000 without any opposition and the people give up their favorite foods, drinks and amusements without grumbling.

No minister of any country ever appeared before a parliamentary body with such revolutionary proposals as did Premier Lloyd George before the House of Commons on February 23 and none ever received more complete acquiescence. His plan for meeting the emergency caused by the German blockade comprized two parts: one to make England more nearly self-supporting by increasing the production of home-grown food, the other to reduce the demand for shipping by an embargo on all dispensable imports.

The first aims to secure the cultivation of every inch of available land. Land owners who decline to do this will be forced to by the Government. Hitherto there has been a great reluctance to break up pasture and lawns because it was feared that as soon as the war was over prices of agricultural products would again fall. To meet this objection the Government has guaranteed minimum prices to the farmers for staple products. On wheat for instance a minimum price of 60 shillings a quarter is guaranteed for 1917, 55 shillings for 1918 and 1919 and 45 shillings for 1920, 1921 and 1922. For potatoes a price of six pounds a ton is guaranteed for the coming season. To induce the farm laborer to put forth stronger efforts he is guaranteed a minimum wage of 25 shillings a week instead of the 14 to 18 he now receives.

England Restricts Imports

Premier Lloyd George said that the stocks of food in Great Britain at the present time were lower than they had ever been before and the demand for ships was unprecedented. More than a million tons of British shipping had been allocated to France and the French and Italian ambassadors had been to him begging for more ships. Last year 16,000,000 tons of foodstuffs had been imported, but this could be cut down by at least a million tons by lopping off certain luxuries. The importation of aerated and mineral waters and foreign teas is prohibited. Indian teas will be reduced. Coffee and cocoa will be prohibited for the present since there are large stocks in the country. Such imported and unessential foods as oranges, bananas, grapes, apples, tomatoes and nuts are reduced to 25 per cent. On the liquor question the Premier said:

In 1914 there were 36,000,000 standard barrels of beer brewed in this country. In 1916 that was reduced to 26,000,000 barrels, partly owing to the fact that two or three millions of the adult population had left these shores. Early this year the food controller proposed a further reduction to 18,000,000 barrels.

It is a powerful trade. Nobody knows better than my old colleagues and myself what it can accomplish if its interests are menaced. But it accepted all this interference in a most laudable spirit of determina-

BLOCKADED

It doesn't matter what you call it—these are only two of the many viewpoints on Uncle Sam's present predicament—what to do about it is the question

tion to do all in its power to contribute to the safety of the nation. But we must go beyond that. It is absolutely impossible to guarantee the food of the country without making a much deeper cut in the barrelage, and we must reduce it to 10,000,000 barrels. That means that we shall save 600,000 tons of foodstuffs a year, which is nearly one month's supply of the cereals entering the country. That is a direct saving, but the indirect saving is a deal more and this is one of the most important contributions that can be made at the present moment toward ending the war.

The importation of paper would have to be cut down from 1,200,000 tons to 640,000, half it going to the printing and half to the packing trades. The Premier remarked that he did not know whether newspapers ought to be treated "as a luxury, a comfort, a stimulus, a necessity or a nuisance in life," but they would have to be reduced in size. In order to prevent unfair competition foreign posters, newspapers, periodicals and books will be shut out. On the list of prohibited imports appear also clocks, agricultural machinery, leather, typewriters, photographic apparatus, works of art, millinery, perfumery, wine, timber, furs, and glassware. Such articles as are needed for the army or otherwise may be imported under special license.

Germans Retire on the Ancre

For some weeks it has been evident that the Germans were not making such strong exertions as formerly to hold their lines north of the Somme and the British have been able to make steady progress at comparatively small cost. On the morning of the 24th when the fog which had obscured the scene for two days lifted the British outposts found the German lines strangely quiet. Patrols sent forward discovered that the trenches had been evacuated except for a few sharpshooters, so the British were able to advance a half mile or so toward Bapaume, occupying without opposition the villages of Miraumont, Pys and Warlencourt for which they have been fighting for months.

British Blockade Stricter

A new order-in-council dated February 14 but published February 21 makes a sweeping extension of the conception of contraband. It is declared that "goods of enemy origin or destination" found on any vessel "shall be liable to condemnation" and that "any vessel carrying goods of enemy destination or of enemy origin shall be liable to capture and condemnation." A still more startling ruling is that any vessel encountered on the high seas is to be regarded as guilty of carrying contraband unless it has previously called at a British port and submitted to examination. This clause reads as follows:

A vessel which is encountered at sea on the way to or from a port in any neutral country affording means of access to enemy territory without calling at a port in British or Allied territory shall, until the contrary is established, be deemed to be carrying goods with enemy destination or of enemy origin and shall be brought in for examination and, if necessary, for adjudication before a prize court.

The intent of this order is explained by Lord Robert Cecil, Minister of Blockade, as follows:

We are arranging in certain cases, where we are satisfied the vessel concerned is not trading in the interests of our enemies, that they shall be examined at some other British port, such as Halifax. This course does not mean the abandonment of the right of visit and search, which obviously it would be impossible for us to abandon. All it means is that we substitute one form of exercizing that right for another, and in order to make our action quite clear we are declaring at the same time that vessels trying to run the blockade with goods to or from Germany, directly or indirectly, will expose themselves to condemnation in a prize court. We are adding that if they

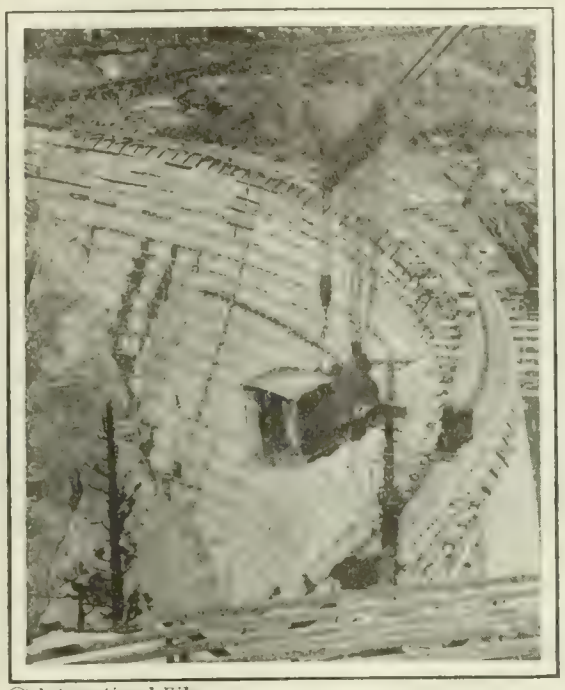
THE PAN-GERMAN PLAN ACCOMPLISHED.

The ambitious design for a coalition or confederation of Central Powers forming a connecting link between Europe and Asia has now been virtually realized, as this map shows. The conquest of Serbia and southern Rumania completes the chain of contiguous territory, and the Berlin-Bagdad Railroad is now laid except perhaps for a stretch along the Tigris. But the British hold the two sea terminals, the Persian Gulf and the Red Sea, and so Germany is still shut out from the Far East. To gain these she would doubtless be glad to relinquish France and Belgium. The strategic and commercial importance of this railroad may be seen at a glance. At the northern end it would take the trade of the Atlantic from the North Sea and the Baltic. At the southern end it would take the trade of the Pacific and Indian Oceans thru the Persian Gulf and Red Sea. In the middle it would connect with the Mediterranean on one hand and the Black Sea on the other.

fail voluntarily to enter a British port for examination they cannot complain if their conduct exposes them to suspicion and indeed constitutes a prima facie case that they are engaged in enemy trade.

The German papers denounce the British order-in-Council as an unprecedented violation of international law and "the reëstablishing of privateering against neutrals."



Conscription a Live Issue

The bill for universal military training and service prepared by the Army General Staff is now interesting Congress and the country at large. It has been sent to Congress without the specific endorsement of President Wilson or Secretary of War Baker, but if Congress should regard the plan with favor it seems unlikely that the President would take any step to oppose it. No one believes that the present Congress will have time to consider and adopt so revolutionary a change in the military system of the nation during the few remaining days of the session, but advocates of universal service feel that it is something to get the plan before Congress with the backing of the chief military experts of the nation and that the next Congress may be favorable toward it.

The proposed army will have a total strength of more than three million men and cost the nation nearly half a billion dollars a year. Young men over eighteen will have eleven months' continuous training, to be followed by two weeks of repetition courses in their twentieth and twenty-first years. Only those will be exempt who are physically or mentally unfit for service or are the sole support of dependent persons. All men who have completed their eleven months' continuous training are liable to service in the first reserves for four years and one month, in the second reserves for seven years and in the unorganized reserves to the age of forty-five.

The Senate Naval Committee has reported to the Senate a number of amendments to the naval appropriations bill as it passed the House of Representatives. Most of the suggested changes are increased, altho the lump sum authorized by a sub-committee to expedite construction has been cut from $150,000,000 to $115,000,000. Fifty submarines are authorized in addition to the eighteen originally provided for in the bill. These submarines will cost from $1,300,000 to $1,900,000 apiece. Each member of Congress empowered to appoint four cadets to the naval academy instead of three as at present. By the fortifications bill now pending in Congress $3,600,000 will be spent for aerial defense. The Secretary of War has requested an emergency appropriation of more than thirteen million dollars for the housing of troops stationed in the Panama Canal Zone.

Offers of aid from private individuals and corporations continue to pour in upon the authorities at Washington. Charles M. Schwab, the steel magnate, has stated that every industry of which he is a director will be placed at the

disposal of the government in case of war. Professor Pupin of Columbia University has offered an improved wireless telegraph apparatus of his invention to the army and navy.

Last Days of Congress

With less than a week remaining before the close of Congress the Democratic majority is almost at the mercy of the Republican minority for the success of some of the most important legislation of the session. For some time a filibuster was threatened in the Senate in order to necessitate a special session of the new Congress immediately after March 4 to pass the revenue bills needed

© *Harris and Ewing*

A TAMMANY TRIUMPH

Representative Thomas G. Patten, Democrat, appointed by President Wilson as postmaster of New York City to succeed Postmaster Edward Morgan, Republican, who has been in the service for thirty-five years and has proved himself particularly worthy of his present position

for national administration. Some Senators wished an immediate session of the new Congress in order to pass legislation supporting the Government in its controversies with Germany, others for the opposite reason that Congress would act as a restraining and moderating factor and prevent the President from taking any action which would make war inevitable. The filibuster began with a debate over the new taxes on excess profits provided for in the emergency revenue bill. The whole system of direct taxation upon which the administration relies to pay the cost of preparedness is opposed by the Republican minority, who believe that tariff increases would yield the needed revenue. These contentions were embodied in the minority report of the Senate Finance Committee which condemned the Democratic majority for extravagance and urged a protective tariff. Senator La Follette, progressive Republican, refused to sign the report.

Democratic leaders accused the minority of lack of patriotism in delaying urgently needed appropriations in order to force a special session of Congress which might have a Republican majority in the House of Representatives. Finally, Republican Senators agreed to permit a vote on the emergency revenue bill. This may not, however, avert the need for a special session, since the administration desires other measures, notably the new railroad legislation and various measures of preparedness, to come to a vote. The filibuster in the Senate broke up in a fiery discussion of foreign policy. Senator Williams of Mississippi made a particularly notable speech, defending the policy of the President, condemning Bryan and other ultra-pacifists for giving Germany the impression that the United States is a divided nation, and urging that American merchant ships be supplied with guns and gunners. Senator Lodge complained of the inactivity of the President in the face of the submarine crisis, and Senator Lewis of Illinois in reply attacked the Massachusetts Senator for trying to "drag us into an alliance with Britain."

On February 21 the House of Representatives approved by an overwhelming majority the Senate measure absolutely prohibiting the importation of liquor into any State which prohibits the manufacture and sale of intoxicants. This is the most drastic prohibitory law ever passed by Congress. The House of Representatives is also considering a prohibition bill for the District of Columbia, but has not agreed as to whether the law shall be conditioned on a referendum of the people of the District or imposed upon them by authority of Congress.

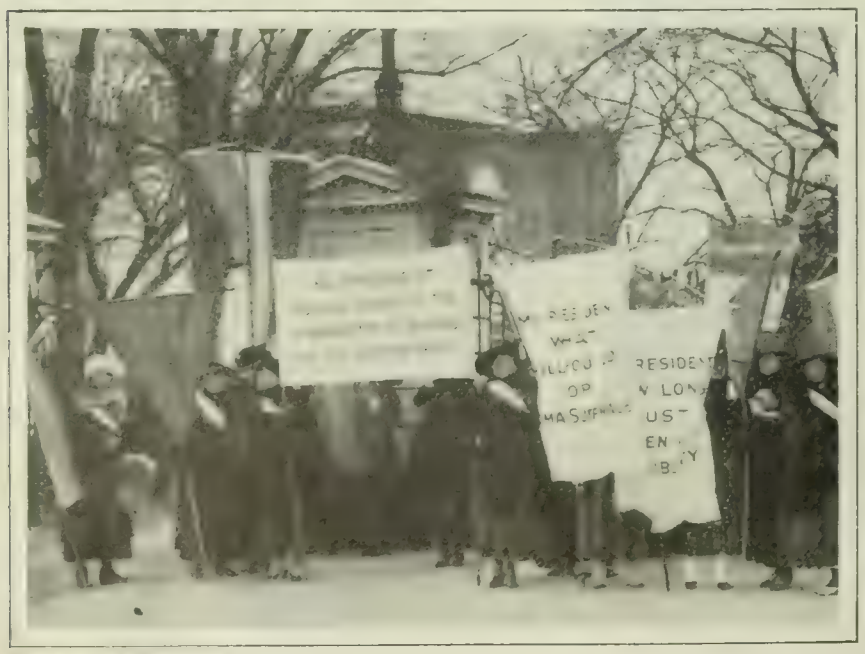
West Virginia Won't Pay

The legislature of West Virginia has refused to make provision for the payment of the state's part of the Civil War debt which the Supreme Court of the United States has ordered West Virginia to pay to Virginia. The state legislature resolved not to pay the money until the Supreme

Court has heard the testimony of the legislators on the motion for a writ of mandamus to compel the state of West Virginia to pay its portion of the debt. The case is set for March 6. There is no question but that after fighting the case to the last ditch in the courts the West Virginia legislature will meet the debt by a bond issue or otherwise. But the feeling in the state that Virginia has disregarded the constitutional rights of West Virginia in its attempt to force an early settlement is sufficiently strong to prevent West Virginia from paying the money earlier than is strictly necessary. The sum in question amounts to $12,393,929.50.

Woman Suffrage Again

Governor Cox, of Ohio, has signed the suffrage bill giving Ohio women the right to vote for President. Anti-suffragists will try to annul the new law by a referendum in the fall. A similar bill has passed the lower branch of the Indiana state legislature. It has already been approved by the state senate. The Minnesota house of representatives has passed a bill giving full suffrage to women by constitutional amendment. If passed by the senate it will be submitted to the voters in 1918. A state constitutional amendment has also passed both branches of the legislature in Maine, and the question will come before the electorate at a special election in September. Since this election comes so early Maine may win the distinction of being the first state east of the Mississippi to grant women equal suffrage with men in all elections; the suffrage laws of Illinois and Ohio not covering offices created by the state constitutions. No other New England state, except Massachusetts in 1915, has voted on a suffrage amendment, and in Massachusetts the popular vote was strongly against the extension of the franchise. In New York a constitutional amendment for woman suffrage has passed the assembly. If the amendment passes the senate its fate will be decided by a referendum.



Food Riots in New York

The high cost of living and particularly the rise in the retail price of meat and vegetables has resulted in serious riots in New York City and also in Philadelphia and other large cities. Some of these riots, such as the mob with banners which gathered outside the Waldorf-Astoria hotel in New York on February 24, were in the nature of public demonstrations to call the attention of public officials to the destitution of the poor. These demonstrations resulted more than once in disorder and consequent arrests, but the police handled them diplomatically and no serious outbreaks occurred. In some instances Socialists took advantage of the demonstrations to further the party propaganda, and it is charged that pro-Germans utilized them in an attempt to induce Congress to lay an embargo on the exportation of foodstuffs. Other food riots were of a totally different character, being simply attempts to enforce a food boycott. Housewives in many cases have banded together into anti-high-price-leagues to boycott the most expensive foods, and have not only refrained from purchasing these articles themselves but have intimidated their neighbors into following their lead. In some districts it was unsafe for a dealer to sell vegetables or meat above a certain price or for customers to pay a high price for them. The public authorities in the cities and states where the riots have occurred are studying remedial measures. In New York the purchase of food by the city and its sale at cost is widely advocated. California is planning to put into force the provisions of a state law empowering a State Market Director to establish commission markets for the receiving, care, sale and distribution of the agricultural, fishery and dairy products of California.

The rise in the cost of living must be considered as a three-fold movement. There is the general rise of all prices which has continued for more than a decade and is principally due to the cheapening of the standard of value, which in this country is gold. Then there is a particularly marked increase in the price of foodstuffs due to many causes: the increase of urban population, the congestion of railroad traffic, the heavy exportations to Europe since the beginning of the Great War, and the use of cold storage by food speculators. Finally, within the last few days only, crop shortage and the war scare combined with tie-ups on some railroad lines forced a sharp rise in the price of certain vegetables, especially potatoes and onions. In New York City, for example, potatoes are selling at seven or eight cents a pound, retail, and onions at fifteen cents. Other foods have shared, tho more moderately, the advance in prices which has so revolutionized the cost of vegetables. Storage eggs are forty-eight cents a dozen and upward, "strictly fresh" eggs, of course, being quite out of the reach of the very poor. Butter is selling at forty-eight cents a pound; sugar nine cents. Better freight conditions and an end to the car shortage which has held up food shipments is promised by the Interstate Commerce Commission, and it is doubtful if the present level of food prices will prevail many days longer.

Food Cost Inquiry Started

President Wilson has directed the Federal Trade Commission and the Department of Agriculture to begin an investigation into the causes of the high prices of staple foods in the United States. In his letter President Wilson pointed out that the production of the major cereal crops, especially wheat and corn, had failed to keep pace during recent years with the increase of population, while the annual per capita supply of meat products had decreased by twenty-nine pounds since 1900. He suggested that agricultural production had been retarded and discouraged by present methods of distribution and unnecessary fluctuations of prices. To discover what causes are operative to increase food prices the President directed the

GOVERNED—AND GOVERNING

Two delegations to the President—they present a contrast worth studying. The Appahare Indians: Short Man, Cut Nose, Little Raven and the rest, represent a whole tribe of voters who want more land; their business is being given serious consideration. The women represent the suffragists of New York City, including plenty of taxpayers, but no voters; they stand outside the gates

THE KEY TO THE CARIBBEAN

The magnificent harbor of St. Thomas, which the United States has for more than fifty years been desirous to obtain, has now been secured by the payment of $25,000,000 to Denmark. The water in the distance is the channel between St. Thomas and Porto Rico, both sides of which are now in American possession. Two of the ships seen in the picture are Hamburg-American steamers laid up for the war

Federal Trade Commission to investigate and report on the facts relating to the production, ownership, manufacture, storage and distribution of foodstuffs, and to ascertain the facts regarding alleged violations of the anti-trust acts. The Department of Agriculture will coöperate in the inquiry.

Members of both Houses of Congress have spoken on the question, deploring the misery of the poor in the great cities and urging that ample funds be provided to investigate the causes of the present abnormal prices. The House of Representatives has adopted the amendment to the Sundry Civil bill offered by Representative Borland of Missouri appropriating $400,000 for such an investigation.

Caribbean Questions

On February 20, the Senate passed the Porto Rican Citizenship and Civil Government bill which had already passed the House of Representatives. As amended, the measure will not prescribe the qualifications for the suffrage, but leave their determination to the Porto Rico legislature. Thus the question of equal suffrage was solved by evading it and passing on the responsibility to the islanders themselves. The Porto Rico legislature is not, however, permitted to impose a property qualification for the franchise. All residents of the island may become United States citizens if they so desire. Both branches of the legislature will be elected by the voters of Porto Rico, but the acts of the legislature must meet with the approval of Congress, and the Governor of the island will be appointed by the President. Porto Rico will have the privilege of sending a commissioner to Washington to represent the interests of the island. If the House of Representatives agrees to the Senate amendments the bill should be ready for the President's signature before the close of the session.

On the same day the Senate passed a bill appropriating $25,000,000 for the purchase of the Danish West Indies, and providing for a temporary government pending the investigation of the needs of the people by a commission of three. Until a final form of government has been established for the islands present laws and present officials will be so far as possible continued, but the President will appoint a Governor, who may be an officer of the army or navy, and necessary minor officials.

In a letter to Senator Stone, of Missouri, as chairman of the Senate Foreign Relations Committee, President Wilson urged that the pending treaty with Colombia be ratified. This treaty would compensate Colombia for the loss she suffered in the Panama revolution and the consequent transfer of the Panama Canal site to the new republic. The reason for present consideration of the matter is, in President Wilson's words, the "only too obvious consideration that we need now, and it is possible shall need very much more in the immediate future all the friends we can attach to us in Central America." But a sufficient number of Republican Senators are opposed to the treaty to prevent its passage, at least during the present session of Congress. They regard the proposal to indemnify Colombia as a reflection upon the action of President Roosevelt in supporting the secession of Panama.

Following the precedent of his action in Cuba, President Wilson has refused to recognize the new provisional government established in Costa Rica on the ground that it owes its existence to illegal violence.

Mexican Affairs

First Chief Carranza's proposal to the neutral powers to stop the war in Europe by placing an embargo on the shipment of supplies to belligerent nations is meeting a cool reception from the sister republics of Mexico. The United States has not yet replied to the Mexican suggestion. Bolivia, which is inclined to be pro-Ally in sentiment, asks Mexico to condemn the use of submarines against commerce. The republics of Salvador and Honduras praise the note in general terms, but the Honduras reply suggests that Mexico wait until the United States and the three great States of Latin America, Argentina, Brazil and Chile, indicate whether they will take action to establish an embargo.

The new Mexican constitution, prepared by the constitutional convention of Queretaro and approved by Carranza, contains provisions regarding alien ownership of productive property that alarm American mine owners in the country. Only Mexicans by birth or naturalization and companies of Mexican citizens may acquire possession of lands, mines, oil properties, or water rights, except that foreigners may be granted the same rights as Mexicans by the special permission of the Government if they agree that they will not invoke the aid of any foreign government on behalf of their titles. But Mr. Fletcher, the American Ambassador to Mexico, has assured the Department of State at Washington that under the Mexican constitution no laws are retroactive and that no existing property rights are therefore menaced. A more immediate danger is the exprest intention of the de facto government to take over all mines in Mexico which are not now in operation unless the owners have applied for an extension of time.

The evacuation of the Mexican border by the national guard continues. Major General John J. Pershing has succeeded the late Major General Frederick Funston as commander of the Southern Department. It is not yet determined who will take General Pershing's place in the El Paso district. The death of Major General Frederick Funston at San Antonio, Texas, on February 19, closed one of the most brilliant and romantic careers in modern military history. General Funston, a graduate of Kansas University who had never had West Point training, first rose to military prominence as a volunteer in the service of the Cuban insurrection against Spanish rule. He commanded a Kansas volunteer regiment in the Spanish-American war and later took an active part in quelling the Aguinaldo rebellion in the Philippines, capturing the leader of the insurrection and taking part in numerous engagements. During the great San Francisco fire in 1906 he kept order in the city. When the situation on the Mexican border became critical he was chosen for the command of the United States forces along the border and in Mexico.

ARMED NEUTRALITY

THE PRESIDENT ASKS AUTHORITY TO SAFEGUARD OUR RIGHTS

On Monday, February 26, President Wilson appeared before Congress in joint session and asked for authority to use the armed forces of the United States to protect American rights upon the high seas. The occasion was made dramatic by the fact that while on his way to the Capitol the President received news of the torpedoing without warning of the Cunard liner "Laconia." Several Americans were among the passengers on the liner, and more among the crew. The House Foreign Affairs Committee and Senate Foreign Relations Committee met immediately to consider what response Congress should make to the President.

Washington, Feb. 26.

Gentlemen of the Congress—I have again asked the privilege of addressing you because we are moving thru critical times during which it seems to me to be my duty to keep in close touch with the houses of Congress, so that neither counsel nor action shall run at cross purposes between us.

On the 3d of February I officially informed you of the sudden and unexpected action of the Imperial German Government in declaring its intention to disregard the promises it had made to this Government in April last and undertake immediate submarine operations against all commerce, whether of belligerents or of neutrals, that should seek to approach Great Britain and Ireland, the Atlantic coasts of Europe or the harbors of the eastern Mediterranean, and to conduct these operations without regard to the established restrictions of international practise, without regard to any considerations of humanity, even, which might interfere with their object. That policy was forthwith put into practise. It has now been in active execution for nearly four weeks.

Its practical results are not yet fully disclosed. The commerce of other neutral nations is suffering severely, but not, perhaps, very much more severely than it was already suffering before the 1st of February, when the new policy of the Imperial Government was put into operation. We have asked the coöperation of the other neutral governments to prevent these depredations, but so far none of them has thought it wise to join us in any common course of action. Our own commerce has suffered, is suffering, rather in apprehension than in fact, rather because so many of our ships are timidly keeping to their home ports than because American ships have been sunk.

Two American vessels have been sunk, the "Housatonic" and the "Lyman M. Law." The case of the "Housatonic," which was carrying foodstuffs consigned to a London firm, was essentially like the case of the "Frye," in which, it will be recalled, the German Government admitted its liability for damages, and the lives of the crew, as in the case of the "Frye," were safeguarded with reasonable care. The case of the "Law," which was carrying lemon box staves to Palermo, disclosed a ruthlessness of method which deserves grave condemnation, but was accompanied by no circumstances which might not have been expected at any time in connection with the use of the submarine against merchantmen as the German Government has used it.

In sum, therefore, the situation we find ourselves in with regard to the actual conduct of the German submarine warfare against commerce and its effects upon our own ships and people is substantially the same that it was when I addrest you on the 3d of February, except for the tying up of our shipping in our own ports because of the unwillingness of our shipowners to risk their vessels at sea without insurance or adequate protection, and the very serious congestion of our commerce which has resulted, a congestion which is growing rapidly more and more serious every day. This in itself might presently accomplish, in effect, what the new German submarine orders were meant to accomplish, so far as we are concerned.

We can only say, therefore, that the overt act which I have ventured to hope the German commanders would in fact avoid has not occurred.

But while this is happily true, it must be admitted that there have been certain additional indications and expressions of purpose on the part of German press and the German authorities which have increased rather than lessened the impression that, if our ships and our people are spared, it will be because of fortunate circumstances or because the commanders of the German submarines which they may happen to encounter exercize an unexpected discretion and restraint rather than because of the instructions under which those commanders are acting. It would be foolish to deny that the situation is fraught with the gravest possibilities and dangers. No thoughtful man can fail to see that the necessity for definite action may come at any time, if we are in fact and not in word merely to defend our elementary rights as a neutral nation. It would be most imprudent to be unprepared.

I cannot in such circumstances be unmindful of the fact that the expiration of the term of the present Congress is immediately at hand, by constitutional limitation; and that it would in all likelihood require an unusual length of time to assemble and organize the Congress which is to succeed it. I feel that I ought, in view of the fact, to obtain from you full and immediate assurance of the authority which I may need at any moment to exercize. No doubt I already possess that authority without special warrant of law, by the plain implication of my constitutional duties and powers; but I prefer, in the present circumstances, not to act upon general implication. I wish to feel that the authority and the power of the Congress are behind me in whatever it may become necessary for me to do. We are jointly the servants of the people and must act together and in their spirit, so far as we can divine and interpret it.

No one doubts what it is our duty to do. We must defend our commerce and the lives of our people in the midst of the present trying circumstances, with discretion but with clear and stedfast purpose. Only the method and the extent remain to be chosen, upon the occasion, if occasion should indeed arise. Since it has unhappily proved impossible to safeguard our neutral right by diplomatic means against the unwarranted infringements they are suffering at the hands of Germany, there may be no recourse but to armed neutrality, which we shall know how to maintain and for which there is abundant American precedent.

It is devoutly to be hoped that it will not be necessary to put armed force anywhere into action. The American people do not desire it and our desire is not different from theirs. I am sure that they will understand the spirit in which I am now acting, the purpose I hold nearest my heart and would wish to exhibit in every thing I do. I am anxious that the people of the nations at war also should understand and not mistrust us. I hope that I need give no further proofs and assurances that I have already given thruout nearly three years of anxious patience that I am the friend of peace and mean to preserve it for America so long as I am able.

I am not now proposing or contemplating war or any steps that need lead to it. I merely request that you will accord me by your own vote and definite bestowal the means and the authority to safeguard in practise the right of a great people who are at peace and who are desirous of exercizing none but the rights of peace to follow the pursuits of peace in quietness and good will—rights recognized time out of mind by all the civilized nations of the world. No course of my choosing or of theirs will lead to war. War can come only by the wilful acts and aggressions of others.

You will understand why I can make no definite proposals or forecasts of action now, and must ask for your supporting authority in the most general terms. The form in which action may become necessary cannot yet be foreseen. I believe that the people will be willing to trust me to act with restraint, with prudence, and in the true spirit of amity and good faith that they have themselves displayed thruout these trying months, and it is in that belief that I request that you will authorize me to supply our merchant ships with defensive arms should that become necessary, and with the means of using them, and to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate and peaceful pursuits on the seas.

I request also that you will grant me, at the same time, along with the powers I ask, a sufficient credit to enable me to provide adequate means of protection where they are lacking, including adequate insurance against the present war risks.

I have spoken of our commerce and of the legitimate errands of our people on the seas, but you will not be misled as to my main thought, the thought that lies beneath these phrases and gives them dignity and weight. It is not of material interest merely that we are thinking. It is, rather, of fundamental human rights, chief of all the right of life itself. I am thinking not only of the rights of Americans to go and come about their proper business by way of the sea, but also of something much deeper, much more fundamental than that. I am thinking of those rights of humanity without which there is no civilization.

My theme is of those great principles of compassion and of protection which mankind has sought to throw about human lives, the lives of non-combatants, the lives of men who are peacefully at work keeping the industrial processes of the world quick and vital, the lives of women and children and of those who supply the labor which ministers to their sustenance.

We are speaking of no selfish material rights, but of rights which our hearts support and whose foundation is that righteous passion for justice upon which all law, all structures alike of family, of state, and of mankind, must rest, as upon the ultimate base of our existence and our liberty. I cannot imagine any man with American principles at his heart hesitating to defend these things.

Drawn for The Independent by W. C. Morris

THE GREAT SPRING DRIVE

PROHIBITION: WHEN AND WHY

BY ROLLIN O. EVERHART

The Independent publishes here the first of four articles on the live subject of prohibition. The second article will present a proposal for a national commission to study the whole liquor problem. The third will be by a minister who does not believe in prohibition. The fourth will be by Mr. Bryan, who does. The Independent believes in prohibition, but even more strongly in free discussion and individual judgment; so it aims to present all sides of this great question, regardless of its own convictions. Mr. Everhart is the editor of "The American Issue," the official organ of the Anti-Saloon League, the sane, militant, business-like, efficient organization which concerns itself primarily with getting results —and gets them.—THE EDITOR.

WHEN a reform has proceeded for twenty years by the experimental method, has taken everything from small villages to entire states and blocks of states into its laboratory and tested on them the workings of its particular social specific, all with one consistent series of results, the worth of that specific may be said to be established. There are now twenty-five states which have adopted statewide prohibition. Three of these were achieved by 1890. The other twenty-two were won in the last ten years, and every one of the twenty-two adopted some form of optional local-prohibition first. They experimented and were convinced. The advancing prohibition battle-line has grown dominant thru its ability to recruit its enemies. Newspaper editors, scattered from Seattle, Wash., to Richmond, Va., men who wore the epaulettes of the opposition and who each fought prohibition's coming—as one of them exprest it—his "damnedest," have been conquered, shown, and reënlisted under the prohibition flag. Mayors and officials of great cities were outvoted, and they now preach it as a variety of city salvation. Big business first feared, then felt, then favored it. Its contagion is marvelous.

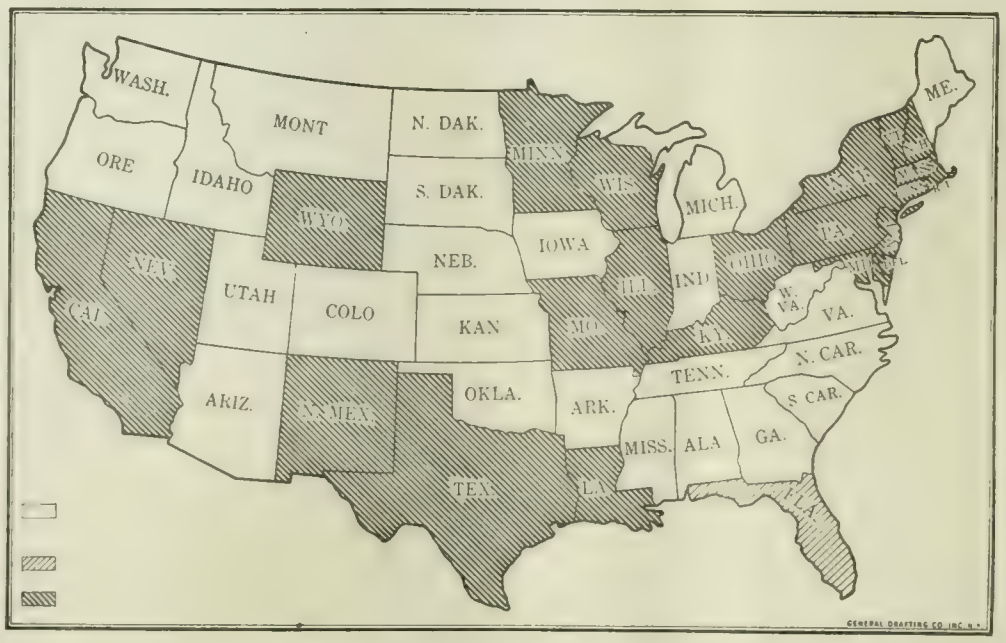
We in America know more about legislative methods of dealing with the liquor traffic than all the world besides. We know everything that Europe knows, and some things of which Europe has not legislatively dreamed. It is diverting, to those who know the facts, when some dillettante bewails the extent to which unsophisticated America is hurtling blindly along the prohibition trail, following dogmas preached by professional agitators, without stopping to take stock of what older and more practiced nations have learned. These writers are engagingly naive. Everything that Europe has ever tried on this question we have tried, and more. Is it some form of state sale which divorces the traffic from private profit and provides only a few, rigorously controlled drinkshops? We have tried it and advanced beyond it. Witness the state liquor-agencies of

Maine and the dispensaries of South Carolina. Is it a program of eating food and drinking liquor simultaneously in restaurants? Cities all over the land have wrestled with that lure to social ruin and have cast it out. Is it the forbidding of spirits and the legalizing of beer? Alabama tried it but finds prohibition better. Is it the Swedish system of licensing the drinker, limiting the amount he may get, canceling his permit if he oversteps the bounds? This, too, in all its essentials, has been tried in America with greater practical success than in Sweden, and has in turn been outgrown. In the State of Washington and elsewhere, trial was made of a limited-shipment provision for personal use requiring each orderer of liquor to get a permit from the county auditor before he could secure a shipment. This was, in essence, the Swedish system of licensing selected drinkers to consume limited amounts. According to special correspondence from Stockholm to the *Brooklyn Eagle*, under date of April 16, 1916, and appearing in the *Eagle* of April 30, the Swedish system of licensing drinkers only reduced the annual consumption of distilled liquors in Stockholm to 9.35 quarts per capita. No mention was made of the consumption of wines and beers. King County, however, in the State of Washington, containing the city of Seattle, in the sixth month of operation under the State's individual-permit law, was, according to the auditor's figures in the *Seattle Times* for July 2, 1916, issuing permits for personal shipments of liquor of all kinds at a rate totaling only two and a half quarts per capita per year for the county, *and only fifteen per cent of that was hard liquors.* Washington was beating Sweden at reducing the consumption by the personal licensing scheme, yet Washington has already gone on to the enactment of "bone dry" legislation. It is the majesty of accumulated evidence that is moving America, not the voices of professional prohibition leaders.

The November elections established three things of more moment as respects ultimate, total, national prohibition than the four added states voted "dry." These three things are:

1. Great cities can no longer be permanently counted on to support license.

2. Great cities may have prohibition forced upon them and be swiftly converted to a belief in it by the results.



3. There will be no exception of beer from American prohibition.

Denver, Portland, Tacoma and Seattle broke the Traffic's heart when they, the recalcitrant victims of rural ballots two years ago, voted in 1916 against weakening the prohibition laws of their respective states to the extent of allowing again the sale of beer only. Denver was 8586 against prohibition in 1914, but after ten months' experience of it cast a balance of 11,665 votes against the return of beer alone. The city of Portland and Multnomah County were outvoted in 1914, but in 1916 they cast a majority of 2200 against restoring the sale of low-percentage malt liquor. Seattle, dragged to prohibition in 1914 in spite of its majority protest of 15,000 votes, after ten months' "dry" experience delivered a 14,948 majority to the prohibitionists and against beer. The vote, as a whole, of the three prohibition states with which the brewers tried to arrange a separate truce was equally emphatic. Oregon, which adopted prohibition by 36,480 in 1914, rejected beer by 53,992 in 1916. Colorado, carried dry by 11,572 in 1914, slammed the door in the face of the treaty-bearing brewers in 1916 by a majority of 85,789. Washington, won to aridity by 18,632 in 1914, roared "No!" to the brewers in 1916 with all the emphasis of a 124,846 majority vote.

Prohibition has the law as well as the facts on its side. Contrast England, toiling in the day of her national peril with the ponderous mazes of state purchase, and America, free to legislate as it pleases with respect to the liquor traffic! Over there the traffic has the rights and the people the limitations. With us, the people have the rights and the traffic the limitations. This is one of the conspicuous ironies of history. If the decision of the Supreme Court sustaining the Webb-Kenyon law be traced back through its antecedents, its source will be found in the English Common Law principle that the end of law is social welfare. Under the Common Law England herself was formerly as free to deal with the liquor traffic as is America today. But in 1904, when the abolishing tendency grew acute, a brewery-controlled Parliament took the liquor traffic from under the Common Law, made it a vested right by statute, and killed all freedom of national action with reference to it save at staggering financial cost. And now, in her bitter hour, England, who gave us our legal freedom on this issue, is herself bound by the chains of her own recent, self-created slavery.

Here in America every point vital to state and national prohibition by the free will of the people has been adjudicated thru the court of last resort. A state, since the Webb-Kenyon decision, may even make the possession of liquors received thru interstate commerce a crime, and the long-standing inability of a state to enforce its prohibitions against liquor shipped in from without is cured. What effect will that decision have upon national prohibition by the proposed National Constitutional Amendment? Many argue that inasmuch as this decision puts at every state's command all the power necessary for real, state prohibition, the chief excuse for national prohibition by the amendment route is removed. How can a decision which puts liquor in the same class as rotten meats and disease-bearing rags be a reason for not outlawing it anywhere? Altho state embargoes against liquor are now possible, there cannot ever, under the Constitution, be any state embargo against all the human beings vitiated by drink. Thru them the life-springs of every prohibition state may be freely corrupted. The mentally deficient procreate their kind, and every grade of deficient mentality from the dullard to the idiot is a common product of liquor-drinking parentage. Shall the states now empowered to bar from their borders the poison which creates degenerates be left powerless with respect to human beings who can and will procreate degenerates—and in geometric progression? No state is sovereign enough to be an abiding menace to the sisterhood. There will never be border patrols of psychological experts with Binet-Simon and Yerkes-Bridges mentality scales to measure the intellectuality of those who cross from alcoholized to prohibition territory. There is a simpler, juster solution. Alcohol's menace to society will be nationally removed, not only for the sake of the states which are "dry," but also for the sake of the few states unable to will themselves "dry." We forcibly freed one section of the Union of an evil for that section's good as well as ours, and its residents now admit that the freeing was a blessing. The quick conversion of such cities as Denver and Seattle to prohibition by a compulsory experience of it points the way to the national solution. The Union is indissoluble—even by alcohol.

New York City

MAKING THE MAP ALL WHITE

The twenty-five white states have adopted prohibition. Florida's legislature is pledged to vote on it at this session

THE DUSTY HOUR-GLASS

BY AMY LOWELL

It had been a trim garden,
With parterres of fringed pinks and gillyflowers,
and smooth-raked walks.
Silks and satins had brushed the box edges
of its alleys.
The curved stone lips of its fishponds
had held the rippled reflections of tricorns and
powdered periwigs.
The branches of its trees had glittered with lanterns,
and swayed to the music of flutes and
violins.
Now, the fishponds are green with scum;
The paths and flower-beds
are run together and overgrown.
Only at one end is an octagonal Summerhouse
not yet in ruins.
Thru the lozenged panes of its windows,
you can see the interior:
A dusty bench; a fireplace,
with a lacing of letters carved in the stone
above it;
A broken ball of worsted rolled away into a corner.

Dolci, dolci, i giorni passati!

THE PRUSSIAN OF "NOBLESSE OBLIGE"

BY ALIDA VON KROCKOW

In "A Parade of Privilege," published in The Independent of February 12, Countess von Krockow told her personal experiences of the Prussian caste system as applied to a girls' school. Here she describes the very essence of Prussianism, the interdependence of nobility and militarism.—THE EDITOR.

THE tutors of boys in country families are generally *candidaten*, or candidates waiting for clerical posts, and are selected in the first place, like the governesses of their sisters, for the "soundness of their views," which is to say, for their subserviency to the views of their patrons. As for the tuition, it is preparatory either for high school, or for the Cadet Corps. Lessons in swimming and gymnastics form a part of the boys' task, and pony riding is practised in the riding rink of the castle court, with the boy's father, who has usually been in military service or else some retired cavalryman, acting as the riding master.

One day as I was sauntering thru the park of Castle K——, I noticed Manfred, a ten year old boy, standing bolt upright under a tree. I wondered what he was doing at the time, and on seeing the poor little fellow still there when I returned some time later, I asked the reason. "Why, he's going thru his standing drill," answered his sister Freda. "He began with standing twenty minutes. Now he is so far along he can stand almost an hour and a half. But he's got to reach two hours. He's to be a page, you know."

At court functions later I sometimes recalled this scene, for the lads that are so picturesque in their theatrically pretty costumes, suffer the chance of falling into swoons, while standing at their posts behind the chairs of royal princesses; posts at which it is their duty to stand upright and motionless during the long progress of courts, receptions, concerts, and the like. During an evening concert I saw on one occasion four pages faint and fall in succession; their bodies being removed swiftly and unobstrusively by lackeys hovering in the background, while reserve pages stepped into the vacant post.

But, whether in the palace, or on the grounds of parades and reviews, the ability to stand long hours without moving is an accomplishment that boys are drilled in; they are also trained in the arts of walking, dancing, and acting; charades and theatricals are especially encouraged because they teach self-possession.

When the preparation at home comes to a close—and the tutor is required to make the preparation end with the boy's confirmation in the fifteenth year of his age—there begins for him generally a life apart from his family. He goes to a college to be fitted for the university; or, if this is too much of a strain on the family income, to a government military school. The father has but to write to the Emperor setting forth the family claims to consideration, and praying for the same, in order to receive a command in response to present his son for examination. It will probably be at the cadet school in Gross Lichterfelder. Here, if the boy is found upon examination to possess the prescribed breadth of chest and the other physical requirements, the boy is accepted. His father returns home deeply satisfied: this son is off his purse on the taxpaying public; and he is, at the same time, in the profession that enjoys the most prestige thruout the empire.

THE boy has been ordered meanwhile into a room with other accepted candidates, where he picks out a uniform from a pile lying ready, and on donning the uniform, becomes a "King's man." Henceforth the break of every day will see him routed from his sleep and inspected, and lessons will fill all the hours of the day: lessons from books, and lessons from drill masters; and always in company with a thousand other boys. His surroundings meanwhile will be barren but clean, his food measured and plain, but nutritious, the disciplinary regulations minute and numberless, his superiors graded in rank. The visitors, who stir the pulses of the great school, will come in shining helmets, flashing decorations and swords.

From his instructors, and the older boys, he will see and hear expressions of contempt for all men who are deprived of the privilege of wearing an officer's uniform. His heroes, among his comrades, are the boys who have seized opportunities to stand and affront such men. And a favorite ambition he nurses, on the eve of a Sunday visit to the city, is the hope of a railroad conductor failing to salute him, or of a clerk, professor or merchant daring to address him informally, when he, too, may enjoy a chance for calling the "dirt" down. For in this stage of his career, the slang which he adopts, to designate civilians, is of a drastic, crown-princely thoroness. Later, he will twirl his mustache, and call those not wearing the coat, "civilians," and men of the rank, "fellows," at least in public company. On the drill ground, the men will have to answer to the appellations: "numskulls," "pig-dogs," and "devil's churls." His own four meters of blue cloth, which he is prohibited from laying aside, come insensibly to identifying his personality.

At the end of the course in the cadet school, he enters a war school as a candidate for a commission, and he graduates with the rank of a second lieutenant, and a handsomer coat.

He has associated during his youth with his kind. The homogeneity of their habits is as complete as that of their views.

But if he be an exceptional man, possessed of latent faculties of mind, vital enough to pierce thru the layers of discipline and instruction imposed at school, the faculties may now become urgent in manifesting themselves, because he is enjoying some freedom of time. He may also be enjoying quarters by himself, it may be in barracks, or in a lodging in town. Perhaps he has always been fond of music, or desired secretly to study art, or to travel and become an explorer. And the revival of these old longings bring on him a pe-

riod of spiritual distress. Some afternoon he will drop in to call on you, turn over the pages of a photograph album a long while, then shut it with a bang, as if of cannon shot, declare life to be "a bum thing," and depart. You make up your mind to ask his captain what talent he possesses, in order to praise that talent when he calls next time. "'Von Ramberg'!" the captain will say. "Why, if he only set his mind to it, with *his* brains he could pass an examination in Russian in three years. Volunteers in Russian nowadays are on velvet. There's no end of the requirements at headquarters for intelligence agents and especial commissioners. And with good work to his credit promotion would ensue."

"Well, there is Von Holst, too."

"Holst; what, the cuckoo! Holst is going up to the war academy; and that invention of his is almost as good as accepted. But that's the way with your young blood. Grumbling about the monotony of the service and nothing doing. Let them carry the harness another twelve, sixteen years, and they will settle into it. Tho, pray God, we shall be crossing swords with the enemy before that, and all of us getting bigger pay, and quicker promotion."

BUT while dissatisfaction of spirit finds no indulgence, there is not wanting encouragement to enterprise. And, on an average, one man in a dozen takes heart to work along some extra line, that may be useful to the army, and so secures for himself something else to do besides limbering up the brains, legs and arms of peasant recruits.

They cannot, however, revolt radically, and throw off the King's coat entirely. The want of money, their habits, their world, their past, all close over them like a vault. And there are the examples, besides, of the men who have revolted. Take Von Uhde, who donned the black jacket of an artist after throwing away his captain's uniform. His suppressed talents proved themselves to be so extraordinary that they carried him into the presidency of the International Exposition of Art in Munich—but only to be snubbed on that pinnacle by the Emperor, for when William II visited the exposition he turned his back on Von Uhde during the whole two hours that he was obliged by his official position to act as conductor of the imperial party.

A man may retire who can show that he has no means to keep up his military rank, or, he can ask for transference into the police corps or postal service; or, he may wilfully marry a girl without fortune or rank, whom no regiment will accept, and so obtain an excuse for going. But, to express the disgust that one feels, as the reason for shedding the uniform, is bound to entail social ostracism. So our youth lives on, and in the meantime habit dulls the wish to escape. The first promotion transforms him into the man the world sees—a man disdainful of every man not in an officer's uniform.

Lads in the few Catholic families of note that remain in the provinces fortunately grow up under a somewhat less concentrated pressure than Protestant boys, for the reason that there are two brilliant careers open to them in the economical calculations of their parents, the church as well as the army. One main reason of the intense militarism of Prussia is to be traced to the fact of its having humiliated the State Church to a position below ambition. In all other countries, where an established church is maintained, it is made to afford positions of prestige and princely livings, which divert, or divide, parental choice, when considering the future of sons of the family. Indeed, it may well be that this very consideration accounts for the policy that the Hohenzollerns pursue of using the church as a mystic ministrant, while keeping the ministers of the church subservient and poor. No Lutheran family of rank in Prussia, even the most pious, looks in consequence to the church when casting about for livings suitable to their offspring; unless, indeed, there are many sons to be provided for, one of whom is religiously inclined. If a son is brainy they devote to him an administrative or diplomatic career. But inasmuch as the major number of boys display only average intellect, the major number naturally are brought up with the single same one future in view—*das officier werden.*

MEANWHILE the thing has been done: the souls of all youth have been saturated with the same class ideas and ideals. And if they marry, these ideas and ideals find their identical, if softer, copy in the souls of their mates. A new family is created, and is put thru the same stamping processes; and so on from generation to generation. Any variant from the type, any youth or girl whose spirit is resistant to the caste mold, is married into it; or, that resource failing, is perforce allowed to slip down to another social plane, while any man who liberates himself mentally, which is to say, becomes modern and democratic in his opinions, is ostracised.

Countess zu D—— came visiting old family friends by herself. "Of course, we can't but receive *her*, poor creature," I heard the friends remark. And for a long time I asked no questions, taking for granted that a crime had been committed by the Count zu D——, whose estate, with its splendid old castle, was among the great ones of the province. But one day it occurred to me to inquire of my husband what the crime had been.

"What the heavens put it into your head that D—— is a criminal?" he exclaimed.

"Why, nobody seems to receive him; and the ladies are always expressing pity for the Countess."

"Well they may," said he, sternly, "for the Count is worse than a criminal. He is a Liberal."

"But he goes to the Golden Star in town," I persisted, after a moment of silence needed to recover from my surprize, and recalling that I had seen the Count alight at that weekly rendezvous of the country squirarchy.

"The Star, yes; a man can't be prohibited access to a public tavern. And some of the gentlemen there are wont to dispute and drink with him. But they are not the men, I can tell you, who are dependent on the grace of Berlin. What sort of a man is it," he went on, in a tone of indignant reflection, "that will risk the future careers of his sons for the satisfaction of airing a batch of doctrines picked up traveling in England, the land of parliamentary government, and hypocrisy?"

THERE exists no indulgence, nor even the expectation of indulgence for individual politics, in the society that the privileged youth of society grows up in; nothing but compelled conformity to the established politics. And the self-interest of his class is as clear as is its power. It is his class that makes or unmakes a man. And the class is old, experienced, ruthless and crafty. So crafty that he may see its chiefs sidetracking his ancient aristocratic claims to an army or government post in favor of a rival who is a plebian. For the youth of the middle classes swarm at the entrance gates of every career which these chiefs control. The middle class has caught on to what is demanded of men in order to be permitted to reach the goals of official place, or associate with the great. And its ambitious members respond to the demands by professing sentiments of conservatism deeper than those put forward by conservatives themselves. Their families devote their wealth, while these ambitious members are devoting their learning, and above all their labors, to what is divined as being in accordance with the will of the governing power. After a generation or two, their combined zeal and ability, having stood the test, some member of the aspiring family is allowed to attain to a high place; while the disgusted youth of noble birth has to content himself with the wink from his elders, that these others are the instruments of their class, and its screen against the democratic masses.

The youth of ancient blood perceives the tactics of the elders of his caste, and sharing in their perception that the condition of the times require the tactics, he acquiesces perforce. But in his soul there deepens the wish, and the resolve to so change conditions as to enable noblemen in Prussia to command offices like those which the lordly families of England have at their disposal. And dreams of conquest become his solace. This has been the way of Prussians since of old. Arms have provided and expanded their might, and arms shall advance it again.

So his youth ends with this religion as the sediment of all his sentiments of revolt against the monotony, the constraints, the vicissitudes of his private life. He is at one with his caste and its policy, its arms and its ancient warrior will. The Spartan-like discipline of his upbringing has borne its fruit.

The British "sea-wasps"—submarine chasers, mosquito fleet, "stabbers" are some of their other names—have been England's effective answer to the German undersea attack. They were built by the Submarine Boat Corporation in this country, 550 of them; they mount 3 inch, rapid-fire guns, their speed is twenty-two miles an hour, and because they draw only four and a half feet of water they are immune from torpedo attack. The "sea-wasps" work in conjunction with an aeroplane to locate the submarines

There is war in New York—war against food shortage, against high prices, and even against starvation. "Sure I was in the food riots," said one old woman typical of the East Side army of women who bombarded the New York City Hall to beg for food. "The way prices is, the kids ain't had a square meal in our house for a month. It's funny that if a couple of us was to go off sailin' on a ship three thousand miles away the Gover'ment would get awful excited about anyone botherin' us, but thousands of us can be starvin' right here in New York and the Gover'ment never bats an eye" At the right is "Sweet Marie": Marie Ganz, labor organizer and leader in the food riots

THE GROUNDWORK OF GARDENING

BY F. F. ROCKWELL

AUTHOR OF "THE POCKET GARDEN GUIDE"

THERE was a man who set out to make a house. Without bothering about plans, he bought his different materials—lime, cement, plaster, rafters, joist, shingles, etc. And after he got them on the ground, being in a hurry, he still didn't bother about a plan but set to work to "get results." He began with one kind of material; he used that as far as it would go; then the same with the next, and the next. . . . They took him off to a big gray building, with beds of coleus and a very tall iron fence around it. His friends are allowed to see him Tuesday and Friday afternoons, when he is not violent.

But if a man sets out to make a garden, doesn't bother with a plan; guesses at the amount of material — seeds, plants, etc. — he will want; uses them "as far as they will go," his friends call him an enthusiast, and he is doing well!

Every garden, even the smallest and simplest, that contains more than half a dozen vegetables, should be planted according to a well considered plan, and the smaller it is, in many cases, the more important careful planning is. Therefore, if one has not already made a plan of some sort, that is the first thing to do, even if seeds and plants are already bought. The plan may be as crude or as elaborate as you care to make it, but it should clearly show the position or *grouping* of the various vegetables, and the number of rows of each. These can be shown in the roughest kind of a sketch, tho it is better (and takes very little time) to draw it to scale and consider carefully the exact amount of space that can thus be allotted to each thing to be grown. A grouping of the various vegetables has the advantage of keeping together crops which will mature about the same time, or that usually occupy the ground for the entire season, so that second or succession plantings can be put in more conveniently. Also it keeps together vegetables similar in their habits of growth or cultural requirements, which results in a very material saving in the amount of work required to take care of them. Each thing has to be planted but once, while it has to be cultivated, weeded, sprayed and picked a number of times, so that a few minutes extra used in planting may often be made up many times over before harvest. Incidentally don't be afraid of that popular, old bugaboo story that you can't have your cucumbers, muskmelons and watermelons near together without spoiling them. They will *not* mix—and even if they could, it would not affect the fruits the first season!

OUTLINE FOR CONVENIENT GROUPING

Lettuce (plants)	
Beets (plants)	
Onions (sets)	
Spinach	
Peas, smooth	
Peas, wrinkled	
Cabbage (plants)	
Cauliflower (plants)	
Kohlrabi	
Lettuce	
Turnips	
Beets	
Carrots	
Chard	
Beans, green	
Beans, wax and dwarf lima	
Beans, pole and lima	
Tomatoes	
Egg-plant and peppers	
Sweet corn	
Cucumbers	
Melons	
Squash	
Onions	
Parsnip	
Salsify	

The first step in the actual work of garden making is to know when you should begin to dig. There is a psychological moment for the beginning of the spring garden drive, and this is *just as soon* as the soil, when spaded or forked up to a depth of six inches or so, will break or crumble readily. Even the parts of the garden and the flower beds or borders which one may not want to plant for several weeks yet, should be worked up as soon as possible. To do so not only gets the soil "warmed up" and ready, but increases its capacity for absorbing and holding the valuable spring rains.

Such manure or compost as can be obtained should be spread evenly on the surface, and turned under. In addition to this, spread on the surface, using about five pounds for every one hundred square feet, bone meal, or a "complete" mixed fertilizer, and dig or rake in entirely. If you must use fertilizers alone, procure a bag or more of "humus." This is natural rich decayed vegetable matter which is very helpful to plant growth. The surface may be left rough a few days after digging, but it should be gone over, pulverized and raked fairly smooth within a short time. This will cause the soil to dry out quickly on the surface, and this dry soil serves as a blanket or mulch to save the moisture below it, and keep it ready for your future needs.

As seeds are of almost every conceivable size and shape, and the plants produced from them vary still more, many different styles of planting are of course required. The usual time for planting and other useful data are presented in the accompanying tables. As to depth seed should be covered there is a general rule that it should be put down three to four times its own diameter. This varies with soil and weather conditions, and besides one has not always a pocket micrometer ready at hand. Cover small seeds, such as onions and carrots from a quarter to a half an inch deep; medium size seeds, like beets, spinach and melons, can be covered about a half an inch deep, and

larger seeds, like peas, beans and corn an inch to two inches deep. When the first spring planting is usually done, the ground is still cold and moist, and the conditions for germination are found very near the surface. Therefore, seed should be covered lightly. In late planting made in dry weather, on the other hand, the surface is likely to be too hot and dry and better conditions for germination are gained by extra deep planting.

While planting nowadays is usually done with a seed drill, very small gardens, or odds and ends in a large garden, and flower seeds, are put in by hand. Just before planting, whatever way it is done, the surface should be raked as fine and as smooth as it can be made. This allows one to do the work more accurately and insures the seed being covered with fresh moist soil which will favor and quicken germination. Your next care should be to get your rows perfectly straight. This is not for good looks alone, altho that is not an unimportant point. Straight rows exactly parallel mean a saving in the time put in cultivating during the season, and less danger of unintentional injury to the plants by whatever tool you may be using. For planting by hand it is a good thing to have for short rows and for planting flowers a board eight inches or more in width of convenient length and with at least one good straight edge. A perfectly straight, neat furrow can be drawn along the edge of this with the end of a trowel or with a marking stick, and one can stand on the board when planting or covering the seed. Very many fine seeds, such as flowers have, can be distributed more evenly if first mixed with two or three times its own bulk of dry soil, or instead of removing the seed from the packet tear off one corner, leaving a very small opening, and tap the envelope very gently with a pencil or garden label so that the seed may be sown thinly but evenly. In using the seed drill adjust it very carefully before beginning to plant, and be sure that the seed is dropping properly at the beginning and the end of each row. If you have not a seed drill of your own, it is usually cheaper to get some one to plant your garden than to attempt to plant it by hand. The drill does better work as well as quicker work than can possibly be done by hand.

A large part of the planting of the garden is done by setting out or shifting plants already partly grown. Skill in transplanting is one of the first "arts" the gardener should acquire. But the transplanter must be something of a surgeon. He (or she!) must refrain from being sentimental about the job in order to save the object of that sentiment. Most plants that are lost in transplanting are, like the cat in "Pinafore," "killed by care!" Geraniums, bedding plants and other plants from pots may be set out as they are. But plants from flats, from the cold frame, or to be shifted in the garden from where they were started to their permanent positions, should have at least about half of their leaf surface removed by cutting back the larger leaves. No matter how carefully plants are taken up a large part of the roots are sacrificed; unless the top is reduced proportionately the roots are usually unable to support the whole top, and the plant "wilts," collapses and dies.

The soil for transplanting should be just as carefully prepared as that in which seed is to be put in. Mark off the rows, and with a trowel or hoe dig out the hole where each plant is to be set and mix in with soil a little manure, or fertilizer, if you want to be sure of quick, strong growth. It may not be necessary for lettuce and other things which are set together, but it is usually desirable in the case of tomatoes, egg plants, peppers, cabbage, etc. Then fill in the holes again, making a little mark with the handle of the trowel, or with the blade, indicating just where the plant is to be set. Take up a few plants, saving all the roots you can and distribute them along the row, and set them at once. It is best to transplant late in the day, or on a cloudy or rainy day, so the plants will not be wilted during the operation. If the soil is dry, a pint or so of water may be poured into the bottom of each hole before the plant is set. Watering the surface after the plant is put in will do little good. Set the plants in deep, covering them well up to the stem so that they will stand up stiff and strong, and not look as if they had been attending an Irish wake the night before. If the weather is very hot and dry, get a couple of newspapers and put a half sheet over a plant, holding it in place with a couple of handfuls of soil for a few days after transplanting. Also put them in *firmly;* don't be afraid to pack the dirt down as tight and as hard about the plant as you can get it.

In setting out shrubs, rose bushes, fruit trees, and other "nursery" stock, have your ground ready before plants are received. Dig out a good sized hole where each plant is to be set, and enrich the soil with old manure, or bone dust; "humus" mixed in with the soil will also be very beneficial. Unpack the plants as soon as they are received, and if the roots seem at all dry, soak them in a pail of water before transplanting. Keep the roots in an old bag, thoroly wet, while they are being carried about when they are being set out. If the soil is dry put a half pail or so of water in each hole. Cut off clean any broken or bruised roots; set them out in a natural position in the hole; fill in the soil about them, and pack it close about the roots with the fingers; put in a little more water when the hole is about half filled up, and then fill in level, and pack it down firm. The plants are not made of glass, and you need not be afraid of injuring them.

After setting out plants of any kind, rake over the surface to make a fine, loose mulch of soil an inch or so deep. This will dry out quickly but will keep the soil below it moist, enabling the plant to renew growth quickly, and make a strong start.

New York City

"HARDY"—PLANT FROM APRIL 1ST TO MAY 1ST

Vegetables	Distance Apart in Rows	Distance Rows Apart	Seeds or Plants for 50-ft. Row

CARTOON COMMENT

TO EAT OR NOT TO EAT?

"How to get enough to eat" is really the question. Winsor McCay presents the *New York American's* solution in a graphic cartoon of food for Europe entitled "There are huge profits in this business." The *Duluth New Tribune* is inclined to see a more humorous phase of food shortage. Even if you were hungry you might laugh at R. H. Handy's picture, "Delivering a Small Order of Groceries These Days." Nelson Harding, in the *Brooklyn Daily Eagle,* pictures "Jack and the Beanstalk Outdone." The *New York World* puts the emphasis on our too big war profits; "Nothing to Eat but Money" is Rollin Kirby's mournful soliloquy for Father Knickerbocker

EIGHT GREAT SHORT STORIES
From American Literature

With Introductions by FREDERICK HOUK LAW

THE LEGEND OF THE ROSE OF THE ALHAMBRA

BY WASHINGTON IRVING

IN the United States the fact that every one reads has multiplied the number of periodicals and increased the demand for the short story—now the most popular type of literature, the one most generally interesting to all ages. It is well to pause a moment in our reading and consider the history of the short story form and what it is that makes a story "good."

With this number The Independent begins the publication of eight great short stories. It has seemed appropriate to limit the stories to those by American authors, not alone because our first interest is naturally in our own land, but more especially because an American critic, Edgar Allan Poe, first pointed out the essential characteristics of the short story as an art form. Hawthorne and Poe were among the first authors to write for single effect. Bret Harte first called attention to the value of local color. Stockton was among those who first wrote for ingenious surprize. However much these writers were influenced by European models, they at least influenced the world. By emphasizing new elements they aided in making the short story what it is today. More recent writers have also become famous in the field of the short story. O. Henry, with freedom from restraint, with pith, point and easy humor, won wide popularity. Richard Harding Davis and Mary E. Wilkins Freeman, the one drawing material from city life, the other from life in the remoter parts of New England, have gone beneath the surface and seen something of the depths of life. There is every reason to be proud of American short stories. In the past their influence was in the direction of form; in the present it is toward dignity and worth.

The stories chosen for reproduction in The Independent are representative in many ways. They illustrate the American short story from the time of Washington Irving to the present, showing how the easy-going tale gave place to the highly centralized narrative of single effect. Representative of eight great American authors, the stories have strong biographic interest. In attitude they illustrate romance and realism, humor and pathos, symbolism and impressionism. Geographically they concern the old world, the mountains and farms of New England, rough frontier life in the West, and the lives of the rich and of the poor in cosmopolitan New York. They are founded on elemental subjects: love, ambition, fear, self-sacrifice, jealousy, sympathy and anger. In general they show the development from the vague and far-away toward the actual—toward that higher realism that is a sympathetic understanding of life.

Those who read the eight stories and the introductory criticisms will gain, we hope, added interest in the short story as an artistic form, new appreciation of our American writers, and a delightful refreshing of the memory by re-reading stories that have given pleasure for many years.

"The Legend of the Rose of the Alhambra" is a pleasing example of the tale, the unemphatic, non-centralized type of narration that preceded the short story of today. The tale—natural easy-going story telling—is as old as the race: the short story is modern. The tale is simple narration: the short story is narration crystallized.

WASHINGTON IRVING

Irving never wrote in accordance with the principles of the modern short story, but he brought the tale to high excellence. Like other writers of his time he usually wrote of the historic or the supernatural, but he always related his work closely to the facts of life, and exprest himself with remarkable originality, melody and charm.

Irving's life was so full of rich experiences that he was well fitted for romance. Born in 1783 and living until 1859, he saw the wonderful unfolding of the modern world. He had the advantage of travel in various parts of America and Europe, and resided for a long time in England and Spain. "Diedrich Knickerbocker's History of New York," "Rip Van Winkle," "The Legend of Sleepy Hollow," "Astoria" and other works came from American experiences; "The Sketch Book" and "Bracebridge Hall" from English life; several biographies from his interest in litera-

ture and history; and his "Conquest of Granada" and "The Alhambra" from his life in Spain.

In 1829, while traveling in Spain, Irving lived for some time in the Alhambra, an old Moorish palace on a great hill overlooking the city of Granada. There, dreaming and studying day after day, he gathered material for his book, "The Alhambra," a delightful collection of descriptions, character studies, and romantic and marvelous tales.

No story in the book is more charming than "The Legend of the Rose of the Alhambra." Here is pure romance fancifully localized and definitely related to history. The dainty Spanish damsel, Jacinta, is ingeniously made the descendant of romantic ancestors; the ever-watchful aunt, Fredegonda, is one of the living characters that make the pages of Irving so vivid; Ruiz de Alarcón and Zorahayda are medieval and dreamlike. There are touches of humor and good-natured satire thruout the story, with a pensive kind of melancholy entirely appropriate to a legend of the old tower of the Infantas. Most remarkable of all is a richly sensuous effect created by flowing rhythms, poetic descriptions, and suggestive words. The word "rose," the keyword of the tale, is repeated again and again, giving an atmosphere of fragrance.

The tale is one of summer evening fancy and enchantment, one of the sweetest that ever ennobled an ancient building. Old-fashioned, aromatic, redolent with charm, "The Legend of the Rose of the Alhambra" is truly a flower of the long ago, plucked in the rich gardens of the Alhambra, prest in the pages of Irving's book, and stirring us with its memory of other days.

FOR some time after the surrender of Granada by the Moors, that delightful city was a frequent and favorite residence of the Spanish sovereigns, until they were frightened away by successive shocks of earthquakes, which toppled down various houses, and made the old Moslem towers rock to their foundation.

Many, many years then rolled away, during which Granada was rarely honored by a royal guest. The palaces of the nobility remained silent and shut up; and the Alhambra, like a slighted beauty, sat in mournful desolation among her neglected gardens. The Tower of the Infantas, once the residence of the three beautiful Moorish princesses, partook of the general desolation; the spider spun her web athwart the gilded vault, and bats and owls nestled in those chambers that had been graced by the presence of Zayda, Zorayda and Zorahayda. The neglect of this tower may have been partly owing to some superstitious notions of the neighbors. It was rumored that the spirit of the youthful Zorahayda, who had perished in that tower, was often seen by moonlight seated beside the fountain in the hall, or moaning about the battlements, and that the notes of her silver lute would be heard at midnight by wayfarers passing along the glen.

At length the city of Granada was once more welcomed by the royal presence. All the world knows that Philip V was the first Bourbon that swayed the Spanish scepter. All the world knows that he married, in second nuptials, Elizabetta or Isabella (for they are the same), the beautiful princess of Parma; and all the world knows that by this chain of contingencies a French prince and an Italian princess were seated together on the Spanish throne. For a visit of this illustrious pair, the Alhambra was repaired and fitted up with all possible expedition. The arrival of the court changed the whole aspect of the lately deserted palace. The clangor of drum and trumpet, the tramp of steed about the avenues and outer court, the glitter of arms and display of banners about barbican and battlement, recalled the ancient and warlike glories of the fortress. A softer spirit, however, reigned within the royal palace. There was the rustling of robes and the cautious tread and murmuring voice of reverential courtiers about the ante-chambers, a loitering of pages and maids of honor about the gardens, and the sound of music stealing from open casements.

Among those who attended in the train of the monarchs was a favorite page of the queen, named Ruiz de Alarcón. To say that he was a favorite page of the queen was at once to speak his eulogium, for every one in the suite of the stately Elizabetta was chosen for grace, and beauty, and accomplishments. He was just turned of eighteen, light and lithe of form, and graceful as a young Antinous. To the queen he was all deference and respect, yet he was at heart a roguish stripling, petted and spoiled by the ladies about the court.

This loitering page was one morning rambling about the groves of the Generalife, which overlook the grounds of the Alhambra. He had taken with him for his amusement a favorite gerfalcon of the queen. In the course of his rambles, seeing a bird rising from a thicket, he unhooded the hawk and let him fly. The falcon towered high in the air, made a swoop at his quarry, but missing it, soared away, regardless of the calls of the page. The latter followed the truant bird with his eye, in its capricious flight, until he saw it alight upon the battlements of a remote and lonely tower, in the outer wall of the Alhambra, built on the edge of a ravine that separated the royal fortress from the grounds of the Generalife. It was in fact the "Tower of the Princesses."

The page descended into the ravine and approached the tower, but it had no entrance from the glen, and its lofty hight rendered any attempt to scale it fruitless. Seeking one of the gates of the fortress, therefore, he made a wide circuit to that side of the tower facing within the walls.

A small garden, enclosed by a trellis-work of reeds overhung with myrtle, lay before the tower. Opening a wicket, the page passed between beds of flowers and thickets of roses to the door. It was closed and bolted. A crevice in the door gave him a peep into the interior. There was a small Moorish hall with fretted walls, light marble columns, and an alabaster fountain surrounded with flowers. In the center hung a gilt cage containing a singing-bird; beneath it, on a chair, lay a tortoise-shell cat among reels of silk and other articles of female labor, and a guitar decorated with ribbons leaned against the fountain.

Ruiz de Alarcón was struck with these traces of female taste and elegance in a lonely and, as he had supposed, deserted tower. They reminded him of the tales of enchanted halls current in the Alhambra; and the tortoise-shell cat might be some spellbound princess.

He knocked gently at the door. A beautiful face peeped out from a little window above, but was instantly withdrawn. He waited, expecting that the door would be opened, but he waited in vain; no footstep was to be heard within—all was silent. Had his senses deceived him, or was this beautiful apparition the fairy of the tower? He knocked again, and more loudly. After a little while the beaming face once more peeped forth; it was that of a blooming damsel of fifteen.

THE page immediately doffed his plumed bonnet, and entreated in the most courteous accents to be permitted to ascend the tower in pursuit of his falcon.

"I dare not open the door, Señor," replied the little damsel, blushing, "my aunt has forbidden it."

"I do beseech you, fair maid—it is the favorite falcon of the queen. I dare not return to the palace without it."

"Are you then one of the cavaliers of the court?"

"I am, fair maid; but I shall lose the queen's favor and my place, if I lose this hawk."

"It is against you cavaliers of the court my aunt has charged me especially to bar the door."

"Against wicked cavaliers doubtless, but I am none of these, but a simple, harmless page, who will be ruined and undone if you deny me this small request."

The heart of the little damsel was touched by the distress of the page. It was a thousand pities he should be ruined for the want of so trifling a boon. Surely too he could not be one of those dangerous beings whom her aunt had described as a species of cannibal, ever on the prowl to make prey of thoughtless damsels; he was gentle and modest, and stood so entreatingly with cap in hand, and looked so charming.

The sly page saw that the garrison began to waver, and redoubled his entreaties in such moving terms that it was not in the nature of mortal maiden to deny him; so the blushing little warden of the tower descended, and opened the door with a trembling hand, and if the page had been charmed by a mere glimpse of her countenance from the window, he was ravished by the full-length portrait now revealed to him.

Her Andalusian bodice and trim *basquiña* set off the round but delicate symmetry of her form, which was as yet scarce verging into womanhood. Her glossy hair was parted on her forehead with scrupulous exactness, and decorated with a fresh-plucked rose, according to the universal custom of the country. It is true her complexion was tinged by the ardor of a southern sun, but it served to give richness to the mantling bloom of her cheek, and to highten the luster of her melting eyes.

Ruiz de Alarcón beheld all this with a single glance, for it became him not to tarry; he merely murmured his acknowledgments, and then bounded lightly up the spiral staircase in quest of his falcon.

He soon returned with the truant bird upon his fist. The damsel, in the meantime, had seated herself by the fountain in the hall, and was winding silk; but in her agitation she let fall the reel upon the pavement. The page sprang and picked it up, then dropping gracefully on one knee, presented it to her; but, seizing the hand extended to receive it, imprinted on it a kiss more fervent and devout than he had ever imprinted on the fair hand of his sovereign.

"*Señor!*" exclaimed the damsel, blushing still deeper with confusion and surprize, for never before had she received such a salutation.

The modest page made a thousand apologies, assuring her it was the way at court of expressing the most profound homage and respect.

Her anger, if anger she felt, was easily pacified, but her agitation and embarrassment continued, and she sat blushing deeper and deeper, with her eyes cast down upon her work, entangling the silk which she attempted to wind.

The cunning page saw the confusion in the opposite camp, and would fain have profited by it, but the fine speeches he would have uttered died upon his lips; his attempts at gallantry were awkward and ineffectual; and to his surprize, the adroit page, who had figured with such grace and effrontery among the most knowing and experienced ladies of the court, found himself awed and abashed in the presence of a simple damsel of fifteen.

The diffidence of the page, tho genuine, was short-lived, and he was recovering his usual ease and confidence, when a shrill voice was heard at a distance.

"My aunt is returning from mass." cried the damsel in affright; "I pray you, Señor, depart."

"Not until you grant me that rose from your hair as a remembrance."

She hastily untwisted the rose from her raven locks. "Take it," cried she, agitated and blushing, "but pray begone."

The page took the rose, and at the same time covered with kisses the fair hand that gave it. Then, placing the flower in his

"Best In The Long Run"

bonnet, and taking the falcon upon his fist, he bounded off through the garden, bearing away with him the heart of the gentle Jacinta.

When the vigilant aunt arrived at the tower, she remarked the agitation of her niece, and an air of confusion in the hall; but a word of explanation sufficed. "A gerfalcon had pursued his prey into the hall."

"Mercy on us! to think of a falcon flying into the tower. Did ever one hear of so saucy a hawk? Why, the very bird in the cage is not safe!"

The vigilant Fredegonda was one of the most wary of ancient spinsters. She had a becoming terror and distrust of what she denominated "the opposite sex," which had gradually increased thru a long life of celibacy.

THE niece was the orphan of an officer who had fallen in the wars. She had been educated in a convent, and had recently been transferred from her sacred asylum to the immediate guardianship of her aunt, under whose overshadowing care she vegetated in obscurity, like an opening rose blooming beneath a brier. Nor indeed is this comparison entirely accidental; for, to tell the truth, her fresh and dawning beauty had caught the public eye, even in her seclusion, and, with that poetical turn common to the people of Andalusia, the peasantry of the neighborhood had given her the appellation of "the Rose of the Alhambra."

The wary aunt continued to keep a faithful watch over her tempting little niece as long as the court continued at Granada, and flattered herself that her vigilance had been successful. It is true the good lady was now and then discomposed by the tinkling of guitars and chanting of love-ditties from the moonlit groves beneath the tower; but she would exhort her niece to shut her ears against such idle minstrelsy, assuring her that it was one of the arts of the opposite sex, by which simple maids were often lured to their undoing. Alas! what chance with a simple maid has a dry lecture against a moonlight serenade?

At length King Philip cut short his sojourn at Granada, and suddenly departed with all his train. The vigilant Fredegonda watched the royal pageant as it issued forth from the Gate of Justice and descended the great avenue leading to the city. When the last banner disappeared from her sight, she returned exulting to her tower, for all her cares were over. To her surprize, a light Arabian steed pawed the ground at the wicket-gate of the garden—to her horror she saw thru the thickets of roses a youth in gayly embroidered dress, at the feet of her niece. At the sounds of her footsteps he gave a tender adieu, bounded lightly over the barrier of reeds and myrtles, sprang upon his horse, and was out of sight in an instant.

The tender Jacinta, in the agony of her grief, lost all thought of her aunt's displeasure. Throwing herself into her arms, she broke forth into sobs and tears.

"*Ay de mi!*" cried she; "he's gone! he's gone. and I shall never see him more!"

"Gone!—who is gone?—what youth is that I saw at your feet?"

"A queen's page, aunt, who came to bid me farewell."

"A queen's page, child!" echoed the vigilant Fredegonda, faintly, "and when did you become acquainted with the queen's page?"

"The morning that the gerfalcon came into the tower. It was the queen's gerfalcon, and he came in pursuit of it."

"Ah silly, silly girl! know that there are no gerfalcons half so dangerous as these young prankling pages, and it is precisely such simple birds as thee that they pounce upon."

Days, weeks, months, elapsed, and nothing more was heard of the page. The pomegranate ripened, the vine yielded up its fruit, the autumnal rains descended in torrents from the mountains; the Sierra Nevada became covered with a snowy mantle, and wintry blasts howled thru the halls of the Alhambra—still he came not. The winter passed away. Again the genial spring burst forth with song and blossom and balmy zephyr; the snows melted from the mountains, until none remained but on the lofty summit of Nevada, glistening thru the sultry mountain air. Still nothing was heard of the forgetful page.

In the meantime the poor little Jacinta grew pale and thoughtful. Her former occupations and amusements were abandoned, her silk lay entangled, her guitar unstrung, her flowers were neglected, the notes of her bird unheeded, and her eyes, once so bright, were dimmed with secret weeping. If any solitude could be devised to foster the passion of a love-lorn damsel it would be such a place as the Alhambra, where everything seems disposed to produce tender and romantic reveries. It is a very paradise for lovers; how hard then to be alone in such a paradise—and not merely alone, but forsaken!

"Alas, silly child!" would the staid and immaculate Fredegonda say, when she found her niece in one of her desponding moods—"did I not warn thee against the wiles and deceptions of these men? What couldst thou expect, too, from one of a haughty and aspiring family—thou an orphan, the descendant of a fallen and impoverished line? Be assured, if the youth were true, his father, who is one of the proudest nobles about the court, would prohibit his union with one so humble and portionless as thou. Pluck up thy resolution, therefore, and drive these idle notions from thy mind."

The words of the immaculate Fredegonda only served to increase the melancholy of her niece, but she sought to indulge it in private. At a late hour one midsummer night, after her aunt had retired to rest, she remained alone in the hall of the tower, seated beside the alabaster fountain. It was here that the faithless page had first knelt and kissed her hand; it was here that he had often vowed eternal fidelity. The poor little damsel's heart was overladen with sad and tender recollections, her tears began to flow, and slowly fell drop by drop into the fountain. By degrees the crystal water became agitated, and—bubble—bubble—bubble—boiled up and was tossed about, until a female figure, richly clad in Moorish robes, slowly rose to view.

JACINTA was so frightened that she fled from the hall and did not venture to return. The next morning she related what she had seen to her aunt, but the good lady treated it as a fantasy of her troubled mind, or supposed she had fallen asleep and dreamt beside the fountain. "Thou hast been thinking of the story of the three Moorish princesses that once inhabited this tower," continued she, "and it has entered into thy dreams."

"What story, aunt? I know nothing of it."

"Thou hast certainly heard of the three princesses, Zayda, Zorayda, and Zorahayda, who were confined in this tower by the king their father, and agreed to fly with three Christian cavaliers. The two first accomplished their escape, but the third failed in her resolution, and, it is said, died in this tower."

"I now recollect to have heard of it," said Jacinta, "and to have wept over the fate of the gentle Zorahayda."

"Thou mayest well weep over her fate," continued the aunt, "for the lover of Zorahayda was thy ancestor. He long bemoaned his Moorish love; but time cured him of his grief, and he married a Spanish lady, from whom thou art descended."

Jacinta ruminated over these words. "That which I have seen is no fantasy of the brain," said she to herself. "I am confident. If indeed it be the spirit of the gentle Zorahayda, which I have heard lingers about this tower, of what should I be afraid? I'll watch by the fountain tonight—perhaps the visit will be repeated."

Toward midnight, when everything was quiet, she again took her seat in the hall. As the bell in the distant watch-tower of the Alhambra struck the midnight hour, the fountain was again agitated; and bubble—bubble—bubble—it tossed about the waters until the Moorish female again rose to view. She was young and beautiful; her dress was rich with jewels, and in her hand she held a silver lute. Jacinta trembled and was faint, but was reassured by the soft and plaintive voice of the apparition, and the sweet expression of her pale, melancholy countenance.

"Daughter of mortality," said she, "what aileth thee? Why do thy tears trouble my fountain, and thy sighs and plaints disturb the quiet watches of the night?"

"I weep because of the faithlessness of man, and I bemoan my solitary and forsaken state."

"Take comfort; thy sorrows may yet have an end. Thou beholdest a Moorish princess, who, like thee, was unhappy in her love. A Christian knight, thy ancestor, won my heart, and would have borne me to his native land and to the bosom of his church. I was a convert in my heart, but I lacked courage equal to my faith, and lingered till too late. For this the evil genii are permitted to have power over me, and I remain enchanted in this tower until some pure Christian will deign to break the magic spell. Wilt thou undertake the task?"

"I will," replied the damsel, trembling.

"Come hither, then, and fear not; dip thy hand in the fountain, sprinkle the water over me, and baptize me after the manner of thy faith; so shall the enchantment be dispelled, and my troubled spirit have repose."

The damsel advanced with faltering steps, dipped her hand in the fountain, collected water in the palm, and sprinkled it over the pale face of the phantom.

The latter smiled with ineffable benignity. She dropt her silver lute at the feet of Jacinta, crost her white arms upon her bosom, and melted from sight, so that it seemed merely if a shower of dewdrops had fallen into the fountain.

Jacinta retired from the hall filled with awe and wonder. She scarcely closed her eyes that night; but when she awoke at daybreak out of a troubled slumber, the whole appeared to her like a distempered dream. On descending into the hall, however, the truth of the vision was established, for beside the fountain she beheld the silver lute glittering in the morning sunshine.

She hastened to her aunt, to relate all that had befallen her, and called her to behold the lute as a testimonial of the reality of her story. If the good lady had any lingering doubts, they were removed when Jacinta touched the instrument, for she drew forth such ravishing tones as to thaw even the frigid bosom of the immaculate Fredegonda, that region of eternal winter, into a genial flow. Nothing but supernatural melody could have produced such an effect.

THE extraordinary power of the lute became every day more and more apparent. The wayfarer passing by the tower was detained, and, as it were, spell-bound in breathless ecstasy. The very birds gathered in the neighboring trees, and hushing their own strains, listened in charmed silence.

Rumor soon spread the news abroad. The inhabitants of Granada thronged to the Alhambra to catch a few notes of the transcendent music that floated about the Tower of Las Infantas.

The lovely little minstrel was at length drawn forth from her retreat. The rich and powerful of the land contended who should entertain and do honor to her; or rather, who should secure the charms of her lute to draw fashionable throngs to their salons. Wherever she went her vigilant aunt kept a dragon watch at her elbow, awing the throngs of impassioned admirers who hung in raptures on her strains. The report of her wonderful powers spread from city to city. Málaga, Seville, Córdova, all became successively mad on the theme; nothing was talked of thruout Andalusia but the beautiful minstrel of the Alhambra. How could it be otherwise among a people so musical and gallant as the Andalusians, when the lute was magical in its powers, and the minstrel inspired by love!

While all Andalusia was thus music mad, a different mood prevailed at the court of Spain. Philip V, as is well known, was a miserable hypochondriac, and subject to all kinds of fancies. Sometimes he would keep

Legal Training
For Business Efficiency
(By Mail)

THIS talk on Law Training is addressed to every reader of The Independent who wishes to possess an accurate knowledge of the law for business purposes, to every man following a commercial career who wishes to gain the tremendous advantages of legal training as a factor in business efficiency, rapid promotion and large success. The law, as you fully recognize, is inseparable from modern business. Every man who aims at a higher position and greater achievement in business knows that he must be grounded in the fundamentals of law just as much as in the principles of business administration and efficiency. For all these factors go hand in hand.

There is never a day in business when some legal question may not arise, some unexpected situation, calling for thorough knowledge of the law and a quick and correct decision to save your business from loss or even from ruin.

Probably not a week goes by in the life of the average business man that he is not called upon to decide, quickly, some point of business law, the correct solution of which may mean the difference of hundreds, perhaps thousands, of dollars to him.

It is expensive—and not always feasible—to consult a lawyer on every one of these points as they arise. The business man who has acquired a general knowledge of law can act intelligently and wisely in many of these emergencies without taking the time and trouble to consult a lawyer. Where legal advice is necessary he is equipped to discuss his legal problems with his attorney intelligently.

A business executive is not true to his trust, nor is he a safe executive, if he is lacking in a thorough knowledge of the law. You will find that the great majority of business executives in high positions possess an accurate legal education.

That is why this message is of vital importance to you. *Our Business Men's Law Courses* are especially prepared to fit many classes of business men. They include only such of the law as will be practically useful under ordinary, every day conditions.

These special courses are as follows:

1. Business Men's Law Course (90 lectures, 3 law books) covering Contracts, Agency, Negotiable Instruments, Guaranty and Suretyship, Sales, Bailments, Insurance, Bankruptcy.
2. Bankers Law Course (180 lectures, 5 law books) covering Contracts, Agency, Bills and Notes, Guaranty and Suretyship, Real Property, Wills, Administration of Estates, Trusts, Bailments, Insurance, Bankruptcy, Abstracts of Title, Sale, Private Corporations, Partnership.
3. Commercial Law Course (200 lectures, 6 law books) covering Contracts, Agency, Bills and Notes, Bailments and Carriers, Guaranty and Suretyship, Real Property, Personal Property, Mortgages, Sales, Wills, Private Corporations, Partnership, Insurance, Bankruptcy, Landlord and Tenant, Public Corporations and Torts.
4. Real Estate Law Course (90 lectures, 2 law books) covering Contracts, Agency, Real Property, Mortgages, Wills, Landlord and Tenant, Abstracts.
5. Credit Men's Law Course (85 lectures, 3 law books) covering Contracts, Agency, Bills and Notes, Guaranty and Suretyship, Personal Property, Sales, Mortgages, Banking, Bankruptcy, Credits.

It costs you approximately little in time or money to master one or all of these courses, considering the enormous benefits to be derived.

No matter what your business is you need this instruction.

No matter where you live you can secure this instruction right in your own home.

The Hamilton System of Home Instruction is unique. This is the only Educational Institution of its kind teaching law by correspondence methods which operates and conducts a resident school.

Conducting as we do a high grade, thoroughly recognized Law School, in which even attorneys take special Post Graduate Courses after finishing their regular studies and being admitted to the Bar, we are obviously splendidly equipped to conduct a more practical, thorough and systematic correspondence course of instruction than any other correspondence law school.

Our plan combines and employs both Law Text Book Reading and Study, and the Case System of Study. No other law correspondence school combines these two systems. Our students know not only what the law is, but where to find the law.

Our Case System recognizes the changing conditions of business and cites the newest cases. Our experienced staff of attorneys are constantly giving our students the benefit of their research into the latest opinions and decisions of the courts.

Send us the attached coupon checking off the courses in which you are especially interested. This will place you under no obligation whatever.

MAZDA

"Not the name of a thing, but the mark of a service"

MAZDA Service is the hub—MAZDA lamp manufacturers the spokes—in the wheel of incandescent lamp progress

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company. :: :: :: ::

Better Poise and Self Control

You can't do good work, if you are nervous and irritable—if little things annoy and you are indecisive and quick tempered. Poise is out of the question—self-control next to impossible. Yet—most such conditions are due to habits which may easily be corrected. This is fully explained in Dr. Kellogg's new book, "Neurasthenia." For more than forty years, Dr. Kellogg has been Chief Medical Director of the Battle Creek Sanitarium. Here he has observed and prescribed for thousands of people whose condition has been the result of overwork, over-worry and inattention to the natural requirements of their bodies. Therefore, Dr. Kellogg knows what he is talking about when he tells you that nervousness and irritability are usually symptoms of internal conditions which may be corrected and controlled. He speaks from experience. His findings are those of practice—not theory. In his book he tells you what to do—diet, exercise, rest, sleep and careful attention to posture and working habits. Thus most obstinate cases of nervous exhaustion may be relieved. Full and complete instructions which you can easily follow in your own home. Write for this book today. Find out what it can do for you. The price is only $2. And—if you are not entirely satisfied, after five days' examination, you may return the book and we will promptly refund your money. Is this fair? We let you be the judge of what Dr. Kellogg's book can do for you.

I attach $2 for Dr. Kellogg's "Neurasthenia" which I will keep, if I do not return it in five days for refund.

(Write your name and address plainly in the margin.)

to his bed for weeks together, groaning under imaginary complaints. At other times he would insist upon abdicating his throne, to the great annoyance of his royal spouse, who had a strong relish for the splendors of a court and the glories of a crown, and guided the scepter of her imbecile lord with an expert and steady hand.

Nothing was found to be so efficacious in dispelling the royal megrims as the power of music; the queen took care, therefore, to have the best performers, both vocal and instrumental, at hand, and retained the famous Italian singer Farinelli about the court as a kind of royal physician.

At the moment we treat of, however, a freak had come over the mind of this sapient and illustrious Bourbon that surpassed all former vagaries. After a long spell of imaginary illness, which set all the strains of Farinelli and the consultations of a whole orchestra of court fiddlers at defiance, the monarch fairly, in idea, gave up the ghost, and considered himself absolutely dead.

This would have been harmless enough, and even convenient both to his queen and courtiers, had he been content to remain in the quietude befitting a dead man; but to their annoyance he insisted upon having the funeral ceremonies performed over him, and, to their inexpressible perplexity, began to grow impatient, and to revile bitterly at them for negligence and disrespect, in leaving him unburied. What was to be done? To disobey the king's positive commands was monstrous in the eyes of the obsequious courtiers of a punctilious court—but to obey him, and bury him alive, would be downright regicide!

In the midst of this fearful dilemma a rumor reached the court of the female minstrel who was turning the brains of all Andalusia. The queen despatched missions in all haste to summon her to St. Ildefonso, where the court at that time resided.

Within a few days, as the queen with her maids of honor was walking in those stately gardens, intended, with their avenues and terraces and fountains, to eclipse the glories of Versailles, the far-famed minstrel was conducted into her presence. The imperial Elizabetta gazed with surprize at the youthful and unpretending appearance of the little being that had set the world madding. She was in her picturesque Andalusian dress, her silver lute in hand, and stood with modest and downcast eyes, but with a simplicity and freshness of beauty that still bespoke her "the Rose of the Alhambra."

As usual she was accompanied by the ever-vigilant Fredegonda, who gave the whole history of her parentage and descent to the inquiring queen. If the stately Elizabetta had been interested by the appearance of Jacinta, she was still more pleased when she learned that she was of a meritorious tho impoverished line, and that her father had bravely fallen in the service of the crown. "If thy powers equal thy renown," said she, "and thou canst cast forth this evil spirit that possesses thy sovereign, thy fortunes shall henceforth be my care, and honors and wealth attend thee."

Impatient to make trial of her skill, she led the way at once to the apartment of the moody monarch.

Jacinta followed with downcast eyes thru files of guards and crowds of courtiers. They arrived at length at a great chamber hung with black. The windows were closed to exclude the light of day; a number of yellow wax tapers in silver sconces diffused a lugubrious light, and dimly revealed the figures of mutes in mourning dresses, and courtiers who glided about with noiseless step and woe-begone visage. In the midst of a funeral bed or bier, his hands folded on his breast, and the tip of his nose just visible, lay extended this would-be-buried monarch.

The queen entered the chamber in silence, and pointing to a footstool in an obscure corner, beckoned to Jacinta to sit down and commence.

At first she touched her lute with a faltering hand, but gathering confidence and animation as she proceeded, drew forth such soft aerial harmony, that all present could

scarce believe it mortal. As to the monarch, who had already considered himself in the world of spirits, he set it down for some angelic melody or the music of the spheres. By degrees the theme was varied, and the voice of the minstrel accompanied the instrument. She poured forth one of the legendary ballads treating of the ancient glories of the Alhambra and the achievements of the Moors. Her whole soul entered into the theme, for with the recollections of the Alhambra was associated the story of her love. The funeral-chamber resounded with animating strain. It entered into the gloomy heart of the monarch. He raised his head and gazed around: he sat up on his couch, his eye began to kindle—at length, leaping upon the floor, he called for sword and buckler.

The triumph of music, or rather of the enchanted lute, was complete; the demon of melancholy was cast forth; and, as it were, a dead man brought to life. The windows of the apartment were thrown open; the glorious effulgence of Spanish sunshine burst into the late lugubrious chamber; all eyes sought the lovely enchantress, but the lute had fallen from her hand, she had sunk upon the earth, and the next moment was clasped to the bosom of Ruiz de Alarcón.

The nuptials of the happy couple were celebrated soon afterward with great splendor, and the Rose of the Alhambra became the ornament and delight of the court. "But hold—not so fast"—I hear the reader exclaim; "this is jumping to the end of a story at a furious rate! First let us know how Ruiz de Alarcón managed to account to Jacinta for his long neglect?" Nothing more easy; the venerable, time-honored excuse, the opposition to his wishes by a proud, pragmatical old father; besides, young people who really like one another soon come to an amicable understanding, and bury all past grievances when once they meet.

But how was the proud, pragmatical old father reconciled to the match?

Oh! as to that, his scruples were easily overcome by a word or two from the queen, especially as dignities and rewards were showered upon the blooming favorite of royalty. Besides, the lute of Jacinta, you know, possest a magic power, and could control the most stubborn head and hardest breast.

And what came of the enchanted lute?

Oh, that is the most curious matter of all, and plainly proves the truth of the whole story. That lute remained for some time in the family, but was purloined and carried off, as was supposed, by the great singer Farinelli, in pure jealousy. At his death it passed into other hands in Italy, who were ignorant of its mystic powers, and melting down the silver, transferred the strings to an old Cremona fiddle. The strings still retain something of their magic virtues. A word in the reader's ear, but let it go no further: that fiddle is now bewitching the whole world—it is the fiddle of Paganini!

PEBBLES

"She's the daughter of a bank president."

"No wonder she draws so much interest."—*Purple Cow.*

"Is she interesting?"

"No, cold as a stone."

"Oh, I see: a sort of jade, eh?"—*Sun-Dial.*

Papa—It hurts me more than you when I whip you.

Willie—That's a sort of a sympathetic strike, isn't it?—*Jester.*

Teacher—Rachael, use indigo in a sentence.

Rachael (after much thought)—The baby is indigo cart.—*Awgwan.*

"Well, my little man," said the kind old gentleman, "and how old are you?"

"Five," answered the child.

"And what are you going to be?"

"Six," was the quiet reply.—*Boston Times.*

The Good Things Some Boys Get

In homes that serve Puffed Wheat and Rice, boys carry the grains at play. Sometimes they are simply salted—sometimes doused with melted butter. And these bubble-like grains, toasted, flavory, crisp and flaky, form real food confections.

Those Boys Say This:

Boys with Puffed Grains always treat other boys. And they say something like this: "Why, we have Puffed Grains every day in our house. I get a dish every morning. "I get them sometimes for supper, in a bowl of milk. Sister uses them in candy making. And I get them like this after school.

"Sometimes it is Puffed Wheat, sometimes Puffed Rice, and sometimes it is Corn Puffs. But one is as good as another."

Children who get Puffed Grains talk about them. And children who don't, envy the rest.

For these are the foods that taste like nuts. That are airy and thin and flimsy. And that seem like confections served by the dishful.

Children who don't get Puffed Grains get nothing else that's like them. There is no other way to make whole grains into such inviting morsels.

Puffed Wheat **Puffed Rice**
and Corn Puffs
Each 15c. Except in Far West

The purpose of puffing, by Prof. Anderson's process, is to make whole grains wholly digestible. By terrific heat and shooting from guns, every food cell is exploded.

What cooking does in a partial way, this process does completely. Thus every element is made available, and every atom feeds.

People need whole grain foods. But they need them so the whole grain will digest. Puffed Wheat and Rice supply them. So every dainty tidbit forms a perfect food. Let children eat all they will

MOTOR PROGRESS

By

John Chapman Hilder

AFTER a hard winter of experimentation and hours of study the village blacksmiths are now preparing to put what they have learned into effect and make hash of your car while the sun shines. They are laying in stocks of gasoline adulterants, abrasive lubricants, inadequate tools and brittle promises. So that by the time the roads are opened up and dried out and the great spring drive is on the whole blessed countryside will be ready to take you in, collar your money and send you off repining.

The best possible way for you to keep the balance of trade in your own favor during the coming season is to fix your car troubles now, before they occur, by giving the machine a thoro overhauling. It is not a difficult job, if you do it systematically, and it may teach you a lot about your car that you didn't know before.

Thoro overhauling means really little more than thoro cleaning from end to end and thru the middle. Add to this the replacing of worn parts with new ones and you have a pretty complete definition.

Let us start at the front and work back. First we have the radiator and the cooling system. Whether the water be circulated by force or by the thermo syphon system, it is essential that radiator pipes, waterjackets and conduit pipes be clear and free from obstruction. First open the cock at the bottom of the radiator and drain off all the water. Then close this cock, fill up the radiator with a solution of lye and clean water—about half a pound of lye to five gallons of water—run the motor for five minutes or so and draw off the solution thru the drain cock. Repeat this performance until the water running out of the drain cock is clean. If the cooling system seems to be clogged, insert the end of a hose in the top radiator opening, open the drain cock and send a current of water thru the system. Let the water run in as hard as possible without overflowing at the top. If the system still seems clogged, inspect the rubber hose which connects the radiator and the water jackets. This is frequently a cause of trouble, as it rots inside. If the hose seems ragged and the rubber is becoming separated from the fabric replace it with new hose of the same length and thickness as the old.

While you are running water or alkali solutions thru the cooling system keep your eyes open for small leaks. These are apt to be serious and can play nasty tricks if they are neg-

The Countryside
SUBURBAN LIFE

SIX GREAT SPECIAL NUMBERS FOR ONLY ONE DOLLAR

Because You Live in the Country

The Countryside Magazine is for you. And this offer is for you. Six great special numbers, with gorgeous covers by Paul Bransom; a wealth of beautiful pictures, and articles on every phase of country living, for only One Dollar. The numbers are:

March - - - - - Annual Garden Number
April - - - - - Spring Planting Number
May - - - - - - Suburban House Number
June - - - - - Porch and Lawn Number
July - - - - - - Summer Sports Number
August - - - - - - - Motoring Number

This is the limited offer of the new owners (The Independent Corporation) to enable you easily to make the acquaintance of the greater Countryside Magazine. Good only if you accept before April 20.

Because you live in the country—or expect to live there some day—or go there now for rest and recreation, The Countryside is *your* magazine.

Every important problem that concerns your comfort or enjoyment as a country householder you will find discussed in The Countryside by recognized authorities who stand highest in their chosen fields.

Each number has its big central subject in season—but every number is a garden number, a building number, a house furnishing number, a decoration number, a poultry number, a motor number—a country living number in every sense. The Countryside service never stops, in any part of its field.

Note These Features

Space permits only brief mention of the editorial plans of the new owners.

Aymar Embury II, with five articles, inaugurates "The House Livable." Harold A. Caparn, former President of the American Society of Landscape Architects, is presenting a series of articles on "The House Outdoors." J. Horace McFarland launches our campaign "Better Roses for America" with an article in March illustrated in four colors.

"The Whole House—Room by Room" is another new feature to begin soon—a series of monthly manuals—taking up the problems of construction, decoration and furnishing as applied to each room as a unit from bedroom to library.

Churchill Ripley writes during 1917 on Rugs; E. I. Farrington writes on Poultry (every month); Harold D. Eberlein and Abbott McClure write on Furniture; William Haynes and Mrs. Leslie Hall write of Dogs and Kennel Interests; Charles Dexter Allen tells what is new in Textiles; Harold J. Howland supplies a monthly editorial on the Spirit of the Countryside; Theodore M. R. von Keler is the Motor Editor and conducts the Motor Service; F. F. Rockwell, Jessie P. Frothingham and Parker T. Barnes write on Horticulture and Gardening; Frank A. Waugh writes on Trees; Professor Hugh Findlay will conduct "The Countryside Garden Laboratory," a great new gardening manual to appear in The Countryside every month.

Note These Names

The roll-call of contributors under the new ownership includes such names as: Margaret Woodrow Wilson; Zona Gale, author of "Friendship Village"; George Madden Martin, creator of Emmy Lou; W. H. Truesdale, President of the Lackawanna Railroad; Rev. Harry Emerson Fosdick, of Union Theological Seminary; Mary Sargent Potter, daughter of Professor Sargent of the Arnold Arboretum; Hudson Maxim; Joyce Kilmer; Edna Dean Proctor; George W. Cable, author of "Old Creole Days"; Stewart Edward White, author of "The Blazed Trail"; Gutzon Borglum, Sculptor; Kathleen Norris, author of "Mother"; Walter Prichard Eaton; John Burroughs; Norman Harsele; Max Eastman; Josephine Daskam Bacon; Herman Hagedorn; May Irwin; Edward F. Bigelow; Jack London; Wilfrid Wilson Gibson; Cecilia Beaux; Herbert Reed (Right Wing); P. A. Vaile; Margaret Deland; Mary Roberts Rinehart; Marion Harland, and many others whose names stand high in American literature.

Note This Program

Here are the specific interests to which The Countryside devotes its attention primarily:

HOUSE BUILDING—The acquisition of land, selecting the building site, placing the house, scientific construction, modern efficiency, buying the best building materials and equipment, choosing the house plans, dealing with the architect and builder—on these subjects the country house owner needs sound advice. He gets it in The Countryside Magazine.

INTERIOR DECORATION—What is new in flooring, wall coverings, mantels, bath room fittings, lighting fixtures, wood finishing? The Countryside has articles and pictures about everything that goes to make the house inside comfortable, beautiful, sanitary and efficient.

HOUSE FURNISHING—Choosing rugs, curtains, hangings, furniture. Every object that helps to make your life indoors complete you will find discussed in The Countryside by writers who know their subjects well.

OUTSIDE THE HOUSE—Preparing and keeping up the grounds to make your house in the country beautiful in its setting, putting up greenhouse and garage, buying seeds and bulbs, planting the garden, choosing efficient tools, planning the flower bed, selecting porch and garden furniture and decorations, enriching the soil, raising small fruits, keeping poultry, dogs and live stock—all these delights of country living are dwelt upon in The Countryside by experts who write from scientific knowledge and experience, but in such a way that everyone may understand and receive the maximum of help and pleasure from their reading and from the pictures.

HORTICULTURE—Here again The Countryside enjoys unusual distinction because of its exceptional sources of information and its scientific and accurate presentation of horticultural knowledge.

SPORTS AND RECREATION—Life in the open air is a big factor in your scheme of country living. In The Countryside, as the seasons come round, you will find striking and picturesque articles on motoring, golf, tennis, riding, driving, skating, shooting, fishing, camping, boating and other sports—to help you get the most out of your life along the countryside.

THE NEIGHBORHOOD—Good roads for your motor car, better schools for your children, proper lighting for your side-walk, the country club for your recreation, the suburban church for your worship, improved railway stations and train service for your suburban travel, more attractive approaches for your town—these things concern you intimately; and these are things for which, as you will see, The Countryside stands.

The Countryside Shop

A new and unique service free to every reader. This alone is worth many times the full subscription price—merely in what it saves you.

The Countryside Shop keeps you in touch with the new things, and the best things, offered by the merchants and makers, growers and distributors. It brings you the new ideas of those who plan and execute. It tells you how to get things, what to get and where to get them. Its expert counsellors are leaders in their special fields. Consultation is free—regarding Seeds, Bulbs, Shrubs or Trees, Garden Equipment, Outdoor Adornment, House Plans, Building Materials, House Furnishings and Decorations, Furniture and Rugs, Motor Cars and Accessories, Trucks and Tools, Poultry and Dogs, Sporting and Outdoor Goods, Country Property.

EVERYTHING for the GARDEN

is the title of **our 1917 catalogue**—the most beautiful and complete horticultural publication of the year—really a book of **208 pages, 32 colored plates and over 1000 photo engravings,** showing actual results without exaggeration. It is a mine of information of everything in Gardening, either for pleasure or profit, and embodies the results of over seventy years of practical experience. To give this catalogue the largest possible distribution we make the following unusual offer:

Every Empty Envelope Counts As Cash

To every one who will state where this advertisement was seen and who encloses Ten Cents we will mail the catalogue

And Also Send Free of Charge

Our Famous "HENDERSON" COLLECTION OF SEEDS

containing one packet each of Ponderosa Tomato, Big Boston Lettuce, White Tipped Scarlet Radish, Henderson's Invincible Asters, Mammoth Butterfly Pansies and Giant Waved Spencer Sweet Peas, in a coupon envelope, which, when emptied and returned, will be accepted as a 25-cent cash payment on any order amounting to $1.00 and upward. With the Henderson Collection will be sent complete and detailed cultural directions.

PETER HENDERSON & CO. 35 & 37 CORTLANDT ST. NEW YORK CITY

lected. Space is too limited here to give instructions regarding the repair of such leaks. I will gladly give such information by mail if you will write me.

If you are satisfied that the cooling system is clean, before leaving it inspect the fan. Take off the belt and see if the fan runs true when you spin it, or if it is loose on its bearing. If it is loose tighten the nuts which hold it on the bearing, lubricate it and replace the belt. Then see whether the belt is sufficiently tight to rotate the fan at the proper speed. Slipping fan belts are often the cause of overheating. If the belt seems tight enough, but slips, perhaps it is greasy. Roughen it on the inner surface with a coarse file. Or save the time and buy a new belt—it will cost only a few cents.

The radiator itself may have accumulations of mud in the air spaces. If this seems to be the case with yours, clean it by flushing with water. In doing this it is important that you should flush it from the rear, so that the water comes thru the front, thus avoiding all contact with the electrical apparatus installed on the motor.

If there is a water pump on your car do not touch it unless it is obviously out of order. If it is clogged you will find it simple to take apart and clean. If it leaks around the drive shaft it needs repacking.

NEXT we come to the motor. First drain off the oil in the sump, or reservoir, at the bottom of the crank case and throw it away. If the lubricating system of the car is such that it employs a separate tank — frequently found in pressure feed and force feed systems — clean out this tank, too. Then flush the crank case and the lubricating tank and channels with kerosene. To do this with a splash-oiled motor, pour kerosene into the crank case thru the breather pipe. With a force or pressure feed system, pour kerosene into auxiliary oil tank. Then, taking care to have the ignition switch *off* and the pet cocks—if the motor has them—open, spin motor with the electric starter for about a minute, or spin it by hand as long as you can without developing apoplexy. This will work in the kerosene and help to remove the old oil, particles of carbon and accumulated tar which the kerosene will carry out thru the drain plug in the bottom of the crank case.

This done it is advisable to get to work cleaning the spark plugs, removing carbon, grinding valves and cleaning valve stems and springs. Be warned before you start that removing carbon is a tedious, sooty job and that there is no royal road to its accomplishment by means of chemicals. Carbon cannot be dissolved. Nothing has yet been discovered which will dissolve it. Consequently, it must be removed by purely mechanical means.

Carbon forms on the tops of pistons, around cylinder heads, on valves and valve seats and on spark plugs. Its removal necessitates the partial dismantling of the engine. In modern cars this is easy enough, since motors are

now designed with a view to accessibility and ease of adjustment and repair, and cylinder heads have been made readily removable. A word of caution, before you start to disassemble your engine, or any other part of your car: collect a number of tin pans or cigar boxes and into them put all nuts, bolts, washers and small parts as you remove them. Don't put them on the floor or any other place where they may be lost, bent, or caked with dirt. This will save you much time and worry when you reassemble your car.

The most satisfactory way of removing carbon is by the scraping method. In engines which have detachable cylinder heads this is simple. With those of an older vintage the scraping process can be executed thru the openings in the cylinder head, valve ports and the like, or by removing the cylinders altogether. This latter is an annoying job and should not be attempted unless you have plenty of time and infinite patience. The scraping is done with special tools made for the purpose.

It is a good plan to put kerosene into the cylinder you intend to scrape the night before you are going to work. Kerosene will not dissolve the carbon, but it will loosen it. Certain liquid carbon removers on the market may be used instead of kerosene to accomplish this loosening. In the morning drain the fluid out and your scraping will be easier. If you wish to have complete details of how to remove carbon and what tools to procure, I will send you this information by mail.

To forestall questions I feel sure some of you will send me regarding the chemical carbon removers for which it is claimed that they will free engines of carbon while running, there is this to be said: these liquids remove carbon to a certain extent. Like kerosene, they loosen it. But when, following directions, you start your motor next day and expect the carbon to be blown out with the exhaust this is what happens. Small particles of carbon, carried by the exhaust gas, are trapped by the exhaust valves which stamp them down on the valve seats in hard lumps. This results in the imperfect closing of the exhaust valves, which causes lack of compression, which leads to loss of power, which necessitates the regrinding of the exhaust valves.

In my article in The Independent for April 2, I will continue the subject of spring cleaning. Meanwhile, if you have any questions relating to this article, do not hesitate to ask me for the answers.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

Ready March 7

THE MACMILLAN COMPANY, Publishers, NEW YORK

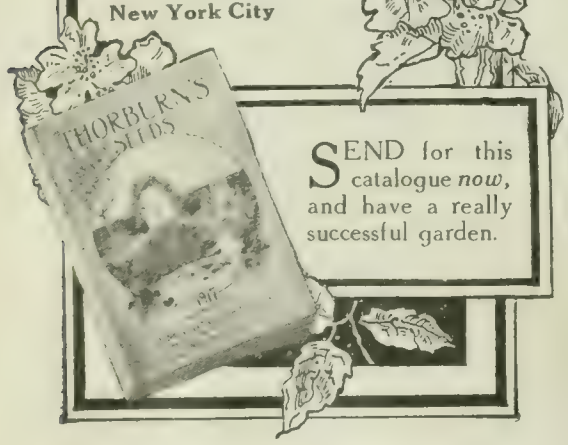
BACK in 1825, when John Quincy Adams was President, our Minister to Portugal asked his friends to send him an assortment of Thorburn's Seeds, so he could grow some vegetables such as he "used to have at home."

Since 1802, Thorburn's Seeds have been known for reliability and results.

The 1917 Catalogue lists a complete line of tested seeds, with full instructions for planting and culture.

Send for One of our finest Novelties—New Rudbeckia

A Hardy Dwarf Perennial with double, semi-double and single flowers, very desirable for beds and borders. Beautifully colored yellow and orange petals, splashed in varying degrees with darker shades of red. Also mahogany and chocolate, with purple or yellow centres.



If sown early in March under glass, will flower the first year.

Price, 25c the packet

J. M. Thorburn & Co.

Established 1802

53-O Barclay St., through to 54 Park Place New York City

SEND for this catalogue *now*, and have a really successful garden.

Independent Opinions

"Just a word," as you say, concerning the opening statement of your editorial, "The Artist-Novelist," of January 29: "It is barely ten years since we heard how Joe Vance's father 'crocked the hinseck' with his thumbnail on the bar. . . ."

Was it not the unfortunate fact that Joe's father was prevented from "crocking the hinseck" himself by the promptness with which Mr. Peter Gunn, the sweep, reached over Joe's shoulder and summarily ended the romantic career of the "hinseck" in question; whereupon Joe's father fetched that promised "smack over the mouth," which, however, failed to reach Mr. Peter Gunn's mouth, and thus caused Joe for the first time to have a doubt as to his father's infallibility; whereupon followed the fight "across the gas-gardens," whereby hangs the whole tale? J. HUDSON BALLARD

The Manse, Hornell, New York

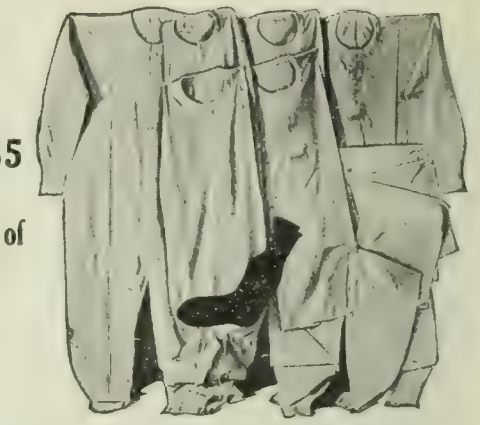
With all due humility and contrition the editor throws himself at the feet of the clerical critic and cries "peccavi." This is what comes from trusting to a treacherous memory. We have not read Joe Vance since it first came out ten years ago, and we did not have the volume at hand, so we were confused as to the details of that historic episode. We are glad to know that the scene remains fresh in the mind of at least one reader.

I note you confess that your column of "Remarkable Remarks" is a "cause of much perplexity to some readers." It is likewise to me, but I have hesitated to write you for fear I might be the only perplexed one among your readers.

Every day I hear remarks that are "striking for their perspicuity, humor, indensity, fatuity or idiocy"; remarks which possess qualities much more *striking* than the remark, quoted from Mr. Marshall: "Solomon worked his men eight hours a day and Solomon was a pretty wise man for his generation." Compare this with the following soliloquy uttered by a loud-mouthed ignoramus, "The best way to get prohibition is to *drink up* the booze." Which for wisdom, perspicuity, humor and idiocy, far outclasses in remarkableness the officious utterance of our Vice-President. F. A. HAWLEY

Modena, New York

Isn't it remarkable that the Vice-President of the United States should make a remark which, in the opinion of our correspondent, is comparable to one made by "a loud-mouthed ignoramus."



We are always glad to receive remarkable remarks from any of our readers provided they are authentic and correctly quoted.

Just yesterday I sent a check for $1 for another year of "Remarkable Remarks." Imagine my disappointment to hurry home with a copy of The Independent and find that you had eliminated "Remarkable Remarks" from that issue. I hope that it was merely an oversight this week and that next week you will give us two columns of it.

Pocatello, Idaho ALEC MURRAY

I regard that column as about the brightest idea and one of the very best things I had seen in any periodical publication in a long time, and I always read all of the "Remarkable Remarks"—not with the object of *assent* to any or all of them, but

$3.85 for Set of 3 Suits

3 Fine Duratex Heavy-Knit Underwear Suits

Money back if not pleased. 6 months' wear guaranteed. *Special offer* of three Fine Suits of Heavy-knit Underwear sent on receipt of $5.19 and 20c postage. Describes over 1000 varieties of roses and other flowers and tells how to grow them. Edition limited. *Established 1850. 70 Greenhouses.*

THE DINGEE & CONARD CO., Box 331. West Grove, Pa.

with the expectation of *dissent* to some of them.

There are numerous collections of proverbs, maxims and apothegms, and Bartlett's "Dictionary of Quotations" is a notable aggregation of apt or interesting sayings of writers of the past. It would be absurd to suggest that the compiler of any of those collections subscribed to any or all of the sayings or sentiments.

R. C. EDMONDSON
Washington, D. C.

You have defined the Avocado Pear about right (with the help of the dictionary), still one must see and taste the fruit to know what it is, and sight and taste must be normal.

Now give us your definition of poetry (with dictionary help in your need), and print beneath it, in prose form, any five lines of the unmitigated slush you last week reviewed as poetry. For comparison append the tens column of the multiplication table.

Only the drab tailend of ignorant conceit could claim the award for thought or sentiment or rhythm for the so called poetry. Poets forsooth! E. J. BAIRD
Lock Haven, Pennsylvania

Some people do not like avocado pears; some people do not like free verse. But then again, some people do and it would not be polite to call their taste abnormal. An editor must serve a varied menu to suit all the tastes he caters to. We decline to commit ourselves to any definition of poetry, either borrowed from the dictionary or homemade. We are not in the least interested in the question whether "free verse" is poetry or not. All we want to know is whether it is readable or not and we know that it is because it is being read, more widely in fact than verse of the old-fashioned sort. We have no need to try the test proposed by our correspondent for we have recently tried the reverse experiment. When we published in our issue of December 4, 1916, a paragraph from Emerson's most famous essay some of our readers thought it unmitigated slush because it was printed in free verse form and signed by the unknown name of "H. O. Nosreme."

As a reader of The Independent for more than twenty-five years past continuously, I write to express to you my keen appreciation of the fine spirit exhibited in your editorial in your issue of yesterday on the "Danish West India Islands," with special reference to the suggestion that "the officials appointed should be men . . . who will respect the self-respect that is characteristic of the negroes of the Danish Islands."

I am sure that thousands of thoughtful colored men and women thruout our country will rejoice and be exceeding glad as they read that broad-minded and large-hearted suggestion from the editor of The Independent. Already there have come to the front very many signs of deep concern on the part of thinking colored people in this country as to the future of the colored inhabitants of those islands in the hands of the American white man. His traditional attitude toward the colored people—everywhere and always—has not been inspiring, to say the least; and when brought to sudden control over the destiny the rights and the daily life of a class of colored people whose past history and experience and environment are such as have been the lot of those West India Islanders, the situation readily lends itself to much misgiving for the future *unless* that class of white men—and there is such a class in this country—who love righteousness and pursue it shall be put at the head of the affairs there.

MAKES ALL NATIONS OUR NEAR NEIGHBORS

THE trend of the times is toward *internationalism.* We can no longer stand aloof from the countries of the world either in diplomacy or trade. We must meet, greet and do business with the people of other lands. We must coöperate with them; we must compete with them.

The Great Question-Answerer

Made in America; it covers the world

The first step is to *learn* about these nations—what they produce and what they need—and the best way to do this *quickly* and *thoroughly* is to *own* and *use*

THE NEW INTERNATIONAL ENCYCLOPÆDIA

Second Edition
Recently Completed

Revised, Rewritten and Reset from A to Z
Printed Throughout from New Plates
Number of Volumes Increased
Size of Page Enlarged

24 VOLUMES 20,000 PAGES
80,000 ARTICLES

STRONG POINTS:

1. Accuracy: all important articles *written by specialists.*

2. Authority: can be quoted *on any subject* without fear of successful contradiction.

3. Comprehensiveness: covers a wider field than any other general reference-work. It contains 80,000 articles—*30,000 more than any other encyclopædia.*

4. Lucidity: written in language so plain that even the young folks can understand.

5. Attractiveness: not only *educational* but *attractive* and *enertaining.*

6. Illustrations and Maps: carefully prepared to *illuminate* and *explain* the text.

7. Convenience: printed on thin paper—not *too* thin but easy to *handle* and to *leaf.*

8. Arrangement: all subjects alphabetically arranged and *easy to find.*

9. Pronunciation: all except the most common words made clear by a simple phonetic system.

10. Bibliography: every important subject supplemented by a *full list of books* that may be consulted.

11. Courses of Reading and Study: affording specialized help toward *self-instruction* in leading branches of knowledge.

12. Research Bureau Service: provides subscribers the *free privilege* of information from our Editors on *any encyclopædic subject.*

SPECIAL NOTICE Since the completion of the Second Edition of THE NEW INTERNATIONAL, subscriptions have surpassed all previous records. We thank present subscribers for their patience in the matter of unavoidable delay in the delivery of the last four volumes. We inform prospective subscribers that we shall be unable to fill orders for complete sets in *all* bindings until April 1st, and because of this we will extend to them the *special prepublication price* until that date. This means a *substantial saving* to those who

Act Promptly

Send in the Coupon at right and we will forward *free* our 80-page book about the *new knowledge* of all nations, showing Specimen Pages, Illustrations, Color-Plates, Maps, etc., with the *reasonable price* and *easy terms* on which THE NEW INTERNATIONAL can *just now* be secured.

"I may stick around now," says the sapling, "but I leave in the spring."—*Cornell Widow.*

"Gotta give him credit, he earns lots of money."

"Doesn't need any credit."—*Cornell Widow.*

"Did you see '20,000 Leagues Under the Sea'?"

"Yes, but it was too deep for me."—*Awgwan.*

"Get up, the house is on fire."

"I can't. The doctor told me not to leave my bed under any circumstances."—*Cornell Widow.*

Skinny—What made the Tower of Pisa lean?

Aver D. Pois—If I knew I'd try it!—*Yale Record.*

Father—When I was a small boy I was left an orphan.

Tommy—What did you do with it?—*Chicago Herald.*

"You say your coat is fox; why, it looks more like dogskin."

"It's both. The material is fox terrier."—*Harvard Lampoon.*

Wife—The paper says that nitrates are higher.

Hub—What do we care? We never telegraph anywhere.—*Chicago Herald.*

Mrs. Parker—Now, young man, why aren't you at the front?

Young Man (milking cow)—'Cos there ain't any milk at that end, missus.—*Tid-Bits.*

A French lady recently married because the bridegroom's taste and hers were similar. "I don't care very much for him and he doesn't care very much for me," she explained.—*London Opinion.*

"I think, Harry," said Mrs. Barton, "I'll ask those new people next door to take dinner with us tonight."

"What for?" asked the husband.

"Well, the butcher left their meat here by mistake, and I think it seems only fair."—*New York Times.*

An evangelist was exhorting his hearers to flee from the wrath to come. "I warn you," he thundered, "there will be weeping and wailing and gnashing of teeth."

At this point an old woman of the congregation stood up. "Sir, I have no teeth."

"Madam," returned the preacher sternly, "teeth will be provided."—*Lehigh Burr.*

The lady of good family was showing her ancestral home to her small son. She pointed with special pride to a bust of her father.

"And that, Bobbie," she said, "is your grandfather."

Bobbie looked somewhat perplexed.

"Is that all there was of him?" he asked.—*New York Times.*

While boating on the bay one night
I saw the ocean's arm
Steal gently round a neck of land
To keep its shoulder warm.

This made me jealous as could be,
It really made me sore,
And so I paddled toward the land
And closely hugged the shore.

—*New Idea.*

The reform warden always made it a point to give each new arrival a chance to do the work with which he was familiar, if the penitentiary dealt in his line. A tailor named Levinski arrived, and it was ordered that he be employed at that trade, if there was an opening. There wasn't. He was asked if he was adept at anything else. "Yes," he replied, with a smile, "I am a crackerjack traveling salesman."—*Saturday Night.*

Free Book on the Law

EVERY ambitious man in America should have our free book on law. It tells vital facts you need in order to realize your ambition. **The place the law-trained man occupies in the modern business world is fully explained.** It tells how other men have won success through the law and how you, too, can fit yourself for a high place.

Law-Trained Men Lead

The book we send free tells *why* the law trained man is the national leader. It tells about the position in business or in the practice of law for which *you* can fit *yourself* by reading law during your idle hours. The study of law has been simplified by the American School.

THE NEW BOOKS

FOUR POINTS OF VIEW

Their Spirit leaves the reader with an impression of an all pervading calm in England and France somewhat difficult to grasp. Robert Grant motored thru England to notice soldiers skylarking with their wives and sweethearts, joy-riding wounded with happy faces, and he appears gratified by the acknowledged superiority of the American articulated leg. The same calmness is observed in France, where the description of a trip to the front resembles a visit to the American Museum of Natural History. Everything appeared satisfactory, including even hotel accommodation and the dinner on the train.

Mr. Granville Barker, however, in *The Red Cross in France,* manages to perform a little better for us; he, or the censor, permits us a glimpse of what the English common people and the English common soldier both feel and think. Positively—Mr. Barker would seem to be amiably surprized by it—they do feel and think, these English common people. Herein are the letters in pitiful appeal to the Red Cross for news of some dear one—the agony of suspense revealed; herein the patriotism of the British soldier finding expression in the care he bestows on the graves of the fallen. Mr. Granville Barker, however, reading these letters in company with dukes and duchesses, confesses that "We expect them to be funny; somehow, indeed, we almost like them to be. For so little is left of that simple looking toward the wise and noble as parental patterns for life's great occasions, that it flatters us!"

A young American, Leslie Buswell, wrote the letters contained in *Ambulance No. 10* without any forethought of publication. These letters ring true from the heart as well as the brain. Not once from cover to cover is there the remotest suggestion of heroic pose, but the author tells us naturally how it feels to look death in the face, how those who follow intelligently and courageously the fearsome path of duty at the front experience a profound brotherly comradeship, a real sympathy, and are not superior to a prayer that this curse of war may be lifted from the earth. No wonder these young Americans of the Ambulance Service are beloved by the French soldiers.

The Stricken Land, by Alice and Claude Askew, is a glowing picture of the heroic resistance of the Serbian nation to the Germanic invasion. The authors were attached to the First British Field Hospital, and proceeded to Serbia shortly after the outbreak of war. It is tragic now to read of the supreme confidence of the Serbs that, even if Bulgaria did join the Teutonic side, the Entente Allies would never permit Serbia to be conquered. "Let Serbia fall," they argued, "and England will be giving up the key to Constantinople, Bagdad, and India." Was there not, also, a treaty between Serbia and Greece to offset Bulgaria? But presently the war clouds are hurled swiftly over Serbia. Follow one smashing blow after another by Germans and Bulgarians, and, with practically no help from the Entente Allies, the Serbian retreat becomes a terrible flight thru the barren, rugged passes into Montenegro and Albania. There are fine pen portraits of King Peter, General Stepanovich, and other Serbian notables, together with a great deal of first hand information about the Serbian people and their customs.

Their Spirit, by Robert Grant. Houghton, Mifflin Company. 50 cents. *The Red Cross in France,* by Granville Barker. G. H. Doran Company. $1. *Ambulance No. 10,* by Leslie Buswell. Houghton, Mifflin Company. $1. *The Stricken Land,* by Alice and Claude Askew. Dodd, Mead & Co. $3.

"TRADE"

The strength of George Gissing's novel, *Will Warburton,* reprinted in cheap form, is in its sanity. A sane and kindly hero must solve a financial problem. Altho he is an English gentleman he accepts his heritage in the modern democracy of common sense and sets aside his social prejudice to become a grocer. He will not let his mother and sister suffer for the sins of his defaulting business partner who speculated with their fortune and lost it. Perhaps this is because he is an English gentleman.

A sane heroine with a sense of humor achieves distinction by declaring that keeping a grocery is a "clean, dainty, aromatic trade." Readers avid of sensationalism may find this novel dull. Others will enjoy the canny soundness of it.

Will Warburton, by George Gissing. E. P. Dutton & Co. 40 cents.

THE BUSINESS OF FARMING

For a multiplicity of reasons that most of them do not understand, farmers find themselves increasingly handicapped in their efforts to make a living from their farms—single-handed. They are bound to get assistance or to go under. They therefore seek the cooperation of other farmers, or subsidies and other helps from the government.

In Germany the Government has been glad to help because conceptions of national strength and autonomy included the soundness of the agricultural foundation of economic life. In France the Government was glad to help because there it was concerned with the welfare of the individual tiller. In this country the Government went in to help the farmer because to a large extent the farmer controlled the Government. But until quite recently there has been no systematic study of the economic problems connected with agriculture in this country.

Professor Nourse, of the University of Arkansas, has produced a book significant at once of the trend of thought in this direction, and of the new technique of university instruction: *Agricultural Economics, A Selection of Materials in Which Economic Principles Are Applied to the Practise of Agriculture.* This is a compilation of nearly three hundred papers by various authors,—editorials, special articles, government reports, expert studies, chapters from the Bible and the classics.

It is an interesting specimen of the reaction against textbooks of the old type, which attempted to encompass a subject and to petrify it for the enlightenment of future generations. The material is here presented largely in the form of original documents, and the reader is compelled to do some thinking himself, tho he is spared the loss of time and energy involved in digging up and bringing together the scores of items to which he might be referred if he followed a textbook course in the usual manner.

As Professor Nourse points out, agricultural economics is of the widest possible interest, and is not the concern of farmers and professors exclusively. The problems raised touch all of us, just as the problems of labor and capital, taxation and health touch all of us. The present book has a further advantage in that it is made up of comparatively "short stories." The inadequate index is somewhat compensated by the rather complete table of contents.

Agricultural Economics; ed. by Edwin G. Nourse. University of Chicago Press. $2.75.

"STONEWALL" JACKSON'S LETTERS

Son of the general's only sister, Thomas Jackson Arnold in his *Early Life and Letters of General Thomas J. ("Stonewall") Jackson,* is privileged to give a somewhat new and very personal view of the Confederate leader. The book being, in large share, letters to this sister, its thousand and one details relative to land-buying, colds, mineral springs, family matters, school-teaching, travel summaries, make not very exciting reading "for you, and me, and everybody." But this does not deny the book's psychologic and, in less degree, its historical value. Especially are the chapters on Jackson's youth, career at West Point, home life, and death a contribution, adding as they do to our knowledge of, and respect and affection for, "Stonewall" Jackson, by showing the great idealism, sympathy, and tenderness of this man whose will was his own enough to make it dominate a life of scant health, and consecrate body, heart, and brain to the Supreme until the combination became one of God's really great temples.

Early Life and Letters of General Thomas J. ("Stonewall") Jackson, by Thomas Jackson Arnold. F. H. Revell & Co. $2.

The Independent's
Third Annual Contest
For American Schools

Eight Great Short Stories

THE Short Story is now the most popular type of fiction. It appears in a variety of forms in the pages of our newspapers, magazines and books. It is read by all classes of people. It is universal in its appeal.

The influence of the Short Story, fortunately, is almost always directed toward that which is good—manliness, honor, self-sacrifice—idealism in some form.

From an educational point of view the Short Story is the most interesting type of literature that can be put in the hands of our high school students. It is direct, vivid, forceful, appealing, and without undue effort it can be mastered as a whole.

Our high school students should know the great American Short Stories. They should know something of the trend of American fiction. They should have some knowledge of the types into which Short Stories may be divided.

Above everything else, our high school students should be influenced toward reading the best Short Stories.

The most recent syllabi in English have recommended the reading of a number of Short Stories. In harmony, therefore, with present movements in the teaching of English, and in the interests of good education generally, THE INDEPENDENT, beginning with the number for March 5, 1917, will publish EIGHT REPRESENTATIVE AMERICAN SHORT STORIES—a different story every week for eight consecutive weeks. The stories to be published represent every period of American literature since the founding of the United States, and illustrate eight distinct types of the Short Story. Every story will be preceded by an introduction of several hundred words pointing out the characteristic excellence of the story, telling something concerning its relation to the general type, and giving information concerning the author and his work.

Teachers will find this series of Short Stories, and the comments upon them, an unparalleled help in awakening the interest of their pupils in the study of English. The eight stories are as follows:

1. The Legend of the Rose of the Alhambra, by Washington Irving.
   An old-world romance, delightful for its tenderness and charm and the richness of its word music—a beautiful example of the easy-going narrative that preceded the Short Story of today.
2. The Ambitious Guest, by Nathaniel Hawthorne.
   A story of New England meditation set against a background of familiar New England scenery. Of all American stories one of the most nearly perfect examples of development, proportion and suggestive effect. A precursor of the realism and the romance of today.
3. The Masque of the Red Death, by Edgar Allan Poe.
   A story of the picturesque and the symbolic, with words and thought so closely united that the whole story gives the effect of richly suggestive melancholy music. A story showing the influence of German romance.
4. The Outcasts of Poker Flat, by Francis Bret Harte.
   A strongly original American story, vivid in its realism, striking in its local color, and so deeply sympathetic in character revelation that it reaches the noblest elements in life.
5. The Lady or the Tiger, by Frank R. Stockton.
   A story of ingenious plot, cleverly devised, clearly and briefly presented, and founded ultimately upon character analysis.
6. The Gift of the Magi, by O. Henry.
   A story of humble life in a great city, revealing the humor and the pathos that lie in small events. Clever in construction and quick in character analysis. A type of the Short Story in one of its most recent forms.
7. A Wasted Day, by Richard Harding Davis.
   A story of modern city life, representing many sides of character, portraying outward realities, but turning most attention upon the inner life. An artistic example of the higher type of modern realism.
8. The Revolt of Mother, by Mary E. Wilkins Freeman.
   A story of rural New England life, exact in detail, full of humor and satire, kindly and sincere, and fundamental in its presentation of character types. An unusually good example of effective realism and well balanced construction.

THE INDEPENDENT offers a Short Story Medal for the best essay from any school in the United States on "The Development of the American Short Story," the essay to be based upon the eight introductory articles and the eight representative Short Stories printed in THE INDEPENDENT. Any American school, private or public, elementary or secondary, may take part in the contest, but the medal cannot be awarded unless ten pupils at least compete from that school. Every competitor must complete an original essay of from 500 to 2,500 words and hand it to the judges by May tenth.

In elementary schools the school authorities shall select three judges from the faculty, pupils or outsiders (including no contestants). In secondary schools the contestants themselves may select any three judges they may wish except a contestant.

This contest is open free to all schools. A subscription to THE INDEPENDENT is not obligatory. If 1,000 schools take part in this contest, 1,000 medals will be awarded. Your school does not have to compete with any other school.

THE INDEPENDENT, 119 West 40th Street, New York:

We wish to enter THE INDEPENDENT Short Story Contest for American Schools. Please reserve a medal for my pupils.

Insurance

Conducted by

W. E. UNDERWOOD

FRATERNAL INSURANCE

At least one-fourth of all the inquiries about life insurance received by this department relate to the condition, operation, cost in, and future of the many fraternal orders and assessment companies, particularly the former, which are doing some good and much harm in this country.

Perhaps I should explain the meaning of the last ten or twelve words of the preceding sentence. It is unnecessary to do more than say that, wrong-headed tho it be, fraternal insurance has been a real blessing to hundreds of thousands of women and children—widows and orphans. In the vast majority of cases it has been the only source from which it was possible for them to get relief at a time when aid is most needed. The blessed in the fold of that school of insurance are those who die earliest and their beneficiaries.

Those who survive to middle and old age have become joint-heirs of the accumulated obligations of those who, dying early, were not made to pay their just share of the costs incurred.

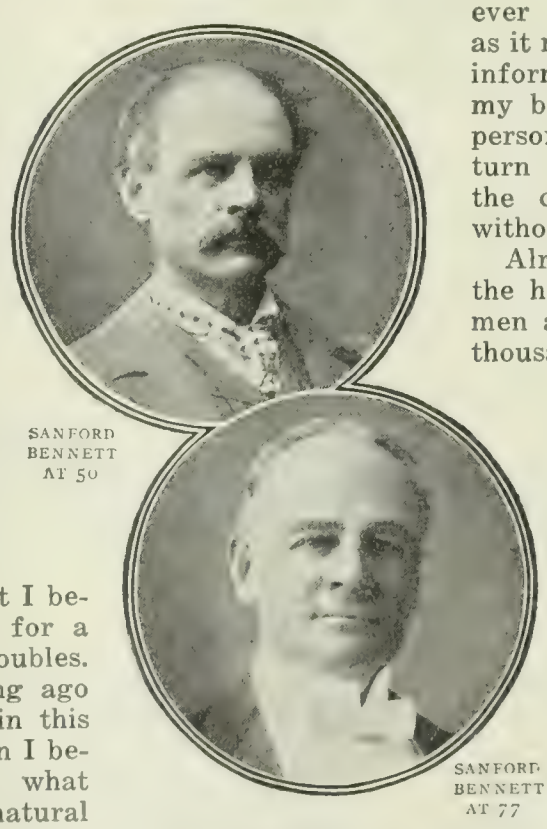
Much has been made by the advocates of fraternal life insurance of the fact that it is a democratic, representative system. So it is in the matter of choosing its officers and in directing its affairs. But in its effects it is anything but democratic, for that connotes equality of opportunity, privileges and duties. Instead of each individual paying his just share of the expenses in a fraternal order, we find some of them paying much less and others much more for the same benefits. Right here I want to acquit the leaders of most of these orders of all responsibility for existing evils. Twenty years ago it was they who were at fault; I believe they were sincerely ignorant. At any rate they misled their memberships as to the future cost. They are now convinced that a reserve is essential. This means that each member must pay a proper rate now—not at some future time—but at his attained age. But the members rebel; they resort to the courts and defeat every readjustment proposed.

My object in writing this is to advise those who want information respecting the probable future cost in fraternal insurance that unless the order inquired about is collecting enough money from its members to pay its current death losses and expenses and, in addition, a sum mathematically ascertained to provide an adequate reserve, the case is hopeless, sooner or later.

HOW I GREW YOUNG AT FIFTY

Or Maintaining Youth at Seventy-seven

By SANFORD BENNETT



(The remarkable story of a San Francisco business man who seemingly has discovered the long sought "Fountain of Youth")

AT fifty I was an old man. I was decrepit, weak. Medical diagnosis indicated that I had but a short time to live. I set my affairs in order; I made my will; I was ready to bid good-by to the world.

Of course, I did not want to die. Somehow I felt that there was some cause back of my condition that could be remedied, but the authorities agreed that my time had come.

What could I do? In my despair I turned here and there. I delved into every possible theory that would give me hope. But my condition continued to grow worse. Each day I felt that my enemy Death was clasping me a little closer. I could almost feel his bony finger. His jangling bones and sightless skull seemed to be an ever present reality.

Why should I die so young? I was only fifty. There must be some means of remedying my condition. A ray of light came to comfort me. I was inspired by a new determination. I paced back and forth in my room, and though my steps still tottered, I was hopeful.

SANFORD BENNETT AT 50

SANFORD BENNETT AT 77

It was in this mental attitude that I began a new search for a cure for my troubles. Medicine I had long ago discarded. I was in this frame of mind when I became interested in what might be termed "natural vital building methods." I gradually learned the importance of scientific breathing. I began to experiment with exercise, and I finally evolved a system of exercises that could be taken while reclining. I took these exercises before arising in the morning. In this way I was energized for each day's duties.

My vitality and energy increased with amazing rapidity.

I had been at Death's door. The grave was beckoning to me. I was doped in mind, and fragile in body. And my rejuvenation was not an immediate process by any means, but slowly week by week I felt myself growing younger and stronger. Ultimately I was rewarded with the energy and enthusiasm equal to that which I had possessed in youth.

I was an opera singer as a young man. When I lost my health, my voice disappeared, and the dire misery of soul that possessed me when I realized I could no longer sing, can not be described in mere words.

But when I recovered my health, my voice began to return. Life was again joyous. I could break into song to express the delight of living. I realized that in my discovery of a system to defeat old age, I had something of priceless value to give to the world. The next year of my life was spent in preparing the message to send forth. My book "Old Age—Its Cause and Prevention" is this message. Many doctors, scientists, newspapers and magazines have referred to it as the most important and valuable work on health ever published. Be that as it may, I know that the information contained in my book will enable any person, *man or woman,* to turn back the hands on the clock of life years without number.

Already my book is in the hands of over 70,000 men and women. I have thousands upon thousands of grateful letters from persons who have applied my methods in their own cases with results similar to my own.

My ambition is to get my book into the hands of one million persons within the next year. With this end in view I have arranged with my publishers, The Physical Culture Publishing Co., 3423 Flatiron Bldg., New York City, N. Y., to send a copy of "Old Age—Its Cause and Prevention" free on approval to any person who will write them for it. You are privileged to retain it five days at the end of which time you will either keep the book and send them $2.00 or return the book and consider the matter closed.

I know that I have solved the problem of perpetual youth during life. Of course, there are those who will scoff at the idea of such a thing, but the real wise men and women who read this article, I am sure, will wish to investigate further and will take advantage of the offer outlined above, which enables them to do so without risking a single penny.—*Advertisement.*

ESTABLISHED 1865

A Broad and Attractive List of

6%

Investments

$100, $500 and $1000 Denominations

We are fortunate in in having available a desirable selection of high-grade 6% investments at a time when there is a noticeable shortage in the supply of such securities and a tendency towards lower rates.

MARKET PLACE TALKS

BY LUIGI CRISCUOLO

INVESTMENTS FOR WOMEN

WHEN it comes to an investment of funds, either for an estate or individually, most women are at a loss and often become a prey for the dealer in speculative stocks. Women seem to be more attracted by the high return afforded by a security than by the safety of its principal. This accounts for the fact that so many women holds stocks and bonds of promotion schemes having little or no real value.

The *first* consideration in the investing of funds for a woman should be safety of principal—interest return being a secondary consideration and marketability relatively unimportant. As a matter of fact, a too ready market may serve as a temptation for the sale of securities in order to purchase luxuries which might be easily dispensed with. Safety is more or less of an elastic term; the investment which is legal for savings banks in states like New York, Connecticut or Massachusetts may yield from 3.50 to 4.50 per cent, which is a low return, yet that sort of investment is prized because of its rating—safety being the predominating factor in establishing its value.

The public utility first mortgage bond will yield from 5.50 to 6 per cent and not have as broad a market, yet the company issuing it may have a splendid record of steadily increasing earnings to be envied by any railroad corporation. The industrial bond may be more or less speculative on account of price movements and fluctuating earnings, but, if well secured on tangible property and purchased at a low price, need occasion no fear on the part of the holder.

Women who are self-supporting and have a general idea as to what stocks and bonds represent, can afford to spend a little time in making a study of investments in general. The large banking houses issue literature on almost every phase conceivable, which is sent free to prospective customers. When a woman has devoted some time to the reading of such booklets, she will be in a far better position to go in for the higher yield bonds, or even stocks, which require more attention than the very conservative bonds.

If a woman's fund is sufficiently large and she is in a position to look after her investments, there is no reason why she should not purchase a few good stocks. Here a word of caution is necessary. No class of security requires so much attention as stocks; this is because a stockholder is a *partner* and as such is entitled to such profits as are earned and as distributed by authority of the board of directors. Stocks are usually preceded by various issues of bonds the interest upon which must be met before any dividends are paid on the stocks. Obviously stocks of companies having no funded debt are better than stocks of concerns having bond issues, all other conditions being equal.

It is thus conceivable that in years of financial and industrial depression dividends can be easily deferred without disturbing the organization, while a default in payment of interest would result in a receivership which might wipe out the stock. This is one of the considerations placing bonds on a higher plane than stocks. However, we repeat that in the case of women who are in a position to keep informed, some of the better railroad stocks with long dividend records, and sound industrial and public utility preferred stocks can be purchased in small amounts to average upward the low return on bonds.

Some of the more desirable stocks are Pennsylvania, New York Central, Atchison, Northern Pacific, Great Northern, Illinois Central, Norfolk & Western, Southern Pacific, Union Pacific and other railroads; American Telephone and Telegraph, United States Steel preferred, American Can preferred, American Sugar preferred, National Lead preferred, etc. Stocks of this class are highly regarded, have good records and need much less attention than some of the promotion stocks of industrial concerns recently offered.

While ordinarily a very high rate of return in a bond carries with it a high degree of risk, this is not so if the security is fundamentally sound. At the same time, it must be observed that sound investments secured by first mortgage on valuable property rarely yield over 6 per cent because the demand for securities of that class will keep the price up. If the yield is over 6 per cent, either there is risk or the bonds have been depressed by extraordinary conditions resulting in liquidation, or the high yield may be due to the high cost of money in war times.

A ready market may be absolutely indispensable with respect to a business man's investments, but a woman rarely requires this feature. If she has invested her funds with that in view—she has paid for it with a loss of from 1 to 2 per cent in yield. For the sake of absolute safety and quick marketability her funds may have been placed in municipals or legal railroad bonds yielding from 3.50 to 4.50 per cent, when reasonable safety without the highest degree of marketability could have been secured in bonds yielding as high as 5.50 per cent.

Bonds which are properly bought require little care beyond the cutting and cashing of coupons semi-annually; particularly, if a list of holdings is left with bankers for perusal every six months or so with a view to shifting the investment if necessary. Women who do not want the inconvenience of having to reinvest money every few years should buy only long term bonds, maturing in say twenty years or over from the date of purchase.

Bonds are not ordinarily purchased with a view to profiting from enhancement in market value, but in many cases bonds sell below intrinsic value because of special conditions, or, in case of some public utility issues, because the company may not have developed its full earning capacity and may not develop it for five or ten years. Obviously, a bond selling at 80 today and earning but twice interest charges would be worth more in five years if interest charges were earned thrice over. This is a speculative feature, but it should not be ignored in making a purchase provided the bond is a first mortgage issue, that earnings are over double all interest charges, that the company serves a growing section and is progressing.

Women should absolutely avoid all promotion schemes such as oil, mining and industrial stocks sold thru the mails or by traveling salesmen. The profit on sound securities is so small that no reputable firm would think of sending a salesman to sell stocks to people having only a few hundred to invest. Propositions of that sort are to be looked upon as not worthy of attention even by staid business men, and women are far better off with their money in the savings bank at 4 per cent.

INVESTORS' SERVICE

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds.

We cannot, of course, decide for our readers where they should put their savings and ordinarily will not undertake the responsibility of recommending specific securities to any individual. Neither will we give information on highly speculative oil or mining stocks of doubtful origin, which we advise readers not to purchase.

We ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

Readers who request advice on investments should specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

Safety and Service

THESE three words mean much to investors. They are his prime assurance of a satisfactory investment. They are likewise the watchwords of the Straus organization.

SAFETY — We select only the best issues of first-mortgage bonds, invest our own funds in them, and offer them, surrounded by thorough safeguards, to the public.

SERVICE — We protect the investor's interests throughout the life of the loan, see that he is paid promptly in cash, and relieve him of all responsibility, care and worry.

THOUSANDS of investors, in every state in the Union and in many foreign lands, have found the investments we sell to be safe, and the service we render to be satisfactory. You yourself will find them equally so.

We suggest that you post yourself fully on the *Straus Plan* and the sound first-mortgage real estate bonds we offer to net 5½%. Write today for

6 Per Cent –Plus Profits

The conditions which surround timber ownership and lumber manufacture in the United States and Canada are not paralleled in any other industry. To those fully conversant with them (and to no others), these conditions offer unique opportunities for profit with complete security.

LACEY
Profit-Sharing Bonds

are a new type of investment which enables the average investor to turn this situation to account. It enables him, with all the security of a high grade First Mortgage Bond, to receive interest at 6 per cent and at the same time to share in profits, which are usually very substantial. It goes without saying that this puts Lacey Profit-Sharing Bonds in a class by themselves. One of the reasons for their prompt popularity is the fact that they are available in denominations of

$100, $500 and $1,000

The whole subject of this type of security is of extraordinary interest, and can be no more than hinted at in this announcement.

The name of Lacey is identified throughout the timber world with 37 years of unbroken conservative success in timber investments. We therefore feel that we can fairly presume to speak with some authority concerning timber securities.

MOTION PICTURES

A Brief for Debate

RESOLVED: that motion picture theaters offer a desirable amusement.

TWENTY million people daily visit motion picture theaters in the United States. Are they improving or wasting their time? The arguments below are on the value of motion pictures as shown commercially. This brief was prepared by Clara E. Fanning.

ARGUMENT FOR THE AFFIRMATIVE

I. Movies fill the need of an inexpensive amusement.
  A. Better than
  1. Cheap melodramas.
  2. Plays by poor actors.
  3. Cheap dances.
  4. Saloons.
  5. Pool rooms.
  B. Price permits frequent pleasure.
  C. Good movies can go to small towns.

II. Educationally valuable.
  A. To popularize school subjects.
  1. By visualizing topics in lessons.
  B. To continue education.
  1. By showing details hurried past in text books.
  2. By bringing information up-to-date.
  C. To supplement formal curriculum.
  1. By showing applied knowledge. (a) Industries. (b) Science.
  2. By teaching improved methods. (a) In agriculture. (b) In trades.
  3. By awakening interest in new studies.
  D. As a substitute for or supplement to travel.
  1. Finest scenery made accessible.
  2. Life of all nations revealed.
  E. To chronicle current events.
  1. World's interesting events made vivid.
  2. Needed supplement to newspapers.
  F. To reach non-reading class.
  1. Intellectually lazy.
  2. New immigrant.

III. Socially useful.
  A. To educate public opinion.
  1. For civic reforms.
  2. In public hygiene. (a) Clean streets. (b) Pure food.
  3. In safety first habits.
  B. Usefulness already proved in
  1. Swat the fly campaign.
  2. Sane Fourth campaign.
  3. Clean milk campaign.
  4. Anti-tuberculosis campaign.
  C. As factor for democracy.
  1. All classes meet at movies.
  2. Poor may have best seats.

IV. Can be improved.
  A. Have improved steadily.
  B. Strict censorship can be required.
  1. By Congressional act.
  2. By municipal regulation of theaters.
  C. Public demand can raise standard.

V. Liquor dealers are opposed to movies.
  A. Saloon attendance is decreased.

VI. Value is proved by their use by
  A. Schools.
  B. Churches.
  C. Y. M. C. A.
  D. Industries.
  E. Government.

ARGUMENT FOR THE NEGATIVE

I. Morally harmful.
  A. For children.
  1. Plots unfit for children. (a) Deal with crime, vice, brutality, meanness. (b) Hinge upon adult psychological problems.

DIVIDENDS

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

TYPEWRITERS

$10 and Up. All Makes. Save $25 to $50 on rebuilt at the factory by the well-known **"Young Process."** Sold for low cash—installment or rented. Rental applies on purchase price. Write for full details and guarantee. Free trial.

YOUNG TYPEWRITER CO. Dept. 170 Chicago

ORGANIST—Choirmaster, long metropolitan prominence, seeks position, fine organ, in mild dry climate. Record in "Who's Who." Licensed lay reader. Organist's Guild Founder, care of Independent, 119 W. 40th St., New York City.

CASH FOR OLD FALSE TEETH OR BROKEN JEWELRY

SEND us any diamonds, watches, old gold, platinum or silver jewelry (new or broken), false teeth (with or without gold), any dental fillings, painters' gold-leaf cotton or magneto points. Nothing too large or too small. We pay in cash the highest possible prices. Can do this because we do the largest business of this kind in the country. Established 1899. Your goods returned at our expense should our offer be refused in 10 days.

Liberty Refining Co., 432 G Wood St., Pittsburgh, Pa.

CAMP

CAMP PENN

Valcour Island, Lake Champlain New York
11th SEASON

IF you would wish your son to spend a Summer in a *real* camp—a camp that will mean something *worth while* to him as well as give him a bully good time, you may do well to investigate Camp Penn. This is a camp of highest calibre, requiring first class recommendations of all new boys. Senior camp 12 to 16 years; Junior camp planned for little chaps, 8 to 11 years, 500 acres, exclusive dairy and farm, resident physician, and, above all, real, sure-enough, out-and-out camping! May we send you our booklet? CHAS. K. TAYLOR, M.A., Chestnut Hill, Philadelphia, Pa.

RICH in PURE SALTS of FRUIT Recommended by the World's Great Food and Health Scientists

The DAILY FOOD for Stomach and Bowels. Just What You Need. Makes them Strong—Active Absolutely no need for physic, pill, oil or enema. By Mail, 1 Jar $1. 4 Jars $3.50. Circular on request. STEWART FOOD CO., 575 Security Bldg., Chicago

Indoor Closet

More Comfortable, Healthful, Convenient

Eliminates the out-door privy, open vault and cesspool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

ABSOLUTELY ODORLESS

Put It Anywhere In The House

The germs are killed by a chemical process in water in the container, which you empty once a month. **Absolutely no odor.** No more trouble to empty than ashes. Closet absolutely guaranteed. Write for full description and price.

ROWE SANITARY MFG CO. 3108 ROWE BLDG., DETROIT, MICH.

Ask about the Ro-San Washstand—Hot and Cold Running Water Without Plumbing

2. Power of suggestion bad. (a) Can teach tricks of stealing and deceiving. (b) Develop craving for adventure.
3. Police courts find movies responsible for much juvenile crime.
4. Moral lessons of plays not imprest upon children. (a) Only action in plays remembered. (b) Cut-ins not read by younger children.

B. For adults.

1. Public taste lowered. (a) Appeal is to lower side of nature. (b) Spectators become accustomed to the sensational. (c) Low standard of humor.

II. Socially harmful.
A. Detrimental to home life.
1. Families do not stay at home.
B. Sunday performances in most places.
C. Draw from better amusement in cities.
D. Dark audience rooms dangerous.
E. Normal life seems uninteresting to spectators of thrilling drama.

III. Physically harmful.
A. Air always bad.
1. Few theaters properly ventilated.
B. Continued eye strain.
C. Fire hazard great.

IV. Cause extravagance.
A. Frequent change of bill increases attendance.
B. Americans spend about $2,000,000 daily on movies.

V. Educational value is slight.
A. Do not develop intelligence.
1. Impressions, not food for thought, remain.
B. Instructive films are small part of programs.
C. Bits of information gleaned are unrelated and fragmentary.
D. Faked pictures are mixt with true.
E. Thrillers are popular films.

VI. Censorship is failure.
A. Is only voluntary.
B. Films can be altered after censored.
C. Censors pass much that is bad.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

TO THE TEACHER: Assign one or more of the questions pertaining to the subject taught by you to every member of your class, making the assignments in such a way that some reports will be made at every recitation during the week. The work will be done to best advantage if the reports are made in writing, and if students bring their copies of The Independent to each recitation. See "Contents" for position of articles mentioned below.

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

The Dusty Hour-Glass. By Amy Lowell.

1. How do we feel when we see relics of the past?
2. What emotion does this poem present?
3. What pictures of the past are suggested?
4. How does contrast aid in making the poem effective?
5. Define the following words: parterres; tricorns; periwigs; lozenged.
6. Is any advantage gained by having the last line, "Sweet, sweet, the days of the past," in Italian?

Eight Great Short Stories.

1. What has been the work of America in the development of the Short Story?
2. What is the difference between the Tale and the Short Story?
3. What are some of the characteristics of Irving's story telling?
4. From what sources did Irving draw material?
5. What are the most notable characteristics of "The Legend of the Rose of the Alhambra"?
6. Explain what is meant by "The Alhambra."
7. How does Irving connect old legend with real life?
8. Tell the story of Zayda, Zorayda and Zorahayda.
9. What is the character of Ruiz de Alarcón?
10. What is the character of Jacinta? of Fredegonda?
11. In what way is the title of the story appropriate?
12. Are there any elements of humor in the story?
13. Explain the reference to Paganini.
14. What are the characteristics of Irving's style as shown in this story?
15. In what ways is this story better than some others that you have read?
16. Write a story in which you try to imitate the characteristics of this story.

SECTION II. WORD STUDY.

Motion Pictures: A Brief for Debate.

1. Give the derivation and the meaning of every one of the following words: melodramas; visualizing; curriculum; marvels; accessible; hygiene; municipal; psychological; detrimental.

SECTION III. GRAMMAR.

Pebbles.

1. Give the syntax of all the adverbial expressions in the column.
2. Give the syntax of all the pronouns except those in the first person.
3. Give the syntax of all nouns except those that are used as subjects of sentences.

SECTION IV. COMPOSITION AND ORAL ENGLISH.

The Prussian of "Noblesse Oblige." By Alida von Krockow.

1. Show how the use of specific instance adds to the effectiveness of this article.
2. Write a composition in which you draw a contrast between the American spirit and the spirit mentioned in this article.

The Groundwork of Gardening. By F. F. Rockwell.

1. This is a technical article for general readers. Show how it is introduced; how it is made clear; how it is made emphatic; how it is made interesting for general readers, and how it is concluded.
2. Write a short technical article for your school paper.

Motion Pictures: A Brief for Debate.

1. Present orally or in writing any part of the debate.
2. Write a brief for a debate on some other subject.

Prohibition: When and Why. By Rollin O. Everhart.

1. Write an article entitled "The Progress of Prohibition."

Editorial Articles and the Story of the Week.

1. Write an article, based on "The American Short Story," on "Why We Should Be Interested in Spanish Literature."
2. Write an argument based on "The Little Nations."
3. By what rhetorical means has the editorial on General Funston been made effective?
4. Write a composition in which you explain the developments of the Great War during the past week.
5. Write an explanation of Lloyd George's plans for making England more powerful.
6. Write an argument based on the present cost of food.
7. Write a clear explanation of some of the important measures that are now being discussed in Congress.
8. Write a short composition concerning the relations of the United States with other lands than Europe.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. American Interest in the Caribbean Sea—"Caribbean Questions;"

1. Compare the new Porto Rican Bill with the present law for the government of Porto Rico, of the Philippines. Compare it with the English law for the government of Canada.
2. Review the history of our relations with Colombia. Was President Roosevelt's action in 1903 justified? Should the pending treaty be ratified?
3. Follow up your study of the Cuban situation. Are the chances of American intervention increasing or diminishing?

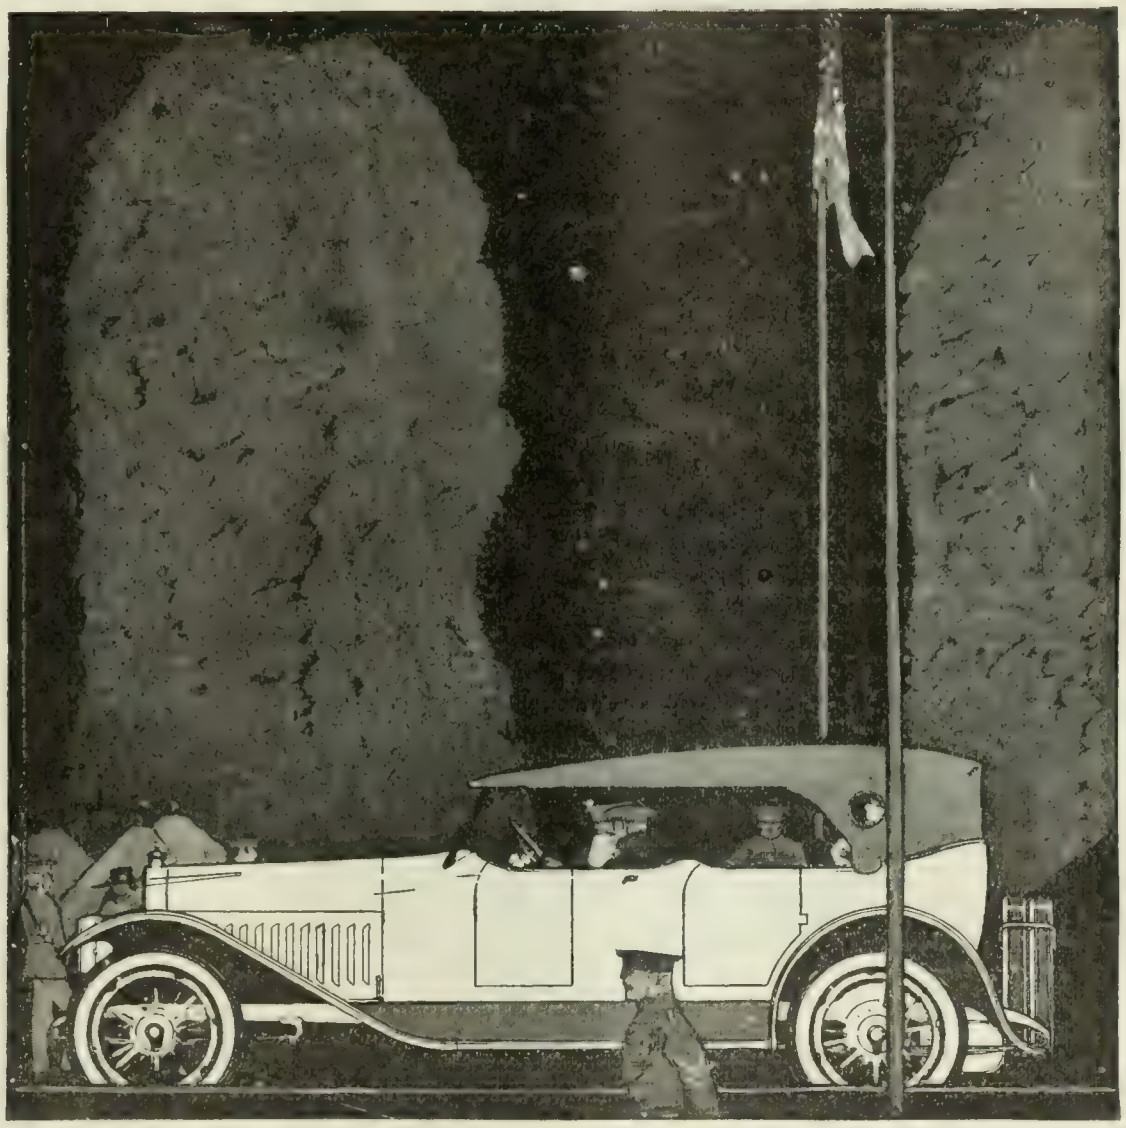
II. The Prohibition Movement—"Prohibition: When and Why;" "Fifty Per Cent Less Crime;" "Last Days of Congress."

1. By reference to an encyclopaedia and to one or more of the current Year Books, trace the history of the Prohibition movement in the United States.
2. Explain one or more of the European systems, e. g., the Swedish System, referred to in the first article. How is the liquor problem being handled in England?
3. What is the status of the liquor traffic in your own state? What action in reference to the traffic has been taken in Congress during the past week?
4. What are the chief arguments for and against Prohibition? How do you account for the rapid spread of Prohibition during the last five or ten years?

III. England and the Great War—"Lloyd George's Plan;" "England Restricts Imports;" "British Blockade Stricter."

1. Compare the present economic situation in England with the economic situation during the Napoleonic wars.
2. What, in your judgment, will be the effect of Lloyd George's guarantees after the war is over?
3. What effect will the program of Lloyd George and Lord Cecil have upon neutral trade?
4. Compare England's method of handling the situation with Germany's.

IV. The Prussian System—"The Prussian of 'Noblesse Oblige'."



1. What is the significance of the title of the above article? Discuss this article in connection with the article by the same author in The Independent, February 12. Show how the two articles justify the heading: "The Prussian System."
2. Recall your studies of the feudal system and of pre-revolutionary society in France. How far are the conditions in Prussia as described in these articles similar to those which existed in these earlier periods? How far are they dissimilar?
3. Explain these two sentences in the next to the last paragraph: (a) "What the British aristocracy lent their young sons," etc. (b) "This has been the way of the Prussians and their kings since of old."
4. Have you any evidence, gathered from other sources, to prove that the picture presented in these articles is highly colored and one sided?

V. Capital and Interest—"Investments for Women."

1. What is the economic theory upon which an investor is entitled to interest? What are the factors which, according to your text book, determine the rate of interest? Which of these factors are discussed in this article?
2. Tabulate the types of investments discussed in this article. Write a brief note on the advantages and disadvantages of each type.
3. "Obviously stocks of companies having no funded debt are better," etc. Why?
4. Read the next to the last paragraph of the article aloud. Explain each sentence as it is read.
5. "Women should absolutely avoid all promotion schemes," etc. Why?

VI. The Problem of Food—"Ralegh's Lazy Root;" "Food Riots in New York;" "Food Cost Inquiry Started."

1. Discuss the problem of the relation of various kinds of food to the economic efficiency of the individual.
2. "In some instances Socialists took advantage," etc. What relation does the present agitation for state regulation of food supply bear to the Socialist program?
3. Analyze the causes for the rise in prices of food. Which of these causes can be remedied by legislation? Which cannot?
4. Compare the food prices quoted with those given last week in Secretary Wilson's article. What do you find?

White
Sixteen valve 4

THE SIXTEEN-VALVE FOUR has the unique distinction of being the most far-reaching improvement in engine design in recent years and still the most conservative. There has been no departure from the basic simplicity of the four-cylinder motor.

High power and utmost flexibility have been attained by the most direct means—increasing valve capacity without the roundabout method of multiplying cylinders to secure the same end.

By having two sets of intake and exhaust valves in each of the four cylinders a full flow of explosive gas is secured at any engine speed, thus maintaining full power at high engine speed and a degree of flexibility at low speed unobtainable in any other type of motor.

THE WHITE COMPANY
CLEVELAND

CHANDLER SIX $1395

There Is No Other Six Like This For Anything Like This Price

THE Chandler offers intrinsic value greater than other cars for which you are asked to pay much more. Greater value in materials, design, equipment, and, above all else, in the dependable and enduring service of its marvelous motor.

You may say it is easy to make such a claim for the Chandler. It is. And It Is Easy to Prove Such a Claim for the Chandler

Year-old Chandlers command as high or higher price in the used car market than year-old cars of other makes selling, when new, for two or three hundred dollars more.

Could any further evidence be asked, to prove Chandler leadership in value? It wouldn't seem so, but let's make thorough inquiry.

What other make of car, at anything like the Chandler price, offers you a motor which has been developed, refined and perfected throughout four years of conscientious manufacture and not subjected to radical changes or experimental devices? *None.*

What other make of car, at anything like the Chandler price, offers you such a proven mechanism as the whole Chandler chassis? *None.*

What other make of car at anything like the Chandler price, offers you all those features characteristic of the highest priced, high-grade cars—Bosch high tension magneto; solid cast aluminum motor base, extending from frame to frame; big silent chains instead of noisy gears for driving the motor shafts; full floating and silent spiral bevel gear rear axle and light running annular ball bearings in transmission, differential and rear wheels? *None.*

What other make of car, at anything like this Chandler price, offers you more beautiful and comfortable bodies than the Chandler? *None.*

Chandler policy has always kept the Chandler price low. Relatively it is lower today, when so many prices have been inflated, than ever before.

These are *Facts* and to you they mean a Better Car for Less Money

Seven-Passenger Touring Car, $1395

Four-Passenger Roadster, $1395 *Seven-Passenger Convertible Sedan, $2095*

Four-Passenger Convertible Coupe, $1995 *Limousine, $2695*

All prices f. o. b. Cleveland

JUST A WORD

The next article in the series of four views on Prohibition, which are being published in The Independent, will discuss a plan for a national commission of experts to study the economic and social phases of the whole liquor problem and to suggest its wisest solution. Charles Beatty Alexander, advocate of this plan, is a prominent lawyer in New York City and a firm believer in prohibition tho he deplores the helter-skelter arguments and unfounded propaganda sometimes attracted to the cause.

Following Mr. Alexander's article The Independent will publish a discussion of prohibition by a minister who doesn't believe in it. You will be interested in his reasons.

The last article of the series will be by the man who has probably talked longer and oftener for prohibition than any one else in this country, William Jennings Bryan.

Do you know "The Theater that Comes to You"? Perhaps it hasn't come to you yet, but don't lose hope. It will. And in the meantime read Constance D. Mackay's entertaining article of its purposes and achievements, soon to be published in The Independent. Miss Mackay is the author of several plays and pageants, and she has studied rather closely the development of the Portmanteau Theater.

"May I ask you to record the fact that I do not know anything of the sort," says President Nicholas Murray Butler, of Columbia University, in answer to the Remarkable Remark, accredited to him and published in The Independent of February 26, 1917, which read as follows:

I know positively that in one British port there are eighty-five captured submarines and the "Deutschland" is among them.

Our apologies to President Butler!

REMARKABLE REMARKS

DR. STEPHEN S. WISE—Elihu Root is a highbrow.

J. W. HAMILTON—The secret of success is ambition plus will.

GEORG BRANDES—The peace of Europe depends on free trade.

WOODROW WILSON—Only a peace between equals can last.

SARAH BERNHARDT—The artist never says good-bye to the stage.

DR. IRA REMSEN—We deliberately waste about one-fifth of our resources.

FRANCIS W. HIRST—Great Britain is veering toward political socialism.

CARDINAL O'CONNELL—This is not the time to talk chemistry or science.

DR. JOHN ELLIOTT—Democracy in industry is the big question of the day.

PROF. P. G. STILES—A change of scene is an admirable cure for insomnia.

KING CONSTANTINE—There is less pro German feeling in Greece than in the United States.

PRESIDENT JACOB GOULD SCHURMAN—If war were banished I would retain military training.

LAUNDRYMAN NANKIWELL—The man who "dresses" wears seven collars a week. The man who "is drest" wears four or five clean collars a week.

DUDLEY FIELD MALONE—The old flubdubs in the Senate are those who seek to dignify the Senate when they should be "getting down to work."

T. J. MCCORMACK—The people who have to be attacked by the educational propaganda are editors, preachers, publicists, writers and educators.

EX-PRESIDENT ELIOT—Mankind would get along better than they do, if it were positively known that the heaven of revelations had been burned and hell quenched.

LLOYD GEORGE—There have been epochs in the history of the world when in a few raging years the character and destiny of the whole race have been determined for unknown ages. This is one.

DOROTHY DIX—I know women who consider it their sacred duty to tell their husbands every unpleasant thing that has happened in the house the minute they put their foot across the door step.

REAR-ADMIRAL FISKE—George Washington would not know us, and General Grant would be shocked to see the difference in manner and carriage between the young men of today and the young men that marched behind him fifty years ago.

PROF. JACQUES LOEB—If we succeed in substituting for the present a new type of statesmen who are familiar with and follow the development of the exact sciences and who are willing and capable of applying the results of exact science to the intellectual, moral, physical and economical uplift of the masses, we shall at least diminish the danger of war.

PEBBLES

Doc—I have to report, sir, that you are the father of triplets.

Politician—Impossible! I'll demand a recount.—*Awgwan.*

Young Fair Damsel—Do you guarantee these night-gowns?

Sly Young Clerk—Yes, you can't wear them out.—*Awgwan.*

Prof.—What is mind?
Student—No matter.
Prof.—What is matter?
Student—Never mind. *Awgwan.*

One of the latest women-workers is a female bill-poster, who has pluckily announced her determination to "stick to it" as long as the war lasts.—*Passing Show.*

She—Where did you sleep last night?
He—In the coal bin.
She—Why! Wasn't it awfully hard?
He—Why no, it was soft coal.—*Lehigh Burr.*

"Look at the great cities of antiquity," exclaimed the lecturer. "Where are they now? Why, some of them have perished so utterly that it is doubtful if they ever existed!"—*Boston Transcript.*

"Now, Johnny," said the mother of the young hostess to the little boy guest, "I want you to feel perfectly at home."

"'m!" growled Johnny. "I don't want to feel at home. I want to have a good time."—*Philadelphia Record.*

Poly Sci Prof.—What has been the dominant character of America's military program up to the last three years?

Stude (who was on a party the night before)—Not prepared, sir.

Prof.—Correct.—*Gargoyle.*

PRESIDENT WILSON'S INAUGURAL

"UPON THIS AS A PLATFORM WE CAN STAND TOGETHER"

Washington, March 5.

My Fellow Citizens: The four years which have elapsed since last I stood in this place have been crowded with counsel and action of the most vital interest and consequence. Perhaps no equal period in our history has been so fruitful of important reforms in our economic and industrial life or so full of significant changes in the spirit and purpose of our political action.

We have sought very thoughtfully to set our house in order, correct the grosser errors and abuses of our industrial life, liberate and quicken the processes of our national genius and energy, and lift our politics to a broader view of the people's essential interests.

It is a record of singular variety and singular distinction. But I shall not attempt to review it. It speaks for itself and will be of increasing influence as the years go by. This is not the time for retrospect. It is time, rather, to speak our thoughts and purposes concerning the present and the immediate future.

Altho we have centered counsel and action with such unusual concentration and success upon the great problems of domestic legislation to which we addrest ourselves four years ago, other matters have more and more forced themselves upon our attention, matters lying outside our own life as a nation and over which we had no control, but which, despite our wish to keep free of them, have drawn us more and more irresistibly into their own current and influence.

It has been impossible to avoid them. They have affected the life of the whole world. They have shaken men everywhere with a passion and an apprehension they never knew before. It has been hard to preserve calm counsel while the thought of our own people swayed this way and that under their influence.

We are a composite and cosmopolitan people. We are of the blood of all the nations that are at war. The currents of our thoughts as well as the currents of our trade run quick at all seasons back and forth between us and them. The war inevitably set its mark from the first alike upon our minds, our industries, our commerce, our politics and our social action. To be indifferent to it or independent of it was out of the question.

And yet all the while we have been conscious that we were not part of it. In that consciousness, despite many divisions, we have drawn closer together. We have been deeply wronged upon the seas, but we have not wished to wrong or injure in return; have retained thruout the consciousness of standing in some sort apart, intent upon an interest that transcended the immediate uses of the war itself. As some of the injuries done us have become intolerable we have still been clear that we wished nothing for ourselves that we were not ready to demand for all mankind—fair dealing, justice, the freedom to live and be at ease against organized wrong.

It is in this spirit and with this thought that we have grown more and more aware, more and more certain that the part we wished to play was the part of those who mean to vindicate and fortify peace. We have been obliged to arm ourselves to make good our claim to a certain minimum of right and of freedom of action. We stand firm in armed neutrality, since it seems that in no other way we can demonstrate what it is we insist upon and cannot forego.

We may even be drawn on by circumstances, not by our own purpose or desire, to a more active assertion of our rights as we see them and a more immediate association with the great struggle itself. But nothing will alter our thoughts or our purpose. They are too clear to be obscured. They are too deeply rooted in the principles of our national life to be altered. We desire neither conquest nor advantage.

We wish nothing that can be had only at the cost of another people. We have always profest unselfishness and we covet the opportunity to prove that our professions are sincere.

There are many things still to do at home to clarify our own politics and give new vitality to the industrial processes of our own life, and we shall do them as time and opportunity serve; but we realize that the greatest things that remain to be done must be done with the whole world for a stage and in coöperation with the wide and universal forces of mankind, and we are making our spirits ready for those things. They will follow in the immediate wake of the war itself and will set civilization up again. We are provincials no longer.

The tragical events of the thirty months of vital turmoil thru which we have just passed have made us citizens of the world. There can be no turning back. Our own fortunes as a nation are involved, whether we would have it so or not.

And yet we are not the less Americans on that account. We shall be the more American if we but remain true to the principles in which we have been bred. They are not the principles of a province or a single continent. We have known and boasted all along that they were the principles of a liberated mankind. These, therefore, are the things we stand for, whether in war or in peace:

That all nations are equally interested in the peace of the world and in the political stability of free peoples, and equally responsible for their maintenance.

That the essential principle of peace is the actual equality of nations in all matters of right or privilege.

That peace cannot securely or justly rest upon an armed balance of power.

That governments derive all their just powers from the consent of the governed and that no other powers should be supported by the common thought, purpose or power of the family of nations.

That the seas should be equally free and safe for the use of all peoples, under rules set up by common agreement and consent, and that, so far as practicable, they should be accessible to all upon equal terms.

That national armaments should be limited to the necessities of national order and domestic safety.

That the community of interest and power upon which peace must henceforth depend imposes upon each nation the duty of seeing to it that all influences proceeding from its own citizens meant to encourage or assist revolution in other states should be sternly and effectually suppressed and prevented.

I need not argue these principles to you, my fellow countrymen, they are your own, part and parcel of your own thinking and your own motive in affairs. They spring up native amongst us. Upon this as a platform of purpose and of action we can stand together.

And it is imperative that we should stand together. We are being forged into a new unity amidst the fires that now blaze thruout the world. In their ardent heat we shall, in God's providence, let us hope, be purged of faction and division, purified of deterrent humors of party and of private interest, and shall stand forth in the days to come with a new dignity of national pride and spirit. Let each man see to it that the dedication is in his own heart, the high purpose of the nation in his own mind, ruler of his own will and desire.

I stand here and have taken the high and solemn oath to which you have been audience because the people of the United States have chosen me for this august delegation of power and have by their gracious judgment named me their leader in affairs. I know now what the task means. I realize to the full the responsibility which it involves.

I pray God I may be given the wisdom and the prudence to do my duty in the true spirit of this great people. I am their servant and can succeed only as they sustain and guide me by their confidence and their counsel.

The thing I shall count upon, the thing without which neither counsel nor action will avail, is the unity of America—an America united in feeling, in purpose and in its vision of duty, of opportunity and of service. We are to beware of all men who would turn the tasks and the necessities of the nation to their own private profit or use them for the building up of private power; beware that no faction or disloyal intrigue break the harmony or embarrass the spirit of our people; beware that our Government be kept pure and incorrupt in all its parts.

United alike in the conception of our duty and in the high resolve to perform it in the face of all men, let us dedicate ourselves to the great task to which we must now set our hand. For myself I beg your tolerance, your countenance and your united aid.

The shadows that now lie dark upon our path will soon be dispelled and we shall walk with the light all above us if we be but true to ourselves—to ourselves as we have wished to be known in the counsels of the world and in the thought of all those who love liberty and the right exalted.

The Independent
WITH WHICH IS INCORPORATED
HARPER'S WEEKLY
A Journal of Civilization

WILLIAM BAILEY HOWLAND

BY the death of William Bailey Howland on February 27 The Independent has lost its president and the constructive genius of the new magazine. Mr. Howland came to the office early Tuesday morning in his usual good health and spirits, but at a quarter past ten o'clock he was seized with a sudden attack of angina pectoris and expired an hour later.

On August 28, 1916, William Hayes Ward, Honorary Editor of The Independent and for half a century the guiding spirit of the editorial staff, passed away.

Thus within the span of half a year The Independent has lost its oldest, ablest and best beloved leaders.

William B. Howland was born in Ashland, N. Y., June 10, 1849. He had the best of New England inheritances. His father, the Rev. Harrison Otis Howland, was a Congregational minister and his mother was Hannah Bailey. He received the average American boy's education and shortly after graduation from famous old Williston Seminary he married Ella May Jacobs, of Gowanda, N. Y., and with no capital except a few borrowed dollars started in the newspaper business. If ever a man chose his right vocation, William Howland did. During his fifty years of publishing he never failed. He built up every periodical he managed. His first venture was the *Kinderhook Advertiser*. This he sold at a profit and then bought the *Chatham Courier*. He next founded *Outing*, which he published from 1882 to 1885, when he sold out his interest and purchased the Cambridge (Mass.) *Tribune*. This he made such a success that he was invited by Mr. Lawson Valentine to undertake the business management of *The Outlook*. He served *The Outlook* for twenty-three years, as publisher and part owner, building it up from a periodical little known outside of religious circles to one of the great journalistic forces of the land.

After my uncle, Clarence W. Bowen, retired as publisher and owner of The Independent in the autumn of 1912 and I had organized a corporation to buy it, I felt that by reason of his achievements and our congeniality of purpose and taste, Mr. Howland was the one man in the United States best fitted to help The Independent realize the broader development I had in view for it, so I invited him to associate himself with me.

He accepted the opportunity, with results that were as gratifying to him as they were to me. Since we joined forces in the spring of 1913, The Independent has increased its circulation from less than 23,000 to over 100,000. It has incorporated America's historic "Journal of Civilization," *Harper's Weekly*, as well as purchased *The Countryside Magazine*—formerly *Suburban Life*. Thru Mr. Howland The Independent was able to make close affiliations with the Chautauqua Institution, of which he had long been a trustee, and with the National Institute of Efficiency, of which he was the founder.

These and similar enterprises are due chiefly to Mr. Howland's energy and initiative during the past three years when we were turning The Independent, as he used to term it, "from a single track to a double track road."

But Mr. Howland was much more than a successful business man. Few editors I have known had such an unerring sense of what to publish, or of that even greater editorial art, "what to keep out of the paper." He especially loved to suggest a "feature" article or series. The presentation of an idea generally interested him more than the idea itself. I never knew a man who could put a page into the proper type better than he, or who had more at his fingers ends, the fundamental principles as well as the minutæ of illustration and display.

During the three years of our association I have watched with admiration and often amazement the skill with which he upbuilt our enterprise. He never bothered with a detail he could get any one else to do. He never was in such a hurry that he could not sit down on the corner of a desk and talk it over. He even had the courage to change his mind whenever he evolved a new idea or one was presented to him. But he kept all his faculties unswervingly on the thing to be done and when the time for action came he acted.

Mr. Howland found time to take an active part in all good movements. And what is unusual for men in authority he urged his colleagues on The Independent to do likewise.

For his services as Treasurer of the Society for Italian Immigrants he was decorated by the King of Italy. In recognition of his activities in connection with the celebration of the Hundred Years of Peace between Great Britain and the United States he was given the honorary degree of LL. D. by the University of Toronto. He was one of the founders of the American Civic Association, and served as its treasurer from 1904 to the time of his death. He was President of the Commissioners of the State Reservation at Niagara Falls. He was a Vice-President of the League to Enforce

Peace, and was especially proud of the fact that he was one of the two gentlemen who acted as host at the dinner where the program of the League was first promulgated.

He was from 1893 to 1907 treasurer of the Congregational Home Missionary Society. He was one of the chief promoters of the plan for making Sulgrave Manor —the ancestral home of George Washington in England—a shrine of American patriotism. He was the first President of the American Institute of Graphic Arts, and the second President of the American Periodical Publishers' Association. He was a life member of the National Arts Club and established one of its most attractive features—the Annual Book Exhibition.

But I like to think of Mr. Howland best as a comrade working shoulder to shoulder with me for the success of The Independent. I remember his stout heart whenever things went wrong, and his boyish enthusiasm whenever things went right. On a snowstorm day he had a way of having a hot luncheon served for the young women of the office and then sending them home early so that they could avoid the traffic delays. He always had a word of encouragement for all, and when an employee had done a particularly good piece of work he used to write a note of appreciation, sometimes with an enclosure not entirely unsubstantial. In a way his ambition has been achieved. Largely thru his courage and leadership The Independent is on the road to a larger service and influence than it has ever had before in the nearly three score and ten years of its life. He leaves two grown sons—his "boys"—whom he has trained to take up his work and who inherit his big heartedness, sound headedness, and unfailing enterprise.

His place, like Dr. Ward's, can never be filled. His loss would seem irreparable did we not know that each best, when past, makes room for a next best that shall fit the age which is ever renewing itself.

HAMILTON HOLT.

THE CRISIS

GERMANY has chosen our enmity instead of our friendship. The leaders of the German nation seem to believe their "ruthless submarine warfare" more vital to the German cause than the continued friendship of the United States. A month ago they announced for the second time that they would not respect neutral and non-combatant rights upon the sea and gave notice of unrestricted lawlessness in European waters. They were uninfluenced by our instant and solemn protest. They were undeterred by our breaking off of diplomatic relations. Already they have sent to a cruel death two American women. These two deaths merely increase the roll of American victims of German submarine lawlessness to 166; considered from this point of view they are not greatly significant. But considered as the overt act that stamps the German purpose as irrevocable, the killing of Mrs. Hoy and her daughter is a crucial event. The United States cannot ignore it. By that act, the German choice was unmistakably made manifest.

The Sixty-fourth Congress ended ignobly. Thru the contemptible recalcitrance of a dozen men in the Senate, the granting of the request of the President for authority to arm American merchantmen was made impossible. An overwhelming majority of both houses were ready to uphold the President's hands; but the absurd and mischievous rules of the Senate permitted an insignificant handful of poor spirited men to block the way.

The President should instantly call the new Congress in special session. At such a critical time as this the legislative branch of the Government should stand shoulder to shoulder with the executive. Congress should meet at once and grant the President's request for a confirmation of his authority to deal with this crisis. He already has the power—for any action short of an actual declaration of war—but if he prefers to have confirmatory action from Congress, he should be given it ungrudgingly and swiftly.

Unless the wildly improbable happens and Germany now recants, war seems inevitable. We must take this dread step not for revenge, not to resent an insult or wipe out a stain on our national honor. It is the deliberate and persistent violation of universally accepted principles of international law, the shameless and relentless assault upon the sacred rights of humanity involved in the German program of ruthless submarine warfare, that is forcing the United States into the ranks of Germany's declared enemies.

In the face of this challenge of barbarism it is not enough to arm American merchantmen. It should not be left to private ship owners and the officers and crews of peaceful merchant ships to defend American property and American lives from ruthlessness. While this spirit of lawlessness and frightfulness is abroad in the world, the United States should oppose it with all the force at its command.

We need no further proof that Germany, under its present leadership and with its present purposes, is the common enemy of humanity. If, as now seems likely, we enter the war we should make it unmistakably clear that the battle we wage is for a far greater cause than the vindication of national honor or the defense of our national rights. We shall fight to overthrow an implacable enemy of humanity, an unrelenting menace to democracy and the rights of man.

THE KAISER'S PIPE DREAM

ZIMMERMANN'S note is staggering to the reason but stimulating to the imagination. We seem to see the country after the German-Mexican-Japanese alliance has done its work.

Japan is dominant on the Pacific Coast. Thruout California one may hear the sweet tinkling of the temple bells, the shouts of the jinriksha-men and the gay laughter of the geishas. The problem of the high cost of living has disappeared, since rice is four times as nutritious as an equally expensive mess of potatoes, and fish comes cheaper than meat. The mayor of Sanfrantokyo (*née* San Francisco) appears on state occasions with the two swords of the Samurai. Disorderly persons who have partaken too freely of the beverages of the country are politely tied into double bow knots by police officers trained in jiu-jitsu. The city hall bears the graceful shape of the pagoda and, best of all, the dishonest politicians that used to frequent it have been quietly notified by their neighbors that honor demands the expiation of their shame in hari-kiri. The viceroy of Oregonora achieved office not by his oratorical impres-

siveness (as was the old American custom), but by writing that touching little poem:

A scarlet leaf—
A jasmine flower—
How sweet in the remembering!

Moving eastward we come to an equally interesting but wholly different civilization. At every bar the vaqueros are swapping tales of the old days when Texas was one of the United States and when Arizona governors fought disputed elections in the courts instead of in the sagebrush. President Wilson is deprived of the advice of Colonel House, who is raising an army to overthrow General Burlesono of Texas. The bright colors and instinctive picturesqueness of an Indian-Spanish civilization characterize the Mexican conquests from the great cathedrals of Denver to the bull-rings of Galveston.

But perhaps the greatest changes of all have occurred in Neu Deutschland (once New England) and Neu Berlin (alias New York City). Needless to say the sausage and the sauerkraut have prevailed in the home of the bean and the cod; that the skyline of Neu Berlin has been shorn of its anarchic tumultuousness and all buildings are just eleven stories in hight; that violations of the municipal ordinances are *strengst verboten* and, what is more, really put a stop to; that the mayor of Hindenburgsdorf (Boston) was recently the professor of municipalgovernmenthistory in Harvard; and that the people are not allowed to attend the old fashioned *baseball spiel*, but are locked every afternoon into concert halls to get used to Wagner. Of course, there is some discontent. Many disliked having the Statue of Liberty Enlightening the World remodeled into the *Kulturdenkmal*, others objected to the imprisonment of newspaper editors for criticizing *hochwohlgeboren* army officers and *durchlauchtigste* officials, but all this was nothing to the spasm of indignation that racked the people when a street car was prohibited from taking on more passengers simply because it was full. A judicious severity has, however, quieted the obdurate and many of Germany's erstwhile opponents have accepted titles, iron crosses and high rank under the new government.

Such was the dream of the Kaiser. Wilhelm may not be a general and he is certainly a poor statesman, but who can deny that he is a poet?

A NEW LAND SETTLEMENT POLICY

THIS country entered on a new social and economic era after the last free, fertile public land had been absorbed. Public land had afforded poor families with a liking for rural life an open road to economic independence. Its sudden closing has been followed by a rapid rise in the price of privately owned land and in the cost of water rights on land which require irrigation. Consequently it has become as difficult for men who lack capital to be farm owners in this country as it is in the most densely peopled countries of Europe.

Since the beginning of this century there has been a disquieting increase in the percentage of land owned by non-residents and cultivated by tenants. The American farm laborer is flocking into the cities and is being displaced by immigrants from Asia or from southern Europe. These new recruits may be good cultivators, and usually are, but they do not contribute to the social or political strength of this country.

Here is a new field of social statesmanship which needs attention. If the balance between the growth of city and country is to be maintained and the drift of intelligence and ambition away from the farm is to be checked, some method of enabling men of industry and thrift to enjoy landed independence must be devised and put in operation.

It is not surprizing that the first constructive recommendation for achieving this result should come from California. The report of the State Colonization and Rural Credits Commission and the discussion of Land Settlement by the Commonwealth Club of California, which have just been published, not only contain much valuable information on the fundamental problems of rural life, but follow it with a recommendation of State direction in land settlement which is of interest to the whole country. This report shows that in California 310 men own 4,000,000 acres of the richest land on this continent; that one individual owns 1,000,000 acres and one railroad 5,000,000; that thus far the subdivision and settlement of these great landed properties has been left to unregulated private enterprise. In the language of the report, "Land was bought, subdivided and sold like grain or coal. It was merchandise to be bought at the cheapest possible price and sold for as much money as the settler could be induced to pay."

In place of this the Commission recommends that in the future the plans for colonization enterprises be carefully thought out in advance, with a view to the creation of the kind of agriculture or horticulture suited to the soil and climate of the locality, that men of experience and business ability employed to advise and direct settlers in the purchase of equipment, and that houses, fences and ditches be built by some central organization instead of leaving each inexperienced settler, often a stranger, to struggle alone and unaided. In other words, the plan is to substitute community action for that of the individual.

One of the most valuable features of this report is the description of the methods and policies of Germany, Denmark, Great Britain and Australia, under which a great middle class society is being created. Where for generations there had been a rich land owner at one end of the scale and a poverty-stricken peasant at the other, there is being developed a state of affairs under which neither great wealth nor sordid poverty exist. This great agrarian reform has thus far been disregarded in America, but it cannot be disregarded any longer if we are to meet the economic competition of the future, or if this country is to remain a real democracy.

The California Commission recommends the purchase by the State of 10,000 acres of land, subdividing it into 200 farms varying in size from 20 to 100 acres, providing for the erection of houses and leveling the land for irrigation, and then selling these farms to young men and women under thirty years of age. Only a small cash payment would be required, and if necessary, thirty years' time to complete payments would be given. This plan would enable young men to marry and start on their life work with a security and independence not possible in any salaried position. Along with these farms would go 50 two-acre homes for farm laborers where they could grow most of the food of their families.

The concluding paragraph of the report of the Com-

mission summarizes the reasons for this proposed action:

These departures from the methods and policies under which the State has reached its present wealth and greatness are in accordance with the changing tendencies of our time. Before the beginning of the present war and more rapidly since its beginning the leading nations of the world are organizing all their resources and their industries, so as to eliminate waste, promote efficiency and give the broadest possible diffusion of opportunities. Making settlement a public matter and using the wisdom and experience of the world in shaping our methods and policies will not only attract people here, but will do more to make California a desirable place to live in and secure a better use of our resources than can be accomplished in any other way.

If this plan is approved the whole country will watch the results. It is a significant measure for public good.

DROP THE HYPHEN

AT a recent crowded meeting of the Americanization Forum on the East Side, the principal speakers were United States Senator Calder, Ambassador Morganthau, and Sam A. Lewisohn. After other speakers had aroused enthusiasm over America as the land of religious freedom and political equality, Mr. Lewisohn drove home some good sound advice. He urged the people to drop the mannerisms and speech of the countries from which they came as soon as possible, telling them, "It is not what you get from the community, it is what you give, that counts." There is quite a little sermon involved in this advice, which we commend to those whose chief purpose in life seems to be to nurse the hyphen. It is a hopeful sign of the times when men of the standing of the Lewisohns, not content with their recognition as metal kings, devote themselves whole-heartedly to philanthropy and patriotism.

THE QUESTION OF THE GERMAN COLONIES

WHEN the note stating the peace terms of the Allies was sent to the United States we called attention in our editorial of January 22 to the omission of any reference to the German colonial possessions now held by the Allies. Such an omission was remarkable in view of the fact that the colonies constituted the most uncertain of the questions of the war and that it was Germany's desire for "a place in the sun" that brought her into conflict with England, Russia, Belgium, and France.

When the first draft of this note was transmitted to Tokyo the Japanese Government at once called attention to the omission of what was to Japan the most important issue of the war. So before Japan gave her adhesion to the note she had an understanding with her Allies that the note to America should not be understood to "contain all the conditions of peace to be demanded by the Allied Powers."

Australia and New Zealand, which apparently were not consulted in the drafting of the note, promptly protested against the omission as soon as it was published, and announced their intention of holding on to their conquests. Sir Joseph Ward, Finance Minister of New Zealand, said:

I saw with regret in the note sent to the United States by the Allies in reply to the German peace offer that there was no reference to the manner in which the conquered German colonies are to be treated. There was not a word of reference to those islands in the Pacific which Australia and New Zealand had taken from the Germans, and which those dominions were determined should never go back again to the Germans.

W. F. Massey, Prime Minister of New Zealand, was equally outspoken and emphatic:

New Zealand holds Samoa, and means to retain it. I am sure the Australian people feel the same as to the enemy islands which they have occupied. When the war began there was no question of taking territory. But after what we have seen in Poland, we in the Pacific would not feel secure if German bases were to be permitted in the southern hemisphere with German warships within a day or two steaming from our settlements.

No doubt the Union of South Africa feels quite as strongly on the subject, and would resist surrender of the two great countries it has wrested from the Germans.

On account of this common protest from her oversea dominions and her Japanese ally, Great Britain has reversed her policy and come out plainly for the retention of her conquests. It is understood that the late Asquith government was opposed to the annexation of more Asiatic and African territory, and this was, apparently, one of the causes of its overthrow. At any rate the new Premier, Mr. Lloyd George, has entered upon a strong imperialistic program. He has summoned an Imperial Conference, or, as he prefers to call it, an "Imperial Cabinet," composed of the premiers of all the self-governing dominions, to discuss these questions. The Minister of Colonies, Mr. Long, has announced the policy of the new government in this vigorous language:

Let no man think that their struggles for these colonies have been in vain. Let no man think that these colonies will ever return to German rule. It is impossible. Our oversea empire will not tolerate any suggestion of the kind.

These definite and authoritative pronouncements clarify the problem of peace. It is now clear that unless the Allies are decisively defeated, which is highly improbable, Germany will lose practically all of the colonial empire which she had spent thirty years and untold millions in building up. The colonial territory thus lost to Germany amounts to more than a million square miles, equal to a third of the United States. Of this Great Britain will naturally get the lion's share. The new territory added to the British Empire since the war began or now held by British arms amounts to fifty times the area of England, and this is more likely to be increased than diminished as the war goes on. Of this the parts claimed by Australia and New Zealand, that is, the German islands in the Pacific, equal in area New York and Pennsylvania. The French in Africa have conquered German territory equal to half the size of France. The gains of Japan are inconsiderable in area but of great strategic importance.

The annexation of German colonies by these powers will excite little regret either among the inhabitants of the transferred territory or in the outside world. The Japanese administration of Korea, the French administration of Algeria, and the British administration of Egypt, have been with all their faults vastly superior to the German administration of East and Southwest Africa, in regard both to fair treatment of the natives and to the commercial development of colonies. In two points the Germans excelled: they spent their money more freely for the benefit of the colonies, and they studied the country more thoroly. But they have nowhere demonstrated the ability to rule alien races amicably or to establish self-governing colonies of their own kind. But whatever we may have thought of their prospects of ultimate success in colonial administration, they have now forfeited the chance of trying it, at least on any such extensive scale as formerly.

THE STORY OF THE WEEK

The U-boat War

The destruction of shipping by the German submarines has gradually fallen off and there were three days in the past week when no losses were reported. In how far this is due to the withdrawal or capture of the submarines or to reluctance of shipping to enter the danger zone cannot be ascertained.

From the London reports it appears that during the month of February 189 ships were sunk with a total tonnage of about 480,000. But on February 19 the First Lord of the Admiralty, Sir Edward Carson, gave the number of ships sunk as twenty more than had at that time been reported to America, so it is not certain that we are getting news of all the losses. The German claims are considerably greater. On the whole, however, we may assume that the total destruction of shipping during the month of February was under a half million, and therefore not much greater than the January loss of 322,000 tons or the December loss of 347,000 tons. From this it appears that the ruthless sea war which Germany proclaimed on February 1 has not materially changed the situation. The Germans expected to be able to destroy a million tons of shipping a month, but during the first thirty-one days of the new campaign they have not succeeded in reaching half that estimate.

THE GREAT WAR

February 26—British take Kut. Six ships sunk. President asks Congress for authority to arm ships.

February 27—British popular war loan exceeds $5,000,000,000. Five ships sunk.

February 28—British casualties for February 18,428. No ships sunk.

March 1—Germans retiring on Ancre. Six ships sunk.

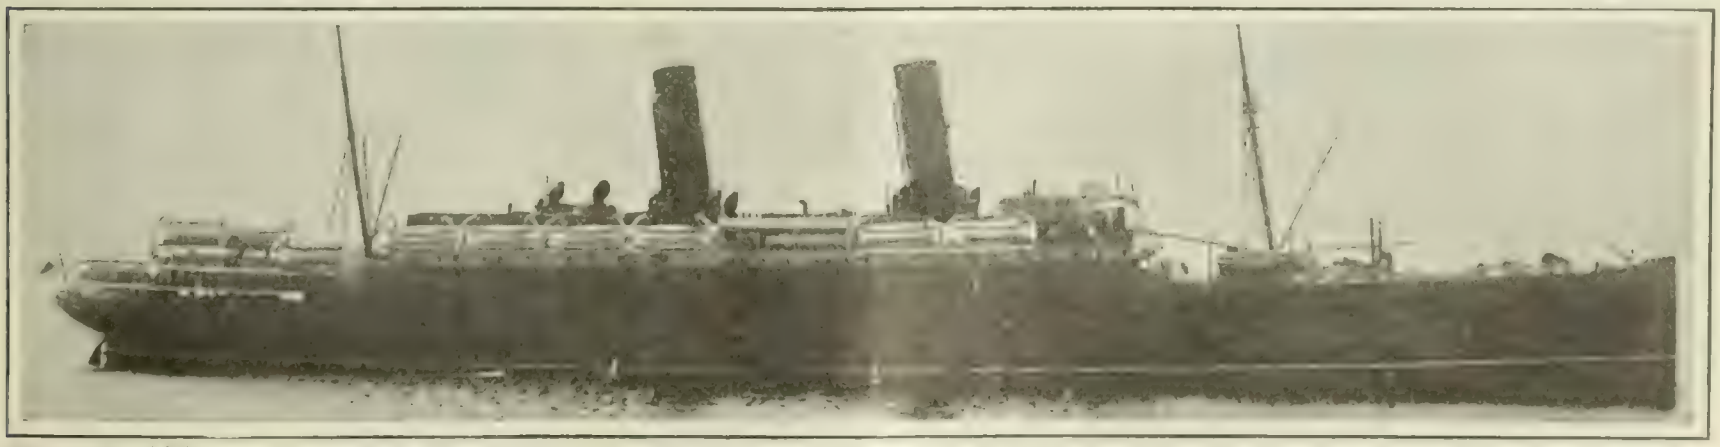
March 2—Russians retake Hamadan. Persia. No ships sunk.

March 3—Italians attack German lines in southern Serbia. One ship sunk.

March 4—Senate adjourns without empowering President to arm ships. No ships sunk.

The Sinking of the "Laconia"

The largest victim of U-boats with the exception of the "Lusitania" was the Cunard liner "Laconia" which was sunk 150 miles west of Ireland on Sunday night, February 25. She had left New York on February 10 with 75 passengers and 216 in the crew. Her cargo consisted chiefly of structural steel, iron plates for ship building, wheat, meat, cotton, silver and 2000 cases of empty brass rifle cartridges. The value of the cargo was about $2,000,000. She also carried 5400 sacks of mail, including 1500 sacks that were to go on the "St. Louis," but were taken off when the American liner failed to sail. The "Laconia" was commanded by Captain Irvine of the Royal Naval Reserve and was armed with a 4.7 inch rapid firer in charge of a Royal Naval Reserve gunner. The weapon, however, was of no avail since she was struck about ten o'clock at night when a submarine is invisible. The "Laconia" was running without lights but evidently was not invisible to the submarine.



The passengers had eaten their last dinner as they were expecting to land next day and many of them had gone to bed when the first torpedo exploded in the side of the ship. Boat drill had been practised every day, but in the darkness and confusion lifeboat No. 8 was smashed against the side of the vessel. In this boat were two American ladies, Mrs. Mary E. Hoy and her daughter, Miss Elizabeth Hoy, and an American negro fireman named Coffee. These three died from injuries or exposure and their bodies were thrown overboard to lighten the boat. A second torpedo was fired at the ship which sank in an hour. The submarine approached one of the boats and the officer standing beside the periscope inquired in good English what was the name of the ship he had struck and where the captain was. When the people in the boat reproached him with murdering women and children he replied that they would only be out a short time for a British patrol boat was near. He told them which way to row toward it, then bade them "good night" as the U-boat vanished.

But it was six hours before the survivors on the floating boats were picked up. As they were brought into the Irish harbor they stood on the deck of the sloop that rescued them, singing "Rule, Britannia." There were at least eleven others lost besides the three Americans mentioned. Six of the passengers were American and twenty of the crew, for many of the original crew of the "Laconia" refused to risk the return passage and their places were filled with such men as could be found in New York, mostly negro stokers and coal passers.

Mrs. Hoy was 65 years old and her daughter 30. They had been back to their old home in Chicago and were returning to London, where Mrs. Hoy's husband and son represented the Sullivan Machinery Company of Chicago. The elder Hoy, served in the Civil War in the Nineteenth Wisconsin and is now 75 years old. His son, Austin Hoy, cabled to the President as follows:

My beloved mother and sister, passengers

(c) International Film

WAS IT AN "OVERT ACT"?

Public opinion in America is divided over the sinking of the "Laconia," a Cunard liner torpedoed by a German submarine. The passengers were taken off in lifeboats and most of them were saved, tho two Americans, Mrs. Albert H. Hoy, of Chicago (photographed above), and her daughter, died before the boats reached shore

on the "Laconia," have been foully murdered on the high seas.

As an American citizen outraged and as such fully within my rights and as an American son and brother bereaved, I call upon my Government to preserve its citizens' self-respect and save others of my countrymen from such deep grief as I now feel. I am of military age, able to fight. If my country can use me against these brutal assassins, I am at its call.

If it stultifies my manhood and my nation's by remaining passive under outrage, I shall seek a man's chance under another flag.

Altogether 166 Americans have been put to death by the German submarines. Of these 124 were lost on the "Lusitania" on May 7, 1915. The American victims were mostly on British vessels but three American seamen were drowned on the American tanker "Gulflight" May 1, 1915.

The German Withdrawal

The extent and meaning of the retirement of Germans on the British front are still uncertain. The retirement was voluntary in the sense that the Germans chose the time and method of it. This is shown by the fact that the British did not realize for a day or two that the trenches before them were virtually empty. But on the other hand the Germans would not have yielded the ground unless they had felt that they were forced to, tho whether it was because they were too weak to hold the old lines against the anticipated onslaught or because they hope to gain a better defensive position is still an open question. By this movement they gain at least one temporary advantage; they have disarranged the plans of the British and so delayed their spring drive. It will take some time to occupy the mile or two of evacuated ground, to establish new front entrenchments, to make roads and bring forward ammunition, to locate the new German positions and otherwise to bring everything up to the point of preparedness which the British had reached on the old lines. By the time the British are ready for an attack upon the new lines the Germans hope that their U-boat warfare will have cut the cross-channel transportation system by which the English army receives its reinforcements and supplies.

The withdrawal was evidently planned long ago and has been carried on secretly for some time. The old trenches and dug-outs have been completely denuded of their furnishings, equipment and arms except the few machine guns left to keep up a show of resistance. The village church spires and clock towers that might serve as observation posts have been demolished. Many traps were laid for the advancing British. As their outposts enter the empty fortifications mines are exploded either by trip-wires or by a distant observer. Spring guns are set in the trenches and it is unsafe even to pick up a German helmet left lying on the ground for it is apt to contain a bomb set to explode at a touch. The only prisoners taken are the squads of machine gun men and snipers left to harry the enemy. The

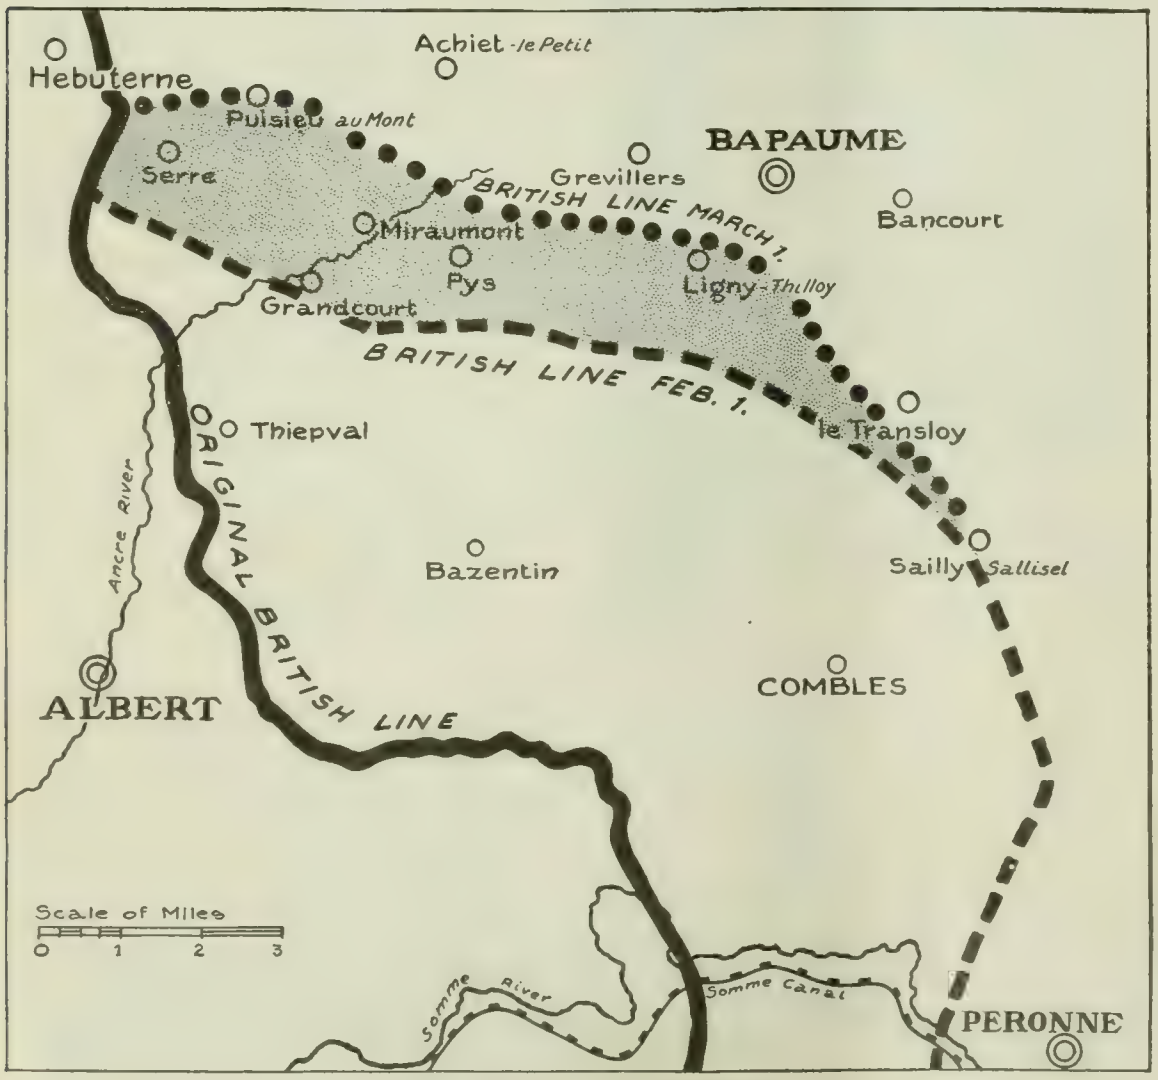
THE CONQUEROR OF KUT

A British defeat turned into a victory, several thousand Turkish prisoners taken and an advance of fifteen miles accomplished—the capture of Kut-el-Amara by General F. S. Maude is an important item in the British success of the past week



British War Office reports only two thousand as their total captures on all fields during February. From the announcement of a skirmish between the British and Germans near Roye it appears that the British line has been extended for at least twenty miles south of the Somme.

On the Ancre the Germans have retreated more than two miles, but at le Transloy and Sailly-Sallisel, eight miles east, they are holding their ground, apparently using this point as a pivot while they swing back their right wing toward Bapaume.

British Gains on the Tigris

Again the insignificant Turkish town of Kut-el-Amara becomes the center of interest, but this time the situation is reversed, for the Turks are defeated and the British are victorious. With characteristic tenacity of purpose the British have returned to the scene of their former failure. In vain the London *Times* criticizes the Mesopotamian movement as an unwise diversion of troops more needed in France to a field where the most complete victory would not determine the issue of the war. General Maude evidently proposes like General Grant "to fight it out on this line if it takes all summer." The aim of the expedition is the same, that is, Bagdad. The path is the same, that is, up the Tigris River.

The first expedition sent up the river in 1915 was a foolhardy enterprize as everybody can see now and as some saw then. General Townshend who was appointed to lead it declared in advance "it is absolutely unsound from a military point of view to attempt to

THE GERMAN RETIREMENT

The British drive begun last August was stubbornly resisted by the Germans, but nevertheless resulted in an advance of about five miles from the original British line. During the winter little was done, but in the last days of February the Germans spontaneously withdrew from their entrenchments, so enabling the British to occupy the shaded area without opposition. Where the Germans will make their next stand is uncertain, but it is supposed that they have fortified a new line on the ridge in front of Bapaume

take Bagdad with less than an army corps of two divisions." He was only given one division and when he had got within eighteen miles of Bagdad he was met by a Turkish force of more than four divisions, and in the ensuing battle of Ctesiphon he lost 4500 killed and wounded out of 14,000 men. With the remnant of his army he retreated down the river but was overtaken and surrounded at Kut-el-Amara. Here he stood a siege from December 7, 1915, to April 28, 1916, when he finally surrendered. The relief expedition came within sight of his camp on the bluffs and communicated with him by aeroplane, but could not break thru the Turkish lines below Kut.

The Capture of Kut

The first British expedition up the Tigris was, as we have seen, too small. It was poorly provided with sanitary supplies and hospital facilities so the sufferings and losses of the wounded were greater than they should have been. The communications with the British base at the mouth of the Tigris could not be kept up so the expedition ran short of food and ammunition when it most needed them.

These defects in the previous expedition have, it is believed, been remedied in the present expedition. It is said to comprize three full army corps; that is, six divisions which would amount to some 120,000 men. Two light railways have been run along the banks of the Tigris and a substantial flotilla of river boats provided.

These preparations having been made General Maude began his operations against Kut-el-Amara on December 13, 1912, and succeeded in cutting off the place from the upper Tigris and Bagdad. The situation will be readily grasped by readers who are familiar with the meanderings of the Missouri. The Tigris makes a southward sweep in a mule-shoe curve about a mile wide around the bluff known as Kut-el-Amara. Here the Turks entrapped the Townshend expeditions by entrenching across the narrow entrance to the loop. The British cannot do this at present because they have not yet command of the northern and left bank of the Tigris. Their passage up this bank was blocked as formerly at Sanna-i-Yat fifteen miles below Kut, where the Turks occupied an exceptional strong position. Their right rests on the river and their left was protected by a swamp too extensive to permit of a flank movement. The narrow front between the river and the swamp was thoroly fortified, and it was not until Kut was taken that the Turks abandoned this position.

ANOTHER BELGIUM?

IT'S HARD ON HOLLAND

On the southern or right bank of the Tigris the British have been surprisingly successful. The Turks voluntarily evacuated their entrenchments southeast of Kut, the Es-Sinn position, which last spring they held against all attacks. This time the British marched thru the Es-Sinn entrenchments without opposition, and in January assaulted the Turkish lines just across the river from Kut. Here they encountered stubborn resistance and the losses on both sides have been heavy. On January 21 and again on January 25 the British report that a thousand Turkish corpses were found in the captured trenches. In the assault of February 14 a thousand Turkish prisoners were taken. The result of this fighting was that the British took possession of the south bank of the river bends on both sides of the Kut loop, and directed their attack upon the town itself, tho from the opposite side of the river.

The Retreat Toward Bagdad

The Turks made no attempt to stand a siege at Kut-el-Amara as General Townshend did. The British seapower evidently extends to rivers. They have at least four gunboats on the Tigris, the "Tarantula," "Mantis," "Moth" and "Firefly," a swarm of deadly insects, that harassed the Turkish positions on the northern bank and make Kut untenable. But by their command of the river the British were able to throw troops across the river from the southern side wherever they chose. When they thus took possession of both banks in the bend of the river just above Kut the Turks determined to evacuate that place rather than be cut off. They abandoned guns and equipment and fled up the northern bank toward Bagdad. The gunboats ran up the river along side of them and converted the retreat into a rout. At last accounts the Turkish army had got half way to Bagdad and was still going. It remains to be seen if they will make a stand at the ancient city of Ctesiphon, where the previous British advance was stopped and turned back. The forces of General Maude took 4300 prisoners within a week, making 7000 within a month, and the Turkish killed and wounded amount to more than 20,000. The Turks on the other hand claim that the British have lost 30,000.

Germany Plans Coalition

On the first day of March the nation was startled by the publication of a note from Foreign Minister Zimmermann of the German Empire to the German embassy in Mexico. The document, which was dated January 19, 1917, announced that on the first of February unrestricted submarine warfare would be resumed. Should the United States refuse to remain neutral Germany would be glad to have Mexico for an ally. "We shall," it said, "give general financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas and Arizona." The President of Mexico was then to be invited to mediate between Germany and Japan and win over Japan to the anti-American coalition. It will be noted that at the time this note was written the United States had not broken diplomatic relations with Germany and the relations between the two governments were, on the surface, perfectly friendly.

The Associated Press made the note public in the first place and many per-

sons refused to credit its authenticity until officially confirmed. Even Congress was inclined to be sceptical. After a long and rather excited discussion the Senate agreed to a resolution which requested President Wilson to furnish what information he could about the German note unless it were against the public interest to do so. In reply President Wilson sent a report of Secretary of State Lansing which guaranteed the authenticity of the note and added that the evidence was procured by the Government within the week. This set at rest all doubts of the genuineness of the discovery. With commendable frankness the German Government made no attempt to deny its responsibility for the conspiracy against the United States. Foreign Secretary Zimmermann admitted that Germany had projected a coalition against this country but insisted that this was only a defensive precaution and would never become operative unless the United States entered the war against Germany.

Secretary Lansing made it plain from the first that this Government had no reason to suspect either Mexico or Japan of adhesion to the plot or even of knowledge of the contents of the German note. Viscount Motono, the Japanese Foreign Minister, scouted the German scheme as absurd and denied that his Government had been approached by Germany or that it would under any circumstances have listened to such proposals. But the fact that Germany contemplated an alliance with Japan has emphasized the importance of friendly relations between Japan and the United States at this critical time. The German note has, apparently, had the indirect effect of putting an end to the present possibility of such anti-alien land laws as Idaho and other Western states have been considering within the last few months.

JAPAN SPEAKS UP

"It is to laugh" is the Oriental's answer to the ingratiating proposition of Germany and Mexico, "We offer you a full partnership"

Latin-America and the German Plot

The fact that the German Government is now known to have projected an alliance with Mexico in the event of war with the United States has led observers to suspect the hidden hand of German intrigue in all the events which have recently perplexed us in our sister republics to the south. To be sure, Foreign Minister Aguilar, of Mexico, has officially denied that his government had so much as received the German proposal. But even supposing that the note was intercepted before it reached the officials to whom it was directed, there may well have been other negotiations which inclined Carranza to view the German cause with favor, if not as against the United States at least as against the Entente Allies. This would explain the recent Mexican proposal for a joint embargo of the neutral powers to shut off supplies from all belligerents, the increased export duties on crude oil and its products, the heavy purchases of cartridge making machinery from Japan, the anxiety of President Wilson to come to an understanding with the de facto government on almost any terms, and the rumored friendliness between the Germans in Mexico and some of the rebel leaders. The Society of the Iron Cross, including some 3000 German residents of Mexico, is accused of supporting every faction which could by taking an unfriendly attitude embarrass the American Government. These accusations may be exaggerated or unjust, but under the circumstances they are inevitable. Even if Carranza continues to turn a deaf ear to the tempter, Villa or any of his other opponents may attempt to win popular support and approval for their revolutionary activities by a raid across the American border.

German influence is suspected not only in Mexico but also in the recent bloodless revolution in Costa Rica, the latest disorders in Santo Domingo, the activities of the Cuban insurgents and the ambiguous attitude of the Republic of Colombia. President Wilson's very hostile attitude toward the Cuban and Costa Rican revolutionists may thus have another reason behind it besides disapproval of the Latin-American habit of settling political quarrels on the battlefield; and his urgent but unsuccessful attempt to induce Congress to pay Colombia for the satisfaction of her Panama claims may be partly due to the need of securing the safety of the Canal Zone. In the principal Latin-American republics, however, the publication of the German proposal to Mexico was greeted with a chorus of indignation hardly second to that which it evoked in the United States itself.

Senate Passes Spy Bill

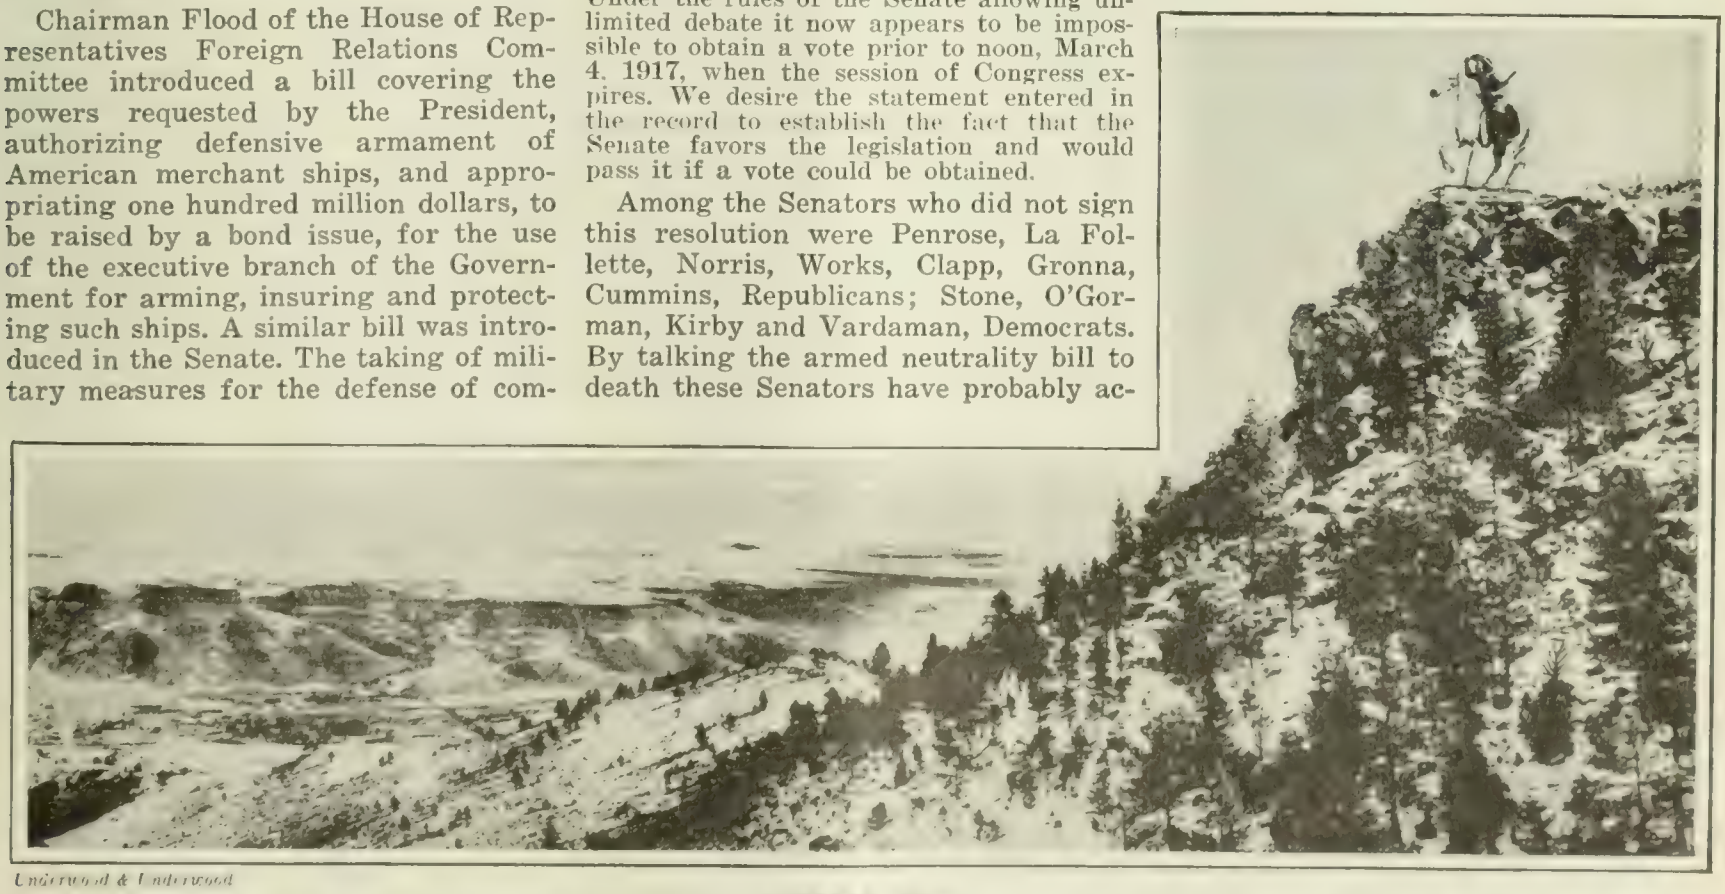
The omnibus bill directed against espionage, which has been so bitterly contested by anti-militarists in Congress, passed the Senate on February 20 by a vote of 60 to 10. A large majority of both parties were in favor of granting to the President at this crisis the extensive powers provided for by the bill. The ten Senators who voted against the bill were: Borah, Cummins, Gronna, Kenyon, La Follette, Norris and Works, Republicans; and Lane, Lee and Vardaman, Democrats. Among the acts prohibited under the most drastic penalties by the espionage bill are the entering of any place connected with the national defense in order to secure unlawful information, the securing of

information about the military conditions of the country on behalf of any enemy country, the making of untrue statements under oath in connection with international controversies, the injuring of ships in American harbors and many similar infringements of national security.

New legislation desired by the administration would empower the President to detain "any vessel, public or private, foreign or domestic, in order to enforce compliance with, or to prevent the obstruction of, the obligations of the United States under the law of nations"; punish anyone from injuring articles of export to prevent their exportation; prevent any person other than diplomatic or consular officers of the Government from acting as agents of foreign governments, and prevent the coinage or the printing of currency or bonds within the United States for a revolutionary government not recognized by the United States.

Armed Neutrality President Wilson's address before Congress on Monday, February 26, the text of which was published in last week's Independent, embodied a request that he be authorized to supply merchant ships with defensive arms and "to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people." The President believes that he has the right to take such action without the voted consent of Congress, but he wished formal approval of his course to obviate any doubt that the people's representatives supported his method of asserting American rights at sea. This approval he was unable to secure because of the short time remaining before the end of the session and because the rules of the Senate permit unlimited debate.

Chairman Flood of the House of Representatives Foreign Relations Committee introduced a bill covering the powers requested by the President, authorizing defensive armament of American merchant ships, and appropriating one hundred million dollars, to be raised by a bond issue, for the use of the executive branch of the Government for arming, insuring and protecting such ships. A similar bill was introduced in the Senate. The taking of military measures for the defense of commerce without any declaration of war constitutes what is known to diplomacy as "armed neutrality" and finds precedent in the action taken by the United States against France during the Napoleonic wars. But while armed neutrality need not lead to war it is a step in that direction and therefore the more obstinate pacifists in both the House and the Senate opposed the proposed grant of powers to the President. But the Flood Bill passed the House of Representatives on March 1 with little difficulty and by an overwhelming majority of 403 to 13. Even Representative Mann, the minority floor leader and a bitter opponent of the President's foreign policy, supported the bill. The thirteen opponents included the lone Socialist in the House, three Democrats and nine Republicans.



In the Senate the bill encountered very different fortune. Senator Stone of Missouri, Chairman of the Foreign Affairs Committee and therefore spokesman of the President on international affairs, broke the bonds of party discipline and led the fight against the bill. In this he was seconded by a small group of Republicans from the West who acted under the informal captaincy of Senator La Follette of Wisconsin. The pacifist group in the Senate was not large enough to defeat the bill, but it was able to prevent it from coming to a vote at all by consuming the few remaining hours of the session in interminable speeches. In order to show that the Senate majority favored the armed neutrality bill, the supporters of the measure signed the following resolution:

> The undersigned United States Senators favor the passage of Senate bill 8322, to authorize the President of the United States to arm American merchant vessels. A similar bill already has passed the House of Representatives by a vote of 403 to 13. Under the rules of the Senate allowing unlimited debate it now appears to be impossible to obtain a vote prior to noon, March 4, 1917, when the session of Congress expires. We desire the statement entered in the record to establish the fact that the Senate favors the legislation and would pass it if a vote could be obtained.

Among the Senators who did not sign this resolution were Penrose, La Follette, Norris, Works, Clapp, Gronna, Cummins, Republicans; Stone, O'Gorman, Kirby and Vardaman, Democrats. By talking the armed neutrality bill to death these Senators have probably accomplished two things: they have made inevitable an extra session of Congress in the immediate future and they have convinced the country that the Senate should limit its present unrestricted freedom of discussion.

Congress Closes Perhaps there has never been a session of Congress which has attempted so much as that which came to an end on March 4. Owing to the extraordinary pressure of business and especially to the Republican filibuster against the revenue bill and the pacifist filibuster against the armed neutrality bill, most of the tasks of the session remain unaccomplished. With the armed neutrality bill went down to defeat, from lack of time for consideration, the army appropriation bill and several other appropriation measures. A list of nearly two thousand nominations failed of confirmation by the Senate including the much discussed nomination of Dr. Grayson for medical director of the navy. Neither the railroad labor problem nor the question of the high cost of foodstuffs received the consideration which everyone expected this session of Congress to devote to them.

But Congress succeeded in securing the final passage of many important measures in the final week of the session. Chief of these was the revenue bill, signed by the President on March 3, which provided for the raising of $350,000,000 by special taxation and bond issues. Half of this sum is reserved for purposes of preparedness. In the Senate the bill passed by a party vote of 47 to 33 after numerous amendments proposed by the Republicans had been defeated. Among the other successful measures were the regular appropriations for the legisla-

BUFFALO BILL

On one of the mountains of his own "Wild West," within view of four states, Wyoming, Colorado, Nebraska and Kansas, is to stand the nation's monument to Colonel William F. Cody—Buffalo Bill. Ex-President Roosevelt is a vice-president of the committee which is collecting funds for the memorial

tive, executive and judicial branches of the National Government; the appropriation for pensions; the bill establishing a temporary form of government for the Danish West Indies; an increased appropriation for the War Risk Insurance Bureau; the flood control bill, appropriating $45,000,000 for controlling floods on the Mississippi and $5,600,000 for similar work on the Sacramento in California; and the Porto Rico bill, granting American citizenship to the natives of the island and remodeling their constitution on very democratic lines.

The navy appropriation bill, carrying appropriations of $535,000,000, passed both branches of Congress just in time to secure the President's signature. It is said to be the largest sum ever appropriated for any navy in time of peace. The army bill was not so fortunate. It passed the House of Representatives without a record vote, and the Senate Military Affairs Committee voted to report it with substantial increases which brought it up to more than $277,000,000, but the Senate did not get an opportunity to pass upon it.

The Food Question Food prices in the great cities showed a slight downward tendency owing to the widespread popular boycotts of the more costly articles of diet. The public authorities have conducted campaigns of education calling attention to available substitutes for the boycotted foods. In New York, for example, George W. Perkins has purchased 4,000,000 pounds of rice to sell at cost, a carload of smelts and large quantities of Brazilian brown beans. The railroad situation is improving and the prevailing high prices of vegetables have resulted in unusually large shipments from the agricultural states of the South and the West. Nevertheless, some food speculators are still holding out for higher prices. One wholesale dealer admitted that he was keeping 20,000 bushels of potatoes out of the market in order to maintain the present price level. Attorney General Gregory is of the opinion that conspiracy in restraint of trade can be proved in very few instances, and that "a common selfish impulse of traders to take advantage of the extraordinary condition of the times is not punishable under any existing federal law, no matter how completely lacking in economic justification, no matter how extortionate." Senator Borah, of Idaho, introduced a bill to appropriate $6,000,000 for the relief of those who suffered from the food shortage. Lack of time prevented consideration of the measure in Congress.

President Wilson Succeeds Himself At noon on Sunday, March 4, Woodrow Wilson took the oath to administer the office of President of the United States for another four years. Chief Justice White of the Supreme Court administered the oath and was the first to congratulate the President on the beginning of his second term. President Wilson was sworn in at his desk in the Chief Executive's room of the Capitol, and a few members of his cabinet were the only witnesses of the ceremony. Owing to the fact that March 4 fell on a Sunday there was a double inauguration. The military parade was postponed till Monday, when the President again took the oath of office in the presence of a great crowd of spectators.

THE HOLD-UP OF THE SENATE

PRESIDENT WILSON'S STATEMENT ON THE FAILURE OF THE ARMED SHIP BILL

Washington, March 4.

The termination of the last session of the Sixty-fourth Congress by constitutional limitation discloses a situation unparalleled in the history of the country, perhaps unparalleled in the history of any modern government. In the immediate presence of a crisis fraught with more subtle and far-reaching possibilities of national danger than any other the Government has known within the whole history of its international relations the Congress has been unable to act either to safeguard the country or to vindicate the elementary rights of its citizens. More than 500 of the 531 members of the two houses were ready and anxious to act; the House of Representatives had acted, by an overwhelming majority; but the Senate was unable to act because a little group of eleven Senators had determined that it should not.

The Senate has no rules by which debate can be limited or brought to an end, no rules by which dilatory tactics of any kind can be prevented. A single member can stand in the way of action if he have but the physical endurance. The result in this case is a complete paralysis alike of the legislative and of the executive branches of the Government.

This inability of the Senate to act has rendered some of the most necessary legislation of the session impossible, at a time when the need for it was most pressing and most evident. The bill which would have permitted such combinations of capital and of organization in the export and import trade of the country as the circumstances of international competition have made imperative—a bill which the business judgment of the whole country approved and demanded—has failed. The opposition of one or two Senators has made it impossible to increase the membership of the Interstate Commerce Commission or to give it the altered organization necessary for its efficiency. The conservation bill, which should have released for immediate use the mineral resources which are still locked up in the public lands, now that their release is more imperatively necessary than ever, and the bill which would have made the unused water power of the country immediately available for industry, have both failed, tho they have been under consideration thruout the sessions of two Congresses and have been twice passed by the House of Representatives.

The appropriations for the army have failed, along with the appropriations for the civil establishment of the Government, the appropriations for the Military Academy at West Point and the general deficiency bill. It has proved impossible to extend the powers of the Shipping Board to meet the special needs of the new situation into which our commerce has been forced or to increase the gold reserve of our national banking system to meet the unusual circumstances of the existing financial situation.

It would not cure the difficulty to call the Sixty-fifth Congress in extraordinary session. The paralysis of the Senate would remain. The purpose and the spirit of action are not lacking now. The Congress is more definitely united in thought and purpose at this moment, I venture to say, than it has been within the memory of any man now in its membership.

There is not only the most united patriotic purpose, but the objects members have in view are perfectly clear and definite. But the Senate cannot act unless its leaders can obtain unanimous consent. Its majority is powerless, helpless. In the midst of a crisis of extraordinary peril, when only definite and decided action can make the nation safe or shield it from war itself by the aggression of others, action is impossible.

Altho as a matter of fact the nation and the representatives of the nation stand back of the Executive with unprecedented unanimity and spirit, the impression made abroad will of course be that it is not so, and that other governments may act as they please without fear that this Government can do anything at all. We cannot explain. The explanation is incredible.

The Senate of the United States is the only legislative body in the world which cannot act when its majority is ready for action. A little group of wilful men, representing no opinion but their own, have rendered the great Government of the United States helpless and contemptible.

The remedy? There is but one remedy. The only remedy is that the rules of the Senate shall be so altered that it can act.

The country can be relied upon to draw the moral. I believe that the senate can be relied on to supply the means of action and save the country from disaster.

"A LITTLE GROUP OF WILFUL MEN"

Senator La Follette, of Wisconsin; Senator Clapp, of Minnesota; Senator Cummins, of Iowa; Senator Gronna, of North Dakota; Senator Kenyon, of Iowa; Senator Norris, of Nebraska; Senator Works, of California; Senator Kirby, of Arkansas; Senator Lane, of Oregon; Senator O'Gorman, of New York; Senator Stone, of Missouri; Senator Vardaman, of Mississippi.

FOUR YEARS OF DEMOCRACY—AND FOUR MORE

BY THOMAS R. MARSHALL

VICE-PRESIDENT OF THE UNITED STATES

DEMOCRACY is not a system of government. Indeed, democracy may find its expression in any one of numerous systems. The rule of the people is not essentially rule by the people. By their votes, even when democracy has unfolded to full manhood suffrage, the people may have a monarchical form of government. The people's rule does not depend upon the number of votes nor necessarily upon the system of government under which they vote. Good or bad government must go back to good or bad citizenship, to intelligent or ignorant, to honest or dishonest electors.

Our coördinate system of government was formulated by Thomas Jefferson and many a man wholly ignorant of Jefferson's theory of government is now proclaiming himself a Jeffersonian democrat. American democracy in its purity was intended to mean, and, I believe, does mean, something more than voting. It is an inspiration and an aspiration. It does not always depend upon the ticket which a man votes. It does depend always upon the motive back of the ballot.

My own view has always been that government is a necessity and not a luxury; that it is not a business and has no right to engage in business except in so far as the legitimate exercize of its police power, looking toward the life and health of the people, compels it to interfere with business inimical to life and health.

THE Democratic party has been in power for four years and will succeed itself for another term. This continuation is due to the fact that the Democratic party has made good and that the administration of Woodrow Wilson has created an enthusiasm for the right and aroused public sentiment everywhere against the wrong. I assert without fear of successful contradiction that the President of the United States and the Congress have been actuated by no motive save one, to free the people from the shackles of industrial life. You must admit the honesty of the present administration even tho you may doubt its wisdom.

The Democratic party is a growing—a progressive party. The last election proved it. Part of its duty is to quiet the fears of the timid. It proposes that the social and economic justice of the tariff towards the workingman shall have a practical instead of a theoretical test. It waived its ancient views as to a tariff commission, now that the tariff has been lowered and wealth has been made to bear its fair proportion of the burdens of government.

The honest business man no longer dreads a panic nor doubts that with good security his credit will remain indefinitely unimpaired. Any number of excellent laws have been enacted by the present Administration. Who objects that in the exercize of its peace-making and war-making power, Congress has seen fit to provide for the erection of powder, armor-plate and nitrate plants rather than to trust this entire business to private patriotism? Who would not have the Government engage temporarily in shipping rather than have the country return to the old slavish customs of the sea? Who balks at good roads, rural credits, agricultural education and Federal aid for the betterment in every way of men and conditions?

All these measures received more or less support from members of the minority, because these enactments have had but one object—the common weal.

THOSE who have criticized the President have said that he is an infirm American. This description has suddenly been forgotten now that the President has acted with a hand that is very firm. Now it so happens in this country not birth nor religion, but loyalty to America constitutes the American.

Neither the President nor the American people have lost the American spirit. Whether native-born or foreign-born, an overwhelming majority love the flag and are loyal to our institutions.

This leads us to the phrase "American honor." Now everybody knows that there are as many kinds of honor as there are kinds of men. A gambler believes that honor consists in shielding his pals and a thief in fairly dividing the booty. Individual honor changes with the ages. Alexander Hamilton thought that honor demanded that he give Aaron Burr a chance to kill him, but we now do not think so. The honor of America is the composite opinion of the American people as to when and why we should go to war. The sense of national honor does not belong to the men who are holding office nor to the men who want office. It is the composite opinion of the American people as to what constitutes just cause for war.

The whole history of the republic from Washington down is filled with illustrations of the taking of American life, and the destruction of American property, but the instances are rare in which American honor was so assailed that the people have deemed it necessary to maintain that honor by force of arms.

But as soon as an organized government thru its governmental authorities deliberately trampled upon the rights of the American people, the spirit of 1776 has been found alive everywhere in our land.

America has no right to be unless she stands for man and the rights of men. For, we must remember, we are not Americans in the sense that we are a homogeneous people. The war discloses that we are rather cosmopolitans.

We are all Americans in that we believe in the institutions under which we live and are loyal to the flag which floats over us, but we are not so welded together into a people as to have forgotten the lands whence we came. Our isolation is a fallacy. We have discovered that the whole world is kin, and that that which affects the welfare and prosperity of Europe affects the prosperity of the United States. When we have the opportunity for a splendid isolation, we suddenly discover that in reality it is the most undesirable of positions.

Impartially and in accordance with our treaties and the principles of international law, the President has used "mere words," as they have been called. For this he has been criticized. Parties come and parties go. Politicians and partizans and critics strut their brief hour and disappear. Socrates drank his cup of hemlock but philosophy lived on. The spirit of Savonarola went up in smoke from the market place of Florence, but religion remained the supreme hope of the human heart. Mocked at, misunderstood, misjudged, Lincoln went to his martyr's crown, but the Republic was reunited and still lives.

IN this hour of world darkness I have faith that humankind is going upward to the hights, not downward to the vales. The judgment of the American people has been not to make a martyr of the man who brooded over the Republic in storm-stressed times and by mere words has spoken a continuing peace to the troubled seas of international politics. If peace cannot endure, it will be because we shall take up arms only for the composite American who has been molded in the constitutional pattern of civil and religious liberty.

I believe that the present Administration is a mirror of Jeffersonian democracy. Upon its principles all men can stand. Were they crystallized into law, honestly construed and fearlessly enforced, many of the unjust burdens upon the people would be removed. True, there are other problems to be settled. On other questions we may be divided. Let them wait.

The Anglo-Saxon—and we are still Anglo-Saxon—never settled two great question nor solved two great problems at once.

Washington, D. C.

WILLIAM BAILEY HOWLAND

BY J. HORACE McFARLAND

PRESIDENT OF THE AMERICAN CIVIC ASSOCIATION

IF there can be an ideal death, it was that which came to William B. Howland. I am not yet readjusted to the world without him, but I know his passing from the activities of this present life was as he would have had it. He died in the harness, "on the job"; and he was never more the master of his job than the day he was taken from it, nor did the harness ever better serve its purpose in helping him pull mankind forward.

A prodigious worker was this friend of ours, if we try to measure the things he set others to do, as well as those which passed under his own hands. Yet no man ever worked more easily, I think; for always he labored with a smile, and the word of cheer came so much more frequently from his lips than the word of complaint or reproof, that we who gladly followed where he led remember only how pleasant it was to work with him.

I know that in our grief we find it easy to ascribe to the one who has passed on more than human virtues and less than human vices. I know, too, that men both great and good are so simple in their lives and ways that sometimes we fail to realize the presence among us of that greatness and goodness; we must wait, it seems, until we can no longer see the one whose friendship has honored us before we know what that friendship meant to us. Yet there were some of his associates who did know what this man Howland meant.

MORE than a score of years ago I went with Mr. Howland to the funeral of a man who had exerted a profound influence on his life and on mine. We listened to Dr. Abbott as he told of the simplicity, the strength, the true greatness, of Lawson Valentine. Beside us was another of the men whom Mr. Valentine's methods had lifted to a higher plane of usefulness. Tears streaming from his eyes, this man exclaimed, "Oh, why didn't I know he was that kind of a man while he was alive?" Turning to him, Mr. Howland said, comfortingly, "You did know, for you have shown it in your work."

So some of us have realized a little of the sweetness of the strength that was always an outstanding fact of William B. Howland. Some of us have wondered at his quick grasp of the essentials of a problem, at his hearty readiness to listen to and be influenced by straight talk, even when that meant a change in his position. Most who ever had much to do with him have marveled more at his resourcefulness, his ability to see and reach after victory in the face of defeat!

Defeat? He never was defeated! Not even death had any temporary victory over the man who had for years faced it with a steady smile, and with the desire to work right along to the end, as he did. It was less than ten days before the end that this good friend discussed with me what might happen, not in any spirit of concern, or complaint, but rather from the standpoint of what activities he had been engaged in, what wheels he had set in motion, what work was going on. He had enjoyed his life, he was enjoying it. Perhaps the greatest of his plans was in full form of promotion the day of his death; but so clear was his thinking, so definite his methods, that no loose ends remain to trip up any one. There could be no defeat for such a man.

MR. HOWLAND'S activities were many. I do not think I could by any means state them all, if that was desirable. Since first Lawson Valentine introduced me to him some twenty-six years ago, the very day he came to New York to take up the work of making *The Christian Union* into *The Outlook*, I have not often missed seeing him or writing him for more than two or three weeks at a time. If there was one interview during all these years in which he did not "start something," I do not remember it.

Mr. Howland was, as I presume not many realize, a printer, and no more ashamed of his trade than was Benjamin Franklin. Indeed, one of his treasures was the framed copy of a sonnet, which he had printed with his own hands on the ancient press of the Musée Plantin, in Antwerp, many years ago. It was thru his suggestion and coöperation that I was able to have that art of civilization and light for the first time recognized by any great university, as it was when Harvard established a course in printing.

Of Mr. Howland as a publisher others can tell; but I can say what was the truth, that he was the best *loved* publisher in New York.

It was on his birthday in June, nearly thirteen years ago, that he sat with a half-dozen friends about a restaurant table in the St. Louis Exposition, joining with wise counsel in the formation of the American Civic Association, of which he became and remained treasurer in official relation, but more nearly co-president in fact. A year later, at the Cleveland convention of the young organization, it was his quick apprehension of the international aspect of Niagara Falls, when it was suggested, that brought action; and he wrote the telegrams to the President of the United States and to the Governor General of Canada which began the Niagara-protecting work in which he had so important a part. Later, it was my high privilege to urge upon Mr. Hughes, then Governor of New York, the propriety of appointing Mr. Howland a commissioner of the State Reservation at Niagara, the extension of the bounds of which he was actively promoting when he died. To his good-humored but forceful insistence as president of that commission is due much of the present favorable condition of the Niagara reservation; and no man has had more to do with the protective internationalizing of the great scenic wonder which was formerly only a state and a provincial prey.

Mr. Howland's acquaintance with the great of the earth was pleasant for his friends! Always welcomed by presidents, governors, cabinet officers and other responsible officials, he was glad to take with him some of us who might otherwise have had difficulty to obtain audience. At such interviews, our friend was "in action," and at his genial best. He was a hard man to say "No" to, this printer-publisher-publicist!

The clarity of thought and statement which made Mr. Howland so efficient in such interviews upon public affairs had another influence upon his associates. He could write a short letter which meant much; and his editorials—the authorship of many of them unsuspected, I think—had that same quality of terseness and brevity. So some of us, or, to be frank, the sorrowing one of us who is writing these words, had a good example to follow, and occasionally a kindly admonition to heed, in the direction of condensation and definiteness.

No one ever found Mr. Howland indefinite or vague. He cleared up each transaction as it came along. He was hard to misunderstand!

PRINTER, publisher, editor; citizen, publicist, friend! All of these in one, but the last the best! Mr. Howland was a friend who defined in his life the quality of friendship. To him friendship was not passive; it meant service. He was the friendliest man I have known. Years ago I said of him that I thought he called any day a failure in which he had not definitely helped some one. And I think there must have been very few failures!

He was friendly in his work; and when the employees in his office astonished him with a red rose for every year on the day he passed the half-century mark, he seemed not to understand why they did it! I knew, for only a year or so before, after a hard-luck season for publishers, he told me how successful he had been. "To be sure, we haven't made any profit," he said, "but we didn't dismiss a single employee, or reduce anyone's wages."

So passes William B. Howland, whose life it is good to contemplate, whose death was a triumph, and whose memory of active and helpful friendship will serve to keep us, his associates, in better touch with life, in closer harmony with God!

Harrisburg, Pennsylvania

MR. HOWLAND'S FRIENDS

MR. HOWLAND was not only a private citizen of the highest class, but also in the proper sense of the word a most useful public servant. He possessed a singular gentleness and sweetness of nature, and both in public and in private life he endeavored to shape his actions in accordance with really high ideals.

THEODORE ROOSEVELT
Ex-President of the United States

WILLIAM B. HOWLAND had a personality that warmed my heart in his presence and hung his portrait in the hall of my memory where I shall see it often in the years to come. It was because I found in him the spirit of my fathers, the incomparable dauntless spirits of the old time Americans, a stedfast, adventurous, playful, kindly, sane, farseeing man, loving his friends, his family and his tasks and ever faithful to them. He was one of those who bear the candle of the Lord.

IRVING BACHELLER
Author of "Eben Holden"

RICH in wise counsel and a fountain of valuable ideas, all freely volunteered and bestowed, Mr. Howland was a pillar of strength to any association with which he was identified. His participation in its affairs, as an officer, board member, was never perfunctory. His was a helping hand—the help always accompanied with good cheer and never a frown. A frequent visitor to Washington, he was ever welcome because he stirred us to new efforts along lines of intense interest. Official Washington liked Mr. Howland—none were too high to pause to visit with him—none too lowly for him to pause to greet. He was, truly, a joy to organization workers. And our loss is very great.

RICHARD B. WATROUS
Secretary of the American Civic Association

Representatives of nearly twenty organizations in which the late William B. Howland, who was buried Thursday, March 1, had taken an active part, spoke at the service in his memory at the National Arts Club, 14 Gramercy Park.

The speeches were necessarily short, and all testified to the affection Mr. Howland was held in by those with whom he came in close contact. J. Horace McFarland spoke for the American Civic Federation, of which Mr. Howland had been treasurer since it was organized in 1904. Hamilton Holt spoke for The Independent, of which Mr. Howland was president. The Marquess of Aberdeen spoke for Mr. Howland's friends in Great Britain. Alton B. Parker represented the National Institute of Efficiency, of which Mr. Howland was president. Dr. Antonio Stella, vice-president, spoke for the Society for Italian Immigrants, of which Mr. Howland was treasurer. Dr. George F. Kunz spoke for the American Scenic and Historic Preservation Society, and Ernest Abbott spoke for The Outlook, of which Mr. Howland was treasurer for twenty-three years.

Other societies represented in the laudatory speeches were the National Arts Club, Italian National Club, City Club, Republican Club, State Reservation of Niagara, Aero Club of America, American Institute of Graphic Arts, National Municipal League, New York Peace Society, American Peace Centennial Committee, the Chautauqua Institution and Congregational Home Missionary Society.

THE sudden death of Mr. Howland shocked me as it must have many other admirers of his worth and genius. I have been familiar with his activities and have recognized his prominence for years. I fully appreciate the loss which advanced journalism has suffered. His work was clean and constructive and he imprest his personality on his generation. I feel that a strong man has been taken away at a time when his loss will be most keenly felt by all of our people.

CHARLES S. WHITMAN
Governor of the State of New York

WILLIAM B. HOWLAND was my friend. In fact, I looked upon him as a chum, and that means a beloved friend. We were always congenial and of similar tastes. These breaks in old friendship can hardly be appreciated by younger generations because it takes time to make real and lasting friends and it hurts to hear of their leaving us.

CYRUS H. K. CURTIS
President of the Curtis Publishing Company

THRU the sad death of Mr. William B. Howland the country loses a valuable citizen. His grasp of public questions and his ability to think true, combined with a gentleness and thoughtfulness both of speech and manner named him a delightful companion and a welcome and helpful member of many important groups.

THEODORE MARBURG
Former Minister to Belgium, One of the Founders of the League to Enforce Peace

AFFECTIONATE friendship shakes the foundation of the most firmly builded philosophy when the object of that friendship is suddenly removed from the midst of close held and active association. Our philosophy is not quite equal to the task of meeting unmoved and dry-eyed the recurrence of life's commonest phenomenon. The one thing which reconciles us is the thought that he that has gone, as our friend Howland has gone, justified in many un-

selfish, constructive works his right to have lived, to have been loved, and his passing to be regretted.

JOHN A. STEWART

Chairman of the Executive Committee of the American Peace Centenary Committee

THE death of William B. Howland brings deep regret and irreparable loss to many movements to which he gave so generously of his initiative and energy for two decades. He has been one of the most influential leaders of public opinion in Ameri. ca. As a trustee of Chautauqua Institution he was enthusiastic, far-seeing and devoted. Indeed every good cause found in him an able advocate.

ARTHUR E. BESTOR

President of Chautauqua Institution

MR. HOWLAND AT HIS DESK

"AFTER he had served his day and generation, he fell on sleep." He has indeed served his day and generation. Nor has his service come to an end. When our friend put his hand to any enterprise, he did so in no uncertain fashion. His plans were well thought out, and his methods were of the constructive sort. Therefore his work abides; and "He being dead, yet speaketh." But he will be greatly missed. His disposition and gifts were such as to enable him to exercize, eminently, a unifying influence among fellow-workers, and the more so because his equability and affability and calmness, were not the product of mere placidity of temperament; rather were these qualities the fruit of a certain "sweet reasonableness," which presented a sympathetic adaptability, when such was compatible with adherence to the essentials of a plan or a principle. Thus he was peculiarly qualified and equipt for that noble work of promoting international friendship, which was so near to his heart. So, by earnestly taking up and pressing forward such a cause, we shall, as it were, be constituting a living memorial to our departed friend.

ABERDEEN

Marquess of Aberdeen and Temair

THE news of Mr. Howland's death came to us all as a great shock, and his loss will be very widely felt. His interest in public welfare and in all great questions of the day has always been keen and his efforts in the direction of building up sound public sentiment have had a far-reaching effect. We can ill spare a public spirited citizen of his type at this time.

LEONARD WOOD

Major General U. S. A.

WILLIAM B. HOWLAND was the dean of periodical publishers and with his death, magazine journalism loses one of its ablest exponents.

He was a business executive of rare ability, possessed of editorial instincts to an unusual degree and the combination made him a conspicuous figure in publishing circles.

From sixteen years' acquaintance with Mr. Howland, I can bear testimony to the warmth of his friendship, the sincerity of his kindly interest and the soundness of his business advice.

He died as he would have wished—in the midst of the day's work.

The world will be a better place because of his life.

FRANK A. ARNOLD

Former Publisher of The Countryside

FOR twenty-five years I have known W. B. Howland as a man of rare vision, most of that time as an associate in educational, philanthropic or civic betterment movements. Often he saw so much further than others that they thought he dreamed when he knew he saw. He had faith that things that ought to be were therefore possible and was ready to lend a hand. When many were content to reach hundreds with the new gospel of efficiency, he planned its National Institute that might reach hundreds of thousands with the practical, adaptable results of the efficiency expert's studies so that America might widely get a better ratio of result to effort expended. He was one of the last men we could spare.

MELVIL DEWEY

President of the Efficiency Society

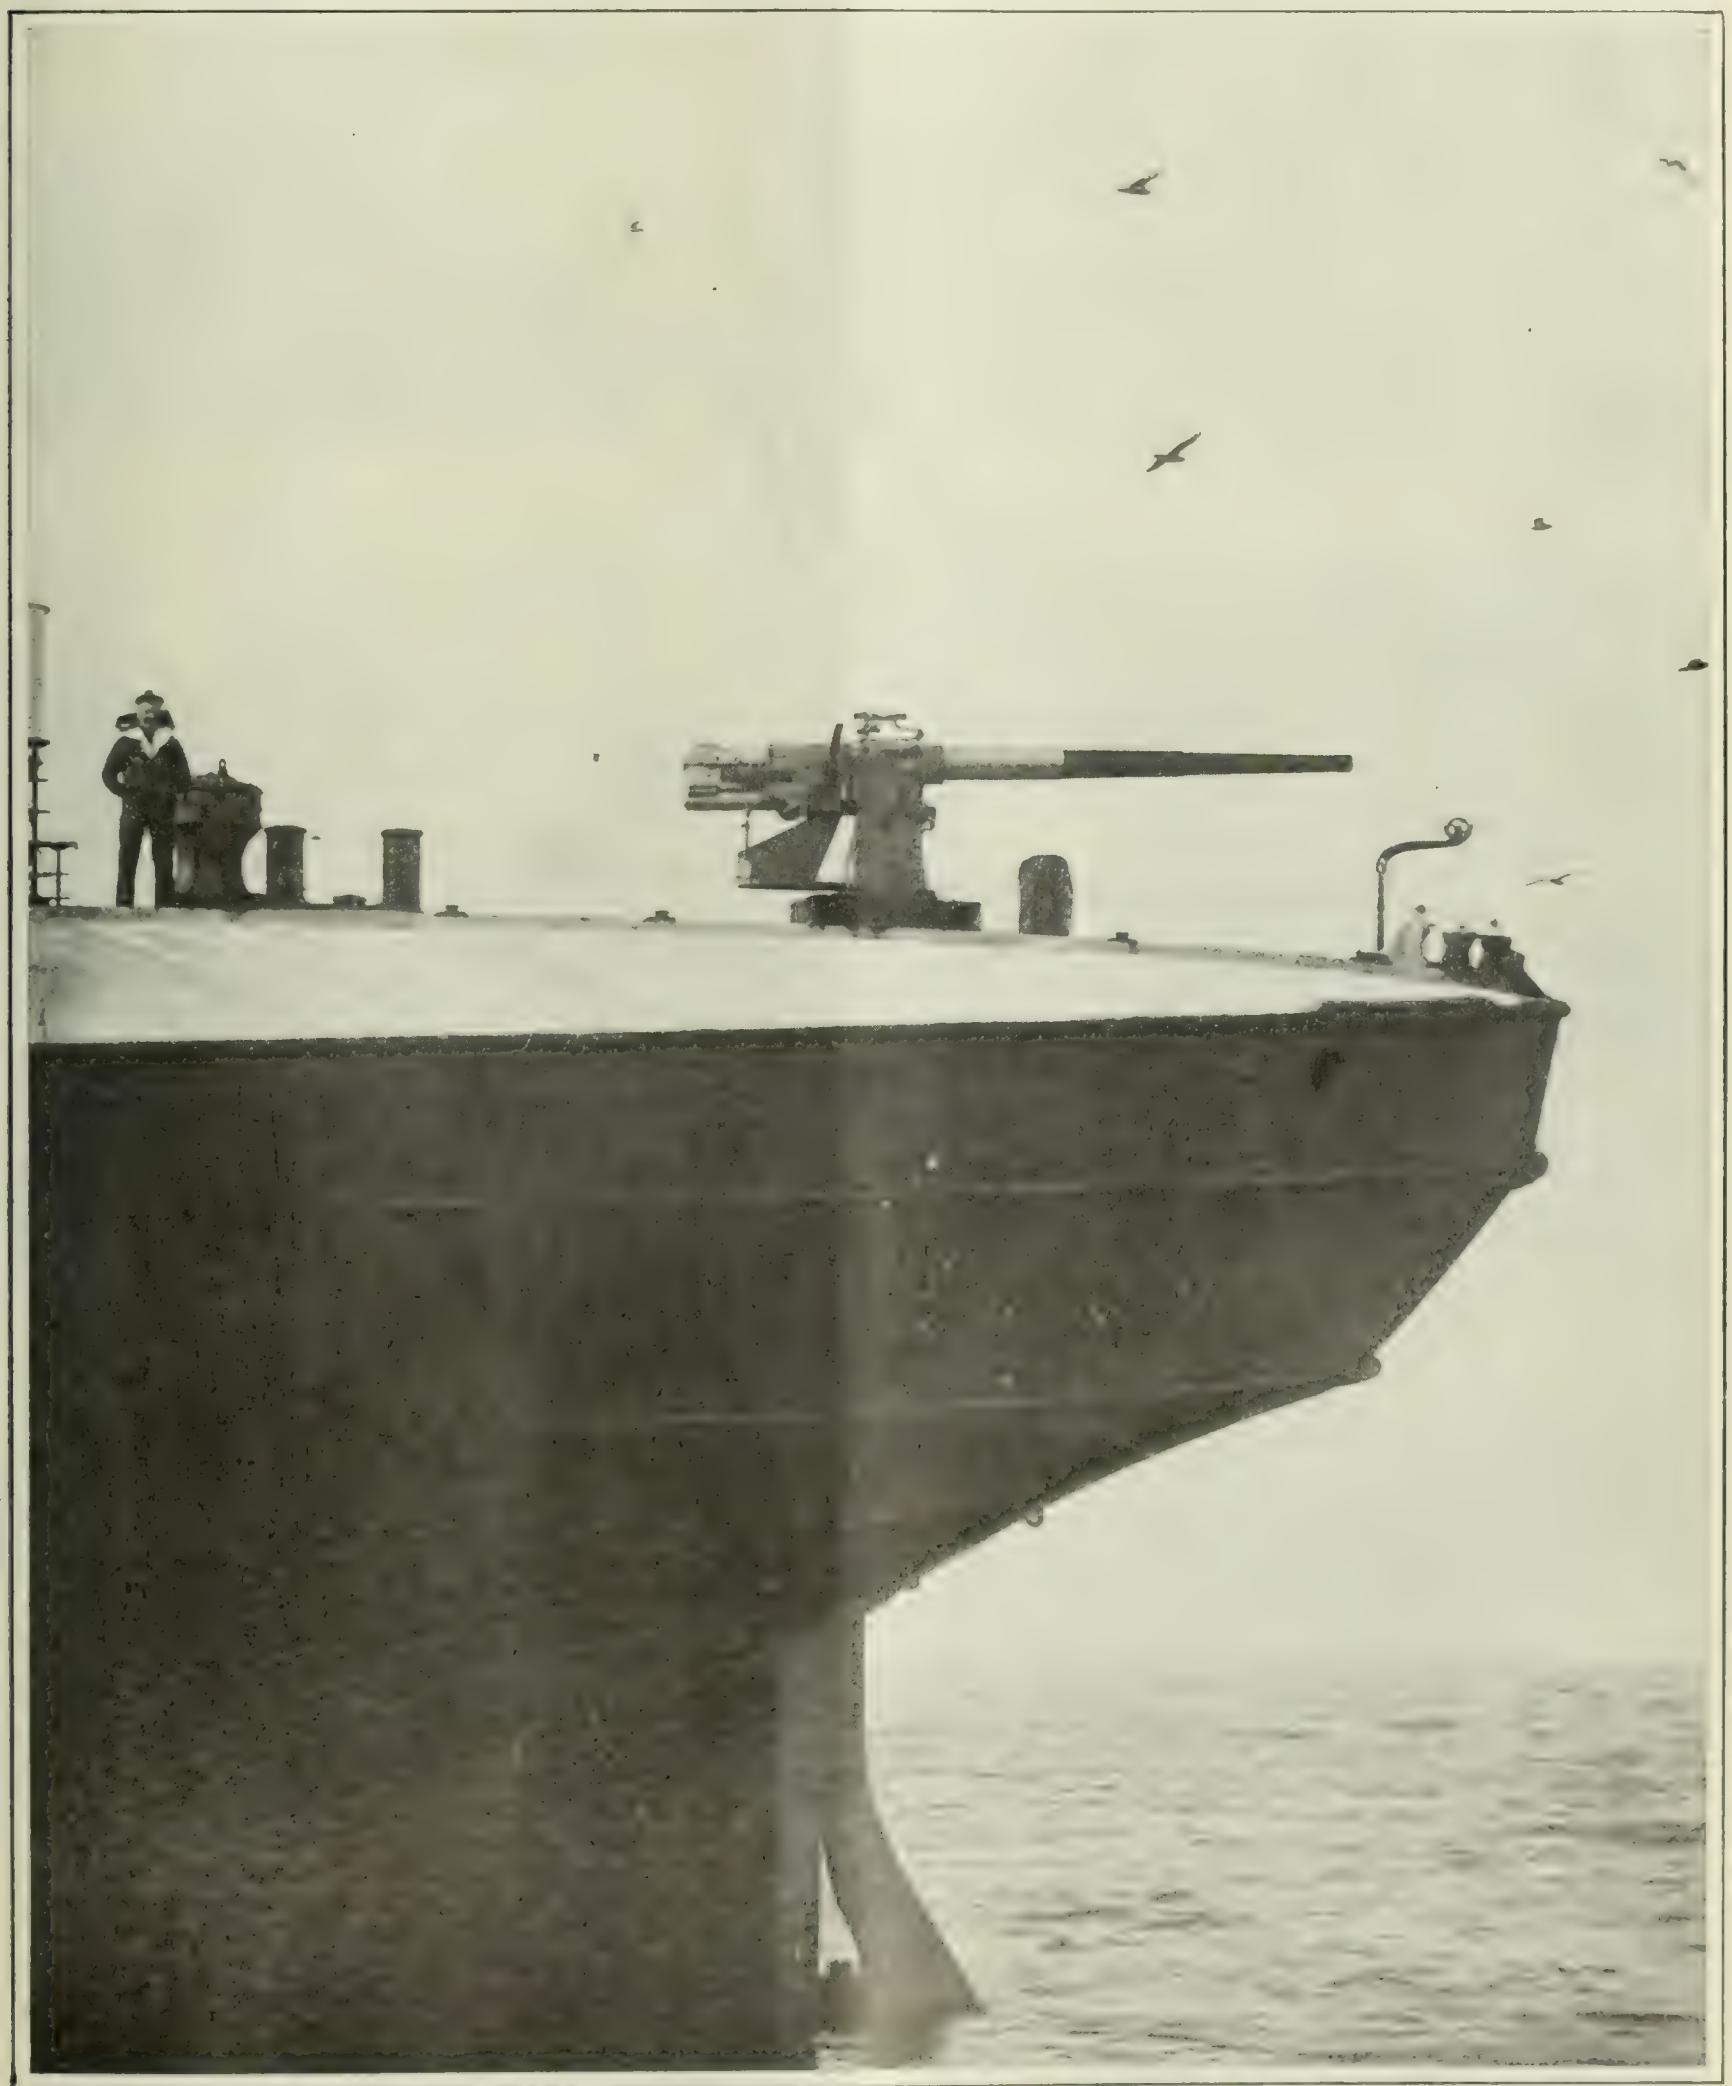
IT was our rare privilege to have on The Independent staff two great men of large heart, William H. Ward and William B. Howland; it is our misfortune to have lost both within a few months. Men like these leave a big hole in the world when they are taken out of it.

From the first day I met Mr. Howland, some three years ago, I had been struck by his far-sightedness and sound judgment. He was endowed with an unusual combination of initiative and industry, of vision and efficiency. He could plan great things and he could accomplish them. He was always appreciative of the efforts of others, tactful in his criticism and inspiring in his suggestions. Dropping into my office in a friendly way as he happened to be going past the door he would leave me with a lot of new ideas and plans for the future, not in the form of orders, or even of advice, hardly as hints. It seemed rather to me that by some curious coincidence good ideas were most apt to come to me when he happened to be present, an illusion that he was careful never to disturb.

His face was always set forward. He could see further ahead than most people and see more clearly. He tested all plans by the future. He detested precedent and discarded tradition. His most frequent reminder in editorial conference was "The Independent must be a forward-looking periodical." If there be any one text for the sermon preached by his life it is "forgetting those things which are behind and reaching forth into those things which are before."

EDWIN E. SLOSSON

Literary Editor of The Independent



I MOURN the loss of a sympathetic friend. The city and the country lose one of their most public spirited citizens.

MARCUS M. MARKS

President of the Borough of Manhattan

One explanation of the high prices for food. These railroad yards are a fair sample of freight congestion in the East

THE HIGH COST OF EATING

Three Answers to the Problem of Food Shortage

PEOPLE'S MARKETS

BY MARCUS M. MARKS

PRESIDENT OF THE BOROUGH OF MANHATTAN

FEW people realize that about 33 1/3 per cent of the cost of food is due to the expense of retail distribution, whereas only 10 per cent is due to wholesale charges. If more people realized the tremendous share of cost due to retailing, then public attention would not be centered so much on wholesale terminal markets as on open public markets for retail distribution.

Terminal markets undoubtedly have great value and should not be overlooked, but the tendency to push aside retail public market development is to be deprecated.

There is another reason for paying attention particularly to the open retail markets now, and that is because results can be obtained thru them immediately and with slight expense, whereas wholesale terminal markets will take years and many millions of dollars for building.

The opponents of the open retail markets say that only a small percentage of the food consumed in a city like New York can possibly be raised within trucking distance. There are two things they forget, and they are both very important. The one is that the open retail public markets do not depend for their supplies entirely upon the farmers who raise crops within the trucking radius of the city. The public retail open markets of Manhattan, for example, were very useful in the distribution of surplus of both food and vegetables coming from a distance; in fact, one of the great advantages of the system of public retail open markets is the ease with which a surplus can be distributed with saving to the public, as well as relief to an overstocked market.

Taking the second point, namely, that the farmers in the neighborhood cannot produce enough, the opponents of the plan should be reminded that if the farmers had a good market handy where they could dispose of their produce without the leakage due to the commission man, the jobber and the retailer—in other words, three profits—there would be a much larger production of crops, and intensive gardening would be followed because it would pay; whereas at present the farmer is apt to leave his crops rotting on the ground on account of the small net returns he receives after immediate profits and expenses have been deducted.

The "Open" feature is important in connection with public markets. Open markets permit free competition; closed markets encourage price control by agreement between standholders who soon become well acquainted and form a quasi-trust. Open markets also attract general attention and thereby advertise thru the street display of fruits and vegetables. There is no more attractive sight in any town or city than the bustling, eager throng of men, women and children in the market place. The color-scheme of umbrellas and garments and the human element displayed give a picture of the local type and customs of the masses. The net result of the open market is low prices, unobstructed business and democratic direct interchange between producer and consumer.

NATURALLY the war has been a great factor in producing the present high prices of food; but we had a similar situation at the beginning of the war, and the people of Manhattan will remember when the open markets were established on September 1, 1914, prices were quickly reduced not only in the markets themselves but correspondingly all over the city in the retail stores. At that time no rent was charged in the markets but it was clearly stated that this was merely a temporary provision; the exprest purpose was to have a moderate rental fixed on all market stalls, not, however, the rental which was imposed by the comptroller of the city on the open markets, namely, $1.50 a square foot on the average; this charge is three times as much as lower Fifth Avenue space or Central Broadway space, altho the latter rentals are inclusive of heat and elevator service, whereas the city market rentals, three times as high, were for space, at that time unenclosed, at the river front in the very cheapest neighborhoods, under bridge approaches which had never brought one cent of income to the city. It will be remembered that the open public markets were tremendously successful, and that as many as one hundred thousand purchasers patronized them on single days. The cost of food was thereby reduced 33 per cent according to investigations of various responsible commissions. These are on file in our office.

While I believe the present situation of high cost of food will unravel itself gradually as the shortage of freight cars diminishes, we should not lose the advantages of public markets as a means to reduce the cost of living. War conditions will probably limit the shipping of products to foreign countries for awhile, and the supply of food here will be correspondingly greater. The law of economics always forces prices down when the supply is greater and the demand not increased.

As a matter of economy, thrift and democracy, I would like to see the market basket taken off the shelf and permanently put into use. In other cities, here and abroad, women both rich and poor are not the least bit backward about going to the market in person; two and one-half years ago the women of the city of New York showed that they were desirous of doing the same thing. As public markets are successful in almost every other city in the civilized world, why not give the people of New York a fair opportunity in this direction?

All those who are interested in seeing what remains of the open markets established by me, with the aid of an active citizens' committee, on September 1, 1914, should visit the Queensboro Bridge Market at Fifty-ninth street and First avenue, and the Harlem Market at 129th street and Third avenue. Despite the high rentals charged stallkeepers there is still a good nucleus for fine market development. A fair business is going on which should be increased. A cut in rental from $1.50 a square foot, to about 50 cents a square foot (which is ample protection for retailers in competition), would put new life into the markets, cause larger competition of sellers, and bring great advantage to the consumers. The effect of such reduction would be immediate and very helpful in the present situation and more tenants would make up the loss in rentals to the city.

The Board of Estimate has no power to reduce market rentals, the charter fixing that authority entirely in the hands of the comptroller.

Outside of retail and wholesale markets, a good deal could be done to reduce and standardize the cost of food

products by a better coöperation among the farmers.

The California Fruit Growers' Association sets a splendid example. It has for many years carried on the business of growing and selling oranges and lemons under very satisfactory conditions. The sales of its 8000 members run up as high as $27,000,000 a year, and their expense, including advertising, has been kept below 2 per cent. They send their products to markets where they are wanted and refrain from sending them to other markets where they are not in demand, or where the supply is sufficient.

PRESIDENT MARKS INAUGURATED THE "OPEN" MARKETS IN MANHATTAN

The retail stores will always be required to supply those who desire the services which they render. The ease and advantage to customers of telephoning, free deliveries, charge account, and comfort in shopping make the retailer a fixture in the community. The profit received by the retailer does not remain in his pocket. The overhead charges are very great indeed. This is largely due to the extravagance of the buyers who are inconsiderate at times in their frequent small purchases and the many deliveries they demand.

I hope that the city of New York will recognize the opportunity for bringing the advantage of a system of open public markets, conducted on a practical and businesslike principle, directly to the masses of the people. Those who are willing to forego comfort and convenience in order to cut the cost of their food will then have an opportunity so to do. Those, however, who are not in need of extreme economies will continue as at present in their method of purchase. It is clear to me that the city owes a direct duty to the people hardprest by the high cost of living.

New York City

THE GOVERNMENT AS GROCER

BY MEYER LONDON

SOCIALIST CONGRESSMAN FROM NEW YORK

THE chaos and confusion inherent in a system of production and distribution which enables a small portion of the community to control the necessaries of life have never been so well illustrated as in the present apparent shortage of food. For more than a decade there has been constant complaint of the growing cost of living. The complaint has been international and has been heard with particular insistence in the United States, where the resistance to a lowering of the standard of living is necessarily more emphatic. Rich as never before, and bread riots! Surfeited with gold, and bread riots! A creditor of all the nations of the world, and bread riots! Such is the state of affairs today. It is evident that an extraordinary problem is presented. There will be as many theories advanced in explanation of the cause of the crisis as there are economic theories, and this country is blest with an abundance of economists who do not know the elementary principles of economic evolution.

While not at war, we suffer from all the effects of war so far as food is concerned. We speak in the name of national interests, national ideals and national preparedness. Billions of dollars are poured out in getting ready all the instrumentalities used in war to prepare the nation. But all our economic legislation has always been for a group, for a class. The nation has been lost sight of. There is not a beginning of industrial preparedness. Nothing has been done, no effort whatever has been made to inform the country as to the quantities of food which it could afford to export. No effort has been made to protect the people against a possible shortage, nor has anybody thought of protecting the consumer from the exploitation of a group of profit mongers who stand between him and the producer. In short, there is no order and there is no knowledge on the subject which precedes the bringing in of order. Capitalism has failed. It is the Socialist's complaint that it is always a failure. It is becoming apparent that it is a dismal failure in times of stress when nations have to act as units, and that is the situation now. There are no individuals in the world today. There are individual nations either struggling for existence in mortal combat with one another or as the United States, sliding gradually into the very vortex which has engulfed the other civilized nations. If we are not to act as a unit now, when will we? It is with this object in mind that I introduced in December, before the so-called "bread riots," a measure which called for the organization of a commission which was to ascertain all facts relating to the supply of food and food products and which was to take every step necessary to regulate the transportation, marketing, preservation and distribution of food. The commission was to inform the President whenever the condition of the food market made the prohibition of exportation necessary, and in that event the President was to issue a proclamation temporarily prohibiting the export of food. The Socialist is international, but when he cannot act internationally he will at least act from the broadest viewpoint possible. The average member of Congress who has always been legislating either for individuals or for groups, is at a loss indeed when confronted with a problem requiring national action.

I am not enthusiastic about an embargo. As a matter of fact, I consider it an immoral thing so far as food is concerned. I would not prevent the population of any country of the world from getting our food, and the fact that the central powers cannot get access to our food is no argument why the population of the other countries should be deprived of it. This is not the point. The point is: shall the nation permit the export of such enormous quantities of food that there should be

a shortage of it? The question is: Shall we permit the unrestricted exportation of food when it is bound to have the immediate effect of making the prices of foodstuffs inaccessible to the masses? Take the case of New South Wales. New South Wales has generously contributed of her blood and money in aid of her mother country, but when the prices went skyward, when distress began to be felt, the Government did not hesitate to seize the foodstuffs about to be shipped to the mother counry and fix the price at which it was to be sold to the people. If the United States had been a colony of any of the belligerent nations it could not have acted more recklessly. Of course, I would not have an embargo except if it were necessary in the case of an actual shortage of food. In the absence of a shortage or a threatened shortage an embargo would be an inexcusable act and destructive of the welfare of the country. It would, like a strike, hit the striker first. Every belligerent country has adopted special measures preventing the export of certain articles and prohibiting the importation of others. The national legislature of the United States lacks a national outlook. The representative of agricultural districts is so happy in his consciousness that the farmer is just now content that he treats with contempt and as a sort of demagogy the cry of the industrial sections of the country for relief.

It requires a lot of self-control to listen to those wise-acres from the agricultural states upbraiding the dwellers of the tenement houses of the large cities for refusing to come to the country and hear the "lowing of the cow, the clucking of the hen," and, as one eloquent orator exprest it, "the grunting of the swine." Oh! the grunting of the swine!

My measure for the establishment of a commission which was to regulate the transportation, marketing, preservation and distribution of food was not followed by action on the part of Congress. I delivered a short talk on the floor of the House in support of my proposition, and when several members showed an interest in the proposition, and when one member whom I consider rather conservative said that if the measure that I advocated was not to be of a permanent character he was inclined to support it, I introduced another resolution, namely, that a commission should be organized and the proper appropriation should be made to enable it to immediately establish food distribution centers and to purchase food and food products and sell the same directly to the consumer in cooperation with state and municipal governments.

To sum up my reasons for introducing the resolution.

We cannot afford to permit self-respecting men and women to become recipients of charity. We cannot afford to let people starve. We cannot trust to the so-called law of supply and demand, which has never had much meaning as applied to human society (the average man is taught to believe that the law of supply and demand is a sort of inexorable natural law, which human action can in no wise affect) and which has no meaning at all now. We cannot permit the situation to be controlled by individual greed or by the greed of various capitalistic groups. It is a national problem, and ought to be tackled by the nation. An appropriation of five or ten million dollars for the purchase and sale of food is the first direct and effective step to aid the people.

Should the commission find itself unable to obtain food at reasonable prices, it would have to come to the Government and present the difficulty, and, whether it wants to or not, Congress will be forced to take the next step, which would be to provide some form of permanent safeguard against exploitation by private interests by establishing a system of national control of food production and distribution. One of the first benefits would be the elimination of the middleman. There should be no middleman between the producer and the consumer unless he is absolutely necessary, and very few middlemen perform any function of value to the community. And then it is self-evident that while every state should do its full duty, the emergency transcends the artificial boundaries of the states and compels national action.

Washington, D. C.

I DON'T KNOW

AN EAST SIDE MOTHER'S STORY OF THE FOOD RIOTS

The first organized protest against the high cost of food came from the women of New York tenements; their food riots of a week or so ago have been imitated in other states and have forced public consideration of a remedy for increasing food prices. The articles by President Marks and Mr. London in this issue present two important results of such consideration. Their arguments should be read in the light of this story of a typical East Side family, retold almost verbatim by Donald Wilhelm. — THE EDITOR.

WE have four children. I lost one. All but Azya, the oldest, was born in this country. We came to America, well, for one thing, so that our children could be educated. And the children educate the parents. They taught us to speak English.

We got along pretty well when the children was small, but now my husband is sick half the time. He says, "I'm getting old. Every year I am more weaker. I make less money."

My husband is a presser. He used to do pretty good, but now he's worn out and his arches are broken from so much standing in these years. He works, anyway. But now four years he's sick other ways. He can't work any more only in the season. That's six months. Then he earns only ten a week.

When Azya finished High School she said, "Mama, I can go to the State Normal School and learn to be a teacher and help father."

I said, "Where's the money?"

She said, "Oh, I can sew." She sews very nice.

Now, maybe you know before the old Jews come to this country they don't have their girls educated. It's the boys.

Azya said, "I got it all figured out." She figured out everything in a little book and showed us just what it would cost and what she'd be making when she got thru and how we could live then, comfortable.

She worked thru the summer at a playground. My girl loves children. The Settlement House in Madison street got her the job. They helped her when she was in the High School. They gave her a scholarship, so she got two dollars a week to help at home so she could go.

Well things went pretty good, and Azya made money at sewing to help with the rent, and she'd got along good at school, too—her teacher came to see her father and me and said she ought to keep on because she would make a good teacher when she got thru. And we began to think how when she was a teacher maybe her father could stop work until he got well, and then he could make more again, and then, maybe, we could educate Max to be a doctor like he talked about; and things would be nice for us when we got old. Azya is a good girl.

In the fall she went to Normal School, Sixty-eighth and Park avenue. She did sewing on the elevated going to school and coming back, and at home when she didn't have to study. She made money for her books and carfare and gave me money every week, too. She made hand-embroidered baby dresses and women's dresses—anything. She did not have to pay anything at the school.

Well, we got along better than I thought we would. Her father was working then and he made about ten dollars a week and I could pay the rent and get something to eat. And we got along all right. Azya said, "I knew it would be all right. Now father will work until summer and then I will

make enough money so he can quit work."

But pretty soon prices began to go up. Azya was out of school two weeks Christmas, and she made more money and things went all right. Once her father got sick. Then Azya staid up almost all night every night in a week and made almost ten dollars. She was pretty tired. But prices went right on up.

Jews eat a lot of fish. Maybe you like gefülte fish and herrings and smoked salmon. We like fish. Two or three years ago I could get very good fish for fourteen cents and now it has gone to about twenty-eight. We had fish less and less. Then Azya said, "Mama, father and the children must have meat if we cut down on fish and vegetables."

But when I went to get meat I didn't know what to get. I used to get good steak for eighteen cents a pound and the butcher always gave me suet fat. In February they began to go up more. I give twenty-eight and thirty cents, but it isn't breast beef or steak and the butcher weighed in the fat and gristle, and when I asked for suet fat he said, "Twenty-two cents a pound." Milk's eleven cents and we have to have two bottles, and if any of the children are sick we have to have three bottles, and with potatoes a nickel apiece and cabbage twenty cents and onions eighteen cents a pound and flour seven I didn't know what to do. Everything's gone 'way up. I said to myself that we couldn't live.

Their father was sick one evening and Azya said, "Father, you stop work; I'll get a job."

But her father said wait awhile, because if she went to work in a factory she could never make enough so that the children could be educated and he could stop worrying. He can't work many years more if he's sick. And you see, children that don't go to school don't make much money. I don't know how we'll get along when my husband and I get old.

Azya told her father that was right, but she told me that night if he didn't get well she'd quit if prices didn't go down.

And you know prices didn't go down. They went up.

I was so afraid Azya would quit school then if we couldn't get enough for the children to eat, so when the children went to school I went out and got work for home. I made fifty oder sixty cents a day on coats. My eyes are not so good. When Max came home from school he took the coats back before he had his tea. He doesn't have sugar in his glass now.

Well, we got along for a week, and then Azya came home early one day and found me sewing on the coats.

She didn't go to school the next day. When she went away in the morning she went for a job and she told us in the evening she was a skirt maker now. She got about six dollars a week. Maybe after while eight.

Then we thought it would be all right and we could buy food, and maybe her father would get well again. But Azya was so tired in the evenings she couldn't do much embroidery and her father was so bad, and all she could do we couldn't buy meat three times a week with the rent and the gas and milk and coal — it's been pretty cold and poor people have to pay more for coal because they buy just a little bit.

So pretty soon Max got his working papers — he's just sixteen and he did well in school. His teacher came to say could he keep on. But Max said we must have enough to eat. A gentleman got him a good job. He makes four dollars.

But for so long their father didn't have the right things to eat so he got sick and couldn't work at all. So we didn't have any more than when their father was working and they were all in school.

One night he got worse when he tried to work for a day. Azya got a doctor and he said their father didn't get enough food.

Then Azya took all the money we had. It was just ninety cents, because we'd just paid the doctor, and the rent was twelve dollars and a half and the gas two dollars and forty cents. She went over on East Broadway to buy a chicken for ninety cents for her father. It was thirty-five cents a pound. She went to another place at Rutgers Square, where they know her, and they gave her a chicken with eighteen cents trust and when she came out a lot of women grabbed it. She fought and they tore it all to pieces.

She had no money then. She had no chicken for her father. She cried and told them about her father, and then a woman told her food cost so much they were all starving and the butchers were all robbers and she made Azya make a speech in Rutgers Square and tell how her father starved till he was sick and he couldn't work and she had to quit school. So there was what you say is a boycott on chicken. Chicken went down.

But the chicken wouldn't do any good. Her father had a hemorrhage one night and they took him to a hospital.

Maybe the store people aren't to blame. But we aren't to blame, are we? Everything is different at our house. Azya isn't the same. I'm afraid she's sick. She never laughs.

I've got two brothers in the war. One is fighting for Germany and one is fighting for Russia. Maybe they're dead. I never hear. They won't let people write. Azya says they're better off.

Maybe the store people can't help it. Some of them are so good—they make trust when they know the people can't pay. Sometimes they trust the poor Italians when they have many children. The poor Italians on Monroe street are starving. Down at the Settlement they caught little Tony Sala stealing bread. You see, we aren't the only ones.

Well, Azya quit school and Max quit school. I guess my children will never be educated. And it's hard on Azya in the factory. I am afraid she'll get sick, too. But we don't have enough to eat now. Azya makes six dollars and Max makes four dollars. That isn't enough. Maybe their father will die. I don't know.

New York City

BUT ONCE

BY MARION HARLAND

We pass this way but once, dear heart!
  Musing beside the birch-log's glow,
The murmur of the mighty mart
  Borne to us thru the falling snow,
Our talk is of a buried day;
  Between us and the embers red,
Are flickering fantoms, wan and gray,
  Sad wraiths of loves and hopes long dead.

We pass this way but once. 'Tho hard
  The road we climb in frost and heat,
Thru deep defiles—and sharp the shard
  'Gainst which we dash our hurrying feet,—
Our toil and pain leave scanty trace,
  A blood-stain on a displaced stone;
Vague lettering on a boulder's face;
  Perchance the echo of a moan.

We pass this way but once. The seed
  We idly strew, or plant with tears,
Is gone for aye! We may not heed
  Its death or growth in future years.
We clutch at gold, and grasp dead leaves,
  We sow spring wealth of hopes and cares;
Others will gather in our sheaves,
  And, cursing us,—will burn our tares.

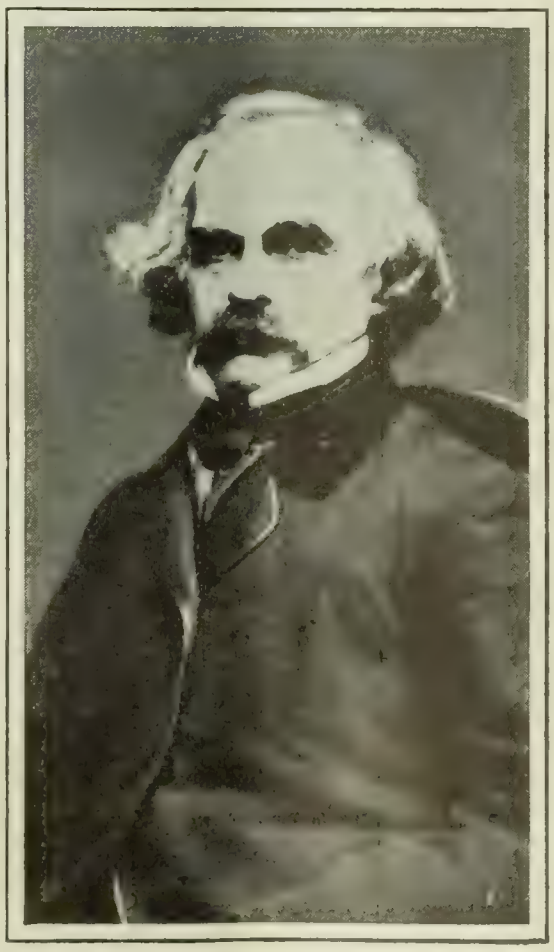
With your true eyes on mine, dear heart,
  As at the margin of the Sea
Which you and me some day must part—
  Forget all that we would not be.
Tread down the Wrong, live out the Right,
  Strong in God's love and love for men;
Then from the hill-top be our flight—
  We shall not pass *this* way again!

EIGHT GREAT SHORT STORIES
From American Literature

With Introductions by FREDERICK HOUK LAW

THE AMBITIOUS GUEST
BY NATHANIEL HAWTHORNE

THE Short Story, as a literary form, was first written by Nathaniel Hawthorne and Edgar Allan Poe. In their hands the short prose narrative became highly centralized; had complete harmony in all its parts; in characters, plot, details and atmosphere aimed to produce a single effect, and thus developed new artistic possibilities.



Hawthorne, born in Salem, Massachusetts, in 1804, educated in Bowdoin, and spending his early years in New England, felt the strong Puritan influence. Whether a boy in the Maine woods, a custom house inspector in Salem, United States consul at Liverpool, or a resident of Concord he was at all times retired and meditative. "Twice Told Tales," "Mosses from an Old Manse," "The Scarlet Letter," "The House of Seven Gables," "The Marble Faun" and many other narratives are the work of a fanciful, poetic soul, and essentially products of the New England spirit.

"The Ambitious Guest," written about 1840, is one of the "Twice Told Tales." Of all American stories it is one of the most nearly perfect examples of development, proportion and suggestive effect. Against a striking background of familiar New England scenery—"The Notch in the White Mountains"—is a story of common everyday people—a farmer's family, a young traveler and passing wayfarers. The slight but all-powerful action leads to an overwhelming catastrophe. The story does not emphasize the tragedy of death but that of unrealized ambition. The young stranger's eager desire for fame; the father's wish for a new farm and public office; the daughter's wish for home and love; the grandmother's wish for beautiful burial; the children's wild projects—all alike were never realized. With fine New England irony Hawthorne shows how all might have been saved—the stranger might have hurried on; the family might have gone with the passing farmers; they might have stayed in the house: Fate, call it what you will, destroyed every wish. That is the great human theme of the story—the vanity of earthly hopes.

The story is as clear as a Greek tragedy, as stern as a New England sermon. Every part is well-balanced and effective, and no part could be omitted. The narrative rises to a supremely complete climax beyond which nothing more can be said. With masterly art Hawthorne foreshadows this climax by keeping all attention fixed on the theme of ambition and the menace of the mountain which "towered above their heads so steep that the stones would often rumble down its sides and startle them at midnight." His fancy plays with the theme in a melancholy way, creating an atmosphere of foreboding. Thus he says, when the stranger arrived "the dreary blast wailed as he was entering, and went moaning away from the door." Every such play of fancy, every touch of irony, every description, every word, in fact, adds to the effect. Simple as it is, "The Ambitious Guest" is a masterpiece of art.

ONE September night a family had gathered round their hearth, and piled it high with the drift-wood of mountain streams, the dry cones of the pine and the splintered ruins of great trees that had come crashing down the precipice. Up the chimney roared the fire, and brightened the room with its broad blaze. The faces of the father and mother had a sober gladness; the children laughed; the eldest daughter was the image of Happiness at seventeen; and the aged grandmother, who sat knitting in the warmest place, was the image of Happiness grown old. They had found the "herb, heart's-ease," in the bleakest spot of all New England. This family was situated in the Notch of the White Hills, where the wind was sharp thruout the year, and pitilessly cold in the winter—giving their cottage all its fresh inclemency, before it descended on the valley of the Saco. They dwelt in a cold spot and a dangerous one; for a mountain towered above their heads, so steep, that the stones would often rumble down its sides, and startle them at midnight.

The daughter had just uttered some simple jest, that filled them all with mirth, when the wind came thru the Notch, and seemed to pause before their cottage—rattling the door, with a sound of wailing and lamentation, before it passed into the valley. For a moment it saddened them, tho there was nothing unusual in the tones. But the family were glad again, when they perceived that the latch was lifted by some traveler, whose footsteps had been unheard amid the dreary blast which heralded his approach, and wailed as he was entering, and went moaning away from the door.

NATHANIEL HAWTHORNE

Tho they dwelt in such a solitude, these people held daily converse with the world. The romantic pass of the Notch is a great artery, thru which the life-blood of internal commerce is continually throbbing, between Maine on one side, and the Green Mountains and the shores of the St. Lawrence on the other. The stage-coach always drew up before the door of the cottage. The wayfarer, with no companion but his staff, paused here to exchange a word, that the sense of loneliness might not utterly overcome him, ere he could pass thru the cleft of the mountain, or reach the first house in the valley. And here the teamster, on his way to Portland market, would put up for the night; and, if a bachelor, might sit an hour beyond the usual bed-time, and steal a kiss from the mountain maid at parting. It was one of those primitive taverns where the traveler pays only for food and lodging, but meets with a homely kindness, beyond all price. When the footsteps were heard, therefore, between the outer door and the inner one, the whole family rose up, grandmother, children, and all, as if about to welcome some one who belonged to them, and whose fate was linked with theirs.

The door was opened by a young man. His face at first wore the melancholy expression, almost despondency, of one who travels a wild and bleak road at nightfall and alone, but soon brightened up when he saw the kindly warmth of his reception. He felt his heart spring forward to meet them all, from the old woman, who wiped a chair with her apron, to the little child that held out its arms to him. One glance and smile placed the stranger on a footing

of innocent familiarity with the eldest daughter.

"Ah, this fire is the right thing!" cried he; "especially when there is such a pleasant circle round it. I am quite benumbed; for the Notch is just like the pipe of a great pair of bellows; it has blown a terrible blast in my face, all the way from Bartlett."

"Then you are going toward Vermont?" said the master of the house, as he helped to take a light knapsack off the young man's shoulder.

"Yes; to Burlington, and far enough beyond," replied he. "I meant to have been at Ethan Crawford's tonight; but a pedestrian lingers along such a road as this. It is no matter; for, when I saw this good fire, and all your cheerful faces, I felt as if you had kindled it on purpose for me, and were waiting my arrival. So I shall sit down among you, and make myself at home."

THE frank-hearted stranger had just drawn his chair to the fire, when something like a heavy footstep was heard without, rushing down the steep side of the mountain, as with long and rapid strides, and taking such a leap, in passing the cottage, as to strike the opposite precipice. The family held their breath, because they knew the sound, and their guest held his by instinct.

"The old mountain has thrown a stone at us, for fear we should forget him," said the landlord, recovering himself. "He sometimes nods his head, and threatens to come down; but we are old neighbors, and agree together pretty well, upon the whole. Besides, we have a sure place of refuge hard by, if he should be coming in good earnest."

Let us now suppose the stranger to have finished his supper of bear's meat; and, by his natural felicity of manner, to have placed himself on a footing of kindness with the whole family, so that they talked as freely together as if he belonged to their mountain brood. He was of a proud, yet gentle spirit—haughty and reserved among the rich and great; but ever ready to stoop his head to the lowly cottage-door, and be like a brother or a son at the poor man's fireside. In the household of the Notch he found warmth and simplicity of feeling, the pervading intelligence of New England, and a poetry of native growth, which they had gathered, when they little thought of it, from the mountain peaks and chasms, and at the very threshold of their romantic and dangerous abode. He had traveled far and alone; his whole life, indeed, had been a solitary path; for, with the lofty caution of his nature, he had kept himself apart from those who might otherwise have been his companions. The family, too, tho so kind and hospitable, had that consciousness of unity among themselves, and separation from the world at large, which, in every domestic circle, should still keep a holy place where no stranger may intrude. But this evening a prophetic sympathy impelled the refined and educated youth to pour out his heart before the simple mountaineers, and constrained them to answer him with the same free confidence. And thus it should have been. Is not the kindred of a common fate a closer tie than that of birth?

The secret of the young man's character was a high and abstracted ambition. He could have borne to live an undistinguished life, but not to be forgotten in the grave. Yearning desire had been transformed to hope; and hope, long cherished, had become like certainty, that, obscurely as he journeyed now, a glory was to beam on all his pathway—tho not, perhaps, while he was treading it. But, when posterity should gaze back into the gloom of what was now the present, they would trace the brightness of his footsteps, brightening as meaner glories faded, and confess that a gifted one had passed from his cradle to his tomb, with none to recognize him.

"As yet," cried the stranger, his cheek glowing and his eye flashing with enthusiasm, "as yet, I have done nothing. Were I to vanish from the earth tomorrow, none would know so much of me as you; that a nameless youth came up, at nightfall, from the valley of the Saco, and opened his heart to you in the evening, and passed thru the Notch, by sunrise, and was seen no more. Not a soul would ask—'Who was he?—Whither did the wanderer go?' But I cannot die till I have achieved my destiny. Then let Death come! I shall have built my monument!"

There was a continual flow of natural emotion, gushing forth amid abstracted reverie, which enabled the family to understand this young man's sentiments, tho so foreign from their own. With quick sensibility of the ludicrous, he blushed at the ardor into which he had been betrayed.

"You laugh at me," said he, taking the eldest daughter's hand, and laughing himself. "You think my ambition as nonsensical as if I were to freeze myself to death on the top of Mount Washington, only that people might spy at me from the country round about. And truly, that would be a noble pedestal for a man's statue!"

"It is better to sit here by this fire," answered the girl, blushing, "and be comfortable and contented, tho nobody thinks about us."

"I suppose," said her father, after a fit of musing, "there is something natural in what the young man says; and if my mind had been turned that way, I might have felt just the same. It is strange, wife, how this talk has set my head running on things that are pretty certain never to come to pass."

"Perhaps they may," observed the wife. "Is the man thinking what he will do when he is a widower?"

"No, no!" cried he, repelling the idea with reproachful kindness. "When I think of your death, Esther, I think of mine too. But I was wishing we had a good farm, in Bartlett, or Bethlehem, or Littleton, or some other township round the White Mountains; but not where they could tumble on our heads. I should want to stand well with my neighbors, and be called 'Squire, and sent to General Court for a term or two; for a plain, honest man may do as much good there as a lawyer. And when I should be grown quite an old man, and you an old woman, so as not to be long apart, I might die happy enough in my bed, and leave you all crying around me. A slate gravestone would suit me as well as a marble one—with just my name and age, and a verse of a hymn, and something to let people know that I lived an honest man and died a Christian."

"There now!" exclaimed the stranger; "it is our nature to desire a monument, be it slate, or marble, or a pillar of granite, of a glorious memory in the universal heart of man."

"WE'RE in a strange way tonight," said the wife, with tears in her eyes. "They say it's a sign of something when folks' minds go a-wandering so. Hark to the children!"

They listened accordingly. The younger children had been put to bed in another room, but with an open door between, so that they could be heard talking busily among themselves. One and all seemed to have caught the infection from the fireside circle, and were outvying each other in wild wishes and childish projects of what they would do, when they came to be men and women. At length a little boy, instead of addressing his brothers and sisters, called out to his mother.

"I'll tell you what I wish, mother," cried he, "I want you and father and grandma'm, and all of us, and the stranger, too, to start right away, and go and take a drink out of the basin of the Flume!"

Nobody could help laughing at the child's notion of leaving a warm bed, and dragging them from a cheerful fire, to visit the basin of the Flume—a brook, which tumbles over the precipice, deep within the Notch. The boy had hardly spoken, when a wagon rattled along the road, and stopped a moment before the door. It appeared to contain two or three men, who were cheering their hearts with the rough chorus of a song, which resounded in broken notes, between the cliffs, while the singers hesitated whether to continue their journey, or put up here for the night.

"Father," said the girl, "they are calling you by name."

But the good man doubted whether they had really called him, and was unwilling to show himself too solicitous of gain, by inviting people to patronize his house. He therefore did not hurry to the door; and the lash being soon applied, the travelers plunged into the Notch, still singing and laughing, tho their music and mirth came back drearily from the heart of the mountain.

"There, mother!" cried the boy, again. "They'd have given us a ride to the Flume."

Again they laughed at the child's pertinacious fancy for a night ramble. But it happened that a light cloud passed over the daughter's spirit; she looked gravely into the fire, and drew a breath that was almost a sigh. It forced its way, in spite of a little struggle to repress it. Then starting and blushing, she looked quickly round the circle, as if they had caught a glimpse into her bosom. The stranger asked what she had been thinking of.

"Nothing," answered she, with a downcast smile. "Only I felt lonesome just then."

"Oh, I have always had a gift of feeling what is in other people's hearts," said he, half seriously. "Shall I tell the secrets of yours? For I know what to think when a young girl shivers by a warm hearth, and complains of lonesomeness at her mother's side. Shall I put these feelings into words?"

"They would not be a girl's feelings any longer, if they could be put into words," replied the mountain nymph, laughing, but avoiding his eye.

ALL this was said apart. Perhaps a germ of love was springing in their hearts, so pure that it might blossom in paradise, since it could not be matured on earth; for women worship such gentle dignity as his; and the proud, contemplative, yet kindly soul is oftenest captivated by simplicity like hers. But, while they spoke softly, and he was watching the happy sadness, the lightsome shadows, the shy yearnings of a maiden's nature, the wind thru the Notch took a deeper and drearier sound. It seemed, as the fanciful stranger said, like the choral strain of the spirits of the blast, who, in old Indian times, had their dwelling among these mountains, and made their hights and recesses a sacred region. There was a wail along the road, as if a funeral were passing. To chase away the gloom, the family threw pine-branches on their fire, till the dry leaves crackled, and the flame arose, discovering once again a scene of peace and humble happiness. The light hovered about them fondly, and caressed them all. There were the little faces of the children peeping from their bed apart, and here the father's frame of strength, the mother's subdued and careful mien, the high-browed youth, the budding girl, and the good old grandam, still knitting in the warmest place. The aged woman looked up from her task, and, with fingers ever busy, was the next to speak.

"Old folks have their notions," said she, "as well as young ones. You've been wishing and planning, and letting your heads run on one thing and another, till you've set my mind a-wandering too. Now what should an old woman wish for when she can go but a step or two before she comes to her grave? Children, it will haunt me night and day till I tell you."

"What is it, mother?" cried the husband and wife at once.

Then the old woman, with an air of mystery, which drew the circle closer round the fire, informed them that she had provided her grave-clothes some years before—a nice linen shroud, a cap with a muslin ruff and everything of a finer sort than she had worn since her wedding day. But this evening an old superstition had strangely recurred to her. It used to be said, in her younger days, that if anything were amiss with a corpse, if only the ruff were not smooth, or the cap did not set right, the corpse, in the coffin and beneath the clods, would strive to put up its cold hands and

Europe's many tongues and consequent misunderstandings

The Fruits of Understanding

Throughout the vast area of this country prevails a common tongue. The whole of Europe hardly exceeds our territory, yet Europe has more than a score of nationalities and many different languages.

In the United States the telephone, as exemplified by Bell System, renders a matchless service in its mastery of distance and in encouraging the use of a universal language. This accomplishment is in spite of the great influx of population from every country in the world.

In Europe the independent countries, separated by barriers of language, and lacking efficient telephone service, suffer from inadequate facilities for intercommunication.

We now talk from the Atlantic Coast to the Pacific, and eliminate more than three thousand miles. In Europe, contending with a babel of voices and unrelated telephone systems, a bare quarter of that distance has been bridged with difficulty.

The ideal of the Bell System has been day by day to extend its service in the interest of all telephone users. Its efforts have resulted in providing the facilities to unite cities and rural districts in true American democracy.

arrange it. The bare thought made her nervous.

"Don't talk so, grandmother!" said the girl, shuddering.

"Now," continued the old woman, with singular earnestness, yet smiling strangely at her own folly, "I want one of you, my children—when your mother is drest, and in the coffin—I want one of you to hold a looking-glass over my face. Who knows but I may take a glimpse at myself, and see whether all's right?"

"Old and young, we dream of graves and monuments," murmured the stranger youth. "I wonder how mariners feel when the ship is sinking, and they, unknown and undistinguished, are to be buried together in the ocean—that wide and nameless sepulcher."

For a moment the old woman's ghastly conception so engrossed the minds of her hearers, that a sound, abroad in the night, rising like the roar of a blast, had grown broad, deep and terrible before the fated group were conscious of it. The house, and all within it, trembled; the foundations of the earth seemed to be shaken, as if this awful sound were the peal of the last trump. Young and old exchanged one wild glance, and remained an instant, pale, affrighted, without utterance, or power to move. Then the same shriek burst simultaneously from all their lips.

"The Slide! the Slide!"

The simplest words must intimate, but not portray, the unutterable horror of the catastrophe. The victims rushed from their cottage and sought refuge in what they deemed a safer spot—where, in contemplation of such an emergency, a sort of barrier had been reared. Alas! they had quitted their security, and fled right into the pathway of destruction. Down came the whole side of the mountain in a cataract of ruin. Just before it reached the house the stream broke into two branches, shivering not a window there, but overwhelming the whole vicinity, blocked up the road, and annihilated everything in its dreadful course. Long ere the thunder of that great Slide had ceased to roar among the mountains, the mortal agony had been endured, and the victims were at peace. Their bodies were never found.

The next morning the light smoke was seen stealing from the cottage chimney up the mountain-side. Within, the fire was yet smouldering on the hearth and the chairs in a circle around it as if the inhabitants had but gone forth to view the devastation of the Slide and would shortly return to thank Heaven for their miraculous escape. All had left separate tokens, by which those who had known the family were made to shed a tear for each. Who has not heard their name? The story had been told far and wide, and will for ever be a legend of these mountains. Poets have sung their fate.

There were circumstances which led some to suppose that a stranger had been received into the cottage on this awful night, and had shared the catastrophe of all its inmates. Others denied that there were sufficient grounds for such a conjecture. Wo for the high-souled youth, with his dream of Earthly Immortality! His name and person utterly unknown; his history, his way of life, his plans—a mystery never to be solved; his death and his existence equally a doubt! Whose was the agony of that death-moment?

The New Books

A DOCTOR'S MEMORY BOX

If doctors, by reason of their intimate associations with all kinds of people, get a better perspective on life than do the rest of us, then truly Dr. Alan McLane Hamilton, grandson and biographer of Alexander Hamilton and one of the most distinguished of alienists, should be able to give us most valuable books. For he has known as personal friends many of the greatest men and women of his time. He knew Agassiz and Lincoln, Edwin Booth, Max Beerbohm, Henry Irving, and many others. He travelled in Europe and Asia and Africa and met the leaders of thought everywhere. He studied many a famous criminal. His *Recollections of an Alienist* is a book of frank comment on life and personality, a veritable feast for those whose hunger for similar experience has never been satisfied. His comment on many of the men and women he has known will be certain to stimulate controversy, for others still living have known these same people and thought of them each after his own fashion. No two of us ever get the same idea of a friend's personality. But the comment is fair and kindly and always interesting.

Recollections of an Alienist, by Alan McLane Hamilton. G. H. Doran Company. $3.50.

SOUTH AMERICA

Professor Coester, in his *Literary History of Spanish America*, has given us one of the most useful books which the student of Latin America has seen in many days. The historians have, as yet, gone scarcely deep enough below the surface of Spanish American civilization to warrant a satisfying historical interpretation of its literature, and "Manual" rather than "History" would be a more fitting title for this volume. Its practical value lies in just the fact that here the student, amateur and professional, may find out what has been written by our neighbors to a degree heretofore impossible, even to those who know Spanish. Professor Coester's method is in general chronological, with the customary grouping of historical periods and the traditional interpretation of movements and personalities.

One could wish for fuller treatment of the literature of the Colonial period, those three centuries which saw the development of most of the problems which confront the republics of today. A disproportionate allotment of space is given to the Revolutionary period, tho not sufficient to make clear the meaning of that period, and the significance of its results. The modern Spanish American states are then taken up,

INDIANA LIMESTONE

The ARISTOCRAT of BUILDING MATERIALS

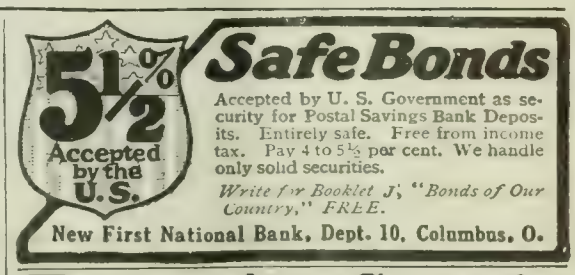
A Building Medium Which Expresses the Culture of Centuries

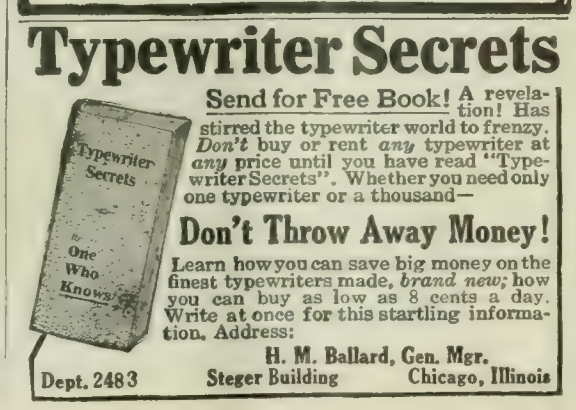
In Europe the art and architecture of all ages has been expressed in the venerable stone buildings we study and adore. In America we build of man-made innovations—trying to express the real with an imitation of it. Then we wonder why our buildings seldom give the impression of beauty, solidity and permanence as those of Europe do—and why our better dwelling places are called houses instead of homes.

A large proportion of the truly great buildings—homes that have the qualities of dignity and refinement without stiffness and formality—"cultured homelikeness"—have been and always will be built of stone. Indiana Limestone expresses the beauty of all styles of architecture, and it is not higher in cost than far less durable artificial materials. You really owe it to your "appreciative sense" to find out about it.

FREE: An interesting illustrated booklet and a sample showing various finishes will be sent you upon request. See Indiana Limestone at close quarters — write to

INDIANA LIMESTONE QUARRYMEN'S ASSOCIATION
Box 214, Bedford, Indiana





Residence of Indiana Limestone, "The Aristocrat of Building Materials" for Mrs. Senator Hitt, Washington, D. C., John Russell Pope, N. Y., Architect.

Send for booklet, "THE RATIONAL TREATMENT OF CONSTIPATION." Write your name and address plainly on the margin below.

most of them for a chapter each, with an enumeration and characterization of their most important literary productions during the nineteenth century. A closing chapter on the contemporary *Modernista* movement is especially valuable for its appreciation and criticism of the work of the brilliant Nicaraguan lyric poet, Ruben Darío, who died recently. Used in conjunction with the author's bibliography of Spanish-American literature, published in the *Romanic Review*, we have here the best available guide, in English, for the novitiate in this field. It is to be hoped that some one will soon do a similar piece of work for the Portuguese-American colonies and modern Brazil.

In *Argentina and Uruguay*, the statement that "the only slight pretension of the present book is to be informative," is typical of the author's muddled English whenever he forsakes the field of simply stated fact regarding the economic resources, productions and conditions of modern Argentina and Uruguay. Here Mr. Ross is thoroly at home, thanks to his long experience as trade journalist in Buenos Ayres, and he has given us a volume of unusual contemporary worth, if the reader will omit chapters I, III and IV, and is able to pardon, or laugh at, much execrable English, and such *faux pas* as the following: "His wit, and hers (the *gaucho* and his lady), most frequently take the form of *double entente*."

Margarette Daniels' choice of *Makers of South America* will not always be to the taste of the historian and student, but the juvenile reader has here the first book of its kind which has ever come to the reviewer's notice as worthy of any serious attention. Not the least valuable feature of the book is its appended bibliography, notably well chosen, if one be allowed to except certain modern books of travel, which, however, are perhaps little worse than the best of their kind in North America.

The Literary History of Spanish America, by Alfred Coester. The Macmillan Company. $2.50. *Argentina and Uruguay*, by Gordon Ross. The Macmillan Company, N. Y. $3.00. *Makers of South America*, by Margarette Daniels. Missionary Educational Movement. Cloth, 60 cents; paper, 40 cents.

THE ART OF POESY

The English critic, Theodore Watts-Dunton, recently deceased, had unusual knowledge of many languages and literatures, which contributes to the interest of his thoughtful essay on *Poetry: The Renascence of Wonder*. He devotes a chapter, first of all, to a definition of poetry, but in that chapter I find no better definition than is given in his own title. For poetry is indeed a new birth in wonder which gives back to the adult his heritage in the child's kingdom of joy. After defining poetry at length the author discusses its relation to other arts, and its varieties. He is a conservative with the mental attitude of the scholar rather than of the enthusiast.

A more generally interesting book is Lafcadio Hearn's *Appreciations of Poetry*, a collection of studies of Rosetti, Tennyson, Browning, Swinburne

and other English poets, taken from the lectures Hearn gave before his classes in the University of Tokyo. These lectures were found in the carefully kept notes of Japanese students and have been edited by Dr. John Erskine, of Columbia University. The fact that Lafcadio Hearn spoke with great lucidity and gave ample explanations as an interpreter of the West to the East gives this book an especial value as an interpretation of English poetry to others for whom poetry may be a new language. This would be an excellent supplementary text for school libraries, while it is suggestive and interesting to all lovers of poetry.

Poetry: The Renascence of Wonder, by Theodore Watts-Dunton. E. P. Dutton & Co. $1.75. *Appreciations of Poetry*, by Lafcadio Hearn. Dodd, Mead & Co. $3.

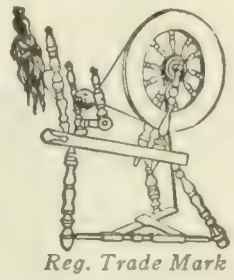
WOMEN WORKERS

When it is remembered that in America nearly a third of the workers of the country are women, that these workers of today are to be the mothers of the men and women of tomorrow, no thinking person will hold that the stream of books on this subject now pouring from the press is unduly great, so it be not swollen by incompetent and superficial work. The latest addition to the National Social Science Series, Dr. Annie Marion MacLean's *Women Workers and Society*, is a very well informed, thoroly grounded, and welcome "briefing" of a wide range of information.

A concise outline of the history of women in American industry is followed in this volume by studies of the woman worker's legal status, of problems of industrial hygiene, of education and recreation, and of the socialization of industry.

Women Workers and Society, by A. M. MacLean. Chicago. A. C. McClurg & Co. 50 cents.

OUT OF DOORS



Horace Klepart's *Camping and Woodcraft*, once a pocket manual, now in its seventh edition, is to have two volumes. The first deals with camping, considering in detail outfit, provisions, woodpests and the camp fires; for the amateur there is a welcome chapter of receipts for campfire cookery. (Outing Publishing Company, $1.50.)

Chatty papers on such homelike topics as cinders, rainfall, bonfires and snow shoveling make up the *Humble Annals of a Back Yard*, by W. A. Dyer. Does anyone ever read of a triumph in the line of green peas without longing, especially if the month be February, to go and do likewise? (Boston: The Pilgrim Press, $1.)

The Book of Forestry has descriptive tables of trees and shrubs, lumberer's measurements, etc. But it is more than a handbook. Mr. Moon's account of forestry in the United States, of what has been done and how, and what must be done, is of interest to every one who owns a bit of woodland or even a few shade trees. (Daniel Appleton & Co., $1.75.)

Appearing first in the London *Times*, *Studies in Gardening*, by A. Clutton Brock, bear much sage advice which the notes by Mrs. Francis King fit to the needs of American flower growers. But more than that, many of the chapters, notably those on the names of flowers and their associations, are uncommonly delightful discursive essays with gardens for text. (Charles Scribner's Sons, $2.)

Imported Dress Linens *for* Season 1917

Reg. Trade Mark

Fashion decrees Linen in White and colors for the smart Suits and Frocks this season. We have made unusual preparations to meet this demand, and complete assortments of weaves and colors are now in stock

At 75c yard—Yarn-dyed Linen (medium weight) in White and upwards of twenty-five fashionable shades. 36 inches wide.

At 95c yard—Our famous "Non-Krush" Linen in White, Cream and a full assortment of the most-wanted shades. 36 inches wide.

At 95c yard—French Linen, 46 inches wide, in White, Black and a host of new and desirable shades. (Medium weight).

At $1.00 yard—Cossack Linen, a semi-rough Linen resembling a Russian Crash, in White and a full line of new shades. 45 inches wide.

At 85c yard—Crepe or Momie Linen, very desirable, White and colors. 46 inches wide. (Special value).

Linen Eponge—A soft, semi-rough Linen in White and colors. 36, 45 and 54 inches, at $1.00, 1.25 and 1.50 yard.

At 85c yard—Special attention is directed to a recent importation of Handkerchief Linen of a superior quality in a choice range of plain colors—Pink, Flesh, Rose, Sky, Copen, Old Blue, Maize, Nile, Reseda, Gray, Helio, Wistaria, Orange, Sand, Golden Brown, Navy, Black. 33 inches wide.

Novelty Handkerchief Linens—Fine, sheer quality, soft finish, White grounds, showing a range of smart printed designs, such as Dots, Checks, Fancy Stripes, Stripe and Check combined and several novelty effects. 36 inches wide at 95c yard.

White Linens for Waists, Dresses or Suits, in all the various weights and weaves to meet all requirements.

New Laces for Spring

Particular attention is directed to our fine assortment of Laces to be used with Summer Dresses and Waists, etc.

Real Filet Laces, ½ to 6 inches wide, 45c to $9.50.

Val Lace Ruffling, 50c to $1 per yard for frills, etc.

Filet Net Edges, 9 to 27 inches, for collars and flounces, 85c to $1.50 yard.

Samples of any of these lines except bordered materials, mailed upon request.

America's Magazines

—their place in the Sun of Commerce

Their place in America's homes —millions of homes—that's an old story. Their place in commerce—that's newer. Their place in homes—educating, entertaining, inspiring—that has grown in the slow, steady strides of America's progress; their place in Commerce, by "leaps and bounds" alongside of the young giant of advertising.

Their place in Commerce depends upon their ability to sell things: ability to create a demand, and therefore a market, where no demand or market existed before; their ability to reach people and make them think—to carry a commercial message and imprint it in the brain of a Nation; ability to raise a people's scale of living, and to nationalize their styles and fashions as well as their soaps and breakfast foods; their ability to build up and maintain commercial Goodwill which business men yearly translate into assets worth millions of dollars.

For instance: There was no demand or market for fountain pens when the pioneer, only by much persuading, launched his venture in a magazine in 1884. Yet a Nation, and then the world, were opened up to his, and later to other men's, fountain pens.

What hours and days of women's work have been saved by various varieties of factory-preserved foods—from pickles to pineapples—made known through magazine advertising!

There was no crying need for a handy camera, no demand for an inexpensive watch, yet in magazine advertising the makers of both made them equally famous.

It required education to get people to accept "ready-made" music, but its creators educated the people so masterfully through magazine advertising that music is now practically universal in American homes.

Nothing started enameled bathtubs on their way to popularity until the maker began to "feel out" the people with his "Health depends upon Sanitation" idea in magazine advertisments. That idea the magazines turned into a national hobby.

Maybe you Mr. Manufacturer, are making some article which Magazine Advertising can place in the homes of millions of people. We shall be glad to discuss ways and means with you.

MR. HOWLAND'S FRIENDS

(*Continued from page* 446.)

I FEEL the profoundest regret and sympathy for the loss of an invaluable friend and colleague.

WEARDALE
Baron of Stanhope

MAY I express my most heartfelt sympathy at an irretrievable loss. ROBERT E. PEARY
Rear Admiral U. S. Navy

OUR country has lost a valued citizen and the world a leader in thought in the death of William B. Howland. It was my privilege with others to be associated with him at his request in the organization and management of the efficiency association conceived by him and for the good work of which he was chiefly responsible. He was ever in the front rank of patriotic and unselfish work for our country. A man esteemed and loved by all who were privileged to associate with him. His work for the betterment of our land and race will survive him and be his best monument.

HENRY S. DRINKER
President of Lehigh University

IN the death of William B. Howland the community has lost a valuable citizen, the periodical publishing world has lost one of its ablest men and I have lost personally a true and loyal friend. His invariable kindness and gentle nature endeared him to all his business associates, and as I look back over the twenty-odd years during which we were so closely associated, I recall many times when his good advice and sound business judgment were invaluable to me. It will be hard to fill his place. FRANK C. HOYT.
Treasurer of The Outlook Company

PERMIT me to express a sense of personal loss in the death of Mr. William B. Howland and my belief that a valuable citizen has been lost to New York. He was a mental and moral force exercising potential influence in each of his many spheres of activity and an upright citizen. A patriot who mingled precept and example, his memory should be an inspiration.

JOB E. HEDGES
Former Republican Candidate for Governor of New York

MR. HOWLAND was a forceful and stimulating coadjutor in all my relations with him, which for a number of years were of the closest and most helpful character. Altho only a member of the Council of the National Municipal League for one year, he was a member of many of its committees and was always available for advice and suggestion. At my suggestion he was nominated for the office of treasurer of the American Civic Association in 1904 when that body was formed as a result of a merger of several organizations. He gave freely of his time, experience and inspiration. He will be missed for his personal

Drugs—The Curse of Constipation

By R. W. LOCKWOOD
President, Corrective Eating Society, Inc.

CONSTIPATION is rapidly becoming the Great American Ailment. If you do not suffer from it at some time or other, you may consider yourself extremely fortunate, for scarcely one person out of ten escapes. When we are cross, nervous, irritable; when we have headaches; when we are troubled with gas, fermentation, acidity, the reason usually can be traced back to constipation.

"I once examined 20,000 diagnosis blanks," writes Dr. B. F. Roller in a recent article in the New York Herald, "and found that ninety per cent of them contained the constipation complaint." If we needed still further proof of the prevalence of intestinal congestion we need only think of the thousands of tons of salts, pills and other cathartic drugs which are consumed annually.

Because nine out of ten people are troubled with constipation to a greater or less degree I have no doubt that every physician is asked hundreds of times what to "take" for it. It would seem that the average person feels that as long as something can be "taken" for relief, he need not worry about the complaint itself. And, indeed, there would be no great cause for worry except that instead of removing the *cause* of constipation, laxatives merely give temporary relief.

As the world's greatest medical authorities agree, all laxative drugs contain some poisonous element, and the reason they relieve you temporarily is that Nature, rebelling against their entrance into the intestinal tract, flushes it with all the body fluids she can muster. Not only are these valuable digestive fluids wasted, thereby aggravating the cause of constipation, but the irritating drugs cause the food to pass out of the stomach long before any nourishment is extracted from it, which explains why we sometimes feel weak after having taken even a single physic. For these reasons the use of laxative drugs should be discouraged. Physicians say the more often we take laxatives, the less we can get along without them. This is because the muscles of the stomach and intestines become weak and inactive through lack of use, if we continually "coddle" them by taking medicine.

"Well," you say, "if I am not to take laxatives, what am I to do?" The logical answer is that instead of devoting your energies to some method of getting rid of the waste AFTER it has formed, you must PREVENT intestinal congestion by so balancing your meals as to assure proper elimination.

"The trouble is," says Eugene Christian (the *food* specialist who has obtained such wonderful results with balanced meals), "not one person in a hundred knows how to properly select and combine ordinary foods. Many *good* foods when eaten in combination with other *good* foods, create a wrong chemical reaction in the digestive tract, being converted into dangerous toxic products which tend to clog the system and cause constipation; unless these poisons are promptly eliminated from the body, they are liable to seep into the blood and cause the more dangerous condition known as auto-intoxication (self-poisoning).

"But just as wrong food combinations impair Nature's important functions and break down our health and efficiency, so do the right combinations help us to re-create and maintain them."

Since Eugene Christian's remarkable success as a *food* specialist has become known, people have sought his advice in such rapidly increasing numbers that he has found it necessary to put his methods into printed form. He has written a series of 24 Little Lessons which tell you exactly what to eat for health, strength and longevity.

These lessons contain actual menus for breakfast, luncheon and dinner, for almost every condition of health and sickness from infancy to old age, for all occupations, climates and seasons, including corrective menus for constipation, acidity, fermentation, etc., etc. He does not ask you to give up the wholesome, nourishing foods that you like, nor do his methods upset your table; and you can secure the foods he recommends at any store or out of any garden—no special or patented foods are required.

A lady in Addy, Washington, whose worst trouble has been constipation, purchased the Little Lessons last August and began to follow the special menus given in Lesson XX. On January 4 she wrote us that she was practically cured of that trouble, and added: "I am very grateful, for I believe that constipation brought on an illness which nearly cost my life last spring."

A well-known business man of Fillmore, New York, had constipation so badly that he had to take something every day. He recently wrote us that as a result of the "Little Lessons," he is so much better that he no longer needs or takes any laxatives.

Another recent purchaser of the "Little Lessons" living in Albion, New York, had suffered from so-called "chronic" intestinal congestion ever since his birth. His "traveling companion," wherever he went, was a bottle of Cascara Sagrada tablets, of which he took daily doses of five to ten grains.

So long had he been in this disagreeable condition that he did not even hope for a total cure, but only for partial relief by Corrective Eating. His letter (of January 27) concludes: "A miracle could scarcely have astonished me more than the immediate results. After a day or two I found that no more drug was needed. The results seem to be permanent."

But by far the most interesting recent letter telling of relief from "The Curse of Constipation," came from a young woman living in Paris, Illinois, who in great kindness of heart and gratitude gave us permission to use her name, "if only one person can be helped as I have been." She writes:

"I never was strong. Among my more serious afflictions was *constipation*, gradually getting worse until it became chronic and at last seemed a hopeless case. I suffered an operation five years ago, from which I got relief from all ailments excepting constipation. It seemed to grow worse all the time. Our doctor told me he feared I would never be cured of constipation because of the conditions in my case which he understood so well.

"July first I began the menus as outlined in book XX. The third day I had a natural bowel action. I told doctor and he said: 'You have awakened to activity these muscles and organs which seemed almost paralyzed. They are working now as Nature intended them to.' When he returned after a trip he was delighted with my improvement. Those tense muscles had relaxed and tenderness all gone. Soon the indigestion was relieved, gas all gone, bowels moving regularly one or two times daily. Complexion getting clear.

"I sleep on one pillow and feel so good every way. No heart palpitation. Have gained six pounds in weight, sleep well and still use Corrective Menus for our table."

With these "Little Lessons" at hand it is just as though you were in personal contact with this great food specialist, because every point is so thoroughly covered and so clearly explained that you can scarcely think of a question which isn't answered. You can start eating the very things that will help to produce the increased physical and mental energy which you are seeking the day you receive the lessons. And you are quite likely to feel some results after your very first balanced meal.

If you would like to examine these "24 Little Lessons in Corrective Eating," simply write the Corrective Eating Society, Dept. 43, 450 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask to have the lessons mailed for five days' trial with the understanding that you will either send the small price asked, $3.00, or remail the books.

Merely clip out and mail the following form instead of writing a letter. This is a copy of the official blank adopted by the Society and will be honored at once.

.....

CORRECTIVE EATING SOCIETY, INC., Dept. 43, 450 Fourth Avenue, New York City

You may mail me the "Lessons in Corrective Eating" for examination. Five days after I receive them, I will either send you $3.00 (full payment) or remail them to you.

The Truth About Corns

You have read much fiction about corns. Were that not so there would be no corns. All people would use Blue-jay.

Here is the truth, as stated by a chemist who spent 25 years on this corn problem. And as proved already on almost a billion corns.

"This invention—Blue-jay—makes corn troubles needless. It stops the pain instantly, and stops it forever. In 48 hours the whole corn disappears, save in rare cases which take a little longer."

That is the truth, and millions of people know it. Every month it is being proved on nearly two million corns.

So long as you doubt it you'll suffer. The day that you prove it will see your last corn-ache.

It costs so little—is so easy and quick and painless—that you owe yourself this proof. Try Blue-jay tonight.

Today?

qualities, for his stimulating service and for his public spirit.

CLINTON ROGERS WOODRUFF
Secretary of the National Municipal League

THE death of William B. Howland is a severe loss to the whole community, and many, very many of us will learn of his passing away with extreme regret. His interests were many and varied, and he had that love and sympathy with nature in all her moods which made him an especially enjoyable companion in country drives and walks. In business, more than any other friend that I have known, he was gifted with a keen and broad insight and that quality of imagination without which commercial transactions are tedious and uninspiring, and seldom meet with success.

GEORGE P. BRETT
President of The Macmillan Company

AS President of the Society for Italian Immigrants I wish to express my great sorrow at the loss we have sustained through the death of Mr. William B. Howland, who for so many years had been our treasurer.

The place which he occupied can never be filled, but his memory as our friend and co-worker will ever remain an inspiration to us all.

ERNESTO FABBRI
President of the Society for Italian Immigrants

MR. HOWLAND was ot the class of men that we Americans can ill afford to lose at such a time as this. His sound common sense judgment, united with an imagination that saw into the future, his honest, sterling character, and his real belief in the good of working for the people, are characteristics needed in every public man today. That he should have died just at this time, when the country needs the advice and help of just such men, seems a very, very sad thing. All of us who knew Mr. Howland personally will feel our loss very deeply.

H. E. HOOPER
President of the Encyclopedia Britannica Corporation

THE United States in its broadest civic sense is immeasurably the poorer by the taking off of one of its most disinterested, intelligent and indefatigable workers, William B. Howland. It has been my happy privilege to meet many of the foremost men of the world and to know many of them quite intimately, but I never knew a gentler, sweeter, more unselfish, more charming or more efficient man than he. I have traveled with him in many foreign lands. Have spent many years in most intimate association with him and under every conceivable circumstance I have always found him to be the soul of honor and the very epitome of unselfishness. The world's loss in his death cannot be doubted. My personal loss cannot be exprest.

ROBERT WATCHORN.
Former Commissioner of Immigration at the Port of New York

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice Manufacturer, 252 North Street, Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

KEENLY interested in his brother man; full of hope for a progressive world; ever loyal to his country; eager to serve his friend or his friend's friend; possessing a mind stored with literary wealth; prolific, keen, original; swift in thought; careful in judgment; charitable in everything, Mr. Howland was a friend indeed; a man made for liberty, providentially born for fraternity, and modestly preferring equality.

ALTON B. PARKER
Former Chief Justice of the Court of Appeals. Vice-President of the National Institute of Efficiency.

DR. WILLIAM BAILEY HOWLAND has done an unusual work and has been a living exemplar of elevated Americanism. His untiring energy, strict attention to business, rare intelligence, acuteness of mind and force and world-vision, together with his talent for friendship, warmth of affection and attractive personality set him aside as a rare man. With all of his activities he had time for great unselfish public service. He was an ideal American gentleman.

HON. CHARLES M. DOW

Former President of the Commissioners of the State Reservation at Niagara

MY relations with Mr. Howland as one of the commissioners of the state reservation at Niagara led me to regard him as a man who cultivated the loftiest ideals of civic duty. He was scrupulous and punctilious in the discharge of public obligations, always modest and courteous in his personal relations with his fellow commissioners and benignant but firm in dealing with the many perplexing problems constantly confronting our commission, problems not infrequently of international and national consequence and involving vast interests. His death is a loss to the state and nation.

A. T. CLEARWATER

Commissioner of the State Reservation at Niagara

WILLIAM B. HOWLAND was a gentleman of the old school, a man of fine culture with all the refinements of gentle breeding and wide reading. He was an unusual combination of business acumen and editorial sagacity. His soul was gentle and sweet and he had the capacity for making those friendships that are rare and beautiful. He loved everything in art and literature that was ennobling, and when he passed into the great beyond the publishing world lost a strong and lovable figure.

TRUMAN A. DEWEESE

Author of "The Bend of the Road"

IN every exercise of his dominating ability was the spirit of disinterested service. Always he was serving others, great and small, and to serve *him*, therefore, was a spiritual privilege rather than a mere opportunity for loyalty.

D. G. ROWSE

Mr. Howland's Secretary

IT is hard for me to realize the death of William B. Howland. He was so very much alive and interested in so many things, working always for their betterment. He had the rare and happy faculty of endearing himself to those of the generation following him as well as to his own contemporaries. These qualities testify to the breadth of his mind and to his humanity. I shall greatly miss his genial kindly personality and the influence of his high character.

HERBERT W. RICE

Treasurer of the National Institute of Efficiency

Are You Hitting at Nothing?

Herbert P. Mee, Material Accountant of the Southern Pacific Railroad at Los Angeles, California, aimed at nothing and hit it—*until*—but let him tell his story himself.

His Letter

"Like most people, I was a drifter, admiring success, weakly wishing for better things to come, with no conception of what those better things were or how to proceed to get them.

"I aimed at nothing and hit it.

"I performed each task that presented itself, did fairly well and then lay back awaiting the next task, using the spare time to build castles in Spain.

"Paragraph One, Lesson One of your

Course in Personal Efficiency

started me to thinking. This I have never ceased to do since. If the Course had done nothing else for me than this, it was well worth the price paid. But it did more.

"As an immediate benefit, I have an increased capacity for work, which my superiors were not slow to recognize, so that for the most part I am relieved of my old duties and assigned to much more important work.

"Young people who wish to get ahead, but don't know the why, the how or the way, can get the information very cheaply through this Course.

"Old people, given over to pessimism, loss of interest, and with apparently weakened vitality and enthusiasm, will get the jolt of their life reading the Course through but once."

Is it skill you want? Efficiency taught the U. S. Navy to shoot 1200 times as well today as at Santiago? Is it money? Efficiency brought a great western railroad a million and a half in one year. Is it Economy? A California state official saved $2700 on one job after he had his third lesson of this Course. Is it Education? A prominent man of Louisville, Ky., got his first big step that way from the first lesson of this Course. Harrington Emerson acquired in practical work with many corporations of many kinds the knowledge and experience that enabled him to write this Course. He is the president of an Efficiency Company directing efficiency work in many corporations. In his work he has had to teach and train many young men, some of whom today hold highly paid positions. He has thought efficiency for forty years; he has taught it for thirty years; during twenty years he slowly collected the data for this Course. You can learn from the lessons of this Course how you can save an hour, two hours, a dollar, two dollars out of each day and how you can make the day a better day at the same time. You can study this Course and make yourself efficient in your own life in 15 minutes a day and for little more than one dollar a lesson.

First Lesson FREE

Send only two 2c stamps for postage

It's too big to explain—too new and too vital. Send the coupon for the first lesson free. Follow its instructions. Then if you feel your work easier and its results bigger—you can have the whole Course. Let the Course reorganize you and your life as its principles have reorganized hundreds of plants and factories. Your capital is brains—your servant is time. Let this Course teach you to make the most of both.

Whoever wherever whatever you are, you need Efficiency. Send the coupon today for the whole story and the first lesson.

Dreer's Superb Orchid-Flowered Sweet Peas

This wonderful type with its wide-open flowers of extraordinary size, with wavy standards and wide-spreading wings, represents the highest achievement in Sweet Peas. The flowers usually measure two inches across and are borne in sprays of three or four on long, strong stems, making them of exceptional value for cutting.

Choicest mixed colors, 10 cents. per pkt., 20 cents per oz., 60 cents per ¼-lb., $2.00 per lb., postpaid.

Dreer's Garden Book for 1917

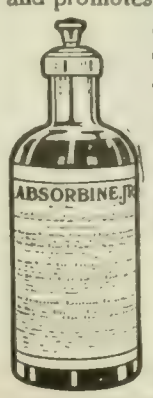
is a ready-reference work that will be of invaluable help in planning your garden; in selecting the best varieties; and in making them grow.

A copy sent free if you mention this publication.

HENRY A. DREER 714-16 Chestnut St. Philadelphia.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.



Stiff Aching Limbs

may be relieved quickly with Absorbine, Jr. Don't be inconvenienced and annoyed with tired, aching muscles. Massage the parts with Absorbine, Jr., and rout out the trouble—it reduces soreness and inflammation effectually and in a pleasant manner.

Absorbine Jr.
THE ANTISEPTIC LINIMENT

Is more than a liniment—it is a positive antiseptic and germicide

This increases its efficiency and its uses. When applied to cuts and bruises it kills the germs, makes the wound aseptically clean and promotes rapid healing. Swollen glands and veins, wens, cysts and bursal enlargements yield readily to the application of Absorbine, Jr.

Absorbine, Jr., is safe and economical to use—it is made of herbs and is non-poisonous; only a few drops required at an application.

Keep Absorbine, Jr., at hand for emergencies. $1.00 a bottle at druggists or delivered.

A LIBERAL TRIAL BOTTLE

together with booklet and laboratory reports, mailed anywhere for 10 cents in stamps.

W. F. YOUNG, P. D. F.
283 Temple St. Springfield, Mass.

The Market Place

STOCKS

The market for securities is still a narrow one, and at a majority of recent daily sessions on the New York Stock Exchange prices have moved downward. For some time past what is called "the public" has not been represented in the transactions, and several traders whose dealings usually tend to excite activity have been idle. During the week that ended on the 3d inst., the average daily business was only a little more than 400,000 shares. A decline on Friday, the 23d ult., was due to Premier Lloyd George's speech about British food supplies and a restriction of imports, which, it was thought, would unfavorably affect our trade. On the following Monday the President's address to Congress, asking for power to safeguard the rights of Americans on the seas, caused an upward movement of prices, which was not checked by news of the sinking of the "Laconia," altho many saw in this an "overt act." The gain for Steel shares was 2 points, and in these shares more than one-fourth of the day's business was done. But Monday's price additions were cut off, in most cases, on Tuesday, and on Wednesday, the 28th, there were greater losses, because many expected war and were disturbed by the unsatisfactory attitude of Congress. It was reported that the Pennsylvania Railroad Company had decided to buy 50,000 shares of New Haven stock. It already owns 53,025, bought when prices were much higher than they are now.

On the 1st there was a further decline, following publication of the letter in which Germany proposed that Mexico and Japan should make war against the United States. Recovery was seen on the 2d, and it was ascribed to the decisive vote of 403 to 13 in the House, empowering the President to arm merchant ships for defense against submarines. Indications that the British Government was selling railroad securities were found. It was thought this course had been taken, in preference to negotiation of a new loan, because an issue of bonds by our Government seemed near at hand. Gold has been coming in, nearly all of it by way of Canada, the quantity received since January 1 being about $160,000,000. Imports in December were $158,000,000. Among the quarterly dividends declared on the 1st were those of several copper companies. The Utah

DIVIDENDS

AMERICAN CAR AND FOUNDRY COMPANY.

120 Broadway, New York, March 1, 1917.

The Board of Directors of the Utah Copper Company has this day declared regular quarterly dividend, No. 35, of Two Dollars and Fifty Cents ($2.50) per share, and extra dividend, No. 5, of One Dollar ($1.00) per share, both payable March 31, 1917, to stockholders of record at 3 o'clock p. m., March 9, 1917.

The books for the transfer of the stock of the Company will remain open.

C. K. LIPMAN, Asst. Secretary.

A constantly increasing number of readers has been following the weekly

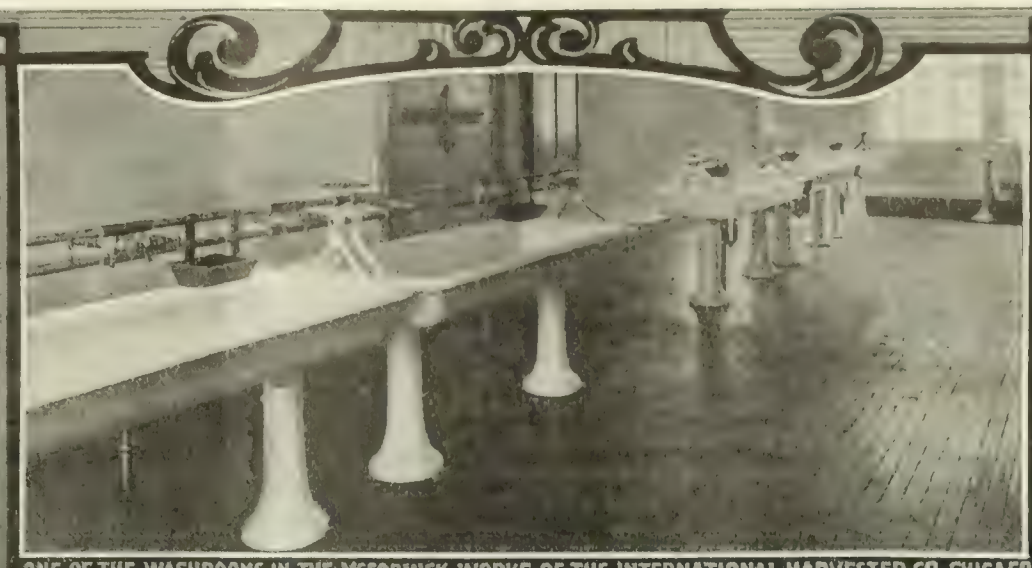
INSURANCE DEPARTMENT

of The Independent.

Many of them are securing valuable information through the Insurance Service Department, conducted by Mr. W. E. Underwood, to aid them in selecting the right insurance.

added $1 extra to the regular $2.50. Other extras were Chino, $1; Ray, 25 cents; Nevada, 50 cents, and Butte and Superior, a zinc producer, $1.25. The New Jersey Zinc Company added 4 per cent to its regular rate.

STEEL AND SHIPS



In the steel industry demand, both foreign and domestic, has not been checked or reduced by the menace of war, altho ocean shipment has been so restrained that there is an accumulation of more than 500,000 tons of products at Eastern ports. New additions to prices are announced. These include 20 per cent for boiler tubes and wire. The output of pig iron is said to be sold for a year and a half to come. Among the inquiries reported last week were those of Italy for 150,000 boxes of tin plate, of China for an equal quantity, and of Russia for 75,000 tons of barbed wire.

The destruction of shipping and the demand for ocean carriers lead builders in many parts of the world to seek ship plates here, and orders for 200,000 tons, at the very high price of 6 cents a pound, for delivery in 1918, could be taken now if the capacity of the mills for this year and next were not already engaged. Orders for delivery in 1919 have been placed. Japan has been buying for the last year and a half and now asks for 50,000 tons. In American yards on January 1 the builders were making, or had under contract, 403 ships with a capacity of nearly 1,500,000 tons. Two weeks ago Great Britain bought seventeen ships under construction in Japanese yards, and will pay $33,000,000 for them. The Cunard Steamship Company has recently ordered five ships of 15,000 tons from the Bethlehem Steel Company, which has shipyards, and three of 7500 tons from a yard on the Pacific coast. Before these orders were placed our yards were building or had undertaken to build ships amounting to 700,000 tons for owners in foreign countries. And so there is a demand for ship plates here as well as abroad.

Our railroad companies are ordering locomotives and cars. Orders for 998 locomotives were given in the first seven weeks of the year. But delivery will be delayed because the manufacturers have contracts covering their output for 1917. Prices are high. The Illinois Central will pay $3,000,000 for seventy-five locomotives engaged last week, or twice as much as it would have paid a year and a half ago. The cost of one has risen in two years from $18,000 to $40,000.

WHEAT

The price of wheat at Chicago advanced from $1.76 a bushel on February 23 to $1.84¾ on March 2. This movement was caused by reports that farm reserves were only 101,000,000 bushels, against 244,000,000 a year ago, and by the demand for export. There was evidence that the British Government was seeking ships to carry wheat and was paying 90 cents a bushel for the transportation.

Good Plumbing
A Factory Necessity

WE call it a necessity because any improvement that increases the producing power of your employees is *needed*—as a practical business proposition—and "Standard" Plumbing Fixtures will do that. Such improvements add vastly to a factory's appearance—its neatness, sanitation, etc.—but, more than that, they *add to daily profit.*

"Standard" Fixtures Increase Factory Efficiency

Look at the installation shown above. Isn't the reason *why* efficiency is increased—and, therefore, profit—very clear? If your factory conditions are not as wholesome as you want them and know they ought to be, write for a free copy of our book on "Factory Sanitation."

Let one of our service men go into the question of good plumbing with you; no obligation on your part for a study of your requirements and helpful suggestions. See "Standard" Fixtures—for factory use, or for bath, kitchen or laundry—at any showroom listed here.

Standard Sanitary Mfg. Co.
Dept. FM Pittsburgh, Pa.

"Standard" Plumbing Fixtures for the Home

represent the complete, up-to-date line for Bathroom, Kitchen and Laundry. They have been *standard* for more than a generation. Their supremacy is the result of experience, service and quality.

Talk to your plumber about "Standard". Look for the Green and Gold label. If interested in plumbing fixtures for domestic use, write for a free copy of "'Standard' Plumbing Fixtures for the Home" also new Sink Booklet.

New Book about Headaches

Headaches are so common and cause so much wholly unnecessary pain and suffering, that Dr. W. H. [illegible], Superintendent of the Battle Creek Sanitarium, has written a book telling how headaches may be prevented. During his many years of practice, Dr. Riley has prescribed for thousands of cases in which headaches have been prominent symptoms. He says what he now tells you in his book is not theory, but facts—facts which are the result of thoroughly practical experience. Dr. Riley tells you how to get at the cause of headaches and remove them. His instructions are very simple and easy to understand. No difficult regime. Just plain common sense about diet, exercise and such things—things you can easily put in practice in your own home. No drugs, only natural means. Dr. Riley's book on "Headaches and How to Prevent Them" is not large but of great value to the headache sufferer. Price only $1 at dealers. Ask your regular book dealer or send direct to us. You take no risk for if you are not entirely satisfied with Dr. Riley's book, you may return it [illegible] and we will promptly refund your money. We let you be the judge as to whether the book has served you. Is this fair?

Insurance

Conducted by

W. E. UNDERWOOD

ESTIMATES AND DIVIDENDS

One of our readers, writing me from a distant point in the West, observes that dividends on matured 20-year endowment policies in a company which he names, show a loss of 40 per cent on the official estimate given when the agent solicited the application. He also remembers, he says, that settlements of policies then maturing, founded on estimates made twenty years earlier, were consistently much less, and that a writer in The Independent at about that time explained that the loss from 1876 to 1896 was due to the lower average rate of interest earned on invested assets, a condition which my correspondent thinks will not hold good during the period from 1896 to 1916. He wants to know if the failure now to meet on maturing policies the estimates made twenty years ago is general with all companies; or "is it merely a part of their selling game?" or "is there a reason?"

This policyholder has one of the numerous breeds of Tontine life insurance which were so ubiquitous until they were outlawed in 1906 by the New York legislature. A number of Eastern states followed New York in interdicting the traffic. But it still flourishes like the green bay tree in a number of Western and Southern states.

Thousands of times I have heard and read that story about the declined rate of interest as an excuse—not a reason—for the difference between the estimated dividends offered as a lure to applicants and the actual dividend said to be earned at maturity. I don't think there was more than a flavor of truth in it. To those with sufficient knowledge of the business and possessing enough mathematical ability to take annual financial returns apart, the principal causes of the disparity between promises and performances were obvious. To begin with the "estimates" were loaded. Companies competed with each other on that point. Estimates were bait, duly concocted to attract players to this gambling contest, and the most succulent bait drew the biggest crowd.

There is an old proverb to the effect that short reckonings make long friends. This was a game of long reckoning—the longer the soliciting agent could make it, the bigger would be his commission. What did the planners of the scheme care whether the long reckonings would cause discontent? Did they not know that only three or four out of every hundred would be on hand demanding settlements at the end of twenty years?

Extravagant as were the promises

What Kind of Man Are You?

You, young man? Are you prepared to meet face to face what life has in store for you and make a success of it, or are you going to fall in behind with the grand army of incompetents—physical and mental weaklings who never get anywhere? Rarely if ever, has a man succeeded in life without health. You will find physical wrecks by the wayside of life suffering for their early mistakes and errors. There is a reason for this.

I Am a Builder of Men

Make it re-builder if you like—the results are the same because they are based on a system which has taken a lifetime to study out and perfect. I, personally, am the result of that system. I experimented first with myself, because I wanted to be sure. Then I tried it on others with the same marvelous results. I have never had a failure among the many thousands who have placed themselves in my hands. I annihilate physical ills, and in many cases, mental ills. There are no drugs in my prescription. "Throw physics to the dogs." If ever there was a royal road to health, strength, energy and vitality, it is that known as the Strongfort System by which each pupil receives individual instructions.

Are You Interested in Yourself?

Have you made a mistake at some time in your life as a result of which you are now suffering and paying the penalty? What are you going to do about it? Do you know that I can help you and will? In all earnestness and sincerity I beg of you to

Let Me Re-Build You

METRO TYPEWRITER COMPANY
70 Front Street Brooklyn, N. Y.

made in those estimated dividends of long ago, I believe that if the same grade of stewardship, the same care for the interests of policyholders, and the same high degree of economy as are to be found in the best annual dividend companies now, had obtained then, the holders of maturing policies would have received sums closely approximating the estimates. That lucky remnant of the gamble were, under the rules of the game, the owners of all the dividends forfeited by those of their class who had died or lapsed their policies, in addition to the dividends legitimately accruing under their own policies.

They did not get them because the money was squandered. Each policyholder was up against a long reckoning. There would be but one accounting and that at the end. Whatever it was, however unsatisfactory to him, he was helpless. He had to accept the dividend offered or sue, and that meant defeat. Why? Because in his application at the very start, over his own signature, he had ratified such allotment of the dividend fund as the board of directors would make—twenty years later. Immense dividends, so-called, were earned thru this iniquitous system of forfeitures, but it was spent in buying more new business and on royal armies of officials at tremendous salaries. Toward the end of the year, when company was vying with company to make a showing of new business secured, agents received by way of stimulus bonuses so large as to bring the cost of new policies above one hundred per cent of the premiums collected on them.

Some little men running companies that are comparatively small and obscure in the West and South are laying up modest fortunes for themselves by running this gambling scheme in the name of life insurance. They will continue it until the people of those sections know as much about it as the people in New York, Massachusetts and a dozen other states. All sorts of estimates have become obsolete in this portion of the country. They are not needed where yearly accounting and settling are mandatory.

C. O. D., Ann Arbor, Michigan.—As the matter stands, your liabilities are $6000; life insurance $4000. If you die before you can discharge your liabilities, your wife is a loser to the extent of your income and the difference ($2000) between the amount of your insurance and your outstanding indebtedness. Therefore, when your policy matures in March, prudence would dictate the choice of the option which converts it into paid-up insurance. You should, in addition, protect the debt by taking its equivalent in 10-year or 20-year term insurance, the premium on which is comparatively small.

F. C. M., Appleton, Minnesota.—As I have stated a number of times the holders of certificates in assessment companies or fraternal orders which do not protect them with a proper mathematical reserve may eventually expect such an advance in cost as will render the arrangement hopeless. I do not understand the offer made you by the agent of the Bankers' Life, but he seems to be providing for the conversion of your assessment certificates in that company into reserve policies. If his figures are to be relied on, the offer is reasonable. In any event, you would be better off in the long run.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

TO THE TEACHER: Assign one or more of the questions pertaining to the subject taught by you to every member of your class, making the assignments in such a way that some reports will be made at every recitation during the week. The work will be done to best advantage if the reports are made in writing, and if students bring their copies of The Independent to each recitation. See "Contents" for position of articles mentioned below.

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

But Once. By Marion Harland.

1. What ideals of conduct does this poem emphasize?
2. Give a full explanation of the last two lines of the third stanza.
3. Define the following words: musing, mart, fantoms, wan, wraiths, shard, sheaves, tares, margin.
4. Point out and explain the metaphors in this poem.

Eight Great Short Stories.

1. What are the characteristics of the modern Short Story?
2. What is meant by saying that Hawthorne's works are fanciful and poetic?
3. In what way are Hawthorne's works products of the New England spirit?
4. In what way is "The Ambitious Guest" an exceedingly artistic story?
5. How does Hawthorne emphasize the theme of the story?
6. In what ways is the story realistic?
7. In what ways is the story fanciful?
8. Point out several instances of foreshadowing.
9. What was the ambition of every person in the story?
10. In what ways is the story a tragedy?
11. What is the single effect that this story produces?
12. In what ways is this story much better than most of the short stories you have read?
13. Write a short story in which you try to imitate the style and the method of "The Ambitious Guest."

SECTION II. COMPOSITION.

William Bailey Howland. By J. Horace McFarland.

1. Write a composition on "The Ideals of Business Life."
2. From the letters concerning Mr. Howland draw material for a composition on "How to Be a Useful Citizen."

People's Markets. By Marcus M. Marks.

1. Explain what is meant by "People's Markets."
2. Write a paragraph of specific instance concerning the success of open public markets.
3. What proofs does Mr. Marks present in support of his assertion that open public markets would benefit the people?

The Government as Grocer. By Meyer London.

1. Is the title of this article more or less effective than the titles of the two accompanying articles? Give reasons.
2. Point out instances of antithesis. What is their effect?
3. Point out short sentences used for the sake of emphasis.
4. Express the thought of the article in a single sentence.
5. Write a short argument for or against the proposition presented by Mr. London.

I Don't Know. Retold by Donald Wilhelm.

1. Why did the reporter use direct quotation?
2. What is the purpose of the article? What means did the writer take to accomplish his purpose?
3. Write a paragraph of comparison in which you show how the thought of this article is like the thought of "A Tale of Two Cities."
4. Write a similar article based on an actual experience someone has related to you.

Editorial Articles and the Story of the Week.

1. Which is the best written editorial article? Give reasons for your opinion.
2. Write a paragraph of cause and effect on "The Withdrawal of the Germans."
3. Write a short composition in which you express your own opinion concerning the work of the last Congress.
4. Write a short argument on "The Food Question."
5. Write a short argument in which you favor or oppose armed neutrality.

SECTION III. WORD STUDY.

The Government as Grocer. By Meyer London.

1. Give the derivation and the meaning of every one of the following words: inherent, decade, surfeited, evolution, economic, embargo, demagogy, exploitation, elimination, exportation.

SECTION IV. GRAMMAR.

I Don't Know. Retold by Donald Wilhelm.

1. Point out examples of clauses used as objects.
2. Give the syntax of the first ten adverbial clauses.
3. Rewrite in the third person, and in idiomatic English, any paragraph that has at least eight lines. Do not use direct discourse. Explain the changes you make in grammatical structure.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.
PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

The President and Congress—"President Wilson's Inaugural Address," "Armed Neutrality," "Congress Closes."

1. What provision of the Constitution justifies the President in his belief that he could take action without the consent of Congress? Can you find any argument on the other side?
2. Who are the various leaders in Congress referred to in "Armed Neutrality"?
3. Summarize the accomplishments of the Sixty-fourth Congress. What, according to the President's statement, have they left undone?
4. Use the present occasion as an opportunity for the study of (a) the election and inauguration of a President, (b) the organization and functions of Congress, (c) the theoretical and actual relations between the President and Congress.
5. Look up the history of the struggle over rules in the House of Representatives in 1889 and during the Taft Administration. Does this help you to form a judgment in the present case?

The United States and Germany—"The Kaiser's Pipe Dream," "Germany Plans Coalition," "Latin-America and the German Plot."

1. What is the purpose back of the above editorial? Rewrite the editorial giving it a serious turn.
2. Look up the history of (a) the annexation of Texas, (b) the annexation of New Mexico and Arizona. Show the connection between this history and the German proposal.
3. Why did Germany hope for favorable consideration of its proposal by Mexico?
4. In view of the fact that Japan is at war with Germany, why did Germany hope to carry out her Japanese scheme?
5. Do you credit the rumors of German plots in Latin-American countries? Why?

England and the War—"Toward Bagdad, the Retreat."

1. What is the purpose of the British in Mesopotamia? Can you locate the present position of the Russians in the same region? What is their purpose?
2. Compare the present British campaign in Mesopotamia with the campaigns in the Soudan in 1885 and 1898.

The Food Problem—"People's Markets," "The Government as Grocer," "I Don't Know."

1. Look up the price of such food products as vegetables, fruits, cereals, meats, etc. (a) at the point of production, (b) at the wholesale terminal market, (c) at the point of retail distribution. Do your figures bear out President Marks's first paragraph?
2. Discuss any methods of dispensing with the middleman with which you are familiar.
3. Comment on one or more of these statements: (a) "Naturally the war has been a great factor in producing the present high prices," etc. (b) ". . . high cost of food will unravel itself gradually as the shortage of freight cars diminishes." (c) ". . . a good deal could be done . . . by better coöperation among farmers."
4. President Marks believes that food prices respond to the law of supply and demand; Congressman London does not. What do you believe?
5. In what respects do the two men agree as to the proper remedies? In what respects do they disagree?
6. The article "I Don't Know" is a specific example of "the resistance to a lowering of the standard of living" referred to by Congressman London. Study the article from this point of view.

Land as a Factor in Production—"A New Land Settlement Policy."

1. Look up the history of the distribution of public lands in the United States, especially of the Homestead Acts. Describe the method of settlement which took place under these acts.
2. What is the type of agriculture described in the editorial? What are its evil results?
3. Look up "the methods and policies of Germany, Denmark, Great Britain and Australia," etc.
4. What, in your judgment, would be the economic result if the program of the California Commission were adopted?

Foreign and Domestic Trade—"The Market Place."

1. Explain the relation between political events like the President's address and the trend of prices on the Exchange.
2. Note the statement concerning purchases of New Haven stock by the Pennsylvania Railroad. What is the purpose of this purchase? What would be its ultimate effect?

The New Seven-Passenger Jackson-Springfield Convertible Sedan—$1995

Built on the Famous Wolverine-Eight Chassis

The Jackson scores another triumph in this newest model.

It is the first of the new Jackson-Springfield Sedan bodies, with staggered doors, and is another tribute to Jackson leadership. An all-season car with style, class and speed.

Of course you expect luxury, beauty, and comfort supreme in such a car. And you will not be disappointed.

The transformation from a completely enclosed car to an open touring car with permanent roof takes only a few moments.

The windows slide out of place and are stored in a convenient receptacle under rear seat. The door windows slide into pockets in the doors. No finer convertible body was ever built.

The upholstery, done in the latest tubular style, the exhaust floor warmer, the staggered doors, which permit the driver to leave or enter without passing in front of the other passengers, and the many other conveniences, all evidence the complete and careful consideration given to your appreciation of style and comfort.

And such a beautiful body mounted on the "Wolverine Eight" chassis, with the Ferro-Jackson eight-cylinder motor, gives you the ideal motor car. You can rightfully feel a thrill of pride in the ownership of such a car.

Power, smoothness, silence and style, with practical economy, are featured in this model. Flexibility, light weight and extraordinary ease of riding are dominating characteristics.

Go to the Jackson dealer and ask to see this new Jackson-Springfield Sedan—and we suggest that you do it at once.

Four Other Body Styles

Five-Passenger Touring Car . . . $1395
Four-Passenger Cruiser, including five wire wheels $1495
(Wood Wheels $100 less)
Two-Passenger Roadster $1395
Five-Passenger Sedan (Demountable Top) including Touring Top . . $1605
All prices f. o. b. Jackson, Mich.

ANNOUNCEMENT

At a special meeting of the Board of Directors of the Independent Corporation, held March 5, 1917, Mr. Karl V. S. Howland, publisher of The Independent, was elected president of the corporation to succeed his father, William B. Howland, deceased.

WHAT DO YOU KNOW?

This very week, when the office was spending its lunch hour asking itself the questions of the general information tests of the Friends' Schools of Baltimore and of Germantown, came a letter from a learned law librarian, anxious lest our new Lesson Study Plans were to crowd out the annual Mental Inventory. No indeed. Here are one hundred snapshots at your general knowledge. They are better than the family album, or last vacation's kodaks, for filling in a sudden silence. We recommend them to any worried hostess. As for the high school students, for whom they were mainly prepared, this is, we suspect, the only sort of examination enjoyed either by pupil or teacher. The differences between this and a Sixth Grade arithmetic examination, for instance, is that there's no fun in this unless you make mistakes, and no fun in that if you do. Then there being no chance to cram for these questions, this is a great opportunity to take stock of what has collected in your brain pigeon holes.

Today has become so vastly interesting that the classics haven't much attention in this set of questions, most of them dealing with topics of daily mention, but we hope this does not mean that every one knows the answers. The list is a combination of the questions given to the boys and girls of the two Quaker Schools, with a few picked up in the office.

We cannot offer to look over your papers because our office has only six days to the week, but as a solace for this deprivation perhaps you will send us any especially droll answers you get, to add to the funny replies we have from one school, a few of which we shall publish with the correct answers next month.

Name: 1. The first woman Congressman. 2. A judge of the Supreme Court appointed by President Wilson. 3. The most recently appointed member of the Cabinet. 4. The late Emperor of the Austro-Hungarian monarchy. 5. The Premier of England. 6. The German religious reformer whose work began 400 years ago. 7. The poet from India who lectured in America in 1916. 8. The warden of Sing Sing who recently resigned. 9. The English poet who died 300 years ago. 10. A Western state long doubtful in the last election. 11. The group of islands recently purchased by our Government. 12. The general who has been in command of our troops in Mexico. 13. The celebrated American admiral who died in January. 14. Our Ambassador to Mexico. 15. The A. B. C. countries. 16. The ruler who first requested all the nations now at war to state their peace terms. 17. The former Slavic kingdom, long divided between three powers, which may be restored. 18. The nominally neutral country occupied by the Allies in 1916. 19. The league, started in America, which aims to prevent war in the future. 20. Three neutral European nations north of Spain. 21. Painter of the best known portrait of Washington.

What are the following: 22. Boxer indemnity. 23. Lincoln highway. 24. Arlington. 25. Periscope. 26. Filibuster. 27. Vodka. 28. Embargo. 29. Poliomyelitis.

Name a plant growing in the United States: 30. That blooms in the autumn after its leaves have fallen. 31. That matures its seeds underground. 32. That catches insects and uses them for food. 33. That ripens its fruit after frost.

Locate geographically or explain: 34 The Father of Waters. 35. The Slough of Despond. 36. The Garden of the Gods. 37. Archangel. 38. Gatun Lake.

What author wrote about: 39. "Tommy Atkins" in India. 40. The Siege of Troy. 41. Campaigns against the Helvetians and Gauls. 42. Oberon. 43. The Court of King Arthur.

Locate by country: 44. The Taj Mahal. 45. The Metropolitan Museum. 46. The Leaning Tower. 47. The Alhambra.

What are the striking features of: 48. Greek Architecture. 49. Gothic Architecture. 50. Byzantine Architecture. 51. American Colonial Architecture; Southern style. Northern style.

In what way distinguished: 52. Herbert C. Hoover. 53. John Masefield. 54. Mary Antin. 55. Sir Roger Casement. 56. Sir J. Forbes-Robertson. 57. Susan B. Anthony. 58. J. M. Barrie. 59. Lord Kitchener. 60. Stradivarius.

Identify by author or book: 61. Scrooge. 62. Mr. Britling. 63. Jean Valjean. 64. John Ridd. 65. Naaman. 66. The Mad Hatter.

Complete these quotations: 67. Who steals — — steals trash. 68. I'll put a — round the earth in forty —. 69. A fool and — — are soon parted. 70. Procrastination is the — of —. 71. The — of — is the root of all evil. 72. A good — is rather — — — than great riches.

What has drawn especial attention to the following in 1916? 73. Chihuahua. 74. Verdun. 75. Shadow Lawn. 76. Bucharest. 77. Dublin.

What does it grow up to be? 78. A caterpillar. 79. A maggot. 80. A wire worm. 81. A cygnet. 82. An ant lion.

83. What crisis was averted by the Adamson Bill? 84. What is the difference between bonds and stocks? 85. Give the modern name for the Hellespont. 86. Where were the militia sent who were called out last summer? 87. Name the largest university in the world. 88. What is the "Christ of the Andes"? 89. What is a ukulele? 90. If a March hare weighs 3 kilograms and half its own weight, how much does it weight. 91. What method of communicating with Congress has President Wilson revived? 92. Why does a frozen water pipe burst? 93. What fuel is used in the engines of a submarine. 94. What is a man's normal temperature? 95. What is the latitude of the equator? 96. Is a moving picture film a photographic positive or negative? 97. Name the best known humorous weekly published in England. 98. The government of what nation rules in the Holy Land? 99. Is the starboard side of a vessel on your right or left as you stand on deck facing the bow? 100. What is a dinosaur?

Picture all you would have in a motor carriage? Then from the masterly Packard line you may completely realize your ideal

It takes time—and accumulated knowledge and skill—to bring the products of art or industry to their finest and most individual expression.

Back of every great picture—and every great design in automobiles—stands a man or an organization with the faith and force to work out original ideas in new ways.

America's largest staff of automobile engineers, out of a rich, time-tested experience, has created an *unmatched* line of motor carriages—for your Spring selection.

A car for *every taste*—now!

But already certain types are nearing exhaustion—in spite of Packard's forehanded preparation for the greatest automobile year.

A powerful, quick, luxurious Twin-six? Surely, in it you may realize your ideal.

Ask the man who owns one

Twenty distinctive styles of Twin-six motor carriages. Prices, open cars, $3050 and $3500, at Detroit. Packard dealers in all important cities.

THE HARM OF A GERMAN VICTORY

IF Germany and her allies should win the Great War it is improbable that very much territory would actually change hands or that indemnities would be exacted which would outweigh the cost of continuing the war another year or two. Even the conquered lands might find a partial compensation for the loss of political independence in improved administration and enlarged industrial opportunities; especially if annexations were made in eastern Europe at the expense of Russia and the Balkan kingdoms. Of course the influence of Germany and Austria would thenceforth dominate the diplomacy of the world, but why should enlightened neutrals, little concerned about the fine points of prestige and the "balance of power," trouble themselves about that?

The answer is plain to the student of history. Every political event which has taken place since the organization of the national states in the fifteenth and sixteenth centuries has depended upon the attitude of a very few great powers. Small nations, while in diplomatic theory on a plane of equality with the heavily armed powers, are in reality only pawns in the diplomatic game, and their weal or woe depends upon the benevolence or hostility of their great neighbors. The twentieth century "concert of the powers" is usually taken to include Germany, Austria-Hungary, Great Britain, France, Russia, Japan, the United States, and perhaps Italy. It may plausibly be argued that Germany and Austria-Hungary are, on the whole, as well governed in respect to their internal affairs as the other states mentioned. But there is no question that their international influence is almost wholly bad. Great Britain, content with her vast overseas empire, has played a very honorable part in European politics even during the dark days of reaction which followed the overthrow of Napoleon. She was the only European power to protest against Spain's reconquest of South America; she stood alone against the so-called Holy Alliance of Russia, Austria and Prussia to put down constitutional government in continental Europe; she lent her approval to the national struggles of Italy, Hungary, Poland and Greece; under Gladstone's influence she broke away from the unfortunate alliance with Turkey and befriended the cause of liberty in the Balkans; she did more than any other nation to put down the slave trade in Africa and set the example of emancipation in her own colonies; she gave asylum to political refugees from every country and took an active part in the international congresses and conferences and treaties of arbitration by means of which the coming federation of the world is being built up. Great Britain has been frequently cursed by British liberals for misgovernment of her own possessions, but every liberal on the continent of Europe has blessed her for her influence abroad.

The record of France is tainted by the territorial greed of the first and third Napoleons, but, except where her own interests were directly involved, France, like Great Britain, has taken the liberal side. Italy owes her national unity more largely to the aid of France than to that of any other nation, and France as well as England has been a haven for exiled revolutionists and persecuted national leaders. Russia's foreign policy is naturally reactionary because of her autocratic government, but geographical accident has made her the enemy of Turkey and therefore the chief emancipator of the Balkan nations. Italy and Japan have confined their international influence to their immediate vicinity and they have been elevated too recently to the rank of world powers to make possible a just estimate of their foreign policies. But it may be said of Japan that her conduct of her war with Russia and the present war has reached the high water mark of international law. The United States has hitherto abstained from taking any part in European affairs, but her friendly interest in Latin America and in China has greatly promoted both republicanism and democracy.

For the influence of Prussia and Austria no good thing can be said. They were the first enemies of the French Revolution and the organizers of absolutism after Waterloo. They intervened by force of arms to put down free government wherever it showed its head in Europe. They plotted the reconquest of the Latin American republics. They not only opprest minor nationalities which were directly subject to them, but frequently gave diplomatic support to the cause of reaction in Russia. In southeastern Europe their two leading policies are the strengthening of Turkey and the prevention of a league of Balkan nations. Germany was foremost in urging the partition of China, and the record of her troops in the Boxer War was infamous beyond measure; she was obstructive in The Hague Conferences and laughed to scorn every proposal for the limitation of armaments either on land or on sea. Germany and Austria-Hungary have given rulers to nearly every throne in the world, and it is no accident that in such countries as Greece, Spain, Sweden, Russia, Rumania and the Netherlands the conservative parties and the court circles are far more pro-German than the

Drawn for The Independent by W. C. Morris

PIPE DREAMS.

radical and liberal parties. The triumph of the Central Powers in the Great War means that international relations will hereafter be dominated by the principles of monarchy, feudal privilege, military ascendency and *Machtpolitik*. The spirit of Metternich would rule the world. America cannot afford to run that risk.

A DENIAL OF AMERICANISM

IN his second inaugural President Wilson formulated the seven fundamental principles of liberty in which, he says, we have been bred and for which we stand. Six of these will meet with general approval, but the seventh and last is so manifestly false and so absolutely abhorrent to American sentiment that it demands instant repudiation by the people. The President states

> That the community of interest and power upon which peace must henceforth depend imposes upon each nation the duty of seeing to it that all influences proceeding from its own citizens meant to encourage or assist revolution in other states should be sternly and effectually suppressed and prevented.

After making this astounding statement he goes on to say:

> I need not argue these principles to you, my fellow countrymen; they are your own, part and parcel of your own thinking and your own motive in affairs. They spring up native amongst us. Upon this as a platform of purpose and of action we can stand together.

He could hardly have hit upon anything we are less likely to agree with for it involves a direct reversal of our national policy from the earliest times to the present. The United States was the offspring of revolution. It has been the refuge of the revolutionists of all races and they have contributed the finest element in its population. It is the only country that recognizes the right of revolution in its fundamental law and expressly provides that the people shall never be deprived of the means of it by being prohibited from keeping and bearing arms. Thomas Jefferson, the revered founder of the party which Woodrow Wilson purports to represent, said:

> God forbid we should ever be twenty years without such a rebellion . . . What country can preserve its liberties if its rulers are not warned from time to time that this people preserve the spirit of resistance? . . . The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its national manure.

And now shall we, having won our own freedom, refuse our sympathy and aid to those who are struggling against worse tyrants than we ever had? If so the American people must harden their hearts and repudiate their ancestral heritage. They have hitherto been ready to lend a hand to any people fighting to overthrow their kings, nobles or oppressive rulers of any name. The Goddess of Liberty has stood at our eastern gateway holding up her torch to light the world to the way of freedom.

Some of the countries in which influences proceeding from our own citizens have "meant to encourage or assist revolution" are France, Greece, Poland, Ireland, Finland, Hungary, Armenia, Italy, China, Persia, Haiti, Brazil, Nicaragua, Panama and Mexico. Some of these insurrectionary movements failed, others succeeded. Some of them, in our opinion, were righteous causes, others wrong. But there is something in the American heart that responds instinctively to an appeal from an oppressed people anywhere in the world, whether the movement be a wise and deserving one or not. This feeling of chivalry cannot be repressed and we hope that it will never become extinct. How proudly our school children have declaimed "Marco Bozzaris" and "Freedom shrieked when Kosciusko fell," and Wendell Phillips' oration on Toussaint l'Ouverture. But if Woodrow Wilson has his way all such utterances will hereafter be repressed as calculated to cause the crowned heads of Europe to lie uneasily. No more would a Kossuth or a Kropotkin, a Palma, a Garibaldi, or a Sun Yat-sen be allowed to tour the states and collect funds for his cause.

Not only have our people been prompt to grant such encouragement and assistance, but our government has officially lent its support to various popular insurrections.

President Johnson aided the Mexican revolutionists to overthrow the Emperor Maximilian and President Wilson aided the Mexican revolutionists to overthrow President Huerta. Cuba and Panama owe their independence to the United States. So, indeed, do all the twenty Latin American republics, for our Monroe Doctrine insured the permanent triumph of their rebellion against Spain. None of our political leaders seems to have heard of this principle of non-intervention which Mr. Wilson supposes has been one of the seven points of Americanism from the foundation of the republic. Looking over the presidential platforms of the Democratic and Republican parties we find that they have many times given encouragement to nationalistic movements. Expressly mentioned in these platforms are the Nicaraguans, Cubans, Hawaiians, Mexicans, Irish, Boers, Jews and Armenians.

President Wilson's statement falsifies American history as well as misrepresents American policy. It would do incalculable harm to the world if it should be adopted as our policy. Let us take a case in point. Suppose that the German people should rise to overthrow the Hohenzollerns and establish a republic. Would President Wilson regard it as his duty to see to it that all influences proceeding from our citizens meant to encourage or assist such revolution "be sternly and effectually suppressed and prevented?" Would it not, on the contrary, be the duty of every American to give such a movement every assistance in his power as the best means to establish a permanent peace? If the revolution of 1848 had succeeded the Great War would have been prevented. It failed. America gained thereby such useful citizens as Carl Schurz, but Germany, by losing her republicans, became an unbalanced autocracy, dangerous to the world. If ever such an opportunity should occur again we believe that many of the descendants of the '48ers living among us would return to help free their Fatherland, and we know that every true American would pray for their success.

THUS PASSES THE FILIBUSTER

THE President spoke by the card when he said as the Sixty-fourth Congress came to an end, "The Senate of the United States is the only legislative body in the world which cannot act when its majority is ready for action." The Senate has always had some ridiculous —and mischievous—rules and practises. The most absurd, and at times the most dangerous, was the absence of any rule by which the body could bring a matter to a vote when the majority believed that it had been debated long enough. Such a rule is indispensable to effective transaction of business in any legislative body.

The Senate has always clung to the practise of permitting any senator to talk on any measure just as long as his inclination dictated and his physical endurance permitted. The result was on occasion the filibuster, which consisted in the "talking to death" of a bill or resolution by a senator or group of senators. Obviously the best time for such a maneuver was the end of a session. If the Senate was obliged by constitutional limitation to adjourn at a certain day and hour, and if a few senators could occupy all the time before adjournment with talk, relevant or irrelevant, wise or foolish, obviously the measure to which they were opposed could be defeated by the simple device of preventing it from coming to a vote.

This is precisely what happened, in peculiarly disgraceful form, in the session just ended. "A little group of wilful men," in the President's phrase, already in a fair way to become historic, prevented, by the sheer force of obstinacy and recalcitrance, the overwhelming majority of the Senate from doing what they, the President, the unanimous House and the country wanted done.

But it never can happen again. The Senate has come to itself with a start and amended its rules. It has made majority rule possible where before minority tyranny was the only certainty. In the future by a two-thirds vote an end can be put to debate after each senator has been given an hour to speak, if he wants to. It is hardly a drastic closure rule, since it would permit, in the extreme case, ninety-six hours of debate. But, after all, filibustering is the act of a minority, and generally of a very small minority. Its evil effects appear only when a few men consume vast quantities of time in purely dilatory talk.

The passing of the filibuster is a consummation devoutly to be welcomed.

PRIZE MONEY

ONE of the most shocking things about the present war is the reversion to barbaric practices which the world was supposed to have outgrown and the universal approval of acts formerly regarded as abhorrent to Christian principles. For instance it was generally conceded more than a hundred years ago that it was wrong for a belligerent to capture merchant vessels or to confiscate its cargo and efforts were made to abolish the practice by international treaties and by personal refusals to participate in its gains. Quakers and Scotch Presbyterians were strongly in opposition to the custom. The town council of Edinburgh past an ordinance

Forbidding the purchase of prize goods under pain of losing the freedom of the burgh forever, with other punishment at the will of the magistrate; the practice of making prizes being contrary to good conscience and the rule of treating Christian brethren as we would wish to be treated; and such goods are not to be sold by any godly men within this burgh.

Nowadays all the belligerents seize merchant ships of their enemies and sell the cargoes without scruple. Even neutral shipping is not safe from seizure or sinking. The godly men of Edinburgh would not think of boycotting such goods. Some of the Quakers are still reluctant to bear arms, but they are silent now on the question of maritime prizes. The most conscientious of objectors does not object to it. The whole population partakes of the profits since privateering had been abolished. If America goes into the war we should be as bad as the rest. Even in thinking about it we find ourselves hampered not by our own consciences but by the consciences of our ancestors. The treaty of 1799, the act of 1819, the declaration of 1856 rise up like ghosts of the past to check and reproach us.

VARIETIES OF PACIFISM

FEW things are more amusing than to stir up a real militarist or an excitable patriot with a few carefully mischosen words on pacifism and then stand back and watch the fireworks. All persons opposed to preparedness or an aggressive foreign policy are, you learn, non-resistant poltroons who delight in being trampled on and would be "too proud to fight" if a foreign army should suddenly come boiling over the frontier headed directly for their wives and children (for further particulars see any outburst of our volcanic ex-President).

Now since we have the assurance of so many worthy gentlemen that this type of pacifist is what is ruining the nation, it is somewhat strange that we who count scores of ultra-pacifists among our friends and acquaintances have never met one of that sort. It is true that we once met a lady who opposed all foreign wars quite consistently, condemning the action of Belgium equally with that of Germany, but as she favors revolutions and is a militant suffraget with a sympathy for syndicalism, she can hardly be the type that the anti-pacifist has in mind. Indeed, pacifist principles vary not in inverse but in direct ratio with personal courage and truculence. Hardly anybody is for peace at any price, but any particular war will be opposed for any of a number of reasons.

The United States is at the present moment facing a serious prospect of war with Germany. Many persons say that we should under no circumstances enter the present Great War. What are their reasons and their motives? Have they the abstract hatred of violence which is supposed to be regnant in every pacifist breast? How many are Tolstoyan anarchists who think that all force is wicked? Perhaps such people exist; the papers say that they do, but they are very hard to find. Let us summarize the real varieties of pacifists, not in the terms which an enemy would put into their mouths, but in the way they do actually think.

Exhibit A (tall, lanky, bony figure with the appearance of a farmer from somewhere in the Middle West): "You Easterners always turn your minds towards Europe. Look at America a little. No foreign nation could conquer the United States and nobody is going to try, but if we mix in with that European scrap it will mean the death of thousands of us and no good to come from it at all. Let's just keep ourselves to ourselves till things have quieted down a bit across the water."

Exhibit B (smoky red hair and a gray eye alight with the fire of battle; a palpable Irishman): "Ah, they want us to go in with that old tyrant of the seven seas that starved and slew the Irish for generation after generation. It's them Wall Street dudes that's always turning up their trousers here whenever it rains in London that wants war. If it was to fight England now——"

Exhibit C (Russian Jewish type, with a copy of *The Masses* under one arm and a package of no-conscription leaflets under the other): "I tell you what, my friend. The capitalists want world markets and they send us

out to die to fill their money bags. When we fight let us fight against our own tyrants right in this country."

Exhibit D (student, with black ribbon on his eyeglasses and a habit of arguing with his forefinger): "Much may be said for the use of force in civil society, but modern war is quite another thing. It means not only the loss of human life—a deplorable but minor matter—but the halting of all internal reform, the wastage of the resources of civilization, the degradation of the human stock by the destruction of its best types, the suspension of civil liberties and the enthronement of military tyranny. No possible good can counterbalance so many and such manifest evils, and therefore I oppose war under all circumstances."

Exhibit E (an elderly man with the courtly bearing of a stand-pat Senator but an ardent advocate of radical causes): "Yes, it is all right to fight when you have a cause worth fighting for, but national honor or even national existence is not such a cause. Nationality is played out. What difference does it really make whether we speak English or German or Esperanto? The only important thing is the advancement of the common civilization of mankind."

These five wholly different cases are all types of the ultra-pacifists. Not one of the five has any physical or moral aversion to combat and not one of them can be answered by talk about cowardice or supine submission to the country's foe. You must convince the Bryanite or "national isolation" pacifist that it is impossible and undesirable for the United States to abdicate from its responsibilities as a great power and let the "foreigners" make any sort of mess they please of the world beyond the frontiers of this country. You must convince the pro-German or anti-British pacifist that he should forget and forgive the grievances of the past and turn his mind to the problems of the present hour. You must convince the class conscious pacifist that American stands for the political freedom and economic opportunity of all its citizens. You must convince the sociological pacifist that present war is a necessary first step to the establishment of a lasting peace. You must convince the cosmopolitan pacifist that something more than the fate of a nation is at stake, that principles of worldwide importance are involved in the conflict. Unless you address your arguments to the real arguments of real people the only pacifists you will annihilate with your logic or your eloquence will be men of straw.

HERBERT HOOVER, MASTER OF EFFICIENCY

IF there ever was an efficient job done, it is that of carrying relief to the wretched millions of Belgium. Herbert C. Hoover, the young American engineer who has managed this job, has established beyond a peradventure his right to the title of Master of Efficiency. The ultimate test of efficiency is getting things done. Hoover has met the test day by day for two years and a half and passed it with high honors.

Two stories of his way of getting at things seem well authenticated. They are certainly significant.

The first story was told by Edward Eyre Hunt, one of Mr. Hoover's associates:

On April 10, 1915, a submarine torpedoed one of the food ships chartered by the Commission; a week later a German hydroaeroplane tried to drop bombs on the deck of another Commission ship, so Hoover paid a flying visit to Berlin. He was at once assured that no more incidents of the sort would occur.

"Thanks," said Hoover. "Your Excellency, have you heard the story of the man who was nipped by a bad-tempered dog? He went to the owner to have the dog muzzled.

" 'But the dog won't bite you,' insisted the owner.

" 'You know he won't bite me, and I know he won't bite me,' said the injured party doubtfully, 'but the question is, does the dog know?' "

"Herr Hoover," said the high official, "pardon me if I leave you for a moment. I am going at once to 'let the dog know.' "

The second, concerning a visit to London, was told by Lewis R. Freeman:

Before his organization was fairly on its feet there came a moment when a huge quantity of food was needed immediately to prevent the actual starvation of many thousands of Belgians. The Commission had the food on hand in England, and the "proper" procedure would have been the orthodox one of requesting the Government, via the usual red-taped channels, for permission to move it, a course, however, which Hoover knew only too well would result in a series of delays that would prove absolutely fatal to the success of his plans. The necessary cars were secured by direct application to the railway people, and in record time the supplies were transported to the seaboard and put aboard steamers which had been provided in an equally "high-handed" manner. When the last bag had been stowed and the hatches battened down, Hoover went in person to the one Cabinet Minister able to arrange for the only things he could not provide himself—clearance papers. "If I do not get four cargoes of food to Belgium by the end of the week," he said, bluntly, "thousands are going to die from starvation, and many more may be shot in food riots."

"Out of the question," said the distinguished Minister. "There is no time, in the first place, and if there was there are no goods wagons to be spared by the railways, no dock hands, and no steamers; moreover, the Channel is closed for a week to merchant vessels while troops are transported."

"I have managed to get all of these things," Hoover replied, quietly; "and am now thru with them all except the steamers. This wire tells me that these are now loaded and I have come to have you arrange for their clearance."

The great man gasped. "There have been—there are even now—men in the Tower for less than you have done," he ejaculated. "If it was for anything but Belgian Relief—if it was anybody but you, young man—I should hate to think of what might happen. As it is—er—I suppose there is nothing to do but congratulate you on a jolly clever coup. I'll see about the clearance at once."

The United States has no reason to be ashamed of the splendid work of humanity done by American energy in Belgium. It has every reason to be proud of the American master of efficiency who has directed that work.

THE AMERICAN AMBULANCE

IT is hinted in prominent quarters that if we go to war with Germany it will become the duty of the American Ambulance serving in France and at Salonika —some 400 men operating 350 cars—to return to America. Why? Certainly cases of illness and accident arising from maneuvers here at home could be cared for by new units. Only in case we send an expeditionary force to Europe will there be large need for an ambulance.

Let us suppose that such an expedition is undertaken. It would be six months at least before we could drill and equip a respectable force. An understanding could be had with the French Government that when this force arrives the American Ambulance will be turned over to it *en masse*. It will be a force of trained and experienced men, knowing the country and the conditions they will be called upon to meet.

In the meantime the Ambulance. by aiding the Entente armies, would be helping us more effectively than if brought home now and reduced to comparative idleness for six months. Far from discouraging the maintenance of the American Ambulance abroad at this time, it is the very moment to encourage its growth.

THE STORY OF THE WEEK

The Conquest of Turkey

We can now see the significance and immensity of the plan of the Allies for the Asiatic campaign of 1917. From the northeast all the way around to the southwest Turkey is beset by foes who are advancing on converging lines toward a common point in middle of Asia Minor. Their aim is to take the Bagdad railroad which it has been the ambition and the pride of Germany to construct. In the map published a few weeks ago we showed that Germany had at last been able to carry out her long cherished scheme of connecting Europe and Asia by a chain of allied countries and a thru overland route. The Asiatic part of this gigantic railroad system, which begins at Scutari on the eastern side of the Bosporus and runs to Bagdad, has now been completed with the exception of a stretch along the Tigris and perhaps a few tunnels in the Taurus mountains. Near Aleppo a branch strikes south thru Syria. This divides, one branch going on to Jerusalem and Beersheba in Palestine and the other to Medina and Mecca in Arabia. Now all these three terminals, are likely soon to be in the hands of the Allies, and the Russians threaten to cut the railroad in the middle.

Turkey weakened by war and famine is in no condition to stand the united onslaught of two such powerful enemies as England and Russia. Nor is Germany in a position to lend her aid as she did last year even in the way of munitions and officers. On the contrary a considerable number of Ottoman troops and probably the best of them were transported to Europe to effect the conquest of Rumania. Tho that campaign has been brought to a close probably the Turks now in Rumania will be retained there to hold back the Russians while the Germans concentrate their diminishing forces in France. So far the Turks are giving way on all sides and it does not yet appear where—if at all—they intend to make a stand.

The Capture of Bagdad

The Turks after being dislodged from Kut-el-Amara in the bend of the Tigris fled up the river toward Bagdad closely pursued by the British cavalry on the northern shore and the British gunboats in the stream. From Kut to Bagdad is a little over a hundred miles as the aeroplane flies but much longer if one follows the meanderings of the river. It was expected that the Turks would attempt to establish a new line of defense at the ancient Persian city of Ctesiphon, about twenty miles from Bagdad, because here they halted and turned back the first British expedition on November 22-25, 1915. But this time the retreating troops past thru Ctesiphon without stopping. The British vanguard without meeting any opposition reached the Diala River below Bagdad. Here the Turks tried to make a stand; but could not save the city. After a hard battle lasting three days the British crossed the Diala and drove the Turks back to Bagdad in a blinding dust storm. On Sunday morning, the 11th, General Maude entered the city. While the British were approaching Bagdad from the southeast the Russians were closing in upon it from the northeast, the north and the northwest, while the Arabs, roused to revolt by the British, were attacking from the south. The Russians at Lake Van are less than a hundred miles north of the railroad and caravan route from Bagdad to Aleppo, and if they should reach this line the Turks and Germans in Bagdad would be completely cut off and encircled by enemies, so rather than run this risk they have surrendered Bagdad. This will make the British masters of the Mesopotamian valley, and if they retain it after the war they will be able to carry out the vast irrigation enterprizes which they planned years ago for the purpose of restoring this region to its ancient prosperity when it was the center of the world's civilization.

The Russians like the British have recovered their lost ground and are now back where they were a year ago. They have occupied all the northern part of Persia which was conceded to them by the British in the Anglo-Russian agreement of 1907, and they are now moving toward the Turkish frontier. They have reoccupied Hamadan, which is about 250 miles northeast of Bagdad. This Persian city, the ancient Ecbatana, was taken by the Russians on December 17, 1915, but they were driven out by the Turks in the following August. The Russians have already advanced more than fifty miles beyond Hamadan in the direction of Bagdad and will doubtless soon be able to make connections with the British on the Tigris as they did a year ago, this time probably with more effect.

THE GREAT WAR

March 5—Germans attack at Verdun. Active aerial warfare in France.

March 6—Russians advancing thru Persia toward the Turkish frontier. British invade Palestine and capture Hebron.

March 7—Irish Nationalists demand Home Rule. Chinese Government favors joining the Allies.

March 8—French regain trenches in Champagne. Count Zeppelin dies.

March 9—British defeat Turks at Diala River, eight miles of Bagdad.

March 10—British occupy ground evacuated by Germans before Bapaume. Austria declares Albania autonomous as an Austrian protectorate.

March 11—British enter Bagdad. Ambassador Gerard arrives in United States.

THE ANGLO-RUSSIAN CONQUEST OF TURKEY

The Ottoman Empire is being attacked simultaneously from the north, south, east and west. The British have gone up the Tigris and taken Bagdad. The Russians have come down thru Armenia and Persia and are nearing the Tigris. The British from Egypt have invaded Palestine and threaten Jerusalem. Arabia is in revolt

The Australian Invasion of Palestine

During the winter the British troops in Egypt have been busily engaged in clearing the Turks from the Sinaitic peninsula. This was commonly supposed to be merely a defensive movement for the purpose of protecting the Suez Canal in case the Turks and Germans should repeat their attack. Now, however, it is apparent that the activity in this field was preliminary to more extensive operations beyond, possibly one of the decisive moves of the Asiatic campaign. For the British have not been content with pushing back their

Drawn for The Independent by W. C. Morris

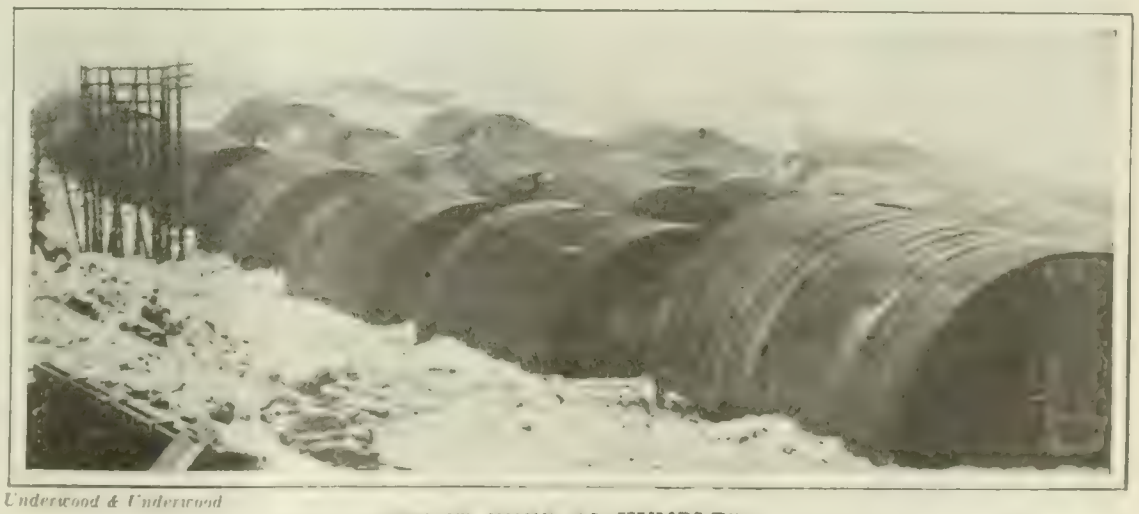
THAT AUSTRIAN NOTE

enemy beyond the Egyptian boundary, but have gone farther and are carrying the war into the enemy's country.

The expedition consists chiefly of the Australian and New Zealand troops with a contingent of Indians. Automobiles and camels seem to be the means of locomotion. They are following in general the same line as was taken by Joshua in his conquest of Palestine. The first place mentioned in the despatches as captured is Beersheba which biblical readers will remember as being the southernmost city of Palestine, at the opposite extreme from Dan. Next the Anzac expedition advanced to El Khalil, which is the ancient Hebron, the home and burial place of Abraham, Isaac and Jacob, and the point from which Moses sent his spies forward into the promised land. Between here and the Dead Sea the Turks had constructed a formidable series of defenses during the last two months, but they abandoned this without a struggle and fell back toward Jerusalem on the approach of the British. The railroad from Beersheba to Jerusalem by which the Turks were retreating was shattered by bombs dropt from the British aeroplanes. The invading column must now be within a dozen miles of Jerusalem and will soon be able to capture or at any rate to bombard that city.

Since the British fleet commands the coast and the Arabs of the desert on the other side have taken up arms against the Turks the British may occupy the whole of Palestine and even Northern Syria.

The Blockade



The Allies have changed their policy in regard to giving out news of the German submarine warfare. Instead of reporting the ships lost each day as was done during the first month they give out information only once a week and even then do not usually give the names of the vessels sunk or any details about them. The first such statement was issued March 7 and covered the week ending March 4, in which twenty-three British merchant vessels were sunk by mines or submarines. Of these fourteen were over 1500 tons. During the same week the number of vessels arriving at British ports was 2528 and the number sailing was 2477, not counting fishing and local craft. The report from Paris for the same week mentions the loss of two merchant vessels and sixteen fishing smacks. The number of merchant vessels entering French ports during the week was 859. From this it appears that the U-boats were not seriously interfering with British and French commerce.

The Norwegian steamer "Storstad" is reported sunk, tho when and where is not stated. She was carrying 10,000 tons of corn from Buenos Aires for Belgium and was duly marked as a Belgian relief ship. Two of the lifeboats, containing thirty men, were lost and the men in the third boat reached shore in an exhausted condition, for they were thirty-six hours afloat in a heavy sea. According to statements of the captain and of the only American member of the crew, J. R. Christian, the submarine fired shells around the boats.

It is now reported that the British transport "Mendi" was sunk after a collision on February 21. She was carrying native laborers from South Africa to France. Twelve Europeans and 191 negroes were saved and ten Europeans and 615 negroes were drowned.

The torpedoing of seven Dutch ships in the English Channel has caused trouble between Holland and Great Britain, for the Dutch not only blame the Germans for attacking them but the British for not protecting them. Since then the Dutch have kept their ships in their own ports, much to the disgust of the English, who threaten to seize the Dutch ships in British ports unless the embargo is lifted. The Dutch refuse to allow armed merchant ships to enter Rotterdam harbor.

American shipowners are complaining that they are not able to secure coal or make repairs in British ports unless they agree to carry munitions.

ANOTHER "LITTLE GROUP OF WILLFUL MEN"

For several weeks reports of the Cuban Government's suppression of the revolutionists have alternated rather regularly with news of rebel victories. Ex-President Gomez, instigator of the revolt, has been captured, but his forces still hold Santiago. United States intervention seems necessary, for much property is being destroyed and the lives of American citizens endangered

The Campaign in France

The British have now taken possession of the ground relinquished by the Germans before Bapaume altho we are yet without definite information as to where the new German line of defense is drawn. In the effort to determine this the British are making use of flocks of aeroplanes which are met by those of Germans. In one day, Sunday, March 4, the Germans claim to have brought down eighteen enemy aeroplanes and the British admit the loss of eleven. In February the Germans claim 29 enemy aeroplanes brought down and the British admit the loss of 23 British machines. On the other hand the British airmen claim the destruction or capture of 41 German machines, and the French airmen claim 19 for the month of February, so it appears that the German losses in the air were more than twice as great as those of the Allies.

The new ground acquired by the British is described as a horrible quagmire. It is pitted by the craters of exploding shells and the loosened earth is so soaked by the spring rains that soldiers are swallowed up in the mud. The villages are mere heaps of stone, the wells are filled up and the roads obliterated. Bodies and fragments of limbs in all stages of decay fill the caved-in trenches and dugouts or lie exposed as they are washed out of the mire by the rains. Evidently the Germans could not have held the ground much longer and it will take some time before the British are able to establish themselves there in order to attack the new German lines. To secure this delay was evidently the reason why the Germans secretly evacuated the position they had held so long.

In the middle of February the Germans made a sudden attack on the French lines in the Champagne and took some trenches on Hill 185 and the adjoining farm known as Maisons de Champagne. These lost positions were mostly regained by the French on March 8 in a well planned assault under protection of the curtain of fire by the French artillery.

Cuban Government Triumphant

The United States has been forced to intervene in Cuban affairs to a greater extent than President Wilson had expected in the early days of the rebellion. The American Government lent the full weight of its moral support to President Menocal and the existing Conservative administration and trusted to the regular forces of the Cuban loyalists to suppress the rebellion before intervention became necessary. But the fighting near the city of Santiago, where many Americans and other foreigners live, and the wholesale burning of sugar cane fields by the insurgents forced the American Government to land four hundred marines from warships in Santiago harbor. The task of the American expedition is to protect the lives of foreign residents without taking part with either side in the civil war.

In the meantime the arms of the regular Government were everywhere victorious. The Cuban Congress empowered President Menocal to suspend the guarantees of the national constitution, or, in other words, virtually declared martial law thruout the republic. Full pardon was offered to the rank and file of the insurrectionists but denied to the leaders of the rebellion. On March 7 the Cuban Government announced the capture of the rebel leader Gomez, former President of Cuba, and victory in a great battle in which some three thousand men took part on one side or the other. Nearly three hundred other rebels were taken prisoner with Gomez and a few of the more prominent of these will be forced to stand trial in the Cuban courts. The capture of the city of Santiago by the forces of the Government appears imminent, but even if the city is taken there is danger that the insurgents may carry on a protracted guerrilla warfare in the country districts.

Congress to Meet in April

President Wilson has ordered the Sixty-fifth Congress to convene in special session April 16. Even if no new legislation is undertaken the new Congress will be kept busy for a number of weeks completing the work which its predecessor left unfinished. The armed neutrality bill is not the only important measure still to be considered. The Administration's railroad program, the bill facilitating business combinations for for-

A NEW MAJOR-GENERAL

Former Brigadier-General Hunter Liggett, appointed by President Wilson to fill the vacancy in the grade of major-general caused by the death of General Funston. General Liggett served in Cuba during the Spanish-American War, and later in the Philippine Islands

eign trade, measures of conservation, the measures directed against espionage which passed the Senate but failed of action in the House, amendments to the currency act recommended by the Federal Reserve Board, the bill enlarging the Interstate Commerce Commission, all await final action. Appropriation measures to be considered include the army bill carrying $270,000,000, the sundry civil appropriations, the general deficiency measure, the rivers and harbors bill and the provisions for the military academy. In all, more than five hundred million dollars of appropriations which the Administration deems essential to carry on the work of the Government have yet to be approved by Congress.

It is still uncertain which party will control the House of Representatives and many public men are inclined to consider favorably a non-partizan organization by which one party will secure the speakership and the other party be granted the chairmanship of important committees. The Senate committees will remain substantially as at present. An attempt to remove Senator Stone, of Missouri, from the chairmanship of the Committee on Foreign Relations because of his opposition to the armed neutrality bill failed to secure the assent of most of the Senators. So close is the balance of parties in the House that the recent death of two Representatives has injected a new element of doubt into the situation. The late Representative Michael Conry, Democrat, from New York, will probably be succeeded by another Democrat as soon as an election can be held. The death of Representative Cyrus Sulloway, Republican, will necessitate a new election in New Hampshire. Unless another Republican is returned in his place the Democrats will almost certainly have a majority in the House of Representatives if the members of the House who are attached to neither party do not combine with the Republicans.

Senate Reforms Procedure

The failure of Congress to complete the legislative program of the recent session made it necessary for President Wilson to call an early extra session of the Sixty-fifth Congress. Before doing so, however, he waited for assurances from the Senate that some change in the rules of Senate procedure would be made which would render impossible the recurrence of a filibuster against the armed neutrality bill. Thirty-three senators at once signed an agreement pledging themselves to work for a change in the rules which would enable the majority to fix an hour for the disposing of any bill subject to the rule of one hour to each senator for discussion either before or after the hour was fixed. Many other senators signified their adherence to the proposed reform.

The Senate remained in special executive session and on March 5 the senators who were elected last November took the oath of office. Sixteen new senators were sworn in and twelve others who had been reëlected. The most important business of the special session was the revision of the rules. Six Democrats and five Republicans were selected by their respective party caucuses as a joint committee to consider the question. The most active advocate of the limitation of debate on the committee was Senator Owen, Democrat, of Oklahoma. Both Republican and Democratic party caucuses approved a rule providing that at any time sixteen senators by serving notice in writing on the presiding officer can demand a vote as to whether debate should be limited. Two days later the question is put without debate and a two-thirds vote restricts subsequent debate to one hour for each senator. No amendments or substitutes for the measure in question can be considered after that except with the unanimous consent of the Senate.

By a vote of seventy-six to three the Senate adopted the new rules as formulated by the bi-partisan committee. Several senators who had opposed the armed neutrality bill took advantage of the opportunity which was afforded by the discussion of the rules restricting debate to explain that they were not in favor of filibustering and that they had prevented the enactment of the armed neutrality bill because it had been introduced into the Senate too late in the session to receive the adequate consideration that its importance demanded. Senator La Follette of Wisconsin and Senator Gronna of North Dakota, however, voted against the restriction of debate. Senator Sherman of Illinois, who had not opposed the armed neutrality bill, also opposed any modification of the rules.

Legislatures Denounce Filibuster

The defeat of the armed neutrality bill by the efforts of twelve senators not only stirred the country as a whole but excited particularly bitter controversy in the states represented by the Senate pacifists. All of the senators concerned have been deluged with letters, telegrams and resolutions approving or denouncing their course. In several states the legislatures have considered the national issues involved in the stand taken by their senators. The Missouri legislature, before the result of the filibuster was known, adopted a resolution requesting the representatives of the state in both houses of Congress to support the President.

Drawn for The Independent by W. C. Morris

THE SLAUGHTER OF THE INNOCENTS

In the Wisconsin Senate a resolution was introduced criticizing Senator La Follette's part in the filibuster, but his friends secured a postponement of the vote. A resolution condemning the action of Senator Clapp and the other opponents of the armed neutrality bill passed the Minnesota House with only one dissenting vote. The Iowa House of Representatives refused to consider the censure of Senators Cummins and Kenyon who were active among the pacifist minority in the Senate, and a resolution of censure against Senator Norris of Nebraska was voted down in the state legislature. On the other hand, the Arkansas legislature commended Senator Robinson for supporting the armed neutrality bill and thus by implication condemned the action of his colleague, Senator Kirby. Resolutions in the legislatures of New York and California condemning Senators O'Gorman and Works still await a vote.

States whose senators did not oppose the armed neutrality bill have in several cases formally censured the filibuster. The Ohio legislature adopted a resolution deploring "the situation which has been created by a pitiful minority" and commending the course of President Wilson. The Idaho House of Representatives vigorously condemned the filibuster. The Delaware legislature exprest "deep indignation at those members of the Senate of the United States who failed to support the armed ship bill." The Kentucky Senate went farthest of all and denounced the obstructionist senators as "un-American, disloyal, unpatriotic, traitorous and cowardly." But the Colorado Senate voted down a resolution condemning the filibuster, altho neither senator from that state took part in it.

President to Arm Merchantmen

President Wilson has become convinced that the authority of Congress is not essential to enable him to provide American merchant vessels with defensive armament. The President and some of his advisers at first profest scruples lest an old statute of 1819, which forbade armed resistance by merchant vessels to search, restraint or seizure by public armed vessels of nations in amity with the United States, might restrict the right of the executive to provide armament without a modification of the law. In rebuttal it has been argued that the statute applied to the recognized right of visit and search, but did not apply to unlawful attempts to sink merchant ships without warning, that since we have broken off diplomatic relations with Germany the two nations are not "in amity," and that in any case Germany as a foreign power could not claim the benefits of the domestic legislation of this country except where principles of international law were involved. Secretary of the Navy Daniels has appealed to the newspapers of the nation to keep secret the arming of merchant ships and also the date when armed ships will sail. He has requested the cable companies not to send out news about ships sailing to or from the danger zone and has promised to prevent the wireless stations, which are under the supervision of the Navy Department, from making public such information.

The action of the President in authorizing the defensive arming of merchant vessels makes the issue of peace or war with Germany depend upon the accident of a conflict between a German submarine and an American ship. In view of the announced intention of the German Government to sink all vessels entering the prohibited area at sight, ship captains will treat the approach of any German submarine within these waters as sufficient evidence of hostile intentions and open fire at once. The German Government, on the other hand, regards armed merchant ships as war vessels and considers attacks on its submarines as acts of war.

© International Film

The Austrian Government has sent a note to Washington supporting the German submarine campaign against merchant ships. The Austrian note is very long, summarizing the history of the blockade established by the Central Powers and the retaliatory measures taken by Germany, questioning the right of merchant ships to carry arms from the viewpoint of existing international law, and asserting that "the principle that neutrals in war time also should enjoy the advantages of the freedom of the seas refers only to neutral vessels, not to neutral persons on board enemy vessels." On the whole, the tone of the note is very friendly and it is evidently inspired by a desire to avoid a diplomatic break with the United States. Thus it says that "Austro-Hungarian war vessels are instructed to warn merchantment . . . and to bring into safety the crews and passengers," and goes on to point out that Austro-Hungarian submarines are operating in the Adriatic and Mediterranean seas and that therefore there is little likelihood of any attack on an American vessel by these submarines.

The German Side of It

News from Germany is scant and unreliable since the break in diplomatic relations. No German newspapers or periodicals have been allowed to reach this country for nearly a year except such few copies as could be smuggled thru the British blockade. No letters are past that contain any information about the war or internal conditions. Telegrams that come thru London are of course censored by both the German and the British censors and those that come by wireless from Berlin to Sayville are subjected to German censorship at one end and American censorship at the other. Consequently little reliance can be placed upon what is rumored about Germany in America and about America in Germany.

THE PLOTTERS

Four men, all furthering pro-German conspiracies in this country, were arrested last week in New York and in Hoboken, New Jersey. Two of them, Richard Kalb (right) and Hans Schwartz (left) are suspected in connection with the recent munitions explosions in New Jersey; bombs and high explosives were found in Mr. Kalb's rooms. The other two, charged with instigating anti-British revolts in India, are Dr. Ernest Se Kunna and Dr. Chandra Chakraberty. They admit connection with the German Foreign Office

We have, however, official confirmation of the report of German intrigue with Mexico which the German-American papers were disposed to scout as a ridiculous slander and a British fabrication when it was first revealed by our State Department. Foreign Minister Zimmermann admitted without hesitation that he had taken such action and justified it on the ground that it was a war measure. The following official statement comes direct from Berlin to Sayville, Long Island:

> The decision to begin the unrestricted submarine war February 1 having been taken, an eventual conflict with America had to be considered by reason of its previous attitude. The facts have proved that the surmise was justified, for the American Government immediately after our notification concerning the barred zone broke off diplomatic relations and moreover requested other neutral powers to join in this course of action. In anticipation of this possibility it was not only the right but also the duty of the Government to take measures in time to counterbalance the joining of an additional ally on the side of our enemies.
>
> The Imperial Minister to Mexico was therefore instructed about the middle of January to offer an alliance to the Mexican Government and to arrange the details in case that the United States should declare war against us. The Minister was expressly charged by instruction to take no steps with the Mexican Government before he had obtained the absolute certainty that war had been declared by the United States. It is not known by what means the American Government acquired knowledge of the instructions transmitted by secret ways to Mexico. It seems that treason—and treason it probably is—has been committed on American territory.

Dr. Siegfried Heckscher, of the Foreign Relations Committee of the Reichstag, exprest the opinion that if the United States entered the war a new coalition would be formed of Germany, Japan and Russia to offset the Anglo-American alliance. He said further:

> The excitement in your country over Foreign Secretary Zimmermann's instructions to the German Minister in Mexico is quite incomprehensible to us. They concerned purely precautionary military measures, to become effective only in case the United States declared war on us. They were part of our active mobilization plans in case we were attacked by the United States. A nation surrounded by world enemies as we now are cannot be blamed for viewing the latent enmity of Mexico toward the United States as a possible active asset in case of war.
>
> Did not Mr. Wilson, at a time when the two governments were still formally on a friendly footing, boldly set out to marshal the whole neutral world against us? Then witness the action of the Entente in China

Tornado in Indiana A terrific storm which swept over Indiana on Sunday, March 11, resulted in several deaths and the destruction of more than a million dollars worth of property. The city of New Castle suffered the greatest damage. Here a score of persons were killed and more than a hundred and fifty injured, over three hundred dwellings were wrecked and all communication with the outside world shut off for hours. The business district escaped serious damage. In Wayne County two children were killed and several buildings destroyed. In Cincinnati the tornado took three lives and caused several fires, and it demolished a number of houses in the neighborhood of Dayton, Ohio. Relief work was promptly organized.

The Mexican Election On Sunday, March 11, a general election took place thruout Mexico under the auspices of the Carranza government. First Chief Venustiano Carranza encountered no serious opposition in his campaign for the presidency, but there were some interesting contests for seats in the Chamber of Deputies and the Senate. This was the first election held according to the provisions of the new Mexican constitution which was enacted by the recent constitutional convention at Queretaro. Of course the reason why Carranza had no important rival in the presidential election was that his opponents also opposed the existing de facto government and therefore did not recognize the constitution which it established or the elections which it decreed.

Greater interest attaches to the international relations of Mexico. It is generally believed that Carranza will keep Mexico neutral even if the United States goes to war with Germany, but he has not personally repudiated the suggestion of a German alliance. Mexico continues to place heavy orders in Japan for ammunition, but it is impossible to say whether this is simply a commercial transaction or evidence of some secret political understanding. Large wireless telegraph stations are being established in Mexico.

Cave-Ins Threaten Scranton The inhabitants of a part of the anthracite coal region of Pennsylvania are confronted by a geological menace and a complex legal problem. Extensive coal mining operations have weakened the natural supports of the surface of the ground and therefore there have been numerous cases of subsidence and even an occasional fissure. These surface disturbances have so seriously endangered life and property that a measure known as the Scarlet bill has been introduced into the Pennsylvania legislature to restrict freedom of mining in the interest of persons who live above the excavated area and whose security is threatened by the extension of mining operations. In the past the courts have usually construed mining rights in so liberal a manner as to meet the desires of the coal companies. A small part of the city of Scranton is menaced by surface subsidence and some forty thousand citizens have joined a Surface Protective Association and are conducting an active campaign against unrestricted mining rights.

AMERICA'S CHANCE IN CHINA

BY LI YUAN-HUNG

PRESIDENT OF CHINA

GIVE the people sufficient rice (bread) to eat and you practically settle all the urgent problems facing China today. By developing mines and constructing railroads and increasing trade you provide the people with livelihood. When their livelihood has been insured, there will be no trouble. Thus, you see that in the solution of this economic problem the American people can help us greatly if they will. We want the American people to invest more of their money in profitable enterprises in China and trade with us more extensively and intensively.

PRESIDENT LI

At present the situation in China is very favorable. Of course, news-mongers are busy as ever. They are responsible for rumors of unbelievable nature, but they cannot influence the general trend of events a whit.

I have heard a good deal about the dissolution of Parliament, the dismissal of the Premier and the resignation of the President, but they are rumors, pure and simple. On the contrary, I look upon the future of China with optimism. We are gradually setting our house in order. Peace prevails thruout the breadth and length of this vast country. Provincial contributions pour into the government treasury regularly and the people are content with their present state of affairs, and would be much better off if natural resources still hidden in the ground were systematically developed.

A new chapter of Chinese history has begun, and I am sure to find at the end of 1917 that it will contain less of discord and more of coöperation between different factions and parties. It must be understood that the Chinese Republic is the outcropping of the steady growth of forces which make for economic and political enlightenment in Asia and which work for unity and harmonious coöperation among Chinese leaders.

Not a flash in the pan of some imaginative impulse and inspiration, the Republic of China has been started and has got to stay. Evil-minded people trying to overthrow the Republic will be overthrown in turn.

The task of turning this great agricultural nation, within whose confines there is a fifth of the world's inhabitants, into an industrial one is not easy; but China has at last set her foot on the path of modern progress and will go far on it if she is given time. We are making progress, but what we want is a little time to readjust ourselves to the new order of things and conciliate the new and old forces, which might be utilized effectively in the solution of the urgent economic problem.

How to bend every effort to use this enormous latent power of the millions of our labor for the development of our unlimited resources occupies our sole attention at present. American participation in a commercial way is cordially invited in the development of natural resources, which will ultimately alleviate the sufferings of the people and make China a prosperous nation.

Commercial assistance from the American people could not be unprofitable to the Americans. Our population of four hundred million is now wide awake, and needs modern articles to satisfy its greater economic wants. Mines must be opened and railways built to increase our purchasing power, while the United States needs an enormous market to consume her surplus goods. There can be no question that when sufficiently westernized, China alone will be able to keep all the manufacturers in America busy and buy up all the surplus commodities of the United States.

Peking, China

PRESIDENT LI

BY HOLLINGTON K. TONG

GENERAL LI YUAN-HUNG, who almost lost his life by rejecting Yuan Shih-kai's offer of a princedom, and who is now President of the Republic of China, is a man of medium height, with square shoulders and a deep chest, and his dark hair is shortly cropped. His general features are large, oval and prominent. A man of polished and modestly dignified appearance, President Li has a well-formed mouth, a kindly face and quiet manner, with an ability to put interviewers at their ease. Frank in conversation and simple in tastes, he is unostentatious, sociable and pleasant. He is full of sympathy with the legitimate aspirations of democracy and is truly "The Pillar of State"—a title which the late President Yuan Shih-kai conferred upon him in acknowledgment of his service. President Li is now fifty-three years old. He has held various official positions from that of a non-commissioned officer to that of governor, and discharged all his multifarious duties with credit.

Mr. Tong is a young Chinaman who has studied for several years in this country, first at Park College and then at the University of Missouri. After his graduation from the Columbia University School of Journalism Mr. Tong took a post-graduate course in practical journalism on The Independent. The above article by President Li was obtained by Mr. Tong who is now on the "Peking Daily News." — THE EDITOR.

Born in 1863, General Li is a native of Hupeh, possessing the true characteristics of his fellow provincials—great tenacity of purpose, unexampled bravery and an aptitude for military achievements. Having naturally chosen the military career as his profession, coming as he did from such a martial province, young Li Yuan-hung entered the famous Peiyang Naval College, and after a course of six years graduated with honor. He was soon assigned to a cruiser as a non-commissioned officer.

During the Chino-Japanese war, President Li fought bravely by the side of Admiral Ting-Shih-chang, the Nelson of China. After the war, he attracted the attention of Viceroy Chang Chih-tung, to whose Yamen at Nan-

THE PRESIDENT'S FAMILY

Madame Li believes in practising democracy and in teaching it to her sons and daughters

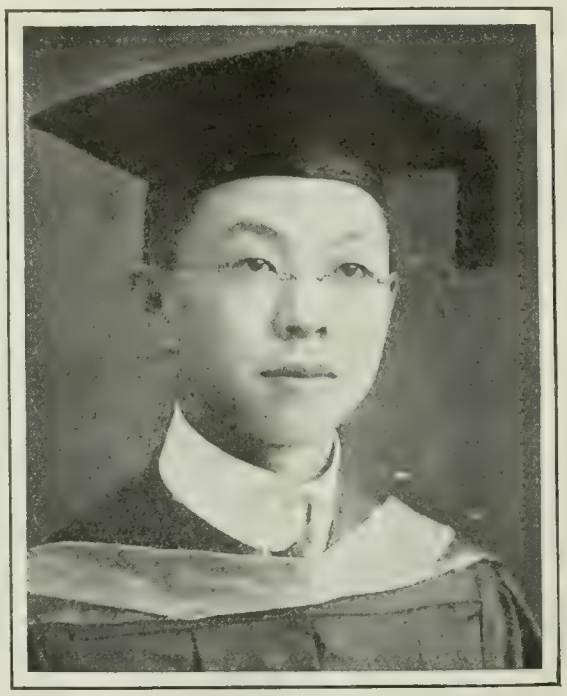
king he was subsequently transferred for the important duty of training troops. When his patron was appointed Viceroy of Hunan and Hupeh, with his headquarters at Wuchang, General Li accompanied him thither to assist in the organization of the army.

President Li went to Japan three times and stayed there from one month to one year, to study fortifications and army organizations at the suggestion of his chief, and on his return, he was appointed a major of cavalry. While serving in the 21st Brigade, he was promoted to the rank of colonel. He was Field Marshal at the great Changteh maneuvers in 1905 which he organized and conducted with great success. He was also general of a division and then of a mixed brigade, being exceedingly popular with his fellow officers on account of his straightforwardness and sincerity.

The outbreak of 1911 brought him forward as the supreme military commander of the revolutionary forces. In that capacity President Li negotiated with Yuan Shih-kai, who had just been recalled to office and power in the great emergency in which the Manchu Government found itself. When the settlement came, Yuan Shih-kai became President of the republic and Li Yuan-hung became Vice-President and Chief of the General Staff. For over a year, they carried on their functions at two different places.

After the conditions in the middle and southern provinces settled, Vice-President Li, at the request of Yuan Shih-kai, came to Peking, and was engaged in the less spectacular side of the administration. In 1915, however, he was made chairman of the State Council, which was advisory in nature and sometimes acted as a parliament, in the absence of the two houses of the Legislature, which it may be remembered, were dissolved by Yuan Shih-kai. When the movement to make Yuan Shih-kai Emperor was started in December, 1916, President Li resigned his chairmanship, as an expression of his disapproval of the movement. Yuan Shih-kai offered to make General Li a prince and actually gave him a princedom with the view of winning him over to the monarchist side. General Li resisted the temptation, great tho it was, and silently stood for republicanism. Standing for republicanism at that time would mean death for him should Yuan Shih-kai's imperialistic efforts succeed.

For his staunch support to the republic, the provinces which revolted against Yuan Shih-kai, elected Li Yuan-hung their President, and the presidential duties were actually trans-



ferred to him by the operation of the Nanking Provisional Constitution, and of the chapter of the Permanent Constitution relating to Presidential Election.

President Li has two sons and two daughters, the younger daughter being engaged to the tenth son of Yuan Shih-kai, the late President of China. The younger son is five years old, born six days before the first revolution. President Li's children are being tutored by a large number of foreign and Chinese teachers of reputation.

My interview with President Li was arranged by Mr. Quo Tai-chi, councillor of the Chinese Foreign Office and private secretary to President Li. Mr. Quo is a Phi Beta Kappa man of the University of Pennsylvania and in him President Li has great confidence. Regarded as the luckiest young man among the returned students from the United States, Mr. Quo has been with President Li for five years already.

Yuan Shih-kai, during his presidential career of four years, left the Palace only twice, heavily guarded by soldiers, and Li Yuan-hung, since his inauguration only eight months ago, has left the Palace to attend graduation exercizes and other functions at least a dozen times, accompanied by a few military attachés and secretaries. The first occasion for Yuan Shih-kai, the late President of China, to leave his palace, was for the worship of Confucius. As he was motoring to the Confucian Temple about four o'clock in the morning, the streets thru which he passed were lined with several rows of soldiers, and soldiers were even stationed on the roofs of houses to prevent assassination. At the opening of the National Assembly last August, President Li freely mixed with members of Parliament and visitors as a common citizen. Such democratic conduct on the part of the ruler of a state in the West is nothing wonderful, but it is considered unusual in the East. In due course of time this example set up by the Chief Executive of China will bear rich fruit and help to spread republicanism and democracy in this vast country.

Peking, China

MR. QUO, THE PRESIDENT'S SECRETARY

CAN A COLLEGE ABOLISH SNOBS?

BY JAMES IRWIN TAYLOR

Mr. Taylor was one of the first sophomores to sign the pledge recently circulated at Princeton "not to join any elective eating club," an attempt at college democratization unique because of the radical reform it proposes and the attention it has attracted. — THE EDITOR.

WHEN five sophomores, leaders of their class, publicly announced in a letter to the *Daily Princetonian* their intention of refusing election to any of the undergraduate social and eating clubs, they threw a bombshell, as it were, into the complacent and self-satisfied little world of Princeton University. The clubs they were thus attacking were long-established institutions in Princeton, that have grown so important in undergraduate eyes that one considers himself a failure if he is not elected to one of them for his junior and senior years. It was therefore an important and bold step that Richard Cleveland, the former President's son, and his four friends took when they decided to cast loose from them.

It is difficult for an outsider to understand completely how questionable the influence of the clubs has been in what has been called a "democratic" university. From the first day of the freshman's life in Princeton the shadow of the club elections in the spring of sophomore year hangs over his head, with all their supposed possibilities of success or failure. All feel it; and many are led astray from their legitimate purpose by it.

Many attempts have been made in the past to modify or break up this system of social snobbery, based on such false standards, for the perspective of time and distance clearly shows its faults; but so far all have been without success.

As now constituted, there are seventeen clubs that include in their membership about eighty-five per cent of the two upper classes. Most of them have magnificent club houses, the values of which total up to very nearly a million dollars. To be one of the fifteen per cent left out of them is to be branded as a failure. Furthermore, there are shades of distinction between the clubs themselves no less pronounced than that between the clubmen and the non-clubmen. The different types of men herd together in the different clubs, thus narrowing seriously the scope of friendship and acquaintanceship that a man may have with others of a different type. Two or three clubs consider themselves the aristocratic clubs; the others are grades successively lower, until in the undergraduate mind the smallest and newest are little better than none at all.

Besides the question of exclusiveness and snobbishness the point of expense and economic value is important. We find that six hundred men are getting their meals (that is the chief function of Princeton clubs) in seventeen different places. Seventeen different plants and establishments are thus made necessary instead of one or two centralized and economically run dining halls. The price of board varies from three to five dollars a week more than the rate charged the two lower classes in the University Dining Halls, where the large number of patrons allows cheaper prices. Each man is required further to contribute fifty dollars as an initiation fee on election. Such are the regular and fixed tariffs, but the men in a club may be assessed additional amounts at different times to cover up unexpected deficiencies caused by wasteful management by the student managers.

It might on the face of it seem that the clubs could better be reformed from the inside by the clubmen themselves. But that has been tried many times in recent years by influential and strong men within individual clubs; even within the present college generation men with the honest purpose of serving Princeton have been defeated by the shortsightedness and jealousy of fellow clubmen. Many of the present senior class sympathize with the move made by the five sophomores and their adherents; some of them have openly showed this by handing in their resignations. It seems likely now that their aims will be accomplished in part at least, for a fair proportion of their class, seventy at least, with some seniors to back them, have come out for this movement; the great majority of alumni, at least of that part of them which has spoken, is urging them to go ahead; the faculty is largely supporting them.

The results of this democratic movement are not clearly to be seen, for altho several practical plans have been put forward as remedies for the situation the inertia of the *status quo* and the selfishness of the clubs may not be dislodged at the present time. But matters will come to head in the club elections to be held in March, and Princeton will show then whether she can be unselfish enough to regain her old time place as the "democratic" university.

Princeton, New Jersey

MR. ALEXANDER

WILL PROHIBITION WORK?

BY CHARLES B. ALEXANDER

"Prohibition: When and Why," published in The Independent of March 5, began a series of articles presenting four important viewpoints on this great question. The Independent believes in prohibition, but it believes even more strongly in free discussion and individual judgment. In this article Mr. Alexander, who is a Regent of New York State University, a trustee of the Fifth Avenue Presbyterian Church, and one of the prominent lawyers of New York City, presents to our readers his plan for a national commission to study the whole liquor problem.—THE EDITOR.

PROHIBITION of the liquor traffic can no longer be regarded as a question of interest and concern merely to individual states of the Union. It has emerged from the somewhat restricted field which it occupied for three-quarters of a century, and has become, all at once, a distinct and definite national issue. It is now proposed, that, by means of an amendment to the Federal Constitution, the traffic in alcoholic beverages thruout the country shall be abolished at one stroke. Such an amendment would require a two-thirds vote in each House of Congress, and then ratification by the Legislatures of three-fourths of the states, to become effective.

The Hobson Prohibition Amendment received considerably more than a majority vote in the House of Representatives some two years ago. Since that time the number of states which have adopted prohibition has increased to twenty-five. There are forty-eight states in the Union, and if Congress should pass a national prohibition amendment, the favorable action by eleven states, in addition to those which have already adopted, or are about to adopt prohibition for themselves, would give the measure the three-fourths necessary. From this it can be seen that prohibition has passed out of the academic stage, even for those states which have heretofore refused to have anything to do with it, and that it is a very concrete proposition for every state, and indeed, for every inhabitant of the United States.

With the recognition of this fact, it is almost startling to realize how little actual knowledge of the drink problem we have in the United States. In a recent issue of The Independent, Mr. Rollin O. Everhart attempted to show that many successful experiments have been made with prohibition in many states, and, indeed, it is probably true that we have more laws on the subject of liquor than any other nation; but the huge masses of statutes piled up in our several states express a fancy for social experimentation rather than well-grounded and carefully considered schemes of legislative control. Even the prohibition laws themselves are singularly incongruous and contradictory. This may be ascribed to the fact that the fundamental facts of the situation are disputed, and nobody really can speak with the weight of authority and positive knowledge. It must be evident then that we cannot proceed further in any direction with safety, until we develop all the data bearing upon the question, by a most thoro-going inquiry, and, as the question is national, the inquiry should be national also, not only in scope, but in form.

It might be undertaken by one of the federal departments, but preferably, I believe, by a commission appointed by the President of the United States, and supplied with abundant means and invested with ample authority to explore the whole field. The value of such an inquiry would be enormous, and, in undertaking it, the United States would be following the road that has been taken by many European nations. Denmark, Norway and Finland have recently investigated the drink question thru official commissions. France and Germany aid with government subsidies, the great societies which keep inquiries going from year to year, and which make reports periodically, and Great Britain in her Board of Control has a body which not only investigates and reports, but also devises and enforces regulations affecting the traffic in alcoholics, and has actually taken over the operation of a number of public houses in various parts of the kingdom.

Since the war began the Russian Government has appointed a special commission on alcoholic beverages, some of whose recommendation, it is understood, have already been enacted into law, and the Swedish Temperance

Commission, an official body, has begun a survey of its country with a view to submitting recommendations to the Government.

Only one attempt has been made to study the drink question in this country on a large scale, and that was by the well-known Committee of Fifty, which published its findings fifteen or twenty years ago. This body performed a service of great value, but its scope was necessarily limited by its unofficial character and by several other circumstances.

That the many and varied aspects of the drink question are not well understood in the United States, can scarcely be contradicted. It would undoubtedly be a primary part of a national commission's task to identify these for the public eye. The purely fiscal side has a very considerable importance, for the public derives about a quarter of a billion of dollars a year from its tax on the production and sale of alcoholic beverages, while the several states and cities receive approximately one hundred millions in addition thru license fees alone, not to calculate the general property tax.

THE distinctly economic phase is also an important one for the total investment in the liquor business represents possibly two billions of dollars, and more than one million persons are employed directly or indirectly. If this enormous interest is to be extinguished without compensation, can that be reconciled with our ideals of equity and justice? If compensation is to be made, how shall it be adjusted, and how shall we arrange for it? Socially and scientifically there is, of course, abundant material to be gathered, while the matter of enforcement of prohibitory regulations presents a great police problem in itself. Doubtless much valuable data could be gathered in the study of the workings of prohibition in this country, and the methods of promoting temperance adopted by other nations.

These are but a few of the many angles presented in a hasty glance at the situation.

The manner in which the Federal Constitution may be amended has some bearing upon the general question, and lends considerable emphasis and weight to the suggestion of a thoro inquiry before the nation is committed irrevocably in any direction. The framers of the Constitution, desiring to protect the states with few inhabitants against possible invasions of their rights by the more populous states, devised the scheme whereby ratification by three-fourths of the whole number is necessary to effect a change in the organic law. It is probable that none of them anticipated, or could have pictured to themselves, a time when three-fourths of the states would have actually less population than the remaining one-fourth. Statistics show that, however, is the case today.

The one-fourth with more than half of the population of the Union and with wealth and commercial interests and activities in even greater proportion have not looked with favor upon prohibition. In the other group are the prohibition states present and prospective, and those in which prohibition sentiment is said to be strongest at the present time.

OBVIOUSLY, then, there is more than a possibility that an actual minority of the population may be able to decide for the whole nation a course of treatment of a question upon which the opinion of mankind has been divided for ages, and, moreover, may definitely force its will, in a social matter, upon a body of people far greater in wealth and population, and much further developed in modern business ways. It need scarcely be pointed out that very grave perils to the country as a whole might underlie such a situation.

The case is made the stronger when it is remembered that the ratification of a constitutional amendment is accomplished by the legislatures of the several states, and not by votes of the people thereof. It is not disparaging the legislator to say that he cannot be as free an agent as an individual voter. He is necessarily bound somewhat by precedent and by the existing situation. A legislator in a prohibition state regardless of his personal view would be inclined to vote prohibition for the country. This disposition to acquiesce in the exprest sentiment of his community and to aid in carrying it to a logical conclusion is not singular, and is not altogether uncommendable.

It is only fair to point out that, since the decision of the Supreme Court of the United States, affirming the Webb-Kenyon law, and thereby declaring the right and power of an individual state to protect itself against the importation of liquor from other jurisdictions, the movement for national prohibtion has weakened in certain quarters. One of the chief arguments for national prohibition was that all the laws a state might enact, and all the pains and penalties it might prescribe, were largely futile when liquor might be shipped into it from any other commonwealth, as an article of interstate commerce. Now, however, that a state, according to the Supreme Court, may take liquor out of interstate commerce, so far as itself is concerned, this argument loses its force. It may be imagined that the South with its predilection for state rights will not now be as anxious to force one of its "peculiar institutions" upon the rest of the nation.

On the other hand, the militant prohibitionists are not disposed on this account to relax their efforts to capture the whole country. They have the dramatic advantages, having recently won a series of striking successes, and having more than half of the whole number of states under their banners. The Webb-Kenyon decision may indeed—as some think it will—add to the psychological force of their appeal for popular favor.

THESE circumstances should add weight to the suggestion of a thoro investigation before the final step shall be taken. Even the prohibitionist can scarcely object with logic to such a course. For if his theory be correct, an investigation should serve to strengthen and confirm it with the public. And again, there is a grave danger, from his standpoint, in hurrying forward a measure which however desirable, can not, if improperly adjusted to existing exigencies, possibly fail to produce great complications, dissension and reaction.

The goal at which we are aiming must always be kept in mind, and we must satisfy ourselves that the method we shall finally adopt will bring us to that goal. If the President should be authorized to name a Federal Commission of Inquiry, he would select members with scientific attainments, with broad human sympathies, with knowledge of political and legal conditions, and of judicial temperaments. Of course, he would not choose any persons affiliated with the liquor interests or with the more radical wing of anti-liquor propagandists. He would, in short, appoint a commission of such standing as would go far toward winning public support to whatever it might recommend for the solution of this great problem.

FLOWERS

BY MARGUERITE WILKINSON

In all her life no one had sent her flowers.
The little sallow child with bulging eyes
Had never known a gift of dandelions
As the shy favorite of a freckled boy.
The girl with stooping shoulders and flat breast
And strained, uncertain manner had never held
Close to her lonely lips blue violets
Sent by a young lad on a day in spring.
Tho she was sweet and sound and strong of heart
No one had dreamed, no one had loved that beauty
While her poor thwarted body might deny it. . . .

But, to be sure, her family is well known
And now that she is cold within her coffin
She wears a cloak of roses and of lilies.
In all her life no one had sent her flowers. . . .

EIGHT GREAT SHORT STORIES

From American Literature

With Introductions by FREDERICK HOUK LAW

THE MASQUE OF THE RED DEATH

BY EDGAR ALLAN POE

EDGAR ALLAN POE has been called "The Father of the Short Story." In a criticism of Hawthorne's tales, in *Graham's Magazine* in 1842, he first pointed out the characteristics of the ideal Short Story: brevity; single effect; direction of every part to a preëstablished design; verisimilitude, and finality.

Poe was born in 1809, five years later than Hawthorne. Educated in England and at the University of Virginia, spending some time at West Point and in the United States Army, and living in Richmond, Philadelphia and New York, as editor of literary publications, he was under far different influences than was the gentle soul of Hawthorne. His life was one of struggle and misfortune. Like the Prince in "The Masque of the Red Death," "he had a fine eye for colors and effects. He disregarded the decora of mere fashion. His plans were bold and fiery, and his conceptions glowed with barbaric lustre. There are some who would have thought him mad."

Unlike Hawthorne, Poe cared everything for artistic effect and little for moral. In his great number of brilliantly original poems and tales he wrote in the most artistic manner and almost always on gloom or terror. In subject he followed a fashion of the times, for Horace Walpole, Matthew Lewis, Ann Radcliffe, Shelley and Coleridge in England; Ernst Hoffmann, Ludwig Tieck, Goethe and Friedrich Fouqué in Germany; and Irving and Hawthorne in the United States had written along similar lines. Poe was chiefly influenced by Hoffmann and Tieck, who had discovered that mental terror is more effective than physical. He took the common theme, adopted the German method, and with originality and force entirely new, wrote tales whose like had never been seen. Both genius and artist, he created as if by magic, and wrought with all the technique of a master.

"The Masque of the Red Death" has all the characteristics prescribed for the Short Story. In its account of seven rooms with differing colors and lights it is a fugue, repeating effects in new and varied ways, giving enrichment and power, and rising to supreme climax. In reading it one is conscious of rich connotative effects, of a symbolic play of color, of a medley of fantastic figures, of "a multitude of dreams"—all combining harmoniously into one strange theme, "The Red Death." If Poe had in mind that the masquers are the people of earth and that neither iron doors nor revelry and laughter can shut out death he did not give the idea expression. For him the effect was everything. His words are chosen as if for a poem; his sentences sway and swing like music; his descriptions of the abbey, of the symbolic rooms, of the weird masque, are rich and full. Little by little the story rises to climax until, with a crash of final chords, it ends, and the Red Death is said to hold dominion over all. In glow of color and totality of effect, "The Masque of the Red Death" is picture, music and writing combined in one.

EDGAR ALLAN POE

"Listening to Inspiration," a statue of Poe by the American sculptor, Sir Moses Ezekiel. It is to be erected in Baltimore

THE "Red Death" had long devastated the country. No pestilence had ever been so fatal, or so hideous. Blood was its Avatar and its seal—the redness and horror of blood. There were sharp pains, and sudden dizziness, and then profuse bleeding at the pores, with dissolution. The scarlet stains upon the body and especially upon the face of the victim, were the pest ban which shut him out from the aid and from the sympathy of his fellow-men. And the whole seizure, progress and termination of the disease, were the incidents of half an hour. But the Prince Prospero was happy and dauntless and sagacious. When his dominions were half-depopulated, he summoned to his presence a thousand hale and light-hearted friends from among the knights and dames of his court, and with these retired to the deep seclusion of one of his castellated abbeys. This was an extensive and magnificent structure, the creation of the prince's own eccentric yet august taste. A strong and lofty wall girdled it in. This wall had gates of iron. The courtiers, having entered, brought furnaces and massy hammers and welded the bolts. They resolved to leave means neither of ingress nor egress to the sudden impulses of despair or of frenzy from within. The abbey was amply provisioned. With such precautions the courtiers might bid defiance to contagion. The external world could take care of itself. In the meantime it was folly to grieve, or to think. The prince had provided all the appliances of pleasure. There were buffoons, there were improvisatori, there were ballet-dancers, there were

musicians, there was Beauty, there was wine. All these and security were within. Without was the "Red Death."

It was toward the close of the fifth or sixth month of his seclusion, and while the pestilence raged most furiously abroad, that the Prince Prospero entertained his thousand friends at a masked ball of the most unusual magnificance.

IT was a voluptuous scene, that masquerade. But first let me tell of the rooms in which it was held. These were seven—an imperial suite. In many palaces, however, such suites form a long and straight vista, while the folding doors slide back nearly to the walls on either hand, so that the view of the whole extent is scarcely impeded. Here the case was very different, as might have been expected from the duke's love of the *bizarre*. The apartments were so irregularly disposed that the vision embraced but little more than one at a time. There was a sharp turn at every twenty or thirty yards, and at each turn a novel effect. To the right and left, in the middle of each wall, a tall and narrow Gothic window looked out upon a closed corridor which pursued the windings of the suite. These windows were of stained glass whose color varied in accordance with the prevailing hue of the decorations of the chamber into which it opened. That at the eastern extremity was hung, for example, in blue—and vividly blue were its windows. The second chamber was purple in its ornaments and tapestries, and here the panes were purple. The third was green thruout, and so were the casements. The fourth was furnished and lighted with orange—the fifth with white—the sixth with violet. The seventh apartment was closely shrouded in black velvet tapestries that hung all over the ceiling and down the walls, falling in heavy folds upon a carpet of the same material and hue. But in this chamber only, the color of the windows failed to correspond with the decorations. The panes here were scarlet—a deep blood color. Now in no one of the seven apartments was there any lamp or candelabrum amid the profusion of golden ornaments that lay scattered to and fro or depended from the roof. There was no light of any kind emanating from lamp or candle within the suite of chambers. But in the corridors that followed the suite there stood, opposite to each window, a heavy tripod, bearing a brazier of fire, that projected its rays thru the tinted glass and so glaringly illumined the room. And thus were produced a multitude of gaudy and fantastic appearances. But in the western or black chamber the effect of the fire-light that streamed upon the dark hangings thru the blood-tinted panes was ghastly in the extreme, and produced so wild a look upon the countenances of those who entered, that there were few of the company bold enough to set foot within its precincts at all.

IT was in this apartment, also, that there stood against the western wall a gigantic clock of ebony. Its pendulum swung to and fro with a dull, heavy, monotonous clang; and when the minute-hand made the circuit of the face, and the hour was to be stricken, there came from the brazen lungs of the clock a sound which was clear and loud and deep and exceedingly musical, but of so peculiar a note and emphasis that, at each lapse of an hour, the musicians of the orchestra were constrained to pause, momentarily, in their performance, to harken to the sound; and thus the waltzers perforce ceased their evolutions; and there was a brief disconcert of the whole gay company; and, while the chimes of the clock yet rang, it was observed that the giddiest grew pale, and the more aged and sedate passed their hands over their brows as if in confused reverie or meditation. But when the echoes had fully ceased, a light laughter at once pervaded the assembly; the musicians looked at each other and smiled as if at their own nervousness and folly, and made whispering vows, each to the other, that the next chiming of the clock should produce in them no similar emotion; and then, after the lapse of sixty minutes (which embrace three thousand and six hundred seconds of the Time that flies), there came yet another chiming of the clock, and then were the same disconcert and tremulousness and meditation as before.

But, in spite of these things, it was a gay and magnificent revel. The tastes of the duke were peculiar. He had a fine eye for colors and effects. He disregarded the *decora* of mere fashion. His plans were bold and fiery, and his conceptions glowed with barbaric lustre. There are some who would have thought him mad. His followers felt that he was not. It was necessary to hear and see and touch him to be *sure* that he was not.

HE had directed, in great part, the movable embellishments of the seven chambers, upon occasion of this great *fête;* and it was his own guiding taste which had given character to the masqueraders. Be sure they were grotesque. There were much glare and glitter and piquancy and phantasm—much of what has been since seen in *Hernani*. There were arabesque figures with unsuited limbs and appointments. There were delirious fancies such as the madman fashions. There were much of the beautiful, much of the wanton, much of the *bizarre*, something of the terrible, and not a little of that which might have excited disgust. To and fro in the seven chambers there stalked, in fact, a multitude of dreams. And these—the dreams—writhed in and about, taking hue from the rooms, and causing the wild music of the orchestra to seem as the echo of their steps. And, anon, there strikes the ebony clock which stands in the hall of the velvet. And then, for a moment, all is still, and all is silent save the voice of the clock. The dreams are stiff-frozen as they stand. But the echoes of the chime die away—they have endured but an instant—and a light, half-subdued laughter floats after them as they depart. And now again the music swells, and the dreams live, and writhe to and fro more merrily than ever, taking hue from the many-tinted windows thru which stream the rays from the tripods. But to the chamber which lies most westwardly of the seven there are now none of the maskers who venture; for the night is waning away; and there flows a ruddier light thru the blood-colored panes; and the blackness of the sable drapery appals; and to him whose foot falls upon the sable carpet, there comes from the near clock of ebony a muffled peal more solemnly emphatic than any which reaches *their* ears who indulged in the more remote gaieties of the other apartments.

But these other apartments were densely crowded, and in them beat feverishly the heart of life. And the revel went whirlingly on, until at length there commenced the sounding of midnight upon the clock. And then the music ceased, as I have told; and the evolutions of the waltzers were quieted; and there was an uneasy cessation of all things as before. But now there were twelve strokes to be sounded by the bell of the clock; and thus it happened, perhaps, that more of thought crept, with more of time, into the meditations of the thoughtful among those who reveled. And thus, too, it happened, perhaps, that before the last echoes of the last chime had utterly sunk into silence, there were many individuals in the crowd who had found leisure to become aware of the presence of a masked figure which had arrested the attention of no single individual before. And the rumor of this new presence having spread itself whisperingly around, there arose at length from the whole company a buzz, or murmur, expressive of disapprobation and surprize—then, finally, of terror, of horror, and of disgust.

In an assembly of phantasms such as I have painted, it may well be supposed that no ordinary appearance could have excited such sensation. In truth the masquerade license of the night was nearly unlimited; but the figure in question had out-Heroded Herod, and gone beyond the bounds of even the prince's indefinite decorum. There are chords in the hearts of the most reckless which cannot be touched without emotion. Even with the utterly lost, to whom life and death are equally jests, there are matters of which no jest can be made. The whole company, indeed, seemed now deeply to feel that in the costume and bearing of the stranger neither wit nor propriety existed. The figure was tall and gaunt, and shrouded from head to foot in the habiliments of the grave. The mask which concealed the visage was made so nearly to resemble the countenance of a stiffened corpse that the closest scrutiny must have had difficulty in detecting the cheat. And yet all this might have been endured, if not approved, by the mad revelers around. But the mummer had gone so far as to assume the type of the Red Death. His vesture was dabbled in *blood*—and his broad brow, with all the features of the face, was sprinkled with the scarlet horror.

When the eyes of Prince Prospero fell upon this spectral image (which, with a slow and solemn movement, as if more fully to sustain its *rôle*, stalked to and fro among the waltzers) he was seen to be convulsed in the first moment with a strong shudder either of terror or distaste; but, in the next, his brow reddened with rage.

"Who dares"—he demanded hoarsely of the courtiers who stood near him—"who dares insult us with this blasphemous mockery? Seize him and unmask him—that we may know whom we have to hang at sunrise from the battlements!"

It was in the eastern or blue chamber in which stood the Prince Prospero as he uttered these words. They rang thruout the seven rooms loudly and clearly, for the prince was a bold and robust man, and the music had become hushed at the waving of his hand.

IT was in the blue room where stood the prince, with a group of pale courtiers by his side. At first, as he spoke, there was a slight rushing movement of this group in the direction of the intruder, who at the moment was also near at hand, and now, with deliberate and stately step, made closer approach to the speaker. But from a certain nameless awe with which the mad assumptions of the mummer had inspired the whole party, there were found none who put forth hand to seize him; so that, unimpeded, he passed within a yard of the prince's person; and, while the vast assembly, as if with one impulse, shrank from the centers of the rooms to the walls, he made his way uninterruptedly, but with the same solemn and measured step which had distinguished him from the first, thru the blue chamber to the purple—thru the purple to the green—thru the green to the orange—thru this again to the white—and even thence to the violet, ere a decided movement had been made to arrest him. It was then, however, that the Prince Prospero, maddening with rage and the shame of his own momentary cowardice, rushed hurriedly thru the six chambers, while none followed him on account of a deadly terror that had seized upon all. He bore aloft a drawn dagger, and had approached, in rapid impetuosity, to within three or four feet of the retreating figure, when the latter, having attained the extremity of the velvet apartment, turned suddenly and confronted his pursuer. There was a sharp cry—and the dagger dropt gleaming upon the sable carpet, upon which, instantly afterward, fell prostrate in death the Prince Prospero. Then, summoning the wild courage of despair, a throng of the revelers at once threw themselves into the black apartment, and, seizing the mummer, whose tall figure stood erect and motionless within the shadow of the ebony clock, gasped in unutterable horror at finding the grave cerements and corpse-like mask, which they handled with so violent a rudeness, untenanted by any tangible form.

AND now was acknowledged the presence of the Red Death. He had come like a thief in the night. And one by one dropt the revelers in the blood-bedewed halls of their revel, and died each in the despairing posture of his fall. And the life of the ebony clock went out with that of the last of the gay. And the flames of the tripods expired. And Darkness and Decay and the Red Death held illimitable dominion over all.

A DAY AT THE OFFICE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

OUR day's work is the measure by which the fates apportion our career. Not genius, nor influence, nor affluence, but a scientific work schedule, makes the great man or the great business. Whoever can order his own day can order his own destiny.

There are three types of mental workers. There are (1) those whose workday is unordered, unfinished and unfinanced; (2) those whose workday is ordered by somebody else for them, on a plan more or less scientific; and (3) those whose workday is ordered by themselves, for themselves, for the business, for the mutual benefit of all concerned. In the first class are the failures; in the second class are the partial successes; in the third class are the big successes, actual or potential. In which class are you?

The standardizing of *mental* operations for brain workers has not yet been accomplished by efficiency engineers. We consider this problem of the highest import. As mental power exceeds manual power, so should mental process outrun and outreach manual process. Your true gage of efficiency is how much and how fast you *think.*

The daily capacity of a tool or machine is the unit of measuring labor—and the mechanic is paid according to his use of this capacity. But the daily capacity of the *mind* is the unit of measuring *management;* and the executive should be paid on the same principle as the mechanic, not for holding a job but for turning out work. A good manager not only regulates people and policies—he originates plans and purposes. A manager who does not produce and execute original ideas for the concern is not a manager, but a foreman. Probably eighty per cent of the office managers of the country are simply foremen, prematurely and unduly exalted.

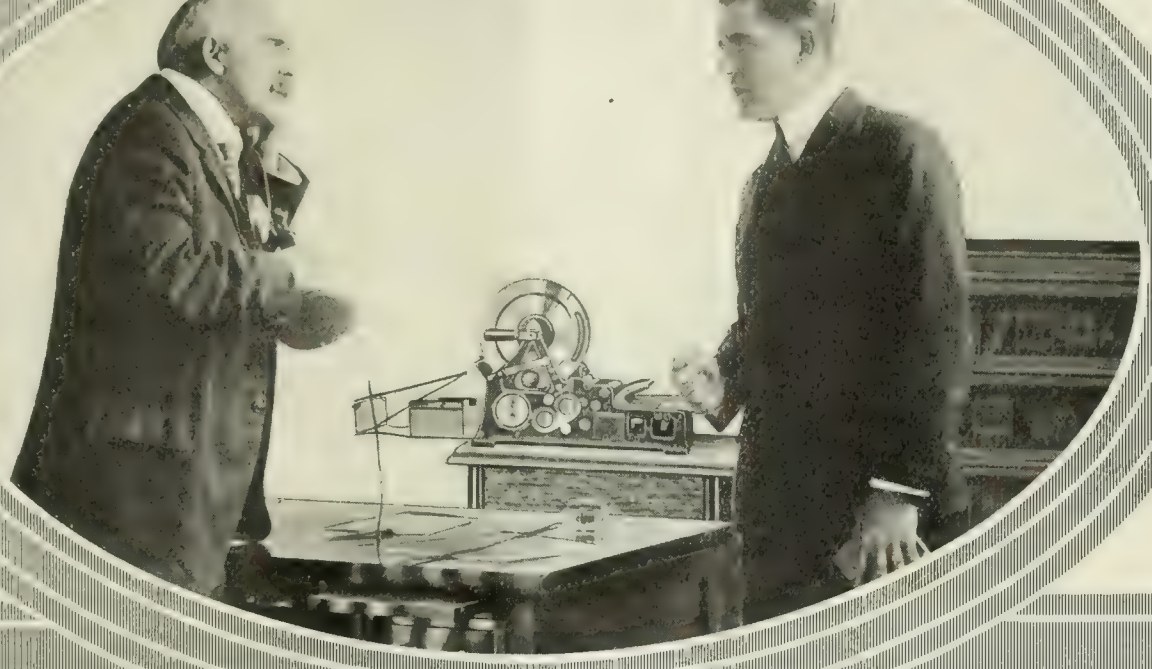
Whoever has charge of a business, an office, or even a desk, should make a thoro study of the ways of standardizing mental operations. There are company and department managers who can do the work of eight hours in three hours. Also, there are managers who, by dint of much hurry and fret and sweat, can do the work of three hours in eight hours. The difference lies in the presence or absence of a scientific work schedule organized and operated by the modern rules of industry, psychology, sociology, hygiene, economy, production and finance.

When I first took charge of an office, many years ago, the work of the manager, being unorganized, consumed about ten hours a day. The "leaks" were prolific, and the overhead ate up the profits. Wages were low, and mistakes many. Nobody was satisfied—nobody, therefore, did his best work. A scientific schedule was evolved, first for the manager, then for each employee. Results: expenses cut, leaks abolished, wages and profits increased together, mistakes prevented—also grouches, and my routine duties done in three hours a day. Since then, I have made a special study of managerial methods, and would here outline the most valuable.

Experiments indicate that the office executive without professional training in office procedure wastes thirty to forty per cent of the time, energy and money he expends on office routine. Why should a manager, because he is a manager, do things a good factory-hand would be ashamed of? Your first move is to find how much you waste.

On the basis of your entire income, figure what each minute of your office time is worth to the company. Then take a sheet of cardboard and rule off six vertical columns. In the first, put all your executive duties and acts, from the least to the largest. In the second, put the average daily time required for each. In the third, put the managerial cost of each (number of minutes multiplied by your salary per minute). In the fourth, put your estimate of the productive value of each item — what the piece of work actually brings the company. In the fifth, put the difference between the cost and the value of each of your jobs, the cost probably exceeding the value of most items. In the sixth and last column, put the annual loss on each item (daily loss multiplied by number of working days a year).

MANAGER'S EFFICIENCY TEST



BY WHICH ANY PERSON HAVING CHARGE OF A BUSINESS, A DEPARTMENT OR A DESK, MAY APPLY SELF ANALYSIS FOR IMPROVED EFFICIENCY

DIRECTIONS. First read Mr. Purinton's article "A Day at the Office." Then grade yourself on the following questions. Where answer is Yes, write numeral 4 in space opposite. Where answer is No, leave space blank. Where answer is partial affirmative, write numeral under 4 that you deem correct. Add numerals for your approximate grade. Queries or problems relating to the article or test will be answered gladly when addrest to Mr. Purinton, care Independent Efficiency Service, 119 West Fortieth Street, New York

1. Is your routine work done in five hours a day? .....
2. Have you figured how much time you waste, by efficiency standards? .....
3. Are you a graduate of a high-class course in business administration? .....
4. Do you know how to standardize a mental operation? .....
5. Have you delegated or divided all duties that a lower-priced man could complete? .....
6. Are you familiar with scientific management as recently applied to offices? .....
7. Is every process of routine planned thruout before execution? .....
8. Do you know that all the timepieces in your place are kept right? .....
9. Have you reduced half your daily interviews to five minutes or less? .....
10. Are you training each employee to be his own critic and supervisor? .....
11. Did you personally select your office desk, chair, pen, files? .....
12. Have you investigated the uses of forty or more office machines? .....
13. Do you subscribe for the business magazines (4) mentioned in this article? .....
14. Have you consulted the Plan and Purchase Department of The Independent? .....
15. Do you own at least four modern books on office administration? .....
16. Is your most exacting work timed for the early morning? .....
17. Have you tried rotation of jobs, to avoid fatigue? .....
18. Are you able to prevent "brain fag," or cure it speedily? .....
19. Do you and all employees follow an office manual carefully? .....
20. Can you get a satisfactory report from any department on five minutes' notice? .....
21. Do all your associates refrain from interrupting you when you are busy? .....
22. Is your daily schedule, accounting for each five-minute period, in satisfactory operation? .....
23. Have you learned efficient eating, from a sane specialist? .....
24. Are you sure that you breathe and exercise properly? .....
25. Can you play hard enough, or dream high enough, to make you forget efficiency a little while each day? .....

Total equals your approximate grade in efficient management

Copyright 1917 by Edward Earle Purinton

Save a day! When printers say "tomorrow" to your call for hurry-up forms, letters, price lists or bulletins, just tell your secretary to have them *mimeographed—"right now"* —five thousand in an hour! No waits for typesetting, cut making, "OK's," or presses—and probably you'll get a better looking job of printing. No overtime to pay for—no promiscuous handling of confidential proofs. Independence! With the mimeograph, not only typewriting but longhand and line illustrations are immediately—flawlessly—duplicated, in your own office. It's easily operated by a typist—and the ways it will serve you are multifold. It makes office duplicating *proof* against printers' delays—and wonderfully economical. Write for booklet "E." A. B. Dick Co., Chicago—and New York.

MIMEOGRAPH
EDISON-DICK

Then add the sixth column, to find complete yearly waste in managerial time.

A second way, simpler than the estimate, is the experiment. See how many minutes you can clip off each group of daily tasks. Before attempting this, read a few books on personal efficiency; or enroll in a mail course on business administration; or employ an efficiency engineer to watch you for several days and offer suggestions. Examples: you should reduce your correspondence period a third or a half, by adopting the new automatic business letter writer, and teaching your secretary to write most of your letters thru a combination of keyed business forms. You should save about eighteen seconds on every telephone call, by means of the automatic telephone system. You should gain a half hour a day by routing your work on a scientific plan, similar to that used in the big factories. You should increase your output and decrease mistakes by regarding the law of energy and fatigue, which demands that certain hours of the day be reserved for your hardest jobs. You should expedite your work by seeing that no friction, confusion, dissatisfaction, or other emotional rubbish gets in the gear of your mental machinery.

BIG MATTERS FOR BIG MEN

A third means of arriving at waste in management is the substitute method. How much of your daily work might be done, should be done, by a lower-priced man? Go over the entire list of your duties and responsibilities, check all that you could now or later delegate or divide, then look around for the right employee to handle each part of your work thus reassigned. The first rule of the man at the top should be this: *Never do what anybody else can do.* Probably half of the letters, calls and interviews that now take your time should be handled by a subordinate. You should be concerned with big matters and big men. Details must be delegated. I have in mind the president of a national organization who was extremely worried by a long line of daily visitors; they had to "see the president," and spent two hours a day calling him away from his real work. He would not offend them, and could not chat with them. An efficiency man was consulted. He picked a member of the president's staff who was friendly, talkative and attractive; told the president how to train the employee as a reception committee; gave the employee a high-sounding title for use among visitors; and returned to the president an hour and a half each day, with everybody satisfied. On every bit of routine work, your continual, exhaustive query should be: "Who else can do this, without loss of business, prestige or good will?" The principle applies to everything, from supervising your help and purchasing your supplies to answering your telephone calls and sharpening your pencils. To do more great work, you must do less little work.

Having appraised your system by one, or all three, of the foregoing methods, you may want suggestions for improving the business and cutting down waste of time, strength and money on the executive side.

1. Locate near your office the desks or departments that you consult or inspect most frequently. Build a straight-line route for all mail and other daily routine matters; then see that the route is followed right, to prevent mistakes and delays.

2. Plan every piece of work from start to finish; time each operation by itself; reduce the time wherever possible; then put each job on your daily schedule for a certain hour; and keep to the schedule.

ABOLISH INTERRUPTIONS

3. Have conferences and interviews by appointment in advance. Do not let your associates or employees break in on you whenever and however they please — most interruptions are needless, and fatal to order and output. Reserve an hour each day for reports, complaints and consultations. Let each worker know just when, and only when, you are available.

4. Try the plan of requesting callers to send you in advance of calling a memorandum stating object and principal points of the desired visit. You can digest this at odd moments, have leading questions prepared in advance for the visitor, and clip several minutes off the interview.

5. Emphasize punctuality. Be on the minute yourself. Earn a reputation for strictness as to promptness. If a man is late in seeing you, don't let the next engagement suffer, but reduce the time allotted the late comer by so much, and explain why. Keep your watches and clocks right—in a big concern the head men often lose several hours a week from chronometers out of gear. You can rent for about four cents a day a guaranteed clock to hang opposite your main entrance and serve as a guide for all clocks and watches in the place; this model clock is daily set with standard time by electricity from clock headquarters.

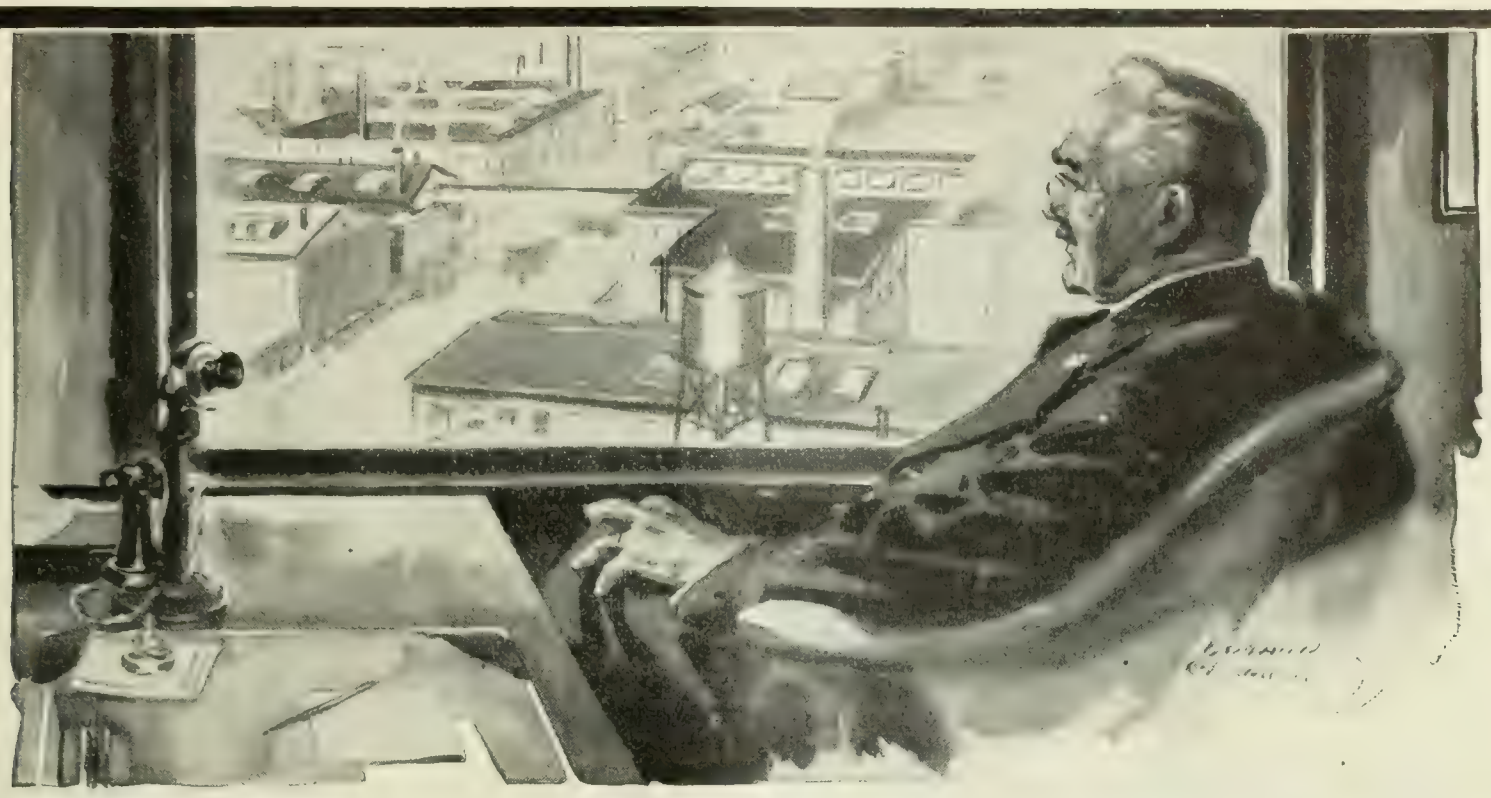
6. Apportion the minimum time for each interview, and put the time on your schedule in advance. Keep the schedule before you, and the caller within his time. The President of the United States limits most callers to five minutes — and some he restricts to three. If he can do it, you can. The secret is habitual concentration plus habitual courtesy.

7. Make a chart of the aptitudes and abilities of your office workers, and evolve a plan to create among them a corps of special assistants for yourself. All employees should be given some responsibility other than mechanical. Train your subordinates to criticize and supervise their own work; I know an eighteen-year-old stenographer who is a more ruthless critic of herself than her employer is of her—and in passing on her own work she saves his time and her feelings.

8. Have your tools and implements not only the best, but the best for you. It will pay you to spend half a day in a big stationery store, and find the pen that exactly suits your hand, your handwriting. Note the number, and keep a supply ahead. Can you work better at a roll-top or a flat-top desk? How many compartments should it have, what kind, how arranged? A single desk manufacturer now produces fifty styles of business desk. Obtain catalogs, and choose the one desk made for you.

9. Be comfortable. Is it a penance, or a privilege, to occupy your swivel chair? How about light, heat, ventilation, drinking water, toilet arrangements—have they been approved by an expert? Are your walls and ceilings bright and cheery? Does your office furniture convey the impression of both solidity and beauty, of elegance with simplicity? Do all your items of equipment harmonize? Efficiency engineers declare that a man works longer, better, more easily, amid proper surroundings; and the way your office looks and feels will be duly reflected in the character and amount of your work. Pride in having all things appropriate is not extravagance but economy.

10. Let each department be an automatic guide on its own production, by means of the proper training and tools. Your work is to check up on totals, having seen first that every total has once reached the maximum. Your stenographer, as illustration, should turn out sixty average letters a day. If she does not her equipment is faulty—either implement, or incentive, or instruction. You will save time if you complain less and coöperate more. When production falls below standard, the first man to regulate is the manager.



USE MORE MACHINES

11. Put more work on office machines. Whatever a machine can do as well as a man, it usually does more rapidly and more cheaply. Almost every office could use to advantage a computing machine, a dictating machine, a duplicating machine, a billing machine, other machines. As all machine operations reduce time and cost of inspection, you may well consider the matter exhaustively.

12. Subscribe for at least four business periodicals, make them a part of your spare time reading. They should include (1) a general business magazine; (2) a personal efficiency magazine; (3) a publication devoted to office work and appliances; (4) the leading journal of your trade or profession.

13. Rotate your duties of management. As the rotation of crops tends to make a healthy, fertile soil, so the rotation of jobs tends to make a healthy, fertile mind. Alternate your mental and manual work thru the day. Don't grind at one sort of labor long enough to dull the cutting edge of your brain. Plan your schedule so you can leave it, go at something altogether different, then come back to the unfinished work.

14. Concentrate most when you feel best, put your crucial tasks of the day at the high tide of your mentality. The

Builds city of 75,000

There is a busy town in the Middle West that has been described as being literally intoxicated with an all-pervading prosperity.

In a short time its population has increased from 13,000 to 75,000. It boasts of 182 men who have made fortunes from $100,000 to $6,000,000.

This boom—this city and fortune building—is the work of one man. Yet, big as this work is, it is only one phase of this man's gigantic enterprises.

Today, he is master of several industries representing an organization of $175,000,000, employing 36,500 men.

This man started in a humble way as an employe in a lumber mill. At twenty-one he said he had mastered the business and was ready for something else.

A cigar factory required bolstering. He gave it new life.

The town water-works were in a bad way. He put them on a sound basis.

Later he organized a carriage company. Then a motor company. In ten years he was a multi-millionaire and was building fortunes for other men.

He knew the underlying principles of business success

Some men will tell you his success was due to a series of "lucky breaks." Others will say he is one of the men who get all the opportunities.

But the fact is, this man started at scratch—he was born with nothing more than most of us are born with.

It was an unusual mastery of big business laws and principles which gave him his advantage—and this grasp of business principles is within the reach of all who have the determination to learn.

The laws of business success do not vary

This man had to master the laws of business before he could become a success. His text book of business knowledge was the experience of others and the facts of his own daily experience. He was able to crystalize these experiences into working principles.

The knowledge he finally gained in this way was the same knowledge that has stood behind every big business success. It is the same knowledge that, when acquired, needs only the personal qualities of determination and energy, to make success sure for anyone. The difference was in the method of learning. Unlike this man most of us need to have these principles crystalized and set down in writing before we can absorb them.

It is this business knowledge, this crystalized experience of thousands of America's most successful men that the Alexander Hamilton Institute is giving to more than 50,000 business men today.

Based on the actual experience of thousands of successful business men

The Institute collects, classifies and transmits to you thru the Modern Business Course and Service, the best thought and practice in modern business. It will give you a thoro and sound training in the fundamental principles underlying all departments of business—it will give you a knowledge that could otherwise be obtained *only* by years of bitter experience—if at all.

The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young men in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; Geo. M. Verity, President of the American Rolling Mills; William H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Company, and scores of others equally prominent.

In the Standard Oil Co., 242 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the General Electric Co., 282; in the Pennsylvania Railroad, 87; and so on down the list of the biggest concerns in America.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Institute. This Advisory Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Jeremiah W. Jenks, the statistician and economist, and Joseph French Johnson, Dean of the New York University School of Commerce.

"Forging Ahead in Business"

A careful reading of this 135-page book, "Forging Ahead in Business," a copy of which we will send you free, will repay you many times over. It will help measure what you know, what you don't know, and what you should know to make success *sure*. This Course and Service will fit you to grasp the opportunities that are bound to come to those who are prepared.

"A cabinet with this capacity would cost more than this desk *and* cabinet."

the Salesmanager's, for example—

There is an Efficiency Desk, equipped with "Y and E" "Short-cut" systems for every business and professional man—for you *personally* and for everyone else in your office. One of these desks will not only cut down expenses for you, but will enable you to do your work better and in less time.

"Y and E" Efficiency DESK

Above we show a typical Efficiency Desk as equipped for the salesmanager of a certain large manufacturing concern, for example.

The upper left-hand drawer contains card record systems by which he keeps in close touch with his travelers, agents, dealers and branches; also territorial consumer records and sales contest summaries. The lower left-hand drawer (for cap- and letter-size vertical systems) holds his file of special reports and of salesmen's applications and correspondence.

The upper right-hand drawer contains card records of contracts and special agreements, the manager's daily reminder, and sales summaries by territories including sales expenses and net profit, also record of employees, salaries, etc. The lower left-hand drawer gives a convenient file for price-lists and catalogs, ads and clippings on his own and competitive lines, follow-up for pending private matters and data on past, present and future selling campaigns.

The center drawer contains a neat arrangement for pins, clips, labels, pencils memo pads, stamps, etc.

Suppose you were a salesmanager—couldn't you work better with a fine desk like this, equipped not only with frictionless drawer-suspension slides and other conveniences but with "Y and E" short-cut efficiency systems laid out for you personally?

There is an Efficiency Desk equipped just as completely for *your* job, whatever that job may be. Write and tell us about yourself and your work and state what work you might possibly like to cover by systems; let us do the rest for you. We try to make our free System Service for customers as satisfactory as our products. Check the coupon and send it in—*today*.

mind, like the sea, ebbs and flows. The full volume of the mind is reached in most people at about 10 a. m., while the ebb usually occurs at 4 to 5 p. m. Don't waste the morning hours from 8 to 11 by seeing after minor details, or doing any sort of mechanical work. Do your thinking, planning, organizing, then.

15. Learn the nature and cause of fatigue, and ways to prevent or cure it. Most "brain fag" is unnatural, unnecessary. Do you grow tired, nervous, confused, irritable, deprest? The cause is probably one of these violations of health: (a) poor ventilation; (b) shallow breathing; (c) faulty posture; (d) tight clothing; (e) lack of system; (f) emotional waste; (g) stomach disorder; (h) mental disturbance; (i) deficient or defective sleep; (j) wrong eating habits; (k) eye strain or derangement; (l) unwise recreation; (m) too little drinking water; (n) too little exercize; (o) constipation and autointoxication; (p) preventable disease; (q) monotony; (r) dislike of work; (s) untrue sex ideation or expression; (t) moral weakness or compromise. You observe these causes do not include "overwork," which is, generally speaking, a myth. Overworking is generally underthinking.

16. Avoid error, waste, confusion by preparing an office manual covering all principles and methods for employees to follow. Have specially typed a supplementary sheet of individual helps and instructions for each worker, with standard of daily performance, and schedule where possible. Make your manual effective by studying first the office manuals of different large corporations.

17. Buy three or four modern books on office administration for yourself. Keep them, study them at home. The past few years have witnessed remarkable developments in your field; the new books on efficient management fully treat of scores of topics that we cannot even mention here. Books named on request.

18. Obtain from the Plan and Purchase Department of The Independent Efficiency Service a compendium of the recent labor and time saving methods and devices, which other managers have used to advantage. The right combination of these will probably save you an hour a day.

19. Keep in close touch with every part of the business machine; first, by daily or weekly reports on all work done, all mistakes and all improvements, all needs and complaints; second, by the interphone system for direct, instant communication with all principal desks; third, by frequent unexpected and informal conferences. Make every worker feel that you are always watching him, not as a spy or slave driver, but as a helper and guide.

20. Be at your desk early. An hour before noon is worth two hours after noon. There is no good reason why a clerk should start business at eight o'clock—and a manager at nine-thirty. When you are cured of the heavy break-

Gymnastic Finger Training at Last Applied to Typewriting

How Stenographers Can Easily Acquire Musicians' Finger Speed

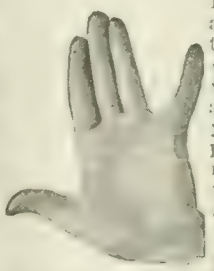
By FRANK J. SIMMONS

IF YOU have ever taken piano lessons, you know that in the beginning your fingers were stiff, stubborn, unwieldy. Perhaps you were "all thumbs." Each finger held itself in its *easiest* position, regardless of what the *correct* position was for piano playing.

Logically, therefore, your first work was confined to the simplest kind of finger exercises—to strengthen the proper muscles for rapid, certain, independent finger action.

Strengthening the finger muscles

Gymnastic Finger Training is a vital and regular part of every musician's work. Teachers in Europe and in America would no more expect pupils to become experts without scientific finger exercises than they would expect them to become experts without the ability to read notes. No one questions the necessity of finger training in music. Yet isn't the need for rapid, certain, independent finger action equally essential in typewriting? *Then why not a system of gymnastic finger training for stenographers?*



Making each finger independent

The reason the average stenographer typewrites only 30 to 40 words a minute is simply because his or her fingers are not quick enough—are not flexible enough—are not independent enough. The expert strikes the keys with amazing rapidity—with perfect accuracy and with remarkable evenness of touch, typewriting at the phenomenal speed of 80 to 100 words a minute because his or her fingers are trained for quickness, sureness and accuracy!

The average stenographer earns but $8 to $10 per week. The expert earns $25 to $40 a week. And the difference in salaries is caused *by the difference in the quantity and quality of finished typewritten work turned out.*

While gymnastic finger exercises for the music pupil have been in existence for centuries, there has never, until recently, been a definite system of exercises designed and prepared specifically for stenographers. Music exercises are different, because they are intended to produce different results. More than this, they are too difficult—it takes too long to master them. What was necessary, obviously, was a system of gymnastic finger exercises prepared specifically to strengthen and limber up the muscles actually used in typewriting—a system which could be mastered quickly and easily and which would give to stenographers the finger control, finger nimbleness and finger independence that is so vital a factor in speedy, accurate typewriting.

In a few days you notice the difference

It remained for Mr. R. E. Tulloss, perhaps the greatest typewriting authority in the country, to prepare just such a system of finger exercises. It is a noteworthy fact that these exercises are practiced entirely away from the machine—at home, in street cars, in spare moments anywhere, and they do not in the slightest degree interfere with your present work. Although new, this method has already enabled thousands of stenographers who never exceeded 30 to 40 words a minute to typewrite 80 to 100 words a minute with perfect accuracy and with amazing ease. Countless business college graduates—thousands of stenographers who have studied "touch" typewriting, and hundreds who studied special typewriting courses have, through these special gymnastic finger exercises, invariably doubled and trebled their speed in typewriting, and almost without exception has resulted in markedly increased salaries.

One case that comes to my mind is that of Mr. I. G. Hipsley, of 109 E. 42nd Street, Chicago, who always wrote at low speed, suffered constantly from headaches and eye strain. Now he typewrites at the rate of 80 words per minute and the relief obtained from headaches which formerly followed a day's work, has been of inestimable value to him. And he is now earning 25% more than he did before taking up the study of finger training.

Then there is the case of Miss Anna S. Cubbinson, who is today filing the position of chief clerk to the Department of Parks in Harrisburg, Pa., and who says that her salary is exactly double what it was when she took up the study of the New Way in Typewriting. Mr. L. L. Powell, of Chanute, Kansas, increased his speed to 90 words a minute and his work became absolutely accurate through the gymnastic finger training exercises prepared by Mr. Tulloss. Mr. Powell's salary was increased almost at once as the result of his increased ability and through it he was able to command positions and promotions so that now he is earning over $2.000 a year. Miss Carrie M. Brown, of Haughton, La., who had no previous knowledge of typewriting, practiced the finger exercises and was soon able to write at the rate of 80 words per minute on new matter and without a glance at the keyboard!

For speed in striking the keys

I could go on and give hundreds of other instances of the remarkable results achieved through the gymnastic finger training, but the School has prepared a remarkable book for free distribution which goes into detail and reproduces many other letters which bear out the claims made. This interesting book shows how the Gymnastic Finger Exercises will make your fingers strong and dextrous, bringing them under perfect control, making them extremely rapid in their movements—and how in a few short weeks you can transform your typewriting and make it easy, accurate and amazingly speedy.

This new method is bringing such marvelous results to others, is proving itself to be so sure a means of quickly increasing salaries, that in justice to yourself you cannot afford to miss the facts as given in the free book which will be sent on request to anyone who cares to have it. There is no charge. Merely mail a post card or letter or the blank form herewith to the Tulloss School, 3823 College Hill, Springfield, Ohio, and your copy will be sent to you by return mail without obligation. Do this *now* before you turn the page, or tear out the address now to remind you.

fast habit, the up-late-at-night habit, and all other habits that result in early morning laziness, you will be on the job at eight o'clock, or sooner. Physical energy is greatest from one to two hours after waking; and if you know how to concentrate, your thinking demands a big volume of energy. Don't waste it by reading trifles in the morning paper, or grumbling at your coffee or potatoes, or oversleeping and becoming enervated.

21. Eat for efficiency. You wouldn't dump a hod of coal into a $5000 automobile and expect to go far on such fuel; but you probably treat your stomach worse—and wonder why you don't get more done, why you are tired, cross and headachey, why so many things go wrong. Your breakfast and luncheon habit makes or breaks your day more than any other one factor. I have personally doubled my day's output of work by the scientific regulation of this one matter. You can take a course by mail in efficient eating—and find your health, energy, buoyancy, vim, largely and rapidly increased.

22. Devote a little time on rising to breathing and stretching exercizes, and a tonic bath, to clear and electrify your brain. But also learn to relax perfectly once or twice a day, for just a few minutes, when business cares and duties press too hard and close. And late in the afternoon, spend an hour if you can renewing brain and body by exercize in the open air.

23. On the basis of the foregoing outline build your daily schedule, with each five-minute period from 8 o'clock till 6 definitely assigned. Experiment, a few days or weeks, until you have a program so finely adjusted as to ensure the daily completion of every task without hurry, and equally without loss of time. A closed desk should always be a clean desk; and the way to guarantee a clean desk every night is to standardize absolutely the regular daily routine. This does not mean rush or nerve strain—you should allow a half hour at least for seclusion without interruption during the day, and a full hour for luncheon. Nor does it mean rigidity of plan—you may leave a few minutes at the close of each hour for delays from interruptions, or a half hour in the late afternoon when all held-over matters can be finished up. Only make your schedule, try it out, certify it, follow it.

24. Set as your goal a five-hour day for routine. Then put the rest of your working hours on building up your business and yourself. Don't be always pointing to the negative pole of your brain. Five hours a day is long enough to squeeze pennies, count motions, fuss over clocks and putty up leaks. Your mind must expand with the new era dawning on the world. Some time each day pry yourself loose from your job long enough to glimpse the great things ahead, and to seize coming opportunities by imagination and resolution. No man was ever supremely effective without inspiration. Your real work is molding tomorrow while managing today.

A MESSAGE

FROM THE

Religious Society of Friends (Quakers) in America

To Our Fellow Citizens:

In this time of crisis when our country's highest good is the common aim of all, we voice this deep conviction of patriotic duty.

We see great hope for the future in that all groups are judging war by moral and spiritual standards. Even its strongest advocates justify the incalculable and tragic cost of war only because they seek to achieve moral and spiritual ends. They would enter this way of sacrifice for the sake of humanity and justice and honor.

We would join in the spirit of sacrifice and would seek the same high ends. We are convinced, however, that such ends can never be achieved by military means.

The cause of humanity can never really be served by methods which array men against their brothers in a spirit of suspicion and hate. Justice cannot be permanently secured by means which prove merely the might, not the right, of a nation. Honor cannot be maintained by the organized slaughter of men by men.

The most precious possession of mankind is the spirit of brotherhood and co-operative service. Without it there is no life worth the living. Civilization advances just in proportion as men act upon a belief in their fellow-men. Since war destroys this spirit of brotherhood which is humanity's greatest possession, it is humanity's greatest foe. True patriotism at this time calls, not for a resort to the futile methods of war, but to an assertion of the constructive principles of good-will.

Good-will is contagious, constructive, healing, irresistible. It is the expression of the Spirit of God in every man. As God is supreme, so good-will is supreme among all the powers which men possess.

Throughout many years of an adventurous belief in the Christian principle of human brotherhood, the Society of Friends has seen the triumph of good-will in all forms of human crisis. We now call our country to a daring reliance upon this supreme dynamic of good-will as the only solution of the present intolerable situation between nations.

The people of every land are longing for the time when love shall conquer hate, when co-operation shall replace conflict, when war shall be no more. This time will come only when the people of some great nation dare to sacrifice the outworn traditions of international dealing and act to make the present what they want the future to be.

The United States can be the nation and this is the time. It is America's supreme opportunity.

Unflinching good-will, no less than war, demands courage, patriotism, and self-sacrifice. To such a victory over itself, to such a leadership of the world, to such an embodiment of the matchless, invincible power of good-will, this otherwise tragic hour challenges our country.

Friends National Peace Committee
20 South Twelfth Street,
Philadelphia, Pa.

It's Not Just "Paint"- it's STONE-TEX

You can't paint brick, stone, concrete or stucco buildings with ordinary paint—and expect the most satisfactory results. A special coating is needed.

STONE-TEX is prepared specifically for masonry surfaces. It gives the walls a **beautiful, uniform, soft-toned finish,** and at the same time renders them **dampproof—rainproof—weatherproof.**

All masonry surfaces, such as brick, stone, concrete and stucco, are more or less porous. Rain, melting snow, sleet and dew are absorbed into the pores, causing a damp condition. The dampness, mingling with the dust from the streets, produces those unsightly streaks and spots that disfigure the building.

Ordinary paints, being intended for wood, offer little resistance to moisture when used on masonry and soon crack, chip or peel off. STONE-TEX, which is a liquid cement coating, enters deep into the pores, fills all hair cracks and makes the walls hard as flint. Because of its dampproofness, it outlasts ordinary paints, retaining its beautiful even finish for years. Suitable for new or old walls and furnished in a variety of pleasing colors.

If your brick, stucco, concrete or stone building is disfigured, or damp and unsanitary, have it **"Stone-Textured"** at once.

Write for Stone-Tex booklet giving full details, colors, etc.

THE TRUS-CON LABORATORIES

124 Trus-Con Bldg. **Detroit, Mich.**

Problems of waterproofing, dampproofing and hardening cement have been the province of the Trus-Con Laboratories for many years. The organization of this well known company includes a corps of expert chemists and chemical engineers, whose advice upon special problems in this field is at your disposal. This consulting service is without charge or obligation.

A Number of Things

by

Edwin E. Slosson

Curious how ignorant some people are of political economy. They cannot understand, for instance, how it is that American potatoes are selling for three cents a pound in London and eight cents in New York. Yet a moment's consideration will disclose the explanation. The scarcity of shipping and the submarine blockade have sent up freight and insurance rates so high that potatoes which otherwise might bring eight cents a pound in the English market have to be sold for three. The difference of five cents may be regarded as covering the cost of transportation to England.

* * *

"Lynch Bryan!" Shouts American Rights Meeting.—*Newspaper headline.*

Has free speech ceased to be one of the "American rights?"

* * *

The papers report the sinking of the Peruvian bark, "Lorton," in the war-zone. It was a bitter dose for Germany when the "Lorton" went down.

* * *

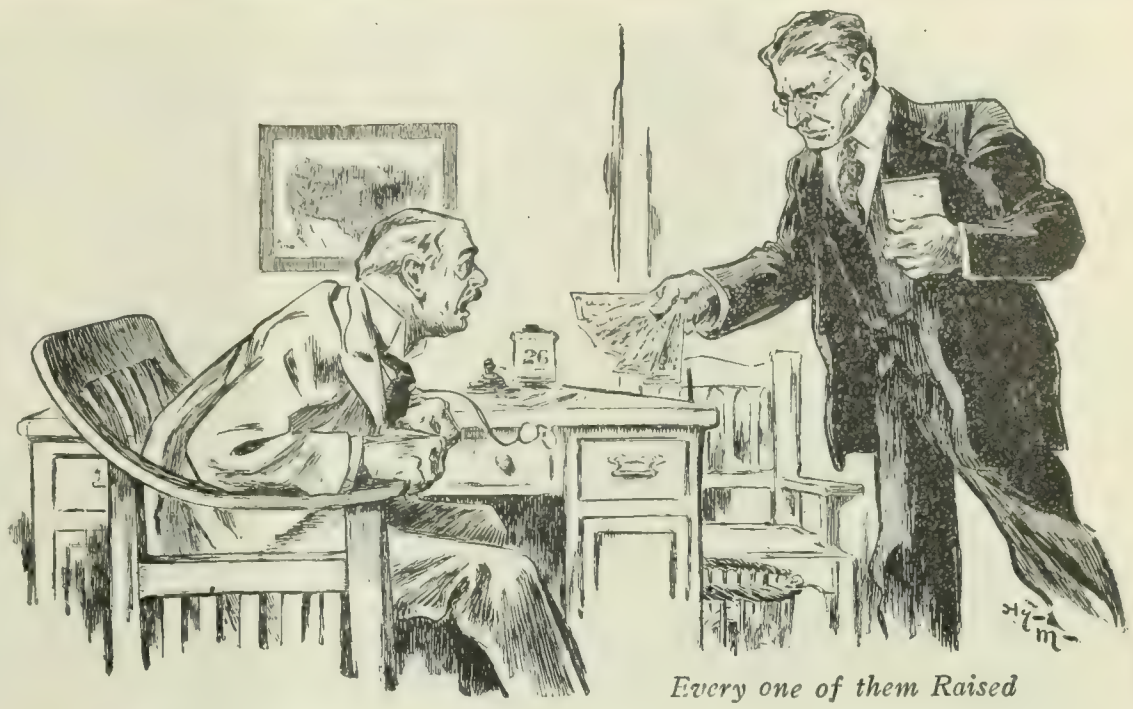
Shakespeare has been ridiculed for his ignorance of geography because in "The Winter's Tale" he has Antigonus land upon the seacoast of Bohemia. But perhaps he was prophetic. If the Allies have their way Bohemia will become an independent country, and if Wilson has his way every independent country will have an outlet to the sea. 'Tis a consummation devoutly to be wished.

* * *

The Germans have begun their march on Berlin.

* * *

There are a great many things about the ministry that puzzle a layman. One is the very small amount of the Bible which is utilized for homiletic purposes. It might be supposed that in listening to sermons at the rate of a hundred a year a man would in the course of a lifetime hear the most of the available portion of the Bible treated didactically, but this is not the case. In reading the Bible one is always striking verses which seem to him, in his unprofessional ignorance, well adapted for texts but which he cannot recall having heard sermons upon, and he wishes his minister would put a slot-box in the vestry into which the congregation could drop the texts they want to hear discussed.



For example, a great deal of atten-

tion is now being paid to questions of political economy in the pulpit, so much so that if all we knew of the Bible was what we get from some of our modern preachers we would suppose it to be purely a treatise on that subject, yet there is one excellent text for sermons of this class which seems to be neglected. I allude to the last clause of the fourteenth verse of the third chapter of the gospel of Luke,"*Be content with your wages.*"

We all know the occasion for the admonition. The Roman soldiers did a great deal for civilization. They were the cement which held together the most stable and extensive of the ancient empires. They maintained order among a hundred nations and enforced peace for the first time on rival sects and castes. They gave a new meaning to the conception of law. They established some degree of justice where the caprice of despots had been the only power. But "single men in barracks don't grow to plaster saints." They had their faults and John kodaked them as accurately as he did the pharisees, the publicans and the multitude. They did sometimes take advantage of their position of public police to accuse men falsely, they were often brutal and rough in their treatment of the subject populace and they were given to striking for higher wages.

What strikers they were, when you think of it! They struck for less work and more holidays; they struck for more spoils of war and less weight to carry. They struck because the weather was too hot and they struck because the water was too cold. They struck whenever a popular leader was removed and if no other excuse presented itself they struck for recognition of the legion. And when new legions were formed with recruits from the recently annexed portions of the empire they struck against the admission of "barbarians," a word that meant the same as "scabs" does now. In every great emergency, in any crisis when it was particularly necessary that all classes should work together for the common good, the legions could be depended upon to strike for higher wages. The election of an emperor was their great chance, and finally it came to be recognized that the man who promised most to the soldiers would be emperor. That is why Rome fell. There are fifty-six other reasons why Rome fell, for which see commencement orations, but they are for use with other subjects.

Some possible reasons occur to me why ministers do not preach from the text "Be content with your wages." One is that it may not be applicable to the present time. If so, it is a good reason. Preachers no longer use the biblical denunciations against the worship of graven images and ceremonial pollutions because these are not modern vices. It may be that there are now no people discontented with their wages, that all employers pay as much as they can afford, that every employee realizes that he is getting as much as he de-

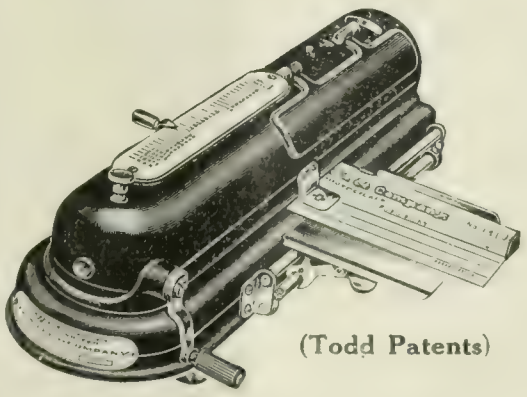
Every one of them Raised

$5,100 Lost on Raised Checks

A Chicago business man (name on request) described to a convention of Todd salesmen, at the Sherman House in January, how *he* had just been victimized through check raising in his office.

All during 1916, he said, his profits seemed to shrink below normal. In December, he ordered an audit. For months, it appeared, the young woman in charge of the office had been making a practice of changing little $5 and $10 checks to $100 and $200, winding up by "boosting" one issued to the cartman, from $5.75 to $575.00.

The method was simple. The checks were made out and signed by the proprietor. Then the clerk erased the amount and the payee's name with ink eradicator, substituted her own name, and multiplied the amount by ten or a hundred. In all, the Chicago man lost $5,100.00 during 1916 alone.



This fraud has happened in thousands of concerns where business men were careless enough to sign a check *before* it was protected. But now, the

Protectograph
Check Writer

writes and protects the full amount in the body of the check, *before it is signed*, in Dollars and Cents, exact to the penny, in two colors, thus—

serves and that the world has become so far christianized that we can delight to see others prosper more than ourselves. It may be that there is now no class which strives to advance its private interests regardless of the inconvenience and injury to the public which may come from the means they employ. If, then, there are none who attempt to get better wages by violence or false accusation the clergy are right in treating the text as obsolete.

*

There is another possible explanation why this text is not used—and I must confess that this is not original but was suggested by a minister. I really never should have thought of it myself. It is that preaching from such texts would "alienate the masses." This is certainly a great objection. In fact it is insuperable. It has always been the great obstacle to the spread of Christianity that preaching the gospel has a tendency to "alienate the masses." It is perhaps not too much to say that if it had not been for this all the world would have been Christian long ago. It must be extremely difficult for a pastor of a mixt congregation to preach "the truth, the whole truth and nothing but the truth" and not "alienate" somebody. I do not see how they can do it. And the masses, above all. There are only a few preachers who have millionaires in their congregations, so rich men are fair game. You can learn all about their vices in the newspapers and there are lots of good texts in the Bible to use against rich men, more than any preacher can use up in a lifetime; but if he alienated the masses the church would be empty and his sphere of usefulness curtailed. I see that.

*

Another reason why this text is not used may be because it is not considered inspired. To be sure, it was spoken by the greatest prophet ever born of woman, but that would not prevent its being rejected by the highest critics. The "higher critics" are those who throw out any passage which they do not understand, the "highest critics" are those who deny the inspiration of anything they do not like. It is an easier method than that of the higher criticism, does not require so much scholarship, and it is more successful. It is really the only way to get a Bible which is perfectly satisfactory to oneself and the congregation. Inspiration is of course not confined to the past. We are all of us infallible, more or less, and "they didn't know everything down in Judee." Some ministers go so far as to preach the virtue of "divine discontent." Discontent does seem a queer attribute for the Deity, but probably it is all right. Only if contentment is no longer one of the Christian virtues, let us know it at once and we will stop our feeble and painful efforts to cultivate it.

There is only one other reason I can think of why the new school of sociological preachers should boycott this text, but that explanation is so improbable and so disrespectful to the cloth that I will not even mention it.

No Soiled Hands—Spoiled Clothes—Ruined Dresses

The ink simply cannot burst through because there are *no holes in the wall* through which it can get out.

IT IS SAFETY-SEALED.

That's why you can carry it upside down or in any position without danger of leaking.

Not until the cap is removed and the SAFETY-SEALED button revealed, do you fully appreciate the advantage of a Parker Self-Filler.

See one—at all dealers, $2.50, $3, $4 and $5.

PARKER PEN COMPANY
239 Mill St., Janesville, Wis.
New York Retail Store, Woolworth Bldg.

Means—no holes cut in wall of barrel —no openings, levers or rings where ink can get out to stain clothes or person.

HOWARD UNIVERSITY'S SEMI-CENTENNIAL

BY W. S. SCARBOROUGH
PRESIDENT OF WILBERFORCE UNIVERSITY

HOWARD University has just celebrated the fiftieth anniversary of its founding in Washington, D. C. It was March 2, 1867, that the charter was first approved and signed, and from that time, thru all of its fifty years, Howard University has steadily grown, increased its usefulness, making itself felt as an educative force, till it now has an attendance of fifteen hundred students and has become one of the best institutions for Negro education in all the land.

The spirit of General O. O. Howard —its chief founder—in honor of whom the institution was named, is still seen and felt as one moves about the College Campus. Quite all the schools for Negro higher learning, founded in the Sixties, were in one way or another helped and aided by this prince of good men. He breathed into these movements for Negro elevation — movements dear to his heart — a spirit that has ever since actuated them.

The purpose of this Anniversary was twofold: a review of the past, and a prophecy of the half century to come —another fifty years, "with all of its possibilities of increased usefulness."

It was an occasion that brought together some of the best minds that the University has ever sent forth, and many of the leading educators of the country who were not Howard men.

At a meeting in Convention Hall where the presiding officer was ex-Chief Justice Stanton Judkins Peel, president of the Board of Trustees, the speakers included such men as Bishop Thirkield, a former president of the University, Hon. Franklin Lane, Secretary of the Interior, Dr. Carl Kelsey of the University of Pennsylvania and Prof. H. T. Kealing of Western University.

Dr. James Waring presided over another interesting meeting held at the Congregational Church, to commemorate the birth of the University and the signing of its charter. The speakers were President Newman, Prof. Richard T. Greener and others.

A Sociological Conference also formed a part of this anniversary, with such themes as: Negro Homes, The Negro in Business, The Negro in Health and Sanitation, etc.

I am asked what Howard University stands for. The answer is easy: It stands for the high "Educational Ideals" set by its founders, and up to which it has lived, both in the spirit and in the letter. Then, too, the greatness of any institution is measured by its product, by its graduates—their successes and their achievements. And here, I observe that Howard men and women have generally made good.

Wilberforce, Ohio

Send for *Free Book*

That Will Show How to Lay Out *Your* Office to Save Floor Space, Steps, Time and Money

Review the methods that other executives use to get their office work done. The "Book of Better Business" *shows how.* Send for it. Solve *your* office problems. It has helped others. It will help you.

Then visit the *Better Business Show* in your city. This is a special exhibit conducted by your local Art Metal Dealer. At his store you will *see* the actual systems, office appliances and methods that are saving time, money and labor for hundreds of businesses, large and small.

Art Metal

Steel Office Furniture and Files

Art Metal makes its appeal to business men because it is made of STEEL, and *STEEL can't burn.* Built on the sectional principle, Art Metal grows with your business.

Mr. Purinton in his current article "A Day at the Office," asks: "Does *your* office furniture convey the impression of beauty and simplicity?"

Art Metal answers this question. It combines the beauty of wood with the strength and *lifetime service* of steel. Finished in every grain effect of wood, it will harmonize with the color scheme of your office. It typifies stability—good taste—efficiency.

Send for This NEW Business Guide Now

The "Book of Better Business"—98 pages—graphically illustrates the office appliances, methods and systems that will help *you* get *your* work done with less effort, and greater results.

The price of this book is 50 cents, but it will be sent *free* if you send the coupon attached to your letterhead.

The edition is limited—send at once.

Chicago, Ill.

THE NEW BOOKS

LAND OF FAERY

Why are W. H. Hudson's charming mixtures of natural history and most agreeably unnatural fancy being dug up today from the comparative oblivion in which they have lain for many years? Partly because John Galsworthy wrote an extravagantly enthusiastically introduction to "Green Mansions," partly because many of us today feel with Hugh Britling that what we want is "literary opium—anything about temples of ivory colored stones and purple seas, red caps, chests of jewels and lizards in the sun." Hudson gives us "literary opium" in its most delightful form, in words so musical that at times one almost forgets the sense.

The latest of his books to be revived, *The Crystal Age*, is partly a romance and partly a vision of Utopia, a Utopia which concerns itself far more with social customs and dress and architecture than with politics. There is little object, however, in going into details. As with "Green Mansions," "A Shepherd's Life" and the "Purple Land," the title is alluring enough in itself.

The Crystal Age, by W. H. Hudson. E. P. Dutton & Co. $1.50.

IDEALS BEHIND THE WAR

Some time since we suggested that as the war developed it revealed "a conflict of principles even more than of interests." The quotation is from the preface to *The Psychology of the Great War*. Mr. Le Bon compares the Germanic ideal with that of the Arabs of Mohammed's day, in irreconcilable conflict with an individual liberty which the rest of Europe has evolved after a struggle of two thousand years. But he warns us that we are passing thru a worldwide second French Revolution, in which, now as before, the protagonists of the tragedy in appealing to reason were never less under her sway.

Mr. Le Bon then opens with a skilful analysis of the affective, collective, and mystic forces, to take up the question of the variations of personality as contributory to the war. In his Rise and Development of the Germanic Power, we note in passing how the Teutonic blood of the modern Prussian is largely infused with that of the French refugees of the Edict of Nantes period.

Further, the author shows that till Sadowa France regarded Prussia, in the words of Danton, "as her natural ally," German unity as the triumph of the Revolution. But these delusions were shattered when Germany sank under Prussian domination, both friendship and peace became a hopeless dream when the Germanic ideal was proclaimed by her militant philosophers. In the chapter on strategical errors he takes for his text Napoleon's words, "In war the moral is everything . . . to the material as three to one," and points to the lack of moral courage, or daring, at the outbreak of war, whereby the French lost Charleroi, and the Allied fleets the initial advantage of decisive sea victories. He concludes with a discussion of peace problems and refers to his "Psychologie Politique" for his views regarding the "disastrous influence exerted by the social legislation of France" previous to the war.

The Psychology of the Great War, by Gustave Le Bon. The Macmillan Company. $3.

MEN OF NORWAY

No more profound and sympathetic study of the spiritual life of modern Norway has ever appeared in English than the late Dr. Agnes Wergeland's essays on *Leaders in Norway*. Unforgetably vivid are the portraits of the national prophets and heroes, Ibsen, Björnson, Grieg, Camilla Collett, and the author's own great relative, the poet and patriot, Henrik Wergeland. But the best parts of the book are not those which tell of individuals, but those which describe the country which produced them; landscapes so lovingly depicted by the author's pen that even the untraveled reader does not need the painter's brush to see the stern and tender beauties of the northland.

Leaders in Norway, by Agnes Wergeland. Menasha, Wis. George Banta Company. $1.50.

A MASSACHUSETTS ADAMS

In his *Autobiography*, Charles Francis Adams, who by birth and "certain aptitudes" was privileged to know more or less intimately the shapers of America at America's most critical period, gives in his old age a calm, broad-minded, often whimsical, wholly inspiring account of how a dreamy, impractical boy, a clientless, literary lawyer, a too modest, too timidly delinquent citizen, made something, gradually, of the fourth generation of the illustrious Adams family!

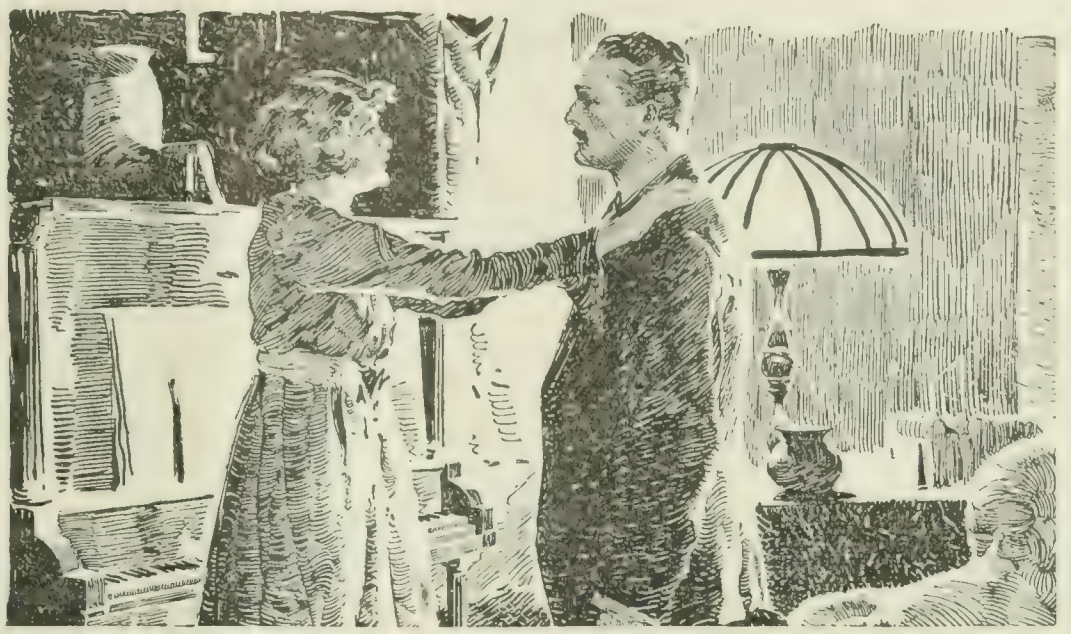
Prose stylist enough to prove the poet at heart, no doubt Mr. Adams' ultimate life of business, figures, legislation, had poems in it. Retrospective poems there certainly were, of a youthful stump-speaking trip with the great Seward across the continent; of occasional happy moments lived at Harvard and in provincial Boston; of more sophisticated, sometimes very literally "wild and woolly," sometimes drink guzzling, social and political Washington of the mid-century; of life and death on the field of the Civil War. His ancestry and his native Quincy, whose islands "lost their green, whale-back outlines under an eruption of summer hotels and seashore cottages," were especially poetic and quaint to Mr. Adams and remain so to us. The book is not all interesting to an equal degree, it should

be said. But the sidelights on Sumner, Seward, Douglas, Lincoln, on Washington society, on war and army life, too personal and too filled with these men's "failings," as well as of their unparaded, more intimate virtues, for our "histories," give it charm and real value.

Charles Francis Adams: an Autobiography. Houghton, Mifflin Company. $3.

ENTERTAINING HISTORY

Our Nation in the Building, by Helen Nicolay, is a stirring and vivid narrative of the life and growth of the American commonwealth from the time of Washington to the eve of the Civil War. It is not an American history at all in the usual meaning of the word, for it ignores the sequence of particular events and takes for granted that the reader retains from his schooldays some knowledge of dates and details. The purpose of the book is rather to make history seem real, to illustrate it by gossip of the Presidents and party leaders and by anecdotes of the pioneer life of the western frontier, to convey to the reader some sense of the novel elements which made the civilization of the New World a fascinating puzzle to the European visitor.



Our Nation in the Building, by Helen Nicolay. The Century Company. $2.50.

BUSINESS TODAY

There are two types of books on economic subjects. The one is the old style, abstract treatise on the theories of production, distribution and exchange. The other is the practical study of current business practise as it is carried on by up-to-date men of affairs.

G. A. Kleene's *Profits and Wages* belongs to the type which was written by the older generation. This is a theoretical analysis of the distribution of income, which the trained student may find very instructive, but which will never be read by the ordinary man of affairs. Similarly, *A Brief History of Panics in the United States*, an adaptation of the work of a French scholar, Clement Juglar, by DeCourcy W. Thom, is also adapted to the uses of trained students rather than to those of the general reader. The book contains a brief introductory section in which the causes of panics are analyzed. This is followed by a continuous historical account of the regular expansion and contraction of credit in the United States during the past 125 years. The narrative is crowded with detailed information but unaccompanied by extended explanation.

The reader who is seeking an introduction to the modern school of economic writers can do no better than to make his beginning with Fetter's *Modern Economic Problems*. This work is, in a sense, a sequel to a book published by the same author a year ago. The earlier volume dealt with broad economic principles; the present book approaches the problems of production, distribution and exchange from the point of view of present day American society. It deals first with the basic material resources of the nation, then it presents a detailed

"We Must Improve Ourselves"

"Do you know, I used to wonder what made the Randolphs so interesting! But now I know. They make a practice of 'learning one worth-while thing every day'—They told me so.

"I called on them the other night and, honestly, I was ashamed. There wasn't a single thing I could talk interestingly about—and they tried so hard to make me feel at home.

"We're just as intelligent as the Randolphs, dear, and it seems a shame we don't utilize our spare time to *improve* ourselves.

"Let's *do* it. I know the way. Let's join

The Mentor Association

and learn some one thing every day." The Mentor Association has over 100,000 members who, like you, are interested in worthwhile things; who have found that such things must be a part of every well-rounded existence, and who realize that they haven't the time or special training to dig deep into all subjects.

Twice a month, the first and fifteenth, they receive "The Mentor." Each time a special topic is discussed with absorbing interest by an authority who is also a gifted writer. And with each issue of "The Mentor" are six gravures or color pictures, reproduced on heavy paper which, added to the illustrations throughout the text, and the text itself, leave with you a graphic and vivid recollection of the subject.

For Instance

"The Mentor" of January 2nd contained an unusually interesting article on "Keeping Time" by C. F. Talman of the United States Weather Bureau, and showed clearly just how the time has been determined by mankind from the beginning, and the various modern ways of keeping it.

On January 15th "The Mentor" took to all members a delightful account of "American Miniature Painters," in an article by Mrs. Elizabeth Lounsbery.

The February 1st issue was devoted to the consideration of many famous precious gems, such as the Koh-i-noor diamond—a fascinating article by Esther Singleton.

W. J. Henderson, well-known music critic, wrote the February 15th issue which dealt with "The Orchestra."

"Brazil" was the subject of a "travelogue" by E. M. Newman in "The Mentor" for March 1st, and you can imagine the beauty of the accompanying pictures which show the wonder sights of Brazil.

These are but examples. The texts, from time to time, reach into the realms of Fine Art, Travel, History, Biography, Literature, Music, Domestic Art, Nature and Popular Science. Each is lavishly illustrated in addition to the separate gravures or color pictures.

But "The Mentor" itself is only part of what The Mentor Association means to you.

What Membership Brings

Briefly, membership in The Mentor Association gives you these five things:

First. 24 issues of "The Mentor," bringing a beautifully printed and illustrated story every two weeks, each different subject written by a leading authority upon that subject—300 pages during the year.

Second. 600 beautiful illustrations, distributed during the year through the text of the 24 issues of "The Mentor."

Third. 144 gravure or color pictures, reproduced on heavy paper, all ready for framing, in deep, rich tones that bring out all the beauty of the originals. On the back of each picture is a crisp five-minute description of the subject that is portrayed.

Fourth. Answers to any question on Art, Travel, Literature, History, Nature or Architecture; each answer by an authority.

Fifth. Authoritative Club Programs. Any program you may want for a club, a reading circle, a literary afternoon or evening—each made for you by an expert.

Send for "The Mentor" on Approval

No need to send any money now. Just fill out the coupon below and mail it. "The Mentor" will be sent you ON APPROVAL. If you like it, send us $1 then and $1 each month for the next two months ($3 in all) for a full year's membership, including 24 complete issues of "The Mentor." If you don't like it, tell us and the subscription will be immediately canceled.

So mail your coupon today

Ind.—3-19-17

THE MENTOR ASSOCIATION
222 Fourth Ave., New York, N. Y.

I accept your invitation to membership for one year—*subject to approval of the first copy of "The Mentor."* Upon receipt of notice, I will send you $1 and $1 monthly for two months until the total of $3 has been paid—with the distinct understanding that the subscription can be canceled if I am not *entirely* satisfied.

Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The Independent

Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 119 West 40th St., New York.

discussion of such practical subjects as the relation between money and prices, the American system of banking and insurance, international trade and tariff legislation. This is followed by a series of chapters on the relations between workers and employers, on the problems of agricultural society, on the organization of railroads, and on the public and private ownerships of the agencies of production and exchange. This book will repay careful study because it dispels a number of popular fallacies and because, as has been said, it offers an excellent introduction to the more modern method of dealing with economic phenomena.

The Administration of Industrial Enterprises, by Edward D. Jones, is a purely practical treatise. Here are no abstract theories of business organization, but facts in profusion stated so plainly that factory hand, manager and college professor alike may easily understand. The aim of the author is to present, first, the problems of factory equipment, then, the development of an administrative organization, the problems of the adjustment of the relations of labor and capital, and finally, the problems of mercantile distribution. Thruout the book two things have been kept in mind by the author: to trace the application of scientific method in industry, and to point out the efficiency of an economic policy based on welfare and service. Perhaps, in his enthusiasm for the subject, Professor Jones overemphasizes the results which will come from scientific management. After all, the human element must always remain as a large factor in business success.

Edward N. Hurley, formerly chairman of the Federal Trade Commission, in his *Awakening of Business*, approaches the same subject from a somewhat more general point of view. His purpose is to suggest methods for the betterment of American business conditions thru the adoption of sound methods of cost accounting, proper methods of coöperation which will do away with wasteful and unwise competition and government regulation which will encourage rather than hamper American trade. At the basis of all business success, according to Mr. Hurley's analysis, lies an intelligent system of cost accounting. In addition, the salvation of American business, the possibility of success in competition with the European seller, lies in the formation of legitimate trade associations which will encourage the standardization of the processes of manufacture and merchandizing and provide for proper commercial education. In all these processes private initiative must continue, but the Government must intervene to suppress unfair methods of competition, to collect and furnish information for manufacturers and merchants, and to regulate certain types of business where individual competition cannot prevail.

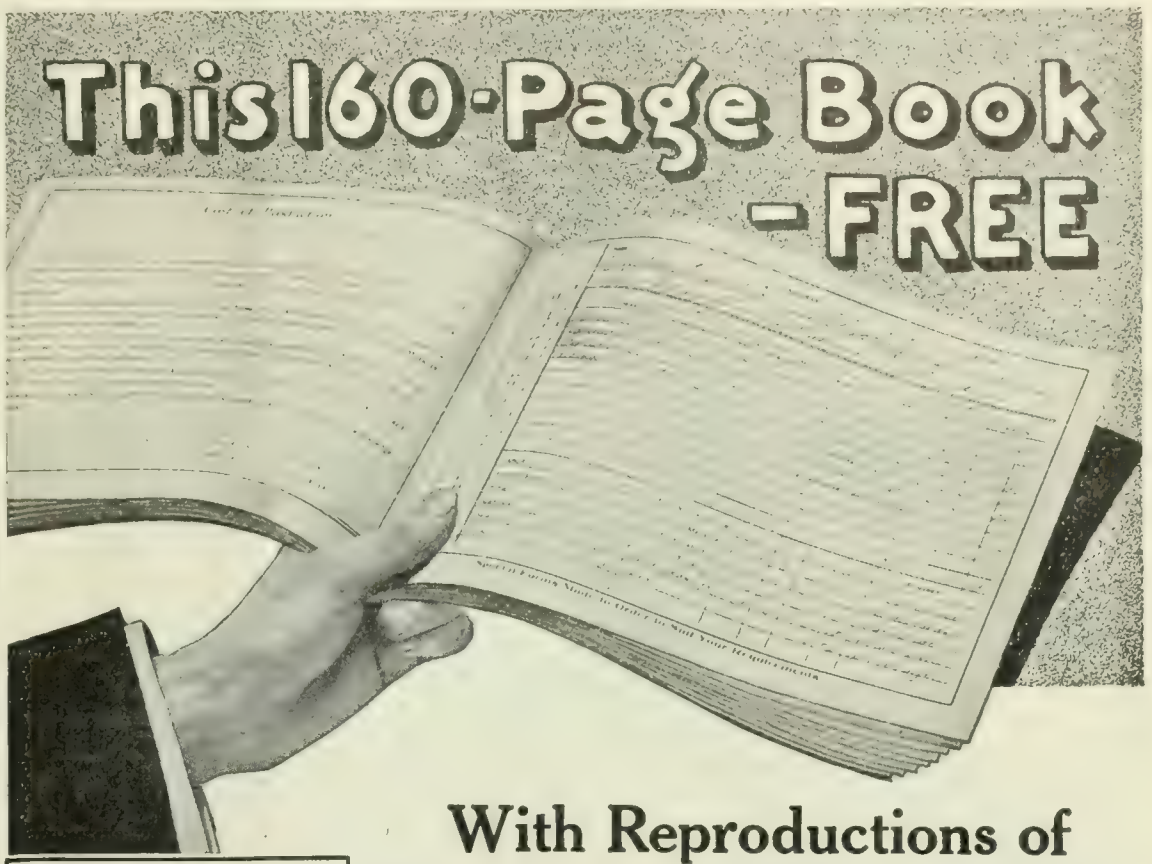
Perhaps the most difficult problem in the organization of business is the establishment of a proper relation be-

tween employer and laborer. To this subject the Commission on Industrial Relations devoted special attention. Professor George E. Barnett of Johns Hopkins and Professor David A. McCabe of Princeton prepared for the commission a special report on one phase of this subject and their book, *Mediation, Investigation and Arbitration in Industrial Disputes,* has grown out of this report. In this volume the reader will find in convenient form the most available material for a study of this subject. According to the authors, the best results in industrial disputes may be expected from proper methods of mediation, tho investigation may be expected to create a healthy public opinion if the results of investigation are published and the possibility of voluntary arbitration also should exist as a final resort.

Finally, in this list of books on economic subjects, it is worth while calling attention to Edward TenBroeck Perine's *The Story of the Trust Companies,* not because the book contains information useful to the general student of economics, but because it is an interesting story of the hundred years' development of the institution which has sometimes been called the department store of finance.

Profts and Wages, by G. A. Kleene. The Macmillan Company. $1.25. *A Brief History of Panics in the United States,* by Clement Juglar. G. P. Putnam's Sons. $1. *Modern Economic Problems,* by Frank A. Fetter. The Century Company. $1.75. *The Administration of Industrial Enterprises,* by E. D. Jones. Longmans, Green & Co. $2. *Awakening of Business,* by E. N. Hurley. Doubleday, Page & Co. $2. *Mediation, Investigation and Arbitration in Industrial Disputes,* by Barnett & McCabe. D. Appleton & Co. $1.25. *The Story of the Trust Companies,* by E. T. Perine. G. P. Putnam's Sons. $2.

YOUNG FOLKS



The Wonders of Animal Life, by W. S. Berridge, has interesting chapters on the courtship of birds, on animal giants and dwarfs, fish that live out of water, animal worship and superstitions, birds that cannot fly, etc. It contains some excellent illustrations. (F. A. Stokes Company, $2.)

The Three Pearls comes from England as you know without seeing J. W. Fortescue's name on the title page. The crab's dialect belongs to an English shire, but he talks well all the same, as do the trout and the kingfisher, and the bad mermaiden and the princess. A pretty book and a pretty tale, if withal sentimental at the close. (The Macmillan Company, $1.25.)

Sonny Jim, Elaine Sterne's funny little boy, does all sorts of funny things like trading the family Thanksgiving dinner for a brand new colored baby, breaking up the Sunday school picnic by having a circus in his barn, and celebrating the purchase of his first valentine by a great battle. Grown up folk will recognize his genus. (Boston: W. A. Wilde Company, $1.)

Dr. Forbush has not chosen a deceptively attractive title. He is entirely frank about his *Young Folks Book of Ideals,* and we hope this honesty will not drive away any young folk, for the book is full of interesting stories and essays, written in easy, chatty style, and singularly free from any attitude of instruction or superiority. (Boston: Lothrop, Lee and Shepard, $2.)

Pictured Knowledge opens with a chapter on how to learn from pictures, advice for the teacher as well as the youngster. The two volumes treat an immense variety of topics, with illuminating illustrations. The short explanations are in large type, clear and interesting. It is a children's cyclopedia, of miscellaneous information, but so inclusive as to meet a child's ques-

TOWNSEND'S TRIPLEX

The Greatest Grass-Cutter on Earth

Cuts a Swath 86 Inches Wide

The Public is warned not to purchase Mowers infringing the Townsend Patent, No. 1,209,519, Dec. 19, 1916.

Floats Over the Uneven Ground as a Ship Rides the Waves

One mower may be climbing a knoll, the second skimming a level and the third paring a hollow

Drawn by one horse and operated by one man, the TRIPLEX will mow more lawn in a day than the best motor mower ever made, cut it better and at a fraction of the cost.

Drawn by one horse and operated by one man, it will mow more lawn in a day than any three ordinary horse-drawn mowers with three horses and three men.

Does not smash the grass to earth and plaster it in the mud in springtime, neither does it crush the life out of the grass between hot rollers and hard, hot ground in summer as does the motor mower.

Write for catalogue illustrating all types of Townsend Lawn Mowers.

"IF you abide in my Word, you shall know the TRUTH, and the TRUTH shall make you free."

(i. e., from the tyranny of Fear in all its forms.)

Pilate said, "What is Truth?"

This Book Will Tell You:

The Word of the Truth

It is a systematic arrangement of the Words of God (in the N. T.) by which you are able to grasp at once the Whole Divine Idea, in its original simplicity.

The whole Truth. The way of Life and Peace. —now and forever.

tions at many points. For use in schools as illustrative material fuller indexing would be convenient. (Chicago: F. E. Compton & Co., $7.75 and $9.50.)

Katherine Pyle has done well in introducing and illustrating a new edition of *Granny's Wonderful Chair*, the fairy tales of the blind poet. Frances Brown. These were first published in 1857 and the introductory essay tells this generation of the dauntless and brilliant Irish girl who was one of the literary figures of London seventy years ago and whose Irish fancy gleams thru these whimsical stories for small folk. (E. P. Dutton & Co., $2.50.)

PEW AND PULPIT

Despite Edwin Markham's laudatory introduction to *Creative Involution*, a metaphysical dissertation by Cora Lenore Williams, it might truly be said of the intellectual processes involved in the making of this book, "The mountain labors and brings forth a mouse." (A. A. Knopf, $1.50.)

Preaching to children is a difficult task. The Reverend J. Edgar Park's volume of parables, *The Children's Bread*, is skilfully related to the events of a child's daily life, but verges dangerously upon the goody-goody. Rightly delivered, they might be charming, even to that most critical of auditors, a child. (Boston: The Pilgrim Press, 75 cents.)

In the Sprout lectures on *The Religion of Power*, Dr. Harris E. Kirk uses history as the basis of a strong appeal for the finality and adequacy of the Gospel. He argues that a religion which was equal to the moral and spiritual demands of the ritualistic Oriental, the philosophic Greek, the practical Roman, the deeply moral Jew, has power still to satisfy man's higher needs. (G. H. Doran Company, $1.50.)

Living for the Future is an earnest attempt on the part of Prof. J. R. Slater to forecast the life after death by following out the implications of certain well recognized moral values. The constant use of poetic allusion and qutoation gives a literary flavor to these persuasive chapters on the unbroken unity of the mortal and immortal life. (Houghton, Mifflin Company, $1.)

Faith Justified by Progress contains the Bross Lectures for 1916 delivered by Prof. Henry W. Wright. The author elaborates a well articulated argument for the essential need of the religious element in modern life. Religious belief has been a product of human volition, and the spiritual factors of life have always been supreme in determining the ethical and social development of mankind. (Charles Scribner's Sons, $1.25.)

A new type of psychological study appears in Professor Snowden's *Psychology of Religion*. Assuming philosophical theism and the Christian faith as true, the author seeks to elucidate these hypotheses by psychological explanation and illustration. The work is, therefore, an exposition of Christian psychology, its purpose being to assist ministers and Sunday School teachers in the preparation of their work. (F. H. Revell & Co., $1.50.)

In *Theology in Church and State*, Principal P. T. Forsyth contends that church and dogma are as inseparable as the church and kingdom. But he sharply distinguishes between dogma and doctrine, dogma being the distinctive message of Christianity around which the church is built and which gives to the church a kind of corporate personality. Church and state may be independent, but they must be coöperative. (G. H. Doran Company, $1.25.)

The difficulty experienced by an imaginative mind in dealing with historical facts is strikingly shown in Allen Upward's discussions of *The Divine Mystery*. A little haziness about the edges of knowledge and a good deal of a poetic fancy have led the author to piece together, in a kind of crazy-quilt pattern, history, mythology, conjecture and fantasy, making a curious synthesis of learning, originality and impossible nonsense. (Houghton, Mifflin Company, $1.75.)

PEBBLES

A bachelor's exclamation: "A lass!"
A maiden's exclamation: "Ah Men!"—*Awgwan.*

Sunday School Teacher—Willie, who was born in Bethlehem?
Willie—Charles M. Schwab.—*Harvard Lampoon.*

Freshie—I don't like those shavings for breakfast.
Sophomore—It beats the board we used to get last year.—*Awgwan.*

Affable Waiter (handing soup)—Looks like rain.
Cantankerous Old Gent—It does; but it smells like soup!—*Awgwan.*

Lady—What! A great, big, strong man like you begging!
Loafer—Well, miss, yer've got ter be big and strong for the profession in war-time, or yer might get 'urt!—*Tatler.*

Maybelle Sergeant—A sailor winked at me last night.
Toppe Sergeant—Did you knock the tar out of him?
Maybelle Sergeant—No. I had him arrested for assault.—*Harvard Lampoon.*

Patient—Is the doctor in?
Attendant—No; he stepped out for lunch.
Patient—Will he be in after lunch?
Attendant—Why no, that's what he went out after.—*Chaparral.*

There once was a farmer from Maine
Who walked thru Paree in the rain.
In crossing a river
He was hit by a Flivver,
Which tended to drive him in Seine.
—*Harvard Lampoon.*

The month's prize for the bummest joke goes to the Kansas Editor who admonished his readers in the following words: "In order to combat the constantly soaring cost of living, we advise our readers to biplane food."
It was a rice murder.—*Gargoyle.*

"I went down in the war panic of 1914," said the big man, as he hung to a strap in the crowded street car. "But now I am getting on my feet again."
"In that case," ventured the little man just behind him, "perhaps you wouldn't mind getting off mine."—*The Lamb.*

"Our Tommy," said the boy's mother, "ought to make a success in life. He shows great determination to stick to anything he undertakes."
"Does he?" queried the proud father.
"Yes," she replied. "Why, he put in the whole day making soap bubbles and trying to tie strings to them."—*New York Times.*

"Well, did he pay you?" asked the wife of a dentist who had been to collect a bill for a full set of false teeth that he had made for a man almost a year before.
"Pay me," growled the dentist. "Not only did he refuse to pay me, but he actually had the effrontery to gnash at me—with my teeth!"—*New York Times.*

Jones had conceived a grudge against O'Connor and sought for a way to pay him out.
"I say, O'Connor," he said, "you remember you told me you had hunted tigers in West Africa? Well, Captain Smith tells me there are no tigers there."
"Quite right, quite right," said O'Connor blandly. "I killed them all."—*Life.*

With most of us the grim necessity of purchasing coal is no joke. Yet a Boston man found at a coal emporium in that city a chap who managed to infuse a degree of facetiousness into the transaction.
"How much is chestnut coal?" timidly inquired the prospective customer.
"That depends," said the salesman. "A la carte, it's $8; cul-de-sac, it will cost you 50 cents extra."—*Everybody's.*

$100 Model Underwood FOR

With Back Spacer—Two-Color Ribbon and Tabulator

You Try It Ten Days Free

Think what you can get *now* for $39.96. A genuine No. 4 Underwood—the standard visible typewriter, with back spacer, two-color ribbon and tabulator—*complete* with waterproof cover, new ribbon and special touch typewriting instruction book—the machine that is today the leading typewriter of the world.

Guaranteed to be delivered in perfect condition! Guaranteed for five years! At a price

You May RENT APPLYING RENT ON PURCHASE PRICE **OR BUY** FOR CASH OR ON EASY PAYMENTS

'Way Under ½ Manufacturer's Price

Moreover, you don't have to buy it to try it! We will send one to you on Ten Days' Free Trial. Write all you please on it for ten days and then if you are not *perfectly* satisfied, send it back at *our expense*. What's more, if you do not care to buy, you may rent it at our low monthly rates. If later you want to own it, we will apply *six months' rental* payments on the low purchase price. Any national bank in Chicago, or any Dun's or Bradstreet's Agency anywhere will tell you that we are responsible. Learn *all* the facts about this remarkable offer. MOTOR PROGRESS

Conducted by John Chapman Hilder

THERE are two major incentives to the purchase of trucks; the possibility of accomplishing more per day, and of accomplishing it at a lower cost.

The first thing to find out, if you are considering the purchase of motor vehicles to replace horses, is the exact cost of operating this horse equipment. Approximate figures are better than none, but exact figures are best. You really ought to know to a nickel how much you are spending before you can make an accurate comparison of motor truck costs as applied to the same work. You ought to know anyway, regardless of comparisons or probable changes.

At the outset, let us analyze the items which enter into a calculation of delivery costs. They include the following:

Depreciation on
1. Horses
2. Wagons
3. Harness, etc.

Interest on the investment
Feed
Stables
Veterinary
Drivers' wage
Stable help
Shoeing
Paint and repairs
Incidentals

With horse drawn equipment it is reasonable to class these as fixed charges, inasmuch as they do not, as a rule, vary according to the amount of work done. Horses cheerfully eat whether they have long hours, short hours or no working hours at all. Wages of the driver and stableman are fixed, stable rent (which you should charge to yourself, if you own your stable) are all fixed. As a rule, also, it is safe to assume that you will need the services of a veterinary to a certain extent during the year and will be called on to pay out a certain sum for painting, repairs and shoeing.

If you add up the cost of these items for a year you will have a figure to use as a basis in calculating the cost of your delivery or hauling system per mile, per ton, per package, per ton mile, per package mile and so forth.

Right here you will note that with a horse drawn equipment you have certain charges which, because such equipment is not flexible in operation, can be spread out to only a limited extent. Suppose, for example, that your horses each make three trips of eight miles a day—twenty-four miles apiece. The cost per mile equals the daily cost, divided by the number of miles covered. It would be impossible to reduce the cost per mile by adding another dozen or so miles to the length of the day's run, because if you did your horses would soon be good for nothing. That is one of the horse's great handicaps, he can do just so much in a day. Overwork or overspeed him and he will drop. Whereas with a truck there is no limit to its working hours.

The cost of any delivery service or hauling system is based, primarily, on the load carried, the distance it is carried and the speed in which this distance is covered. Incidentally, the time required for loading the vehicle must be considered; but for purposes of comparison between horse drawn vehicles and motor trucks this may be ignored, since it may be assumed that the time required is no greater for loading one than the other.

TAKE the case of a merchant operating three horse wagons and contrast the yearly cost of his service to what it would be if he replaced the three wagons with a truck.

MOTOR EQUIPMENT

Truck and body	$2000

YEARLY FIXED COST

Depreciation	$400	
Interest	120	
Insurance	95	
Garage	60	
Driver, $3 a day	900	
License	5	
Repairs	150	
		$1730

MILEAGE COST

Gasoline, 25 cents per gallon	$.025
Oil, 30 cents a gallon	.002
Tires	.0225
Per mile	$.0495
Average 60 miles per day	2.97
Three hundred working days	891.00
Total yearly cost	$2621

HORSE EQUIPMENT

Five horses	$1250
Three wagons	750
Harness, etc.	250
Total invested	$2250

YEARLY COST

Depreciation on		
Horses	$250	
Wagons	75	
Harness	50	
		$375
Feed, 60 cents per day per horse		$1092
Stables		120
Veterinary		50
Interest		135
Repairs and paint		50
Three drivers, $60 a month		2160
Stableman		600
Total yearly cost		$4597
Deduct yearly cost of truck		2621
Total saving		$1976

This shows the truck costing $1976 less yearly than three horse wagons—a little over 42 per cent. That savings such as these are worth while, when you consider that the truck does all that the wagons do and is capable of even more, need hardly be said.

It is obvious that the first saving attendant upon the substitution of a motor for, say, three wagons, is in drivers' wages. Next comes a saving in housing space. One truck not only requires one-third less room than three carts, but eliminates the necessity for horse stalls, too. Where extra men are needed to help unload or deliver packages, two are eliminated by the use of a truck.

It has been proved over and over again that in point of speed, load pulling capacity and endurance the horse is hopelessly out of it in comparison with the motor truck. Where a horse, pulling one thousand pounds, will require two hours for an eight mile round trip, a truck, carrying two thousand pounds, will complete the run in half an hour. Where the horse is capable of making only three such eight mile trips in a day, the truck will make nine, with ease. Where the horse on this basis transports three thousand pounds a day, the truck will transport eighteen thousand, and be able to go right on thru the night should it be necessary.

Since the arrival of the truck as a serious contender for the position so long filled by the horse it has been evident that written records of its lower upkeep cost and higher efficiency would be the strongest factor in its success. For this reason buyers have been encouraged to check up the performance of their motor equipment and hence it is possible nowadays to obtain figures that show quite clearly and in detail just how much it costs to operate certain types of machines under widely differing conditions. You can readily see that the existence and availability of such figures enable you to find out pretty accurately what a truck will cost you before you buy it.

After you have bought it, it is essential that you, in turn, keep full records. In no other way can you be sure that you are getting every penny's worth of good out of the machine. There are any number of ways of keeping such records, dozens of systems, simple and complex. In subsequent issues of The Independent I will illustrate and describe the forms used by successful truck users, of all sizes. Meanwhile, if you are contemplating the purchase of a truck, but are a little bit at sea as to the type to choose, sit down and write me just what you will want your machine to do, how much you feel you ought to pay and everything regarding your business that you think may have some bearing on your delivery or hauling problem.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

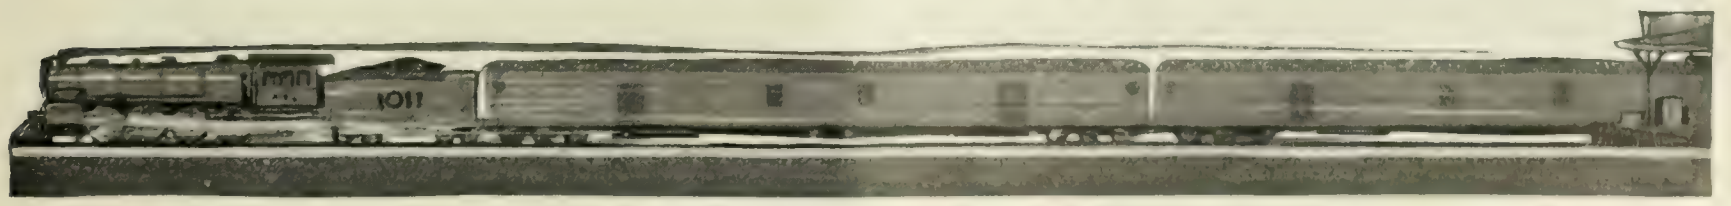
FEDERAL

Assures Schedule Service

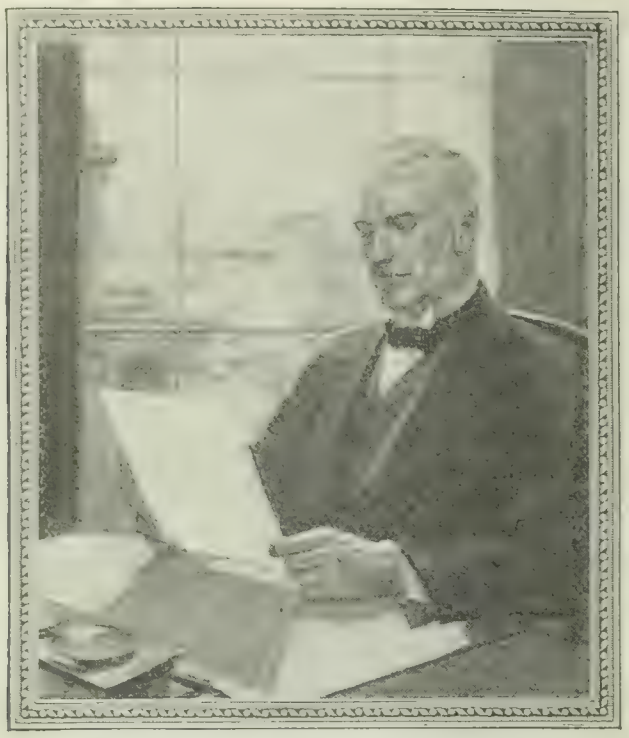
Dependable haulage is more than a matter of service to James Riha, trucking contractor of Chicago. It's a case of contract.

Under the direction of a dispatcher, timed to the minute, Riha's FEDERALS make a round trip hourly from the Sears-Roebuck warehouse to the Sears-Roebuck plant. In the course of a day, a two-ton FEDERAL carries 35,000 lbs. of merchandise, travels 41 miles, and works on a schedule that does not allow more than five minutes leeway.

Sears-Roebuck Railroad Schedule



Truck No.	1	2	3	4
Warehouse Arr.	7.30	7.45	8.00	8.15
" Lve.	7.45	8.00	8.15	8.30
Plant Arr.	8.00	8.15	8.30	8.45
" Lve.	8.15	8.30	8.45	9.00
Warehouse Arr.	8.30	8.45	9.00	9.15



NOTE—These four trucks on a 15 minute headway make a round trip every hour.

FEDERAL Motor Trucks will reduce *your* delivery problem also to "time table certainty." You can schedule their operation hour by hour—twenty-four hours a day if need be—confident that FEDERAL stamina will meet your severest needs—the unexpected emergency as well as the daily grind.

Your Stationery is Your Business Photograph. Are You Proud of it?

CONSTRUCTION BOND

How do men size you up when they hold your business photograph in hand? Does your firm seem cheap and weak? Or does the paper in your letterhead suggest your standing and importance?

To write on a spineless, flimsy sheet—or worse yet, on one known to be cheap—gives your trade a picture of a house indifferent to appearances and service. But a well executed letterhead on Construction Bond reflects your business ideals—proves your preference for substantial quality and honest value—insists the importance of what you say. And it costs only one-tenth of a cent more per letter.

Write now for latest letterhead suggestions and the names of those printers and lithographers in your locality who carry Construction Bond in stock and produce fine stationery upon it.

Look for this watermark in the stationery of firms of recognized importance. You will find it frequently.

FROM SCHOOL TO SCHOOL

THE schools of Austin, Texas, give credit for excellence in Boy Scout work.

The average salary of all the school teachers in the United States is $525 per annum.

The number of men teachers in the United States has increased very slightly since 1900; the number of women teachers has almost doubled.

In the schools of the United States there are at present enrolled the astonishing number of 23,500,000 pupils, twenty-four per cent of our population.

The pupils of the Woodward High School, Cincinnati, carry on the work of a large farm, and gain practical experience in every kind of farm work.

The pupils of the technical high schools of Los Angeles, California, prepare plans for the new elementary school buildings erected by the Board of Education.

The Board of Education of Washington, D. C., is taking active measures to compel all foreign-born or foreign-speaking citizens resident in Washington to speak English.

Enid, Oklahoma, is making an effort to reduce the evening work of high school students by dividing the work of the high school into eighty minute periods, forty minutes of which are used for directed study.

Assistant Superintendent Frank V. Thompson, of Boston, in an address at Indianapolis, emphatically declared that the general high school can not meet all the needs of its pupils. He recommended specialized senior high schools and Junior high schools with differentiated courses.

Colorado proposes to reorganize its state system of education so that the State Board of Education will be appointed by various governors, and the Commissioner of Education by the State Board. County Board of Education will have charge of the rural schools, and will appoint county superintendents.

The poet Tagore recently lectured at the University of Nebraska. The committee in charge paid all the expenses of the lecture and then gave the profits to the poet to use in buying a printing press for his school, "The Abode of Peace." The one stipulation is that the press shall be known as "The Lincoln Press."

The certification laws of Ohio grant a life certificate for teaching in the high schools of Ohio to any graduate of a standard college with a four year course, approved by the State Superintendent of Education, provided the applicant for the certificate has had fifty months of successful experience in teaching. No examination is required.

The City of New York has created the position of City Superintendent of Schools Emeritus, with an annual salary of $5000, for Dr. William H. Maxwell, now absent on sick leave. Dr. Maxwell has been City Superintendent of Schools in New York City since 1898. The resolution provides that any city superintendent of schools who holds office for fifteen years may be made Superintendent Emeritus.

Acting under the authority of the Finance Committee of Boston, a committee of prominent educators has suggested sweeping changes in the organization and the administration of the public schools of Boston. It is proposed to reduce the Board of Superintendents to no more than three members with a salary limited to $4500; to introduce a complete system of district supervision of elementary schools; to establish Junior High Schools thruout the city; to extend the proper number of heads of departments in high schools; to group special classes in one building as far as possible; to recast salary schedules; to provide for a complete system of medical inspection and the care and training of defectives; and to give early training for children with speech defects.

The Market Place

ON THE STOCK EXCHANGE

In the week that began on the 5th the stock market broadened and became more active. Only 2,492,000 shares had been sold on the New York Stock Exchange in the preceding week, the last two days of which had shown a general advance of prices. This upward movement was not checked on Monday, the 5th. It had been stimulated on Saturday by expectation that the Senate would pass the Armed Ship bill. But in the interval passage of it was prevented and Congress adjourned. The prevailing opinion was that prices were still rising because of a belief that public condemnation of the "little group of willful men" in the Senate, and the manifesto signed by nearly all their associates, indicated that the desired action would soon be taken. Railroad shares were comparatively weak. On Tuesday the transactions amounted to 928,000 shares, but there was scarcely any net change in the average of prices. There were some gains for industrials, but railroad stocks were weak again or inactive. A recent rumor that the Pennsylvania company had bought 50,000 shares of New Haven was not confirmed by the company's annual report, which showed that its original holdings of 53,125 shares had not been increased. Various prices ranging between 125 and 190 were paid for these, and the price now is about 44. On Wednesday, when 867,000 shares changed hands, there was a slight average decline. Dullness followed on Thursday (527,000 shares), and averages at the close showed that the market had been almost stationary, the net loss for fifty representative securities having been only one-twentieth of a point.

With an increase of 40 per cent in the day's transactions, there was a marked recovery on the 9th. Prices moved upward thruout the five hours' session, owing partly to the great majority in the Senate for the closure plan and to indications that the Armed Ship bill would soon become a law. Railroad gains were, as a rule, about 1 point, but additions for many industrials were larger. The General Motors Company declared a regular quarterly dividend of 3 per cent, thus increasing its annual rate to 12 per cent, and the day's gain for its stock was 5 points. An advance of 2 raised the price of Steel Corporation to 112¼. In the week's five full days

STEWART FOOD CO., 577 Security Bldg., Chicago

3,892,000 shares were sold, against 2,492,000 in the dull preceding week, and nearly one-fifth of them, or 741,000, were Steel. A majority of those actively interested in the market think that war probably cannot be avoided. The market's attitude appears to be one of composure, strength, and confidence in the nation's resources.

GRAIN RESERVES

Sales of wheat at $1.92 a bushel were made at Chicago on the 7th, but closing figures every day during the week were a few cents lower. Corn rose to $1.10 on the 9th, from $1.06 on the 5th. The advance of wheat prices has been caused by the persistent foreign demand and the Government's report, published on the 8th, concerning reserves. It shows that there were only 101,365,000 bushels remaining in farmers' hands on March 1, against 244,448,000 a year ago. This is the smallest quantity for that date since 1897, and, with two exceptions, the smallest in forty years. If exports continue at the present rate, all that can be spared will be shipped some time before the next harvest. The corn reserves are 789,416,000 bushels. One year ago they were 1,116,559,000. There is a growing demand abroad for our corn. Exports in the seven months that ended with January were 32,269,000 bushels, against only 13,183,000 in the corresponding seven months of last year. Reserves of all kinds of grain are much less than they were in 1916. Reported additional reductions are as follows: oats, from 598,000,000 to 393,000,000 bushels; barley, from 58,000,000 to 32,000,000.

MUNITION PROFITS

Annual reports published recently show how large have been the profits of several companies that make war supplies. The Du Pont Powder Company's gross receipts of $318,845,000 yielded $78,459,000 in net earnings available for dividends, and this would have permitted the payment of 133 per cent. The dividends paid were 100 per cent, or $58,854,000. Gross income in 1914 was only $25,170,000. Since the beginning of the war $60,000,000 has been expended for new plants. Experts employed by the company are making plans for the utilization of a part of the property in the production of chemicals after the war, when it will not be needed for the manufacture of powder. For several years previous to 1914 the company's net profits averaged less than $6,000,000. Net earnings of the Hercules Powder Company were $16,658,000, or 227 per cent on the stock, gross receipts having risen to $63,419,000 by an increase of $47,000,000. The net income of the Scovill Manufacturing Company, which makes brass, rose to $13,402,000 from $5,974,000 in 1915, and $456,000 in 1914. Last year's profits were equal to 268 per cent. In the affairs of the American Brass Company the similar movement of net was from $1,450,000 in 1914, and $6,128,000 in 1915, to $10,991,000, or 72 per cent.

IRON AND STEEL

The prospect that our Government will give large orders has affected the steel market, already under pressure on account of the continuing demand from abroad. Prices are still advancing. Among the additions last week were $4 a ton for wire and pipe, $5 for light rails, and $5 for bar iron. The average for eight leading steel products is now $81, the highest ever known. Before the war the price of ship plates was 2¼ cents a pound; Japan paid 6½ for 10,000 tons two or three weeks ago, and orders were placed last week at 7 cents. Bids for these plates are coming from all parts of the world. There are inquiries for more than 300,000 tons. The leading manufacturers have their entire capacity for this year engaged and have taken large orders for 1918. Japan wants 50,000 tons in addition to 40,000 bought in revent months. Our own shipyards must have 200,000 tons. It is now known that the Cunard Company has given orders here for eighteen ships, six of which will be built on the Pacific coast. France in the last two weeks has bought 60,000 tons of rails, and is in the market for 100,000 tons more. Other foreign Governments are seeking 40,000 tons of iron and 40,000 tons of shell bars. Our Government's naval program will call for 200,000 tons of steel this year, exclusive of armor plate. Owing to shortage of coke and the railway congestion, the output of pig iron was only 2,637,042 tons in February. In several preceding months it had in the neighborhood of 3,200,000, and the furnaces yielded 3,500,000 in October.

COTTON

The publication of Germany's submarine note reduced the price of cotton at once by 5 cents a pound. More than half of what was lost has since been regained, but the old figures have not been reached because the export movement has been checked and large quantities are awaiting shipment at Southern ports. The Senate, upon the motion of Mr. Smith, of South Carolina, has directed the Department of Justice to ascertain whether the methods of the New York Cotton Exchange are not in some way unlawful and at variance with the Sherman act. Southern planters do not like to see the price go down and are inclined to hold the Exchange responsible for the decline, giving little or no weight to natural causes. Officers of the Exchange do not object to the investigation. They point to the fact that the new Cotton Futures law was enacted for the regulation of their business, which is done in accordance with its provisions. An official report says that 584,000 bales were consumed last year by the manufacturers of ammunition.

The following dividends are announced:

Brooklyn Rapid Transit Company, quarterly, 1½ per cent., payable April 1.

Electric Storage Battery Company, common and preferred, payable April 2.

Manila Electric Railroad and Lighting Corporation, quarterly, 1½ per cent, payable April 2.

Insurance

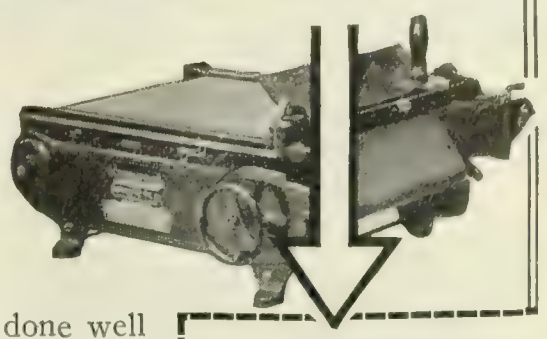
Conducted by

W. E. UNDERWOOD

REFUTING THE DEFERRED DIVIDEND ARGUMENT

In its monthly bulletin for January, the Old Line Bankers' Life Insurance Company of Lincoln, Nebraska, takes exception to views expressed in this department recently on deferred dividend life insurance, a form of contract the sale of which it prosecutes vigorously, and accounts for my hostility to it on the ground "that some one is using the columns of The Independent for personal purposes, regardless of the truth of statements made."

As I, the writer of the criticism referred to have been openly assailing that form of gambling in life insurance now known commonly as "deferred dividends," formerly called tontine, semi-tontine, accumulated dividends, etc., for twenty years, antedating by many years the legislative proscription of it by the state of New York, the insinuation of personal interest is pointless. I have on a number of occasions given the reasons for my opposition. I will restate them. They are very simple and they should be convincing.



Life insurance is a provision against either one of two certain misfortunes: death or penniless or helpless old age. It is not an investment, because it is an expense. It has become a necessary of family life. Its annual cost includes a liberal overcharge to guarantee safety, for security is the prime requisite. This surplus is refunded at the end of each year and the difference between the gross premium paid at the beginning, and the so-called dividend at the end of the year, is the net cost.

Instead of accounting for and paying back this overcharge annually, the deferred dividend scheme holds it in the custody of the company to be used as a stake to be played for in a game that is to last ten, fifteen or twenty years. At no time during the period agreed on in the contracts do the players know how much their respective stakes amount to, for it is agreed that there will be but one accounting—at the end of the long game—and that accounting is certified to as correct, it is specifically ratified in advance, when the application for the policy is signed by the misguided and misinformed person who is induced to "get into the game."

It is as blind a piece of gambling as ever is indulged in. One of the rules of the game is that the players who die or retire (by permitting their policies to lapse) must leave their stakes on the table. The banker of the game (the company) holds all stakes thus forfeited, and is supposed to divide them

40 Office Jobs Made Easier

By Proved Time Saving Methods

What office task is yours—to get done well and quickly? What are you held responsible for, that must be accurate and up to date? You'll find your problem on the coupon at the right. Mark it and get the facts on easier methods.

You can save time, cut expense, reduce labor, eliminate errors, speed up an entire business organization with these proven methods. All these are possible—are being done daily—in 197 lines of business—with the

No Type To Set **Commercial DUPLICATOR** No Stencils To Cut

Your way of doing things is adaptable to the Commercial Duplicator methods. No radical changes are required. Only a boy and the Commercial do mechanically and quickly what others now do by hand or typewriter—slowly and expensively.

First Cost: $35 to $175—

Saving: 2 to 50 Times the Cost—Annually

That is the record of Commercial Duplicator Methods in thousands of concerns in 197 lines of business. No other office device can show you such savings—help you in so many ways—or pay such dividends on its cost—200% to 5000% annually! And remember this is no mere claim. These savings are daily facts in 197 lines of business with concerns large and small.

Check the coupon now to show work you are interested in doing easier, quicker, cheaper. Mail coupon to us and get the facts by return mail.

Duplicator Manufacturing Co.

NOW—

PIN-A-DOLLAR

up among the players who remain until the long game is ended.

Because it is a gamble hitched on to life insurance; because the money which should be used to keep the cost at a figure as low as possible is used as stakes; because the stakeholder never has to account for it while the game is under way; because such accounting as he makes at the end is ratified as correct and satisfactory ten, fifteen or twenty years in advance; and because as iniquitous and merciless a scheme of forfeitures as was ever invented to freeze out the weak and unfortunate constitutes its principal virtue, I am opposed to it.

There is no argument that can be concocted by the brain of man that can, without the use of fallacy and deception, make the business as I have described it—and I have presented only facts—respectable.

The Old Line Bankers' Life continuously advertises in its monthly bulletin specific testimony of the profits made on its policies by a few policyholders. In the issue now before me there is one such on a $2000, fifteen-payment policy, the aggregate premiums on which were $1,146, the settlement of which resulted in a paid-up policy of $2000 and a dividend in cash of $642.-62. The letter of the policyholder, expressing his warm satisfaction, is presented. That policyholder doesn't stop to inquire where that dividend came from. He perhaps doesn't realize that a very large portion of it once belonged to other policyholders less fortunate than himself.

How many of the Old Line Bankers' Life policyholders ever get these fat dividends? What is its annual premium income? In 1915 it received $1,633,-067. How much did it distribute among policyholders in dividends? The small sum of $34,789. It is plain from this statement that the number of individuals actually receiving dividends is small. It will answer to this that it earned much more than this amount. That is true. But will those earnings eventually get to the policyholders? If the answer is yes, then I ask why the deferred dividend fund is carried in its annual reports to the insurance departments of the states in which it transacts business as a free surplus, instead of as a liability? The Old Line Bankers' Life is a stock company, and unless it voluntarily charges the deferred dividend funds up in its accounts as a liability due policyholders, they are the property of stockholders.

W. D., Centralia, Mo.—(1) The term "loading," used by life insurance mathematicians in connection with premium rates, refers to the sum added to the "net premium" for expenses. The "net premium" consists of the amount charged for mortality, plus the amount of the reserve. The three together constitute the amount of the reserve. The three together constitute the amount of premium a policyholder pays. (2) The term "double indemnity" as used lately by some life insurance companies is borrowed from the accident business and usually indicates that the amount of the policy payable for a natural death is to be doubled if death occurs as the result of an accident.

T. W. MOFFAT, Secretary.

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an Annuity or an Old Age Income Policy as issued by the Home Life Insurance Company of New York. The Annuity will yield a much larger income than can be obtained from any other absolutely secured investment. The Old Age Income commences at age 60, but in case of prior death the monthly income immediately accrues to the beneficiary. For a sample policy write to

308 Clarkson Building, Chicago, Illinois

News of Efficiency

The National Institute of Efficiency has received an invitation thru President L. S. Rowe, of the University of Pennsylvania, to send delegates to the Annual Meeting of the American Academy of Political and Social Science, to be held in Philadelphia on Friday and Saturday, April 20th and 21st. The Academy has a record of service along the line of securing and presenting reliable information on many phases of social life, which gives it a distinguished place in the efficiency movements. President Rowe has been notified of the Institute's willingness to send delegates to the meeting.

*
* *

Already the aeroplane is being successfully used to detect forest fires and so help to conserve our supply of timber. Further pacific uses are indicated in the annual report of the work of the Coast Guard, which states that aeroplanes could frequently carry a life-line to wrecks occuring too far off the shore to be reached with the line-throwing gun. "There is no doubt that the use of aircraft will, moreover, greatly facilitate the vitally important work of finding derelicts soon after they are first reported and removing them from the paths of commerce. The desirability of providing aviation stations and equipment for the Coast Guard has been represented to Congress, with the result that authority to undertake this additional function has been incorporated in the pending naval appropriation bill."

*
* *

There would seem, from an article in the London *Spectator*—an organ rarely given to being fantastic—to be a unique opportunity in Europe for the right kind of publicity man. Pointing out that the Serbians have secured many prisoners by dropping nicely-worded postal cards, endorsed by captured Bulgarians, into the enemy trenches, the *Spectator* seriously advocates an extension of the principle on the Western front. "We suggest that there should be printed on the postal cards, in German, specific declarations made by prisoners of war in England, and who have experienced what our treatment is like. 'Kind treatment for prisoners a specialty' must be our advertising head-line, and we must add to it, 'Every facility for quick and easy surrender provided. Do it now.' We believe that the plan would result in the surrender of many thousands." Aeroplane distribution of printed matter is suggested, and billboards erected on "No Man's Land" may yet forestall the peace negotiations of the diplomatists.

Salt Mackerel

CODFISH, FRESH LOBSTER

FAMILIES who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS COMPANY,** with newly caught, **KEEPABLE OCEAN FISH,** choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT** sending by **EXPRESS RIGHT TO YOUR HOME.** We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT-LINED CANS.** They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds. **TUNNY** for salad. **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. *Write for it.* Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

Flowers. By Marguerite Wilkinson.

1. To what emotion does the poem make appeal?
2. What contrast existed between the girl's character and her appearance?
3. What other contrast does the poem emphasize?

The Masque of the Red Death. By Edgar Allan Poe.

1. Explain the five characteristics of the Short Story as an art form.
2. Explain in detail the resemblance between Poe and the Prince in "The Masque of the Red Death."
3. Why did Poe write tales of gloom and terror?
4. In what ways is "The Masque of the Red Death" highly artistic?
5. Show how Poe makes description add to the story.
6. Give definite proof that Poe chose his words carefully.
7. Point out sentences that are rich and musical in effect.
8. Show definitely how the story rises to a climax.
9. Point out color, sound and other sense effects in the story.
10. Point out symbolism in the story.
11. Write a story in which you try to imitate Poe's style.

SECTION II. WORD STUDY.

Editorial Articles and the Story of the Week.

1. Define the important words that are used in narrating or in discussing the news of the week.
2. Give the derivation of ten of these words.

SECTION III. GRAMMAR.

America's Chance in China. By Li Yuan-hung.

1. Give the syntax of all the words ending in "ing" in this article.
2. Give the syntax of all adverbial clauses in the article.
3. Give the syntax of all the infinitives in this article.

SECTION IV. COMPOSITION.

President Li. By Hollington K. Tong.

1. Show in what ways President Li is like or unlike George Washington.
2. Write an explanation of President Li's success.

Can a College Abolish Snobs? By James Irwin Taylor.

1. Write an argument for or against high school fraternities, using this article as contributory evidence.

Will Prohibition Work? By Charles B. Alexander.

1. Give the logical steps by which Mr. Alexander develops his thought.
2. Write a clear expression of your approval or disapproval of the plan here presented.

A Day at the Office. By Edward Earle Purinton.

1. By what means has the author gained clearness? coherence? emphasis?

Editorial Articles.

1. Write an argument for or against the thought presented in "A Denial of Americanism."
2. Write a clear explanation of the so-called filibuster in the Senate.
3. Write your own opinion of the American spirit as shown by the work of the American Ambulance Corps.

The Story of the Week.

1. Write an article in which you properly group and summarize recent events of national importance.
2. Write a summary of the present condition of affairs in Mexico.
3. Explain the relation of the United States Government to the Government of Cuba.
4. Write an explanation of some of the important measures, other than war measures, that are to be considered by Congress.
5. Write a clear explanation of the Irish Home Rule question.
6. Show in what ways the arguments in Burke's "Speech on Conciliation" could be applied to the Irish question.
7. Write your own opinion concerning the German comments on the proposal to ally Mexico with Germany against the United States.
8. Write a summary of the reasons that have prompted President Wilson to arm American merchantmen.
9. Write an explanation of the importance of the British capture of Bagdad.
10. Re-read some of the "Arabian Nights" stories and then write a fanciful story in which you connect present events with those told in the "Arabian Nights."
11. Write a contrast between the present events in Palestine and those that took place three centuries ago.
12. Explain the present military situation in France.
13. Write a short summary of the results of the war on the ocean in the past few weeks.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. The American Attitude Toward Revolution—"A Denial of Americanism."

1. What incidents did the writer probably have in mind when he wrote the list of countries in the fifth paragraph.
2. Look up the story of one or more of the revolutionists referred to at the end of the same paragraph: Bozzaris, Kosciusko, Toussaint l'Ouverture, Kossuth, etc.
3. Give some of the facts that justify the statements in the following paragraph.
4. Does it follow that "if the revolution of 1848 had succeeded the Great War would have been prevented?"

II. Congress and the President—"Thus Passes the Filibuster," "Congress to Meet in April," "Senate Reforms Procedure," "Legislatures Denounce Filibuster."

1. Study the call of the President for a special session of Congress. What subjects is the special session to consider?
2. "It is still uncertain which party will control the House," etc. Discuss in this connection the whole subject of the organization, rules, etc., of the House of Representatives.
3. Compare the organization, rules, procedure, etc., of the two houses.
4. Mention some occasions in the earlier history of the United States when states took action censuring their representatives or senators.

III. The Republic of China and the United States—"America's Chance in China," "President Li."

1. Preliminary to the discussion of this subject, make a brief study of (a) European aggression in China during the nineteenth century, (b) Chinese-Japanese relations since 1894, (c) America's interests in China since 1900.
2. Look up the history of the establishment of the Chinese Republic in 1911-1912 and the history of the Republic since then.
3. What has been the American attitude toward business with China? What opportunities does China offer at the present time?

IV. Latin-American Affairs—"The Mexican Election," "Cuban Government Triumphant."

1. Compare the Mexican and Cuban elections described to the last election in the United States.
2. Review the history of Cuba during the past twenty years. How often has the United States "been forced to intervene in Cuban affairs?"
3. Note the uneasiness implied in our descriptions of Latin-American affairs lest these countries side with Germany. Why should this uneasiness exist?

V. The Prohibition Movement—"Will Prohibition Work?"

1. What method does the author suggest for dealing with the Prohibition movement? What are his reasons?
2. What objections do you find in this article to a federal prohibition amendment?
3. Make a study of the "fiscal side" of the drink question in your community. Of the "economic phase." Do the facts tally with the author's statements?

VI. Progress of the Great War—"The Campaign in France," "The Conquest of Turkey," "The Capture of Bagdad," "The Australian Invasion of Palestine."

1. Trace on a map the military movements which have taken place since the beginning of the war.
2. What is the present military situation in (a) France and Belgium, (b) northern Italy and southwestern Austria, (c) the Balkans, (d) Poland and Galicia, (e) Asiatic Turkey.
3. Comment on the following extracts: (a) "Thruout 1916 Salonica has been a burden as Gallipoli was in 1915." (b) ". . . a second effort will be made to conquer Italy." (c) "It is still a mystery why Rumania . . . declared war," etc. (d) "Germany may attempt to improve her position by invading one of the smaller neutral nations," etc.
4. What were the plans of England, Russia and Germany in reference to western Asia before 1914? How have these plans been affected by the war?

VII. Modern Industrial Organization—"The New Books: Business Today."

1. Which of the books mentioned in this review would you like to read? Ask for them at your Public Library.
2. Compare the method of dealing with the subject of economics used in your textbook and the method described in the review of Fetter's *Modern Economic Problems.*
3. Judging from the review, what are the common elements in Jones's and Hurley's books? Discuss the points wherein they are different?

THE NEW PLAYS

The Professor's Love Story, one of Barrie's first plays, is pleasantly old-fashioned, even sentimental. George Arliss as the Professor does some of his best work. (Knickerbocker Theater.)

Johnny Get Your Gun, excellent low-brow comedy with Louis Bennison as cowboy hero, saving the girl from titled English villain. Prolog is take-off of taking a moving picture. (Criterion Theater.)

Rather than take a chance with a new play Henry Miller has revived *The Great Divide*, forceful, tho its "wild and wooly west" seems a bit obvious today and the plot machinery creaks. (Lyceum Theater.)

The Willow Tree, modern play disguised as fantasy of Old Japan, well-acted thruout; principal roles by Fay Bainter and Shelly Hull. Written by Harrison Rhodes and Benrimo, an author of "The Yellow Jacket." (Cohan & Harris Theater.)

REMARKABLE REMARKS

SARAH BERNHARDT—I am a suffragist.

KING CONSTANTINE—I know nothing about politics.

CONGRESSMAN CALLOWAY—Ain't we a set of "beauts"?

DAVID LLOYD GEORGE—There is great fighting in front of us.

DON MARQUIS—The Kaiser is an advocate of Earth control.

AUGUST RODIN—Only he who knows works slowly.

CHAMP CLARK—This is the best behaved House I have ever seen.

EMPEROR WILLIAM—God also in the future will be with us.

LILLIAN WHITNEY, M.D.—Wear rubber gloves for washing dishes.

REAR-ADMIRAL FISKE — The United States has become effeminized.

MARY PICKFORD—There are very few people who can stand success.

CONGRESSMAN GARDNER — The whole community seems to be chloroformed.

BILLY SUNDAY—I'll be darned if I'll preach if you don't look at me.

H. W. GOSSARD—My mission is to have every woman improve her figure.

PRESIDENT HIBBEN—We have not the vestige of an international conscience.

THEODORE MARBURG—We should go into this war expecting it to last for years.

WILLIAM FAVERSHAM—Bernard Shaw is working for the benefit of humanity.

ED. HOWE—Most people go to hell because of bad luck; few deliberately jump in.

H. G. WELLS—Mankind as a whole seems to have learned nothing and forgotten nothing in thirty months of war.

DAVID STARR JORDAN—Military drill on the part of students counts for very little in the way of military preparation.

RUDYARD KIPLING—It is the hour before dawn which weighs most heavily on those who have spent the night in suffering.

REV. COURTLAND MYERS — God only knows what would happen if the East Side of New York should go on the warpath.

COUNT VON BERNSTORFF—I do not know whether I flatter myself, but I do believe I am not disliked by the American people.

DUDLEY FIELD MALONE—One million of President Wilson's critics are not earning $25 a week for the support of their families.

SIR RABINDRANATH TAGORE—Women are the same everywhere the world over.

FRANCIS NEILSON—You can't start a war in Europe unless you have a liar—he's more necessary than a censor.

GRANTLAND RICE—We would consider it considerable bliss to have a dollar for every word that has been written about Honus Wagner.

BARON SAKATANI — An international missionary system should be adopted so that missionaries can go forth with the object of realizing a world religion.

SENATOR BRANDEGEE — Shall we sit supinely and allow the ukase of some foreign potentate to clear the ocean of American shipping and blockade our ports?

CHANCELLOR VON BETHMANN HOLLWEG —We by no means underestimate the difficulties caused to neutral shipping and we therefore try to alleviate them as much as possible.

JOSEF HOFMANN—A schneller or a mordent occurring in a very slow movement would, if played too rapidly, destroy its repose and so to speak "fall out of the frame."

LADY DUFF-GORDON — When spring comes dancing over the little hills, I want to make dresses that look like the flowers and the sunshine and the green fields and the blue sky.

EX-AMBASSADOR GERARD — Doesn't it seem to you ridiculous that the two states of New York and New Jersey should have more chauffeurs in them than there are soldiers in our army?

"UNCLE JOE" CANNON—As the sun comes up and the sun goes down, as the months go by and the years elapse, I have recognized that under a government of the people there must be organization by parties.

FROM SCHOOL TO SCHOOL

A number of teachers' organizations of the City of New York have united in an effort to bring about a new adjustment of salary schedules to enable teachers to meet the increased cost of living.

The Indiana State Vocational Survey recommends that housekeepers allow their maids, cooks and domestic servants a minimum of two hours per week from regular work in order that they may gain instruction in the best methods of work.

A bill has been drafted to compel the school trustees of Indiana to provide suitable military instruction in any school in the state on petition of forty or more boys thirteen years of age or older. The same bill provides for the instruction of girls in nursing and red cross work on petition of forty or more girls.

Dr. van Loon, who teaches modern history at Cornell and can make history as vivid as fiction, witness *The Golden Book of the Dutch Navigators*, believes in working at "applied history," too. So he was a staff correspondent of the Associated Press with the Russian armies during the Japanese war, and he has been in the Scandinavian countries, in Holland, Belgium and France during the past two years, in order to know whereof he speaks in his many articles on Dutch neutrality.

President Wilson has signed the Smith-Hughes Vocational Educational Bill that provides for Federal aid to the states in giving training in agriculture, trades, home economies and industrial subjects. The bill appropriates $500,000 for such aid in 1918, $750,000 for 1919, $1,000,000 for 1920, $1,250,000 for 1921, $1,500,000 for 1922, $1,750,000 for 1923, $2,000,000 for 1924, $2,500,000 for 1925, $3,000,000 for 1926, and the same sum annually thereafter. In addition to this the bill appropriates for preparing teachers of the subjects concerned $500,000 for 1918, $700,000 for 1919, $900,000 for 1920, and $1,000,000 for 1921 and annually thereafter. The bill is one of the most important educational bills ever made effective.

BRUNSWICK
HOME BILLIARD TABLES

Someone Says, *"Billiards!"*
And Out Comes the Brunswick Table

Folded up in a closet or in any spare space, the "Quick Demountable" Brunswick Home Table is triumphantly brought forth by eager hands and set up in the center of the room. It is only the work of a minute to push back the chairs, rack the balls and fire the shot that starts an evening of royal sport.

Carom and Pocket Billiards never tire—their charm is endless. Sparkling hours of merry rivalry with those you love—moments of tense uncertainty!

Expert Playing Qualities

To live a healthy, worry-proof life, to entertain friends and to keep boys home—install a scientific Brunswick Home Billiard Table.

Beautiful oak and mahogany, accurate angles, fast ever-level beds and quick-acting Monarch cushions. Our handsome billiard catalog shows sizes and styles to fit in any home. *Write for free copy today.*

Balls, Cues, Etc., Free

Complete High Grade Playing Outfit included with every Brunswick—Balls, Cues, Rack, Markers, Tips, Cue-Clamps, Chalk, Brush, Expert Book of 33 Games, etc.

Write for Color-Catalog

See these tables in photographs *of homes like yours.* Get our low prices, easy terms that let you play as you pay and home trial offer.

All contained in our interesting billiard book and color-catalog, "Billiards—The Home Magnet." Send coupon or write for free copy today.

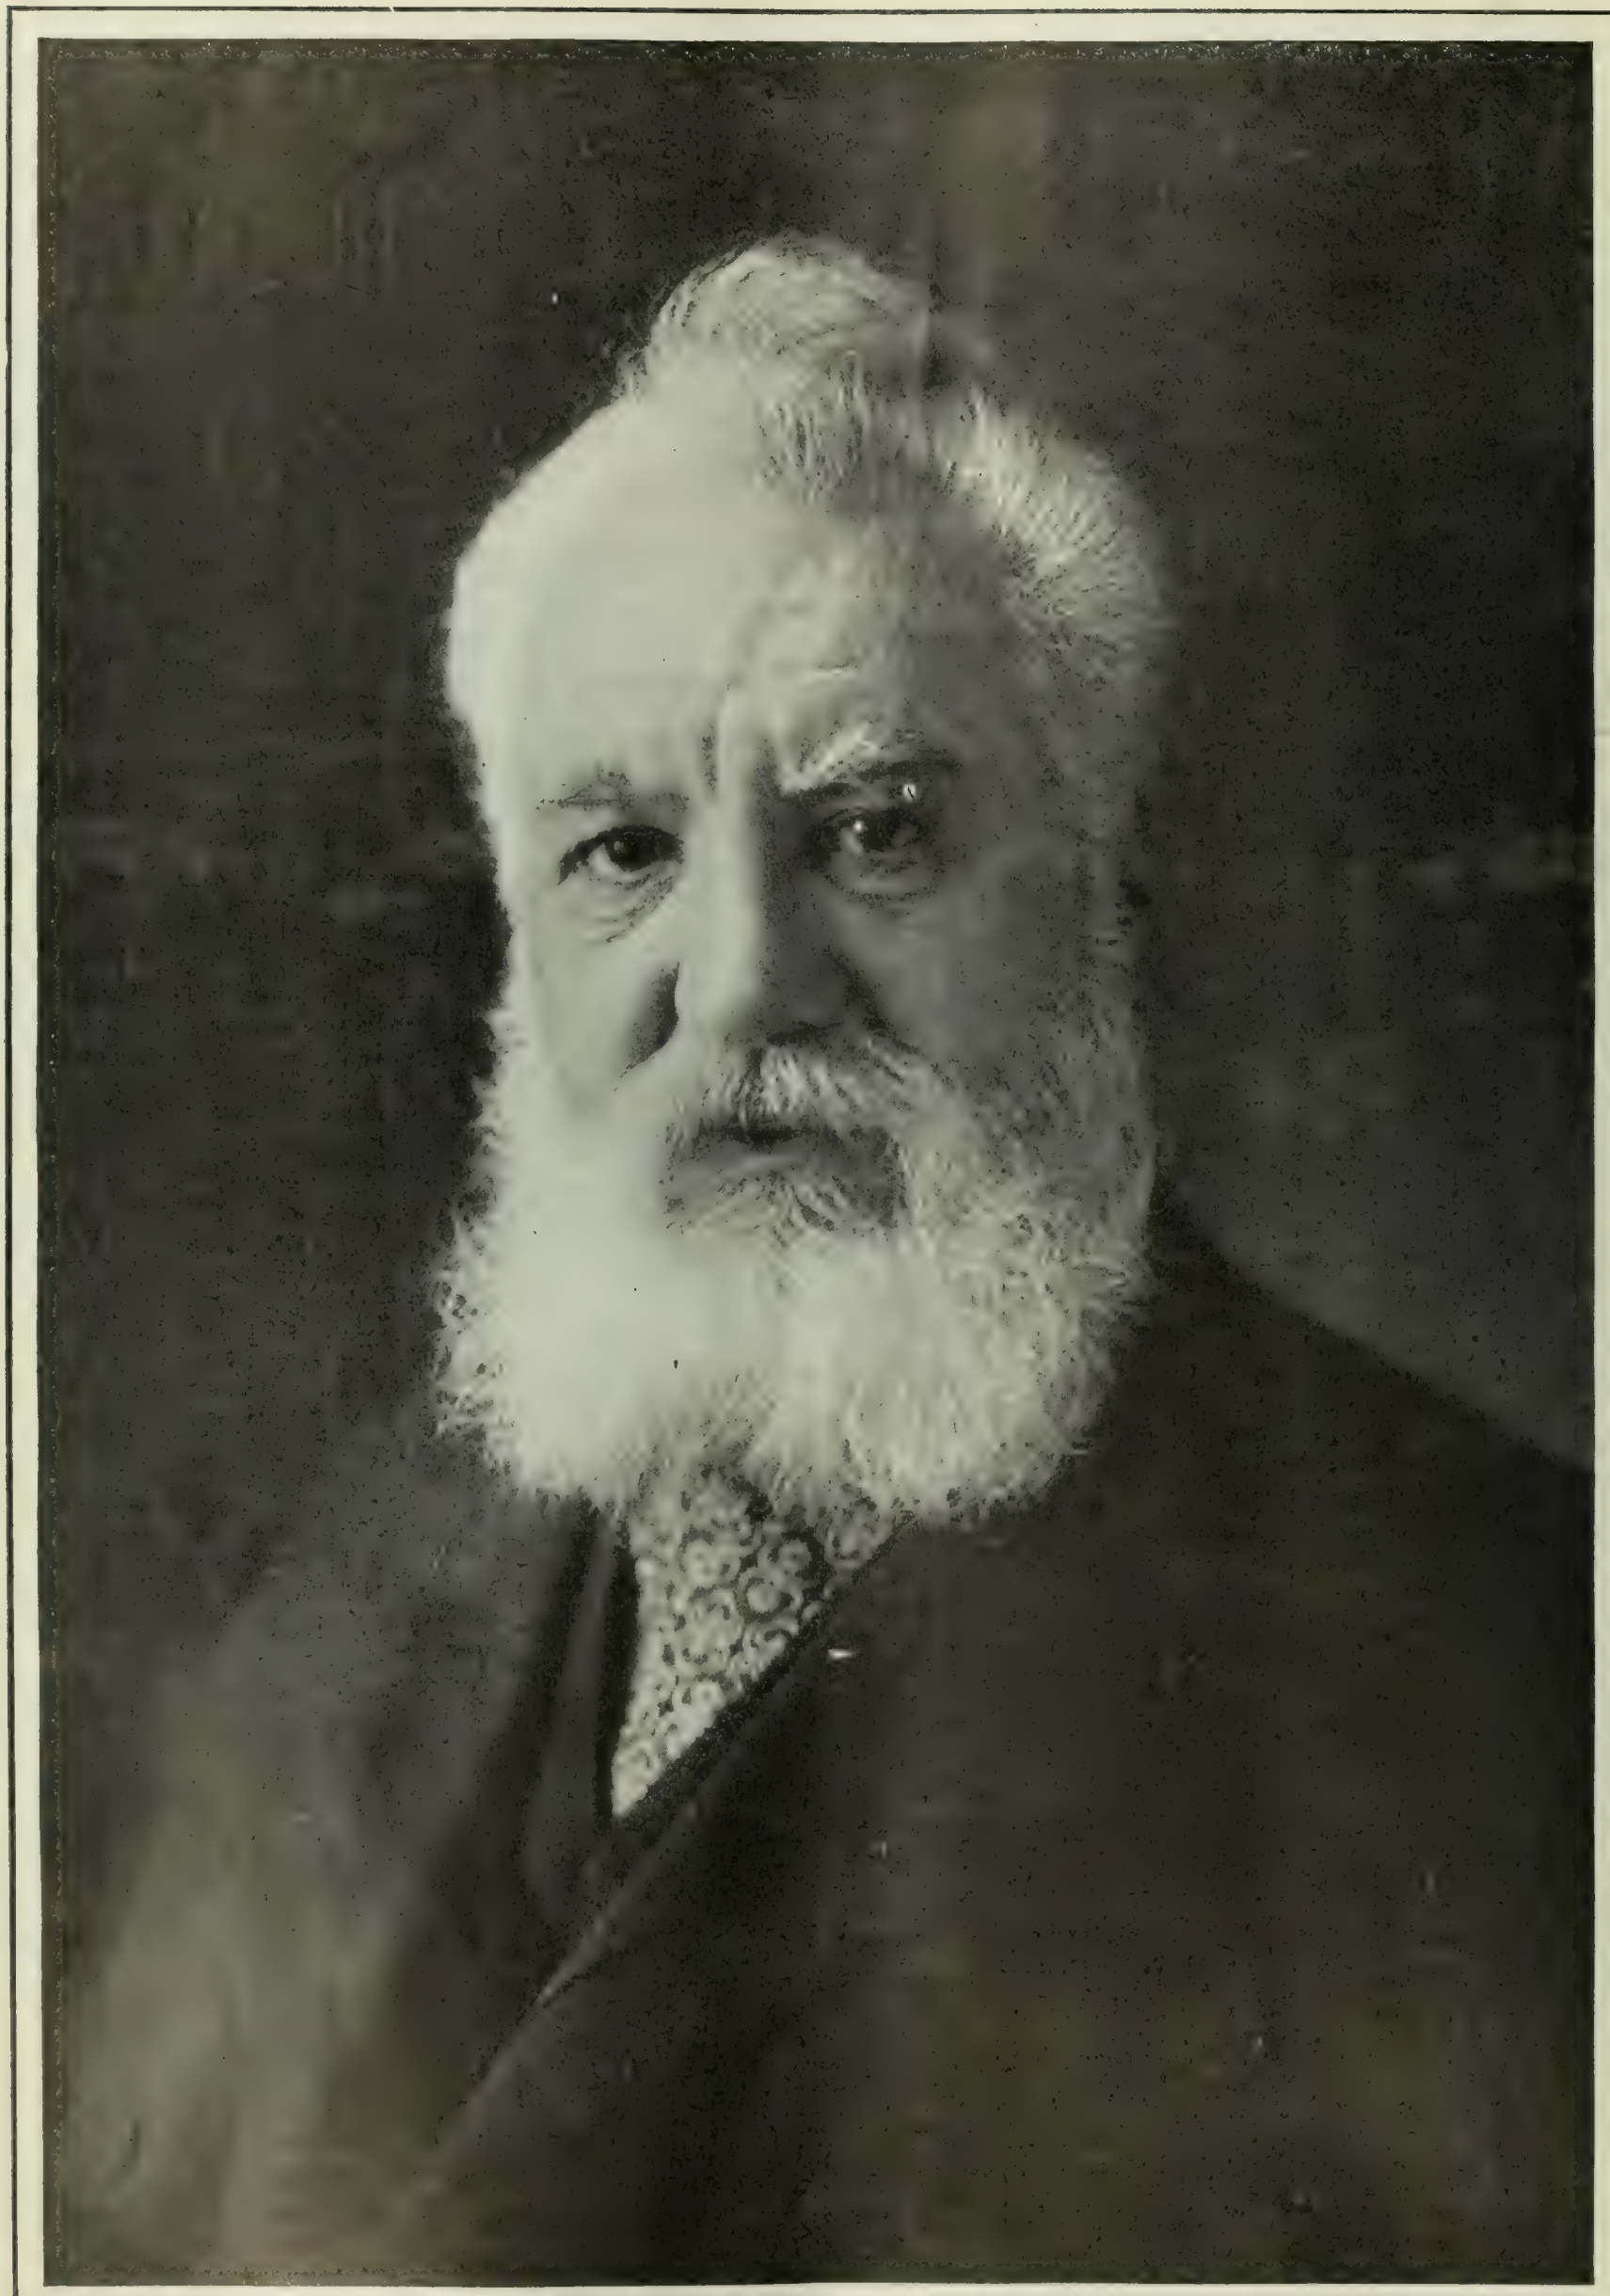
THE DOOM OF THE DYNASTIES

THE Romanoff autocracy has fallen. The doom of the Hapsburgs and of the Hohenzollerns is at hand. The kings must go; and go they will.

On August 10, 1914, in its first editorial reaction to the war, The Independent printed the words which appear on its cover today. Our prediction is verified sooner than we dared then to expect. Complete fulfilment may take a longer time than we now are willing to contemplate, or it may be accomplished swiftly. Royalty may be abolished altogether; or, stripped of all real power, it may be permitted to survive as in England, on condition that it shall function democratically, useful chiefly, like the flag, as a symbol of political unity. Whichever of these possibilities comes true, monarchy as absolutism is a fact of ancient history, and ancient history, as we said ten days after the event, closed at midnight of July 31, 1914.

The Head Devils began this war. This also we said in our first reaction to the Demon Dance. None of the other alleged causes by itself, we contended, "nor all of them in combination, would have made war if the consuming vanity, the monstrous egotism and the medieval-mindedness of the absolute monarchs had not been thrown into the scale." Today all the world knows that this assertion, like our prediction, was true. The war was begun because the dynasties saw their thrones endangered by the rising tide of democracy.

The Czar goes first, because he tried to play the traitor's game. He has been the Dr. Jekyll and Mr. Hyde of the war. Professedly organizing and leading the forces of his empire against the Hohenzollern, he and his minions have been paralyzing the arm of the fighting force, disorganizing communication, scattering and confounding munitions and supplies, starving the people, and preparing, if at any moment the attempt should seem safe, to make a separate peace. The house of Romanoff, partly Teuton in blood, largely Teuton in sympathy, and wholly Teuton in interests, has met the inevitable fate of the traitor, and it is one that satisfies the world's profoundest sense of justice.



After Nicholas, the Kaiser and the Emperor of Austria: it matters little which goes first, they both must go, and go they will. What is more, they know that they must go. Since Bismarck saw and told them, they have perfectly understood that the three czars would stand or fall together. The impending doom was known in Berlin before the news of the Russian revolution reached this continent. Chancellor von Bethmann-Hollweg's speech to the Prussian Diet on Wednesday afternoon proclaimed it to the Empire. "Wo to the statesman who cannot read the signs of the times," he said. Wo, indeed, for the Chancellor has spoken too late. Whether the flame of revolution shall sweep over the Carpathians and the Vistula to the Vosges and the Rhine, or the Chancellor shall be able to keep his promise to reward the loyalty of the German people by giving them the reality of popular government, will matter little in the end. Hapsburg and Hohenzollern, as absolutist powers, have had their day.

And whether the war goes on for months or for another year, the victory of democracy over absolutism is assured. Peace without victory there never has been, there never can be. The forces that clash in war are the forces of reaction and of progress. In the titanic struggle for civilization and liberty peace is but an armistice until civilization and liberty are safe. By exertions and sufferings that have paralyzed imagination they have been saved. A necessary part of the cost has been the temporary sacrifice of much individual liberty and a temporary subordination of civil procedure to military authority in the freer nations, but the back swing of the pendulum has begun. This war, when it ends, will not have militarized the world, as the pacificist has feared. The returning tide of democratic liberty will run swift and deep, from this day on. The doom of the dynasties has fallen.

THE PASSING OF OLD RUSSIA

THE long hoped for, often announced and ever deferred event has at last occurred. The Russian revolution has arrived. Everybody knew it must come some time and some how. Even the Czar's Black Hundreds must have secretly felt what they would never openly admit, that the age of absolutism was over.

But however long and however confidently we may have anticipated the event, it takes us all by surprize when at last it comes. It was disclosed to the world with the skill of a dramatist. The first news we got of the revolution was—silence. We had been told of food riots in Petrograd, but that was an old story. The Czar prorogued the Duma for a month, but that he had done before. We heard that the Duma was reluctant to comply, yet previously their reluctance had been overcome, or, as in 1907, they had been sent to prison.

THE INVENTOR OF THE TELEPHONE

ALEXANDER GRAHAM BELL WAS PRESENTED LAST WEEK WITH THE CIVIC FORUM'S MEDAL OF HONOR FOR DISTINGUISHED PUBLIC SERVICE. THE FORMER RECIPIENTS OF THE HONOR WERE COLONEL GOETHALS AND MR. EDISON

Then, for four days, nothing came from Russia. Berlin and London knew something of what was going on in Petrograd, but did not share the secret with America. We heard an echo before we heard the report. Chancellor von Bethmann-Hollweg appeared unexpectedly before the Prussian Diet and announced that the people must have a larger share in government and that after the war he would undertake the reform of the franchise. Why the Prussian Government should so suddenly concede what it had hitherto so stubbornly refused was apparent when we learned what he knew then, that a revolution had broken out in Russia because of the refusal of the Russian Government to allow the people to participate in the management of public affairs.

While the cable from London was still silent, the aerial waves from Berlin brought us the first knowledge of the rising in Petrograd. It is strange that London should have allowed Berlin the privilege of breaking the news to America if the revolution was, as it is said to be, an anti-German movement. The English people have in the past shown almost as much sympathy for the Russian revolutionary movement as the Americans, and during the war they have suffered under the sneer that, while ostensibly fighting for freedom and democracy, they were actually supporting the most absolute of monarchies. They will rejoice to be relieved of this appearance of inconsistency, and America will sympathize more unreservedly with the Allies now that the Russian people have gained control of their own government.

Such a stupendous change as the conversion of an autocracy into a democracy cannot be accomplished in a week, yet it appears that the center of power has been definitely, and we believe permanently, shifted. The Russian revolution was as sudden and promises to be as permanent as the French. In spite of the fallacy of historical parallels one cannot avoid comparing them.

Nicholas II was much the same sort of monarch as Louis XVI, well meaning and weak, stupid and stubborn, a good husband and a bad king. Both were under the influence of a foreign wife, distrusted by the people, Marie Antoinette, the Austrian, and Alexandra Alixe, the German. Nicholas, like Louis, was justly suspected of secret negotiations with the enemies of his country, Germany and Austria. Nicholas, like Louis, began by concession, then turned too late to repression. He ordered the Duma to disperse as did Louis the States-General. The Duma, like the States-General, refused to obey and declared itself the rightful government. The Czarevitch, like the Dauphin, becomes the innocent victim of his royal birth. The Russian revolution, like the French, was the offspring of two forces, hunger among the people and liberalism among the educated. So the Russians rose like the French, attacked their Bastille, the Fortress of St. Peter and Paul, liberated the political prisoners, and made bonfires of the archives of the secret police, as the French did of the tax rolls. But, fortunately for humanity, history does not have to repeat itself, and we have good reason for hoping that in the Russian revolution neither a Robespierre nor a Napoleon will appear.

The charges which the representatives of the Russian people brought against the bureaucracy for its conduct of the war were three:

1. Inefficiency.
2. Corruption.
3. Treachery.

In spite of the stringent censorship enough has leaked thru to prove that there are abundant grounds for these accusations. We have heard of millions misspent, of shells that would not fit the guns, of munitions piled up at Archangel or shipped to Vladivostok when needed at the front, of the complete breakdown of the transportation system, of regiments sent into action without ammunition and left without food. Russia, with more soldiers than any other belligerent, has suffered the most ignominious defeats. Russia, which grows grain for western Europe, has more starving people than insular England or imprisoned Germany.

And we know that this inefficiency was in large part due to the venality of officials who filled their own pockets at the expense of their country. Contracts were let to the highest bidder—to the purchasing agent. Goods were ordered that were never intended to be delivered, but were paid for just the same. A long chain of chinovniks had to be "seen" before business could be done. Supplies for the front were sometimes sent forward too far and went to equip or feed the German army. Maps and campaign plans also went over the line in the same way. Hindenburg knew the disposition of the Russian troops among the Mazurian Lakes of East Prussia before he made his attack, for a Russian officer supplied him with the information.

Finally the scandal became so great and the danger so imminent that the presidents of twenty-eight zemstvos, or provincial assemblies, met at Moscow on October 29, 1916, and issued this bold arraignment of the government:

> The painful and terrifying suspicions, the sinister rumors of treason, of dark forces that are working for Germany by trying to create a favorable sentiment for a shameful peace at the price of the destruction of our national unity—all these rumors and suspicions are transformed into this certainty: an enemy hand is secretly directing the affairs of the nation!

In the following month Professor Milukov, like a second Mirabeau, delivered his startling philippic in the Duma, denouncing by name the pro-German premier, Stürmer, as a traitor to his country. This brought about the fall of Stürmer, but he was replaced by the reactionary Trepov. The Czar, angered by the open assassination of Rasputin, his ghostly adviser, put in Prince Golitzin as premier and ordered the suspension of the Duma.

After that came the deluge.

THE EIGHT-HOUR DAY

BEFORE the Supreme Court of the United States could pass on the constitutionality of the eight-hour day for railroad workers, the question was finally settled once and for all. The railroad managers capitulated unconditionally. Faced with the certainty of a universal railroad strike if they continued to resist, the managers granted the eight-hour day regardless of the law and its interpretation. A few hours after the managers announced their surrender, the Adamson law was declared constitutional by the Supreme Court—but even if it should be subsequently repealed, the eight-hour day for railroad workers has come to stay.

Its coming marks another step in progress in the im-

provement of working conditions for American workingmen. Whether the eight-hour day for railroad employees is actually what it seems—a means of shortening the workday—or merely a device for securing increased wages, its establishment is a good thing for the workers and for the community.

But it has been brought about in the wrong way. Lasting progress in industrial relations must depend upon the substitution for the methods of war, in settling disputes between employers and employed, of more enlightened and more reasonable means. When capitalists and laborers fall out, the outcome of the quarrel must be made to depend not upon the relative armed strength of the disputants, but upon the justice of their respective causes.

The eight-hour day was first granted to the railroad workers of the country by act of Congress because the workers were so strong in combination that Congress feared what they threatened to do. The eight-hour day has just been confirmed to the railroad workers by act of the railroad managers for precisely the same reason.

What the railroad men have secured for themselves is a full measure of justice in their working relations. But it should be neither possible, nor necessary, for a group of workers to use threats of coercion in readjusting their relationship to their employers. War is as undesirable in industry as in international relations. In both realms we must find some other way.

IF NECESSARY

GERMAN submarines have sunk three American ships in one day. It is perfectly clear that once more Germany means to do precisely what she has threatened. American ships and American citizens sail the high seas off the European shore at their peril. Germany, in complete defiance of international law and the sacred rights of humanity, will "get" them if she possibly can.

Our duty is clear. We must resist this German lawlessness with all our might. American merchant ships are being armed to resist the submarine menace. That will probably not be enough. The American navy must take a hand. We must use every means at our command to make the highway of the sea safe for our people and our ships against these pirates of frightfulness. If this means war Congress must declare it, the American nation must wage it, the American people must sacrifice themselves that it be made successful.

THE ELIMINATION OF RELIGION AND EDUCATION FROM MEXICO

THE Mexican constitution which was promulgated February 5, 1917, and is printed in translation by *The Mexican Review* of Washington, is a most amazing document. It appears that the reactionary party is in full control and are determined to prevent any light from the outside world penetrating the darkness of Mexico, and to preclude the possibility of the Mexican people developing a free and enlightened civilization for themselves.

Americans of all classes are desirous of aiding in the regeneration of Mexico, not by conquest or intervention, but by establishing there free schools, free press and free churches such as have formed the character of our own country, and such as Mexico needs more than anything else in the world. Scores of devoted and qualified young men and women are ready to enter this field. Millions of Americans have contributed money to this cause. Our universities are anxious to assist. Several organizations have been formed to start educational institutions of various kinds, elementary, higher, technical and normal, religious or secular. Never has there been such a generous proffer of good will and practical aid from one people to another.

But the new Mexican constitution is drawn up with diabolical cunning to frustrate and impede all such efforts and to keep the people in ignorance and superstitution. Even Dr. Francia, autocrat of Paraguay, dared not assume such tyranny over the acts and consciences of his subjects.

We have space here to consider the effect of a few of the provisions of this obscurantist instrument:

> Every religious act of public worship shall be performed strictly within the places of public worship which shall be at all times under governmental supervision.

This would prevent such religious services as household prayer meetings and Sunday schools and the development of new churches. No nonconformist or reformation movement could ever arise in Mexico if this provision is enforced. For all "places of public worship" that now exist or shall hereafter be erected are "the property of the nation" and the Department of the Interior decides whether any such places of public worship are needed, and, if so, what sort of services shall be conducted in them and what the minister may say and do. For one thing, the minister is absolutely prohibited from exercizing his highest function, that of influence on public affairs:

> No ministers of religious creeds shall, either in public or private meetings, or in acts of worship or religious propaganda, criticize the fundamental laws of the country, the authorities in particular or the government in general; they shall have no vote, nor be eligible to office, nor shall they be entitled to assemble for political purposes.
>
> Every kind of political association whose name shall bear any word or any indication relating to any religious belief is hereby strictly forbidden. No assemblies of any political character shall be held within places of public worship.

That is to say, such political preachers as Isaiah and Jeremiah, John and Jesus, Paul and Peter, Augustine and Savonarola, Knox and Calvin, Wesley and Edwards are not allowed in Mexico! They might expose some of the rottenness of Mexican politics and some of the evil in high places.

> Only a Mexican by birth may be a minister of any religious creed in Mexico.

America rejoices that she has been able to call from abroad such able ministers as Whitefield and McCosh, Jowett, Aked and Hugh Black, but they would not be allowed in Mexico.

> The state legislatures shall have the exclusive power of determining the maximum number of ministers of religious creeds according to the needs of each locality.

Think of giving our state legislatures such power! Yet we believe they will compare favorably with the Mexican in honesty and intelligence.

The press as well as the pulpit is to be muzzled in Mexico:

> No periodical publication which either by reason of its program, its title or merely by its general tendencies, is of a religious character, shall comment upon any political

affairs of the nation, nor publish any information regarding the acts of the authorities of the country or of private individuals in so far as the latter have to do with public affairs.

If this had been the law in the United States such periodicals as The Independent and *The Outlook* would never have been started and the religious press of the country would be deprived of its influence on public affairs.

No religious denomination, no minister or ex-minister, is allowed to found or conduct schools, colleges, universities, technical institutions, research laboratories, hospitals, orphan asylums, charitable institutions or anything else of the kind. But at least nine-tenths of the higher educational and the charitable institutions of the United States were founded under religious auspices. If this had been our constitution we should have been deprived of Harvard, Yale, and Princeton, St. Luke's and the Presbyterian hospitals, the Protestant, Catholic and Hebrew orphanages, and all similar institutions of incalculable benefit to our country. Russia could not do worse than Mexico under the new régime.

Finally, to make the power of the bureaucracy absolute and to extinguish all possibility of popular control, it is expressly provided that

No trial by jury shall ever be granted for the infraction of any of the preceding provisions.

We understand fully the conditions that have given rise to the fanatical anti-clericalism which finds expression in this constitution. It is an intolerance generated by intolerance. It is a tyranny evoked by tyranny. The Roman Catholic Church has had supreme control over the people of Mexico for four hundred years and cannot escape responsibility for their ignorance, superstition and poverty. But the way to reform a church is not to make it subservient to the state. That makes it worse. The only way to combat intolerance is by tolerance. The only thing that can conquer tyranny is freedom. With free schools, free churches and free press there would be great hope for the future of Mexico. But the new constitution, altho it contains many enlightened provisions, would strangle the only agencies capable of reforming Mexico.

GILL NOT HILL

THE United States Brewers' Association has caught The Independent in an error. In our issue of March 5, we spoke of Mayor Hill of Seattle. It should, of course, be Mayor Gill. We welcome the correction.

But the Brewers' Association, speaking thru its secretary, Mr. Fry, thinks that The Independent was also in error in trusting Mayor Gill's testimony as to the good results of prohibition in Seattle. Mr. Fry writes us on this point as follows:

Mr. Gill was driven from office a few years ago, under the Recall Law of Washington, because of his tolerance of vicious conditions. A short time afterward he made a confession of his omissions, . . . and the deluded voters of his city, male and female, returned him to the office from which he had been ejected, upon his promise to be good. Within a month or so he has been indicted by the Federal Grand Jury under the most sensational circumstances on the charge of conspiring to over-ride the laws, and establish a monopoly of the illicit sale of liquor in Seattle, in connection with some rather notorious characters of that place. In view of these circumstances, it appears to me that the testimony of this gentleman, as to the good effects of prohibition, may at least be received with reserve.

The main facts are as Mr. Fry states them. Mayor Gill was recalled from office in 1910, ran again unsuccessfully in 1912, was elected again in 1914 by an enormous majority as the candidate of the reform forces, and reëlected to a third term last March. During the past year Mayor Gill has enforced the prohibition law with severity and effectiveness. By his activity against the liquor traffic since his return to office he has earned the whole-hearted support of the "dry" interests and the equally hearty hostility of the "wets."

It is true that he has been indicted by a Federal grand jury, on the charge of accepting a bribe from a firm of druggists for protection in the illegal selling of liquor.

But when it is known that the complainants and chief witnesses against the Mayor are the druggists in question, whose stores Mr. Gill had raided, the case looks not quite so clear against him. In the course of the raid casks and bottles containing over 2000 gallons of liquor had been smashed and the liquor thrown away. Both druggists on their own plea of guilty have been convicted of the illegal sale of liquor.

There the case stands. In common with all good citizens, we shall assume Mayor Gill to be innocent until he is proven guilty. In fairness to the Brewers' Association we are glad to present these facts. In fairness to Mayor Gill we should reiterate that he has the stedfast support of the prohibition forces in Seattle and the bitter hostility of those who are attempting to carry on the surreptitious and illegal sale of liquor.

We submit that the weight of probability is all in Mayor Gill's favor as a witness to the effectiveness of prohibition in Seattle.

THE RICH MAN'S CHANCE

WHEN Harry Thaw killed Stanford White, his family poured out money in the employment of legal acumen and medical skill to save him from the logical penalty of his act. He was saved on the ground that he was insane.

When Thaw had been for a time in an asylum for the criminal insane, the family wealth was again used in repeated attempts to have him declared sane. For a long time the attempts failed.

Then the family money was used to engineer an escape from the asylum. The plan succeeded, but the fugitive was captured in another state and brought back in spite of all the legal obstacles the Thaw money could buy.

Another attempt to have Thaw declared sane succeeded. He became a free man again.

It was not long before he was accused of a vicious crime of degeneracy. But once more the family wealth has come to the rescue; and he has been adjudged by a Pennsylvania court to be insane.

Apparently Thaw is insane whenever he commits a crime, and in his right mind between times. At least so the money of the Thaw family succeeds in proving to the satisfaction of the law.

Is it any wonder that the notion prevails that the rich man stands a better chance before American courts than the poor man?

THE STORY OF THE WEEK

The Russian Revolution

Within less than a week and practically without bloodshed the autocracy and bureaucracy of the Russian Empire have been overthrown and the government is in the hands of a group of able and progressive men backed by the national assembly, the Duma. The causes of the movement are discussed editorially. Here we can only briefly narrate the remarkable events that took place in Petrograd. First there was the failure of the transportation system to keep the capital supplied with food. This was ascribed to the incompetency or treachery of Protopopov, Minister of the Interior, and so manager of the state railroads, who was suspected of aggravating the hardships in order to put a stop to the war.

Bread lines formed. Mobs collected in the streets. The police fired upon them but were not able to suppress them. Then the troops were called on to help the police but showed a strange lack of enthusiasm for the task. The Cossacks who used to delight in charging unarmed civilians with whip and saber now fraternized with the people. The Guards fired over their heads or refused to fire at all. Some shot their officers. The police used machine guns from the tops of public buildings with murderous effect on the crowds below.

When the Duma declared itself the government workingmen and nobles, students and peasants, soldiers and sailors hastened to the Tauris Palace to declare their willingness to support the new regime. The famous Preobrajensky Guards, all six-footers, were drawn up in front of the palace, while the president of the Duma, Mr. Rodzianko, made a speech to them. The Grand Duke Cyril, cousin of the Czar, appeared in the Duma Hall with officers of the Naval Guard and placed the Imperial Corps at the command of President Rodzianko. The Grand Duke Nicholas telegraphed from the Caucasus his acceptance of the new regime.

One by one the regiments went over to the side of the Duma. Students and strikers obtaining arms from the arsenal took possession of the streets. The old Cabinet and the police and soldiery that stood by it were besieged all night in the Admiralty Building, the Alexander Gardens, St. Isaac's Cathedral, and the Astoria hotel. Here there was fierce fighting, but early Tuesday morning the resistance broke down and the ministers surrendered. The national ensign was lowered and the red flag raised in its place while the crowd sang the song of the revolutionists. The archives of the hated secret police were raided and the papers that had sent so many thousands to Siberia or death were brought out and burned. As soon as the Czar's abdication was known a mob with ladders gathered in front of the Winter Palace and tore down the ipemrial insignia from the façade. The prisons were entered and the leaders of the old regime put in the place of the revolutionists who had been confined in the dungeons of the fortress of St. Peter and St. Paul. The food stores were released and the shops again opened. There was surprizing little looting and the total number of lives lost in the insurrection is probably less than five hundred.

The Czar and the Duma

On March 11 the Emperor issued a ukase declaring the Duma adjourned "owing to extraordinary circumstances until further notice," tho promising to reconvene the sessions of parliament not later than April. But instead of obeying, the members of the Duma, with the exception of the conservatives, met in secret session and declared the present government overthrown and authorized the establishment of a provisional government in its place.

President Rodzianko of the Duma sent the following message to the Czar who after dismissing the Duma had gone to his customary headquarters at the front:

> The situation is grave. Anarchy reigns in the capital. The Government is paralyzed. The transport of provisions and fuel is completely disorganized. General dissatisfaction is growing. Irregular rifle firing is occurring in the streets. It is necessary to charge immediately some person trusted by the people to form a new Government. It is impossible to linger, since delay means death. Praying God that the responsibility in this hour will not fall upon a crowned head.

This was followed on Tuesday by a still more urgent message from President Rodzianko:

> The position is becoming more serious. It is imperative that immediate measures be taken, because tomorrow will be too late. The last hour has come when the fate of the fatherland and the dynasty are being decided.

The Czar's only response was to start for Petrograd, but his train was stopped at Pskov, 125 miles away. Here he was met by two members of the Duma who placed before him for signature a manifesto of abdication. The Czar asked to be allowed to consult his wife, but that was refused. He talked of suicide but was persuaded from it by his confessor. He declared that he had been betrayed, but finally he submitted to the inevitable, saying:

> It would be very hard to be separated from my son. Therefore I will abdicate in favor of my brother, in behalf of myself and my son.

The Emperor Nicholas then signed the document which we publish in another column. He then left for his Crimean residence.

THE CROWN WAS TOO HEAVY FOR HIM
Alexis, the only son of Nicholas II, was excluded from the throne by his father

Grand Duke Michael

When the Czar abdicated the Russian throne, both for himself and for his only son, he nominated his only brother, the Grand Duke Michael Alexandrovitch, as his successor. The latter accepted only on condition that the question of the form of government be submitted to the people. This is his public declaration:

> This heavy responsibility has come to me at the voluntary request of my brother, who has transferred the imperial throne to me during a period of warfare which is accompanied with unprecedented popular disturbances.
>
> Moved by the thought which is in the minds of the entire people, that the good of the country is paramount, I have adopted the firm resolution to accept the supreme power only if this be the will of our great people who, by a plebiscite organized by their representatives in a constituent assembly, shall establish a form of government and new fundamental laws for the Russian state.
>
> Consequently, invoking the benediction of our Lord, I urge all citizens of Russia to submit to the provisional government established upon the initiative of the Duma and invested with full plenary powers until such time, which will follow with as little delay as possible, as the constituent assembly, on a basis of universal, direct, equal and secret suffrage, shall by its decision as to the new form of government express the will of the people.

THE MEN WHO REMADE RUSSIA'S GOVERNMENT

A recent photograph of the Russian Duma taken in London during the conference of the Duma and the British Parliament. Professor Milukov, leader of the revolution, and now Minister of Foreign Affairs, is seated at the extreme right; the leader of reaction, M. Protopopov, former Minister of the Interior, is seated fifth from the left

China Breaks With Germany

As soon as the United States severed diplomatic relations with Germany the Chinese Cabinet notified the American minister at Peking, Dr. Paul S. Reinsch, that China would take the same action. But the President, Li Yuan-hung, refused to approve of such a measure, holding that the constitution reserved to the president the power with the concurrence of the National Council to declare war and make treaties. The Cabinet thereupon resigned and the Premier, Tuan Chi-jui, took train for Tientsin in spite of the President who had given orders to the railroad to refuse him transportation. Dr. Wu Ting-fang, former Minister to the United States, had resigned the portfolio of Foreign Affairs a few days before alleging as a reason that he had become deaf thru a recent illness. But President Li, finding that parliament would not support him in a policy of neutrality, recalled the Premier from Tientsin and negotiations with the Entente Powers were resumed. The representatives of England, France, Belgium and Japan urged China, by substantial inducements, not merely to break with Germany, but to join the Allies in the war. This was of

RUSSIAN FREEDOM

Citizens.—The Executive Committee of the Duma, with the aid and support of the garrison of the capital and its inhabitants, has succeeded in triumphing over the obnoxious forces of the old régime in such a manner that we are able to proceed to a more stable organization of the executive power, with men whose past political activity assures them the country's confidence.

The new Cabinet will base its policy on the following principles:

First.—An immediate general amnesty for all political and religious offenses, including terrorist acts and military and agrarian offenses.

Second.—Liberty of speech and of the press; freedom for alliances, unions, and strikes, with the extension of these liberties to military officials within the limits admitted by military requirements.

Third.—Abolition of all social, religious, and national restrictions.

Fourth.—To proceed forthwith to the preparation and convocation of a Constitutional Assembly, based on universal suffrage, which will establish a governmental régime.

Fifth.—The substitution of the police by a national militia, with chiefs to be elected and responsible to the Government.

Sixth.—Communal elections to be based on universal suffrage.

Seventh.—The troops which participated in the revolutionary movement will not be disarmed, but will remain in Petrograd.

Eighth.—While maintaining strict military discipline for troops on active service, it is desirable to abrogate for soldiers all restrictions in the enjoyment of social rights accorded other citizens.

The Provisional Government desires to add that it has no intention to profit by the circumstances of the war to delay the realization of the measures of reform above mentioned.

Cesare in New York Evening Post

THE SCEPTRE

THE CZAR'S ABDICATION

We, Nicholas II, by the Grace of God Emperor of all the Russias, Czar of Poland and Grand Duke of Finland, etc., make known to all our faithful subjects: In the day of the great struggle against a foreign foe who has been striving for three years to enslave our country God has wished to send to Russia a new and painful trial. Interior troubles threaten to have a fatal repercussion on the final outcome of the war. The destinies of Russia and the honor of our heroic army, the happiness of our people and all the future of our dear Fatherland require that the war be prosecuted at all cost to a victorious end. The cruel enemy is making his last effort and the moment is near when our valiant army, in concert with those of our glorious Allies, will definitely chastise the foe.

In these decisive days in the life of Russia we believe our people should have the closest union and organization of all their forces for the realization of speedy victory.

For this reason, in accord with the Duma of the Empire, we have considered it desirable to abdicate the throne of Russia and lay aside our supreme power.

Not wishing to be separated from our loved son, we leave our heritage to our brother, the Grand Duke Michael Alexandrovitch, blessing his advent to the throne of Russia.

We hand over the Government to our brother in full union with the representatives of the nation who are seated in the legislative chambers, taking this step with an inviolable oath in the name of our well beloved country. We call on all faithful sons of the Fatherland to fulfil their sacred patriotic duty in this painful moment of national trial and to aid our brother and the representatives of the nation in bringing Russia into the path of prosperity and glory. May God aid Russia.

THE CITY OF THE ARABIAN NIGHTS

The British army which started over two years ago to fight its way up the Tigris river to Bagdad has as last attained its object. This is a severe blow not only to the Turks but also to the Germans, who had long planned to run a railroad from Berlin to Bagdad, thus making an overland route to the Far East as a rival to the British sea route via Suez. This view of Bagdad is taken from the eastern side of the Tigris and shows the bridge of boats connecting the two parts of the city

course opposed by the 3000 Germans in China and also by the radical wing of the Chinese republicans. Dr. Sun Yat-sen, first president of the republic, cabled to Premier Lloyd George begging him to let China alone, as a declaration of war against Germany might lead to another massacre of foreigners and a rising of the Mohammedans in the south.

But as a whole, the Chinese are decidedly anti-German, and had been before the war. The German troops who went with the international force to relieve the legations in Peking during the Boxer rebellion were instructed by the Kaiser to act like Attila and so terrorize the Chinese that they would be remembered for a century. These instructions were carried out with such literalness and efficiency as to shock the civilized world. An excessive indemnity was demanded by Germany for Boxer damages and expeditionary expenses. The Chinese port of Kiaochau had been demanded by Germany as compensation for the murder of two German missionaries and with this foothold on the coast the Germans were gaining control of the rest of the Shang-tung peninsula. Besides these older grievances and apprehensions China has suffered directly from the German submarine warfare for some of the hundred thousand coolies sent to France to replace French laborers have been lost on vessels sunk in the Mediterranean.

China still has to pay over $30,000,000 a year on the Boxer indemnity until 1940, but by entering the war on the side of the Allies she would repudiate that part of the indemnity due to Germany and Austria while the Allies would in consideration of her support either remit the rest of the Boxer indemnity or permit the postponement of the payments until better times.

China also seeks permission of the powers to raise her tariff above the five per cent established by international agreement. The United States has long urged this on the other sixteen signatory powers, but only Japan and Great Britain have been willing to consent to it.

Apparently the Premier obtained these or similar concessions from the Entente Powers for he brought a proposal to break off diplomatic relations with Germany before Parliament where it was passed by a vote of 431 to 87 in the House and 152 to 37 in the Senate. Following the break the Chinese Government took possession of the six German ships at Shanghai.

British Take Bapaume and Péronne

The retirement of the Germans in France is going further than was at first supposed. The British a few weeks ago finding the trenches in front of them vacated expected that the Germans would attempt to make a stand on the ridge in front of Bapaume, and about a mile behind the former German line. But when they reached this point they found that Bapaume was held only by a rear guard which was overcome after stiff fighting. Before evacuating the town the Germans had taken away or destroyed everything of value in the homes as well as public buildings and had set fire to the town.

Bapaume, altho it had only three thousand inhabitants before the war and was not a fortress, has by reason of its position played a considerable part in military history, and was the scene of one of the notable battles of the war of 1871.

More important, however, is the evacuation by the Germans of the ancient fortress of Péronne, on the Somme, which was the main objective of French and British offensive last summer.

South of Péronne the French have occupied Roye and Nogon which were not destroyed by the Germans like Bapaume. All along the forty-five mile front from the Oise to the Ancre the Germans have fallen back within the last month and in places to a distance of two or three miles. It looks as tho the Germans had decided to give up the angle which has ever since the fall of 1914 pointed at Paris and to retire to a shorter and stronger line running thru Lille, Cambrai and St. Quentin and from ten to twenty-five miles behind their former front. This is the greatest change in the line since the battle of the Marne.

French Ministry Resigns

The first victim of the persistent attacks on the French Government in the Chamber of Deputies was one of the latest additions to the cabinet, General Louis Lyautey. He was called to take charge of the War Office from Morocco where he has been in control during the four years since that country became a French protectorate. There he has brought order out of chaos. Previous to this General Lyautey had distinguished himself as a colonial administrator in Tonking, Oran and Madagascar.

But the qualities that make a good proconsul are not the same as make a good parliamentarian. Lyautey was as

THE GREAT WAR

March 12—Russian Duma votes to depose government. American steamer "Algonquin" sunk. China breaks with Germany.

March 13—Revolutionists control Petrograd. Russians take Kermanshah, Persia.

March 14—German Chancellor promises reforms to Prussian Diet. British pursue Turks up the Tigris 30 miles beyond Bagdad.

March 15—Nicholas II abdicates the throne of Russia. British Chancellor of the Exchequer asks Parliament for $320,000,000 more.

March 16—British take St. Pierre Vaast Wood. German airships raid England and France. Zeppelin brought down near Paris.

March 17—British take Bapaume. French take Roye. Briand ministry resigns. American ships "City of Memphis" and "Illinois" sunk.

March 18—American ship "Vigilancia" sunk without warning. British occupy Péronne.

much out of place in a cabinet as Kitchener was. He was restive under popular criticism and did not know how to secure the support of parliamentary factions. Finally when called upon to defend his policy in the Chamber he began with what the Deputies chose to consider an insult and they howled him down.

Among the points criticized were the reëxamination of all men who had been rejected for physical defects to see if they were still ineligible for service, the incorporation of priests in fighting units and the deficiencies of the aeroplane branch of the army. General Lyautey began by saying:

> I must admit that at first thought it would be preferable if this debate did not take place. It really did not seem opportune at a moment when I had just established an organization which answers, in principle at least, to most of your requirements to begin such a discussion I thought, and still think, is dangerous, but if I agreed to it it was because it was most distasteful to me to give the appearance of shunning it.
>
> I believe there are things which must not be spoken. You will permit me not to follow you into technical questions, because even in secret session my responsible opinion is that it would expose the national defense to risks.

At this a tumult of unprecedented violence broke out in the Chamber and he was not allowed to continue. There is evidence enough in the present war to justify his distrust of the Chamber of Deputies in keeping military secrets, but that did not matter. On account of the refusal of the Chamber to listen to him he was obliged to resign his post as Minister of War.

This was followed by the resignation of the whole cabinet and Premier Briand laid down the office which he has held for a year and a half, on the very day when the French armies made their great advance. President Poincaré asked the ex-Minister of Finance to form a new cabinet.

Four American Ships Sunk

The report for the week ending March 11 showed thirteen British and two French vessels of over 1600 tons sunk by German submarines and mines. On February 1 the British possest some 3730 vessels of over 1600 tons, and in the first six weeks of the U-boat campaign 78 of these were sunk, so it seems that the Germans are not reducing British shipping very rapidly, especially when we consider that British and neutral shipyards are constructing more British ships as fast as they can.

Until Count Bernstorff was safely back it seemed that the Germans avoided attacking American ships, but now it is evident that they intend to carry out their threat to sink at sight any vessels in the war zone, for since then four American vessels have fallen victims to the U-boats within a week.

The freighter "Algonquin" from Brooklyn, loaded with meat for London, was suddenly shelled by a submarine from a distance of a mile early on Sunday morning, March 11. The captain immediately stopped the steamer and put his crew in the boats. The submarine, which proved to be the "U-38," continued firing, twenty shots in all, of which some struck the ship and others endangered the boats. Then the submarine submerged and circled around the "Algonquin" several times to see if it were safe to approach. Finding her deserted the submarine came up and sent men on board who hauled down the American flag and placed bombs in the engine room. Ten minutes later these exploded and the ship sank. Captain Nordberg asked the commander of the submarine to give him a tow, but he replied: "I'm too busy. I expect a couple of other steamers."

After twenty-seven hours' rowing, the boats reached Scilly without having seen a single ship on the way to the coast. The crew numbered twenty-seven, fourteen of them Americans. All were saved. The cargo of the "Algonquin" was insured for $1,200,000 and the vessel for $300,000. The American flag was plainly painted on her side and the Germans took photographs of her before blowing her up.

On Sunday, the 18th, three more American steamships were sunk in the same waters, the "City of Memphis," owned by the Ocean Steamship Company of New York; the tankship "Illinois," owned by the Texas Oil Company, and the "Vigilancia," owned by the Ward Line. The "City of Memphis" and the "Illinois" were bound for America and without cargo. The former had been carrying cotton and the latter petroleum. They were blown up on Saturday afternoon after the removal of the crews, most of whom have arrived safely at Scilly. The "Vigilancia" was torpedoed without warning by an invisible submarine. Many of her crew are still missing. The total tonnage of the lost vessels was 14,587.

Rallying Round the President

The response of the country to the German threat of forcing war upon the United States by continuing unrestricted submarine warfare on neutral commerce indicates that President Wilson will have the support of the overwhelming majority of his fellow countrymen in any action that he may take to vindicate our rights at sea. The Pennsylvania House of Representatives has followed the example of other state legislatures in all parts of the country and adopted a resolution condemning the filibuster against the armed neutrality bill. On March 13 governors of the six New England states met in Boston as an executive council of defense. They pledged support to the government and urged instant measures of military preparedness. The New York Federation of Churches adopted by a three to one vote a declaration approving the rupture of diplomatic relations with Germany and recommending universal military service. The mayor of New York has secured, it is estimated, more than a million signatures of citizens to a pledge of loyalty to the American Government. In Milwaukee more than 10,000 persons, many of them of German birth, took part in a monster mass meeting to assure the government of their support in any emergency.

Organized labor generally is meeting the international crisis with undiluted patriotism. Samuel Gompers, President of the American Federation of Labor, has issued a call to labor leaders all over the country to meet for the dis-

cussion of the relation of organized labor to national preparedness.

The Socialist party has been much stirred by an address of Eugene V. Debs, thrice the Socialist candidate for President, which advocated a general strike in case of war with any foreign nation. He urged workers to combine into great industrial unions and be ready to paralyze all industry by concerted action if necessary to preserve peace. Some Socialists dissent from these tactics. Congressman Meyer London, who has always voted with the extreme pacifists in the House of Representatives, declared that the party should oppose any policy leading to war, but should not make difficulties for the government after war has been declared.

Railroad Strike Averted

During the past week the nation has been under the shadow of a general strike of the four great railroad brotherhoods. At first the strike was scheduled to begin on Saturday, March 17, but at the urgent solicitation of the federal government the order was postponed until the following Monday. On Monday the verdict of the Supreme Court upon the constitutionality of the Adamson eight-hour law was expected, and if the decision were favorable no strike would be necessary. The reason why the union leaders attempted to bring on a strike before the decision of the Supreme Court was partly impatience with further delay and partly the fear that war might come and public opinion would regard an industrial dispute of so menacing a character as little short of treasonable. The railroad managers reproached the railroad brotherhoods for embarrassing the government at a time of international tension which is almost as critical as if war were already declared. In reply to this the unionists retorted that patriotism works both ways and that the dispute would end at once if the railroads would grant the eight-hour day which has already received the sanction of Congress and the President and has been embodied in the Adamson law.

If all the members of the four railroad brotherhoods had taken part in the strike about four hundred thousand men would have stopped work, and it is certain that it would have been impossible to find trained men enough outside the unions to fill their places. But the railroad managers counted on the loyalty or the self-interest of a large proportion of the railroad workers to keep their trains running. Many men who had been long in employment were reluctant to lose their chance of a pension and the security of a good job, and some local branches of the unions which happen to be in an especially favorable position did not wish to risk their immediate interests for uncertain benefits to organized labor as a whole. Individual members of the brotherhoods in Pennsylvania filed bills in the United States District Court for an injunction against the organization officials on the ground that a strike would endanger the security of the beneficial funds of the brotherhoods. Various locals in the Middle West announced their intention of disregarding any strike order. The Switchmen's Union, which is not affiliated with the four railroad brotherhoods, declared its "neutrality" in the event of a strike.

At last the railroad managers capitulated. The terms of settlement awarded by the committee on the railroad crisis of the Council of National Defense conceded the eight-hour day at the present standard rate for ten hours' work, even if the Adamson law were declared unconstitutional.

On Monday, March 19, the Supreme Court affirmed the constitutionality of the Adamson law, thus confirming the agreement already reached and proving the wisdom of the railroad managers in bowing to the will of the federal government and the necessities of the situation while it was still possible to make a virtue of concession.

Wilson Picks Tariff Board

President Wilson has named the six members of the new tariff commission which is charged with the duty of investigating the administrative, fiscal economic and industrial effects of existing duties, questions relating to tariff schedules and classifications and modifications of the customs regulations, and the commercial relations between the United States and foreign countries. All of the information secured by these experts is to be at the disposal of Congress and the President. Professor Frank Taussig of Harvard University is appointed as chairman of the commission. The other members are: Daniel Roper, recently first assistant postmaster general; David Lewis, a representative of Maryland in

the Sixty-fourth Congress; William Kent, a representative from California without party affiliation; William Culbertson, a Progressive from Kansas, associated with the old tariff board; Edward Costigan, who was recently Progressive candidate for Governor of Colorado. Republicans complain that the commission should have been non-partizan and yet there is not one straight Republican or protectionist among the six. All are low tariff men and represent various phases of radical thought. The commissioners have terms of varying length, from two to twelve years, and each will receive $7500 a year.

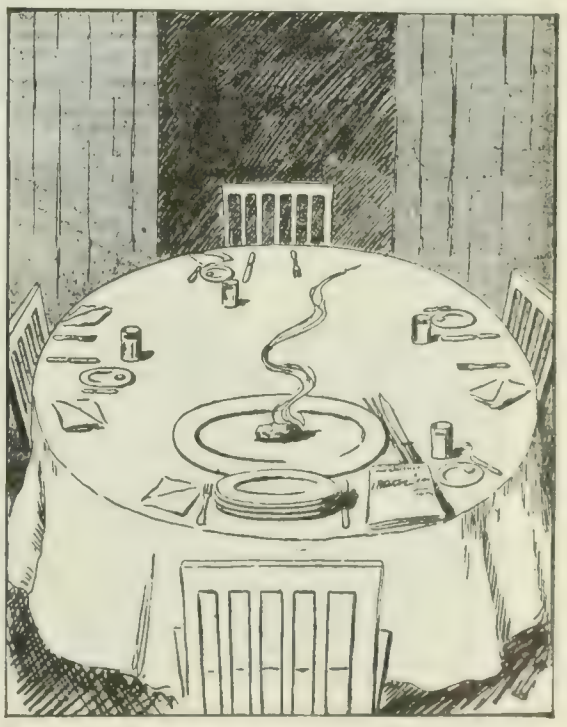
Uncle Sam's Ships

Contracts with private builders have at last been placed by the navy department for the construction of four battle cruisers and six scout cruisers. The total cost of construction, not including armament and equipment, will reach $112,000,000. A fifth battle cruiser will be built directly by the government at the Philadelphia Navy Yard. The private companies which have undertaken battle cruiser construction have agreed to accept ten per cent net profit. The gross cost of building may, however, be increased in order to hasten the completion of the ships. Contracts for three battleships, thirty-eight submarines, fifteen destroyers and many coast patrol boats and auxiliary ships still remain to be awarded.

President Wilson won a striking personal victory when the Senate confirmed his nomination of Dr. Cary T. Grayson as medical director of the navy with the rank of rear admiral. No recent appointment of the administration has been so criticized; the principal objection being that 127 other officers had precedence over Dr. Grayson in the normal order of promotion. The vote confirming the nomination was a strictly party division.

The Great War has not apparently inflicted much injury on the American merchant marine. The navigation bureau announces that the merchant vessels which have taken American registry since the war began have a tonnage 313,814 gross tons more than those which transferred from American to foreign registry during the same period. The number of vessels, however, has not increased. Shipping circles seem to have less fear than formerly of a successful German submarine campaign. The International Seamen's Union, which has been demanding a bonus of seventy-five per cent to each of its members serving on a ship bound for the war zone, has agreed to accept a fifty per cent bonus. The total decline of the foreign trade of the country during the month of February was $190,000,000.

Colombia Treaty Withdrawn



The projected treaty with the Republic of Colombia which has recently engaged the attention of the Senate has been withdrawn and will not be brought up again until Congress meets in special session after April 16. After this action had been taken by the administration the Senate adjourned on March 16. The Colombia treaty was intended to satisfy the grievance which the republic has always felt against the United States for taking a hand in the Panama revolution and thus depriving Colombia of all rights over the Canal route. It contained expressions of regret for the lapse of friendly relations between the two nations and provided for the payment of $25,000,000 to cover Colombian claims. President Wilson urged prompt ratification on the ground that it was imperative that the United States should secure the good will of all Latin-American countries and especially of those near the Panama Canal. This hint that a large money payment was requisite to prevent Colombia from acting in the interest of Germany against us was bitterly resented by many Senators. Senator Lodge accused the President of trying to force the country to pay blackmail. Colombians deny that German influence plays any part in their foreign policy, and ex-President Reyes tells us that Colombia would side with the United States in case we should be at war with Germany because the Monroe Doctrine makes the interest of all American republics identical.

President Wilson can count on his own party to support the treaty but he will need ten Republican votes in the Senate to reach the necessary two-thirds. Only three Republicans appear to favor the treaty, La Follette of Wisconsin, Gronna of North Dakota, and Knox of Pennsylvania. La Follette and Gronna are strong pacifists and took a leading part in the filibuster which prevented the enactment of the armed neutrality bill. The strong support given to the Colombia treaty by Senator Knox was a great surprize to the Senate since he served in the Republican cabinets of Roosevelt and Taft, and has been a fairly consistent opponent of the foreign policy of the present administration. His argument for the treaty was that "it will end a grievance, which, whether fancied or real, has grown so traditional as to be unsusceptible of obliteration in any other way." When the treaty is again brought before the Senate it will probably be modified to meet the views of some of the Republican Senators in order to make possible its ratification. For example, it may include an option on the Atrato River route where another trans-isthmian canal could be constructed.

OUR BILLION DOLLAR NAVY

BY JOSEPHUS DANIELS

SECRETARY OF THE NAVY.

DURING the four years of the first administration of Woodrow Wilson there was appropriated on account of the naval establishment the sum of about $1,135,000,000. The three-year program adopted by the first session of the Sixty-fourth Congress authorized the construction of 156 vessels of different types, and the money has now been provided to commence the construction of 7 battleships, 5 battle cruisers, 7 scout cruisers, 35 destroyers, 48 submarines, 1 destroyer tender, 1 submarine tender, 1 hospital ship, 1 fuel ship, 1 ammunition ship and 1 gunboat.

The outstanding features of the latest naval bill are, first, the $115,000,000 appropriation for speeding up the construction of ships already authorized and those authorized in the bill just approved, and the purchase or construction of aircraft, additional destroyers, submarine chasers, motor boats and other small craft, which will be essential in an emergency and which can be constructed in a comparatively short time. A further emergency appropriation of $18,000,000 is provided specifically for the construction of 20 coast submarines in addition to the 18 submarines for which money is provided in the three-year program.

A serious problem that has confronted the Navy Department during the past two years has been the inability to secure the prompt construction of the ships authorized. The pressure upon private yards for merchant craft has been so great and the demand for skilled labor, which is of a very superior class, has been so unprecedented, that it has been impossible either for private shipyards or the navy yards to secure enough skilled men to do all the work demanded.

The authorization of money to speed up the work, added to the power granted the President to commandeer private shipyards and plants manufacturing war materials, will result in a more rapid construction of ships than has ever before been accomplished in this country. It is going to call for perfect and harmonious action by the private shipbuilding companies, the skilled mechanics, and the Navy. This necessity of securing quick construction may require the delay of merchant craft. In an emergency like the present the needs of the government are paramount.

Of course, to secure this speedy construction I expect to ask the private shipyards, ammunition makers, and contractors who furnish material and skilled workers to give the Navy first call. A number of contractors and builders have already volunteered to do so at prices that are reasonable and I am sure mechanics also will respond patriotically to this call. I shall be quick to recommend taking over any plants if it be essential to do so in order to secure the building of new ships in double quick time.

National preparedness will lay a heavy contribution upon the country, but there will be ready response, I feel sure, and at profits no larger than those paid in foreign countries, which have had to make like demands upon builders and contractors. We need not fear that the generous appropriations of Congress will be followed by excessive prices either for labor or material.

THE naval bill carries some appropriations worth noting. The appropriation of $12,000,000 for the equipment of navy yards for the construction of ships, added to the $6,000,000 authorized at the preceding session, will enable the department to fit out yards and build a larger share of the ships. This will probably be essential if private yards cannot at once respond to the needs of the government because they have not facilities enough to build the program heretofore authorized and authorized in the latest bill. Moreover, the government ought to be able in shipbuilding, as in ammunition making and in making guns and armor, to construct a portion of everything needed for the national defense, the quantity to be determined by the prices charged by outside concerns, time for deliveries and other circumstances.

Large appropriations are carried for the storage of ammunition and torpedoes, mines, projectiles, and other materials. The work upon these storage magazines and other storehouses will be undertaken as rapidly as possible. Plans have already been made for the construction of some of these buildings.

The ordnance appropriations, and funds for fitting merchantmen and other auxiliaries that may be called into service, amount to nearly $57,000,000, the largest amount ever authorized for a like purpose in any naval bill.

One of the most important appropriations in the bill is the appropriation for enlarging and fitting up the submarine base at New London, Connecticut, which will be a base for submarines in the North Atlantic, where there will be a training school for all officers and men who engage in the submarine service. This is not only of the highest importance for training the men in charge of our submarine work, but the proper development of this base will release mother ships for submarine fleets and thereby furnish a number of officers and men who have heretofore been employed on tenders for submarines. The day, of course, must come when there will be enough submarine shore bases to do away with all submarine tenders and mother ships except those needed to attend the craft operating at considerable distances from their bases. Other submarine bases will have to be provided for in the future. The Sundry Civil appropriation bill, which failed of passage, carries an appropriation for the establishment of a submarine base at the east entrance to the Panama Canal.

Aviation is provided for in an appropriation of over $5,000,000, together with $1,000,000 to purchase patents on aircraft. The expenditure of this money may or may not be necessary, but it is the determination of the department to open the way so that manufacturers of aircraft may engage in their manufacture on a larger scale than has yet been undertaken in this country.

Washington, D. C.

FREEING RUSSIA

BY G. J. SOSNOWSKY

THE Russian people have today won the greatest victory which they could expect to achieve in this war. They have won their liberty, their rights. Today the Russian people are a free people, ready to take their place as the world's foremost democracy.

"*The hour has struck. The will of the people must prevail,*" telegraphed the Duma to the Czar on Monday. And the will of the Russian people, contrary to the Government, is to prosecute this war to a successful issue. By coming into power, the Russian people are the best guarantors for the success of the Allies' cause.

It is not only a tremendous victory for Russia, it is a lustrous victory for the Allies, and it brings the promise of a glorious future for democracy in the East.

It is a most crushing blow not only to the autocracy of Russia, but to the autocracy of Germany as well. Those two absolute governments have been upholding each other for centuries, and the downfall of one must of necessity shatter the prestige of the other. That the German governmental circles are anticipating just such another condition at home is proven by the pledges of liberty given by Chancellor von Bethmann-Hollweg to the German people in a debate in the Prussian Diet on the 14th instant.

We may unquestionably rest assured that the German people will not await the end of the war in order to receive "equal rights" from the hands of their reactionary ruler, but in the very near future they will take in their own hands by force the destiny of their Fatherland in the same manner as the Russians have done.

THE address delivered by President Wilson before the Senate on the 23rd of January, 1917, widely sowed the seeds of democracy over Europe and thruout the rest of the world. The day of the deliverance of that speech will be celebrated by all mankind devoted to human rights and broad ideals of democracy, as the birthday of international democracy. The seeds are bearing fruit.

The people of Russia are the first to respond to the principles of democracy as outlined by the executive head of this great republic, and today they are proud and happy that it was Russia who took the lead.

Let us hope the people of Germany will soon follow the lead of the Russians. And then, and then only, may we expect the cessation of this abominable slaughtering of mankind for the benefit of a degenerated dynasty and a rotten bureaucracy. Let us hope that then the German people will do their part in arranging for world peace in accordance with the principles outlined by President Wilson.

Germany was aware of the fact that there would be a revolution in Russia at about this time of this month, but Germany expected a very different outcome.

Mr. Sosnowsky—he has discarded his Russian military title since he became an American citizen—has studied Slavic questions, particularly those pertaining to the government of Russia and the position of Poland, for many years, and he has lived in this country long enough to see their interrelations in true perspective. Mr. Sosnowsky was delegated to the United States on a special commission by the Russian Minister of War. Mr. Sosnowsky is also an officer of the French Academy.—THE EDITOR.

Germany's hope was for a separate peace with Russia. Twice she nearly was successful and twice her machinations were frustrated by the will of the Russian people.

IN the middle of the summer of 1915, after the retreat of the Russian army from Poland, she had all her plans ready for a separate peace. The Russian Court camarilla and pro-German government have made all the preparations for a sham revolution in the whole of Russia. Such a revolution was to serve as an excuse before the Allies and the civilized world for a separate peace.

The plotters were not sure of the army with the Grand Duke Nicola Nicolayevitch at its head, and they resolved to remove him from this high command and to put at the head of the army the Emperor. For this task they employed Pitirim, the then Archbishop of Gruzia. Pitirim implored the Czar to save the sacred city of Moscow and the city of Petrograd from the Germans by himself taking command of the armies. The Grand Duke was relieved of his office, the Duma was closed and the revolution started.

But those machinations were known to the Duma and the real patriots, who, in turn, enlightened the people as to the true situation, and succeeded in restoring order in twenty-four hours, thus effectively frustrating all hopes for the time being of a separate peace.

AFTER this failure more extensive and thoro preparations were undertaken by Germany to achieve her object. Ministers who were more loyal to Germany than to Russia were placed at the head of the Russian Government and a complete disorganization of the interior of the Russian Empire was arranged for.

Premier Stürmer proved himself most obedient to the commands from Berlin. Protopopov was enforcing the most reactionary measures inside the Empire, but his activity was most productive in spreading dissatisfaction by keeping from the people the necessities of daily life.

Trepov disorganized the entire railroad system, hampering not only everyday life but putting to the greatest disadvantage the very existence of the army at the front. Pitirim, by this time made Metropolitan (Bishop) of Petrograd, was gaining rapidly at the Court the influence which, after the assassination of his best friend, Rasputin, put him at the head of the black forces of Russia.

He lately formed a triumvirate: Pitirim, Stürmer, and Kokowcev—who were to rule unopposed the whole of the Russian Empire.

THRU such means and by such men the ground was prepared for the sham revolution and the separate peace—that would for many years to come preserve the life of autocracy and bureaucracy of Russia and give the victory of the Great War to Germany for the enslavement of the German people in the future.

It was designed that the revolution should start in the early spring in order to help the German drive into Russia. The plotters were sure of their success, as the sufferings of the people made them an easy prey for any turbulence, and it seemed easy to persuade them that the war was the cause of their misery and hunger. With further reverses on the battlefields and revolution inside, the pro-German Government was assured that the people of Russia would clamor for speedy cessation of war. .

The closing of the Duma and Imperial Council and precedent withdrawal from the markets of all the necessities of life in the big cities was to mark the hour for revolt. But members of the Duma and the agents of Allies were closely watching the development of events.

Members of the Duma, Ziemskoj Sojus, Gorodskoy Sojus and thousands of other patriots were preparing themselves for months for this historical hour. They relied mostly on the attitude of the army, and no trouble was spared to enlighten its ranks with the real character and purposes of the pro-German Government.

WHEN the hour struck, the Duma was ready to act and turn the tables on the plotters. The members disobeyed the order of the Emperor to close the Duma, and continued their sitting, and, having the support of the army, mastered the revolution, giving to the good people of Russia freedom, the most sacred treasure of any people.

The members of the new National Cabinet are strong men who have the full confidence of their people. They saved the Russian Army from utter defeat many times—now they will make this army victorious.

MILUKOV, PROFESSOR OF PROGRESS

BY SAMUEL T. DUTTON

A NEW page of history has been turned. The hope that among the by-products of the war would be a new and freer life for Russia seems about to be realized.

Among the names of the new cabinet, as announced in the morning papers of Friday last, was that of Professor Paul Milukov, the new Minister of Foreign Affairs. A few weeks ago he was reported as having been obliged to flee from Petrograd. He had made some very frank declarations in the Duma, where he has long been the recognized leader of the Liberal party, concerning the vacillation and dishonesty of certain government officials. He soon returned, however, and has continued to take so bold an attitude that gradually he has surrounded himself with a strong body of brave men. Now, those whom he attacked are in jail, while he is called to the most important position in the ministry at the present time. The advent of Professor Milukov to this office at a critical moment in the life of Russia is only one dramatic incident in the most remarkable revolution the world has ever seen.

Many citizens of New York will be interested to recall that Professor Milukov came here in 1908 to lecture on January 14th in Carnegie Hall under the auspices of the Civic Forum. He made the journey from Petrograd to New York for the sole purpose of giving his lecture, and after three days was on his way back to his duties. His subject was, "Constitutional Government in Russia"; and what he said then was prophetic, viewed in the light of what has just happened. He pointed out that the welfare of Russia was wrapt up in the social composition of the Empire and in the possibility of waking to a new life the dormant intelligence and aspirations of the people. Even at that time he was conscious of anti-Russian intrigues, which were endeavoring, as they have been recently, to thwart the movement for constitutional government. He declared for religious tolerance and said "that the only true representatives of the Jewish people in Russia were the representatives of our party." He was not optimistic concerning an early improvement of conditions and said it was too soon to think of a commonwealth in Russia.

As a member of the progressive party in the Duma and as editor of a leading paper he has been, for many years, an exceedingly busy man. For, in addition to his official duties, he has lectured thruout the empire on education and historical topics, and there is no doubt that he has instilled into the minds of the thoughtful Russians the principles of democracy and the need and advantages of popular government.

Some years before he lectured in New York he was invited to lecture in Chicago University. Connected with this is an interesting story. Professor Milukov, in reply to the invitation, said that he had not learned English, but that if they would postpone the lectures for one year he would prepare himself to give them. Not long after this he was arrested for some of his political activities and sentenced to the fortress for six months. "Now," he said to himself, "is my chance to learn English." In three months he had acquired the ability to read and to write the language. Then he applied to the authorities for a release, so that he could go to England and learn spoken English, with the understanding that at the end of three months he would return and complete his sentence. Permission was granted him. He went to England and at the end of three months was able to speak the language. Then he returned and found the government indisposed to let him finish his sentence in the fortress. He insisted, however, but was permitted to remain only a short time, from which, it would seem, official Russia has sometimes had difficulty in knowing what to do with some of their statesmen.

Professor Dutton, who is associate editor of "Christian Work" and a trustee of the World Peace Foundation, knew Professor Milukov well, when as members of the International Commission on the Balkan War they met for conference at Paris. A photograph of Professor Milukov appears on the preceding page.—THE EDITOR.

It should be said, in passing, that Professor Milukov is a profound scholar, and is master of all the langauges spoken in Central and Southern Europe. Some years ago he was exiled to Siberia, from whence he escaped. At a later period being sent out of the country he went to Bulgaria and became professor in the University of Sophia. During these years he made a most careful study of the ethnology, history and geography of the whole Balkan peninsula, and is today, without doubt, the best living authority on these subjects. He is also the best authority on international law and politics in Russia.

Professor Milukov was a member of the international commission sent by the Carnegie Endowment for International Peace to inquire into the causes and conduct of the Balkan Wars. The commission met in Paris, in 1913, and four members were selected to perform this service. The writer has ever esteemed it a high privilege that as a member of that commission he had the opportunity of being for several weeks in close contact with Professor Milukov and of hearing, from his own lips, something of his hopes and aspirations for Russia. As an investigator he was alert open minded and impartial. He insisted that everything which the committee published should be verified by the most undoubted evidence.

Professor Milukov is blest with vigorous physique, glowing health, abounding courage and so is just the man to strike without finching. It may be said of him, as of Samuel Adams, that he inspired the revolution. Without doubt he hopes to see two great ends accomplished: first, Russia victorious in the war; second, Russia freed from the curse of autocracy and political corruption.

A recent statement from him indicates his attitude toward the war:

> The reëstablishment of a power capable of achieving a victory, as demonstrated by recent events, will increase the popular enthusiasm and multiply the national forces of the people's anger and their determination.

Here is seen the true character of the man. While a great Liberal and intensely ardent in his faith that a better future would come to the Russian people, he was wise enough to maintain a conservative and studious attitude and not to precipitate an attempt at revolution before the times were ripe. There is good hope that the revolution will succeed. There has been going on during the past three years among the peasantry a slow process of education thru the Zemstvos, and so it may be expected that the peasantry, as well as the middle classes, will rally to the support of the new government.

The leaders of the revolution have one difficult problem to solve and that is found in the reverence which attaches to the person of the Czar as a representative of Divinity. Can the throne be supplanted by a republican form of government? This is the question which will be settled as soon as it is seen what path leads to safety and security.

There will be a ray of hope for all who have been anxious about the future of Constantinople. There can be little doubt that the promise of the Allies to Russia will be fulfilled and the Turks will be forced to give up their capital and yield their position in Europe. Under the new regime this will mean that American institutions will be no less free to carry on their educational work than they have been under Moslem rule, and that is saying a good deal. For whatever sins the Turks have committed, they have usually treated with tolerance and consideration the Americans and their institutions.

America and Russia have always been most friendly. If the Great Empire of the North enters the ranks of free nations, with equal opportunities for all its people, the bonds which hold us together will be still stronger, and the brave men who are leading the Russian people out of darkness into the light of free education and liberty will be honored and supported by all true Americans.

New York City

PROFESSOR DEWEY

JOHN DEWEY: TEACHER OF TEACHERS

BY EDWIN E. SLOSSON

This article completes the series entitled, "Twelve Major Prophets of Today." The first six, dealing with Maurice Maeterlinck, Henri Bergson, Henri Poincaré, Elie Metchnikoff, Wilhelm Ostwald and Ernst Haeckel, were republished in book form by Little, Brown & Company, Boston, who will next month bring out a second volume, "Six Major Prophets," containing the following articles which have already been published in The Independent: Rudolf Eucken (Feb. 17, 1913), H. G. Wells (Nov. 20, 1913), Bernard Shaw (April 20, 1916), G. K. Chesterton (Nov. 27, 1916) and F. C. S. Schiller (February 12, 1917).—THE EDITOR.

IF some historian should construct an intellectual weather map of the United States he would find that in the eighties the little arrows that show which way the wind blows were pointing in toward Ann Arbor, Michigan, in the nineties toward Chicago, Illinois, and in the nineteen hundreds toward New York City, indicating that at these points there was a rising current of thought. And if he went so far as to investigate the cause of these local upheavals of the academic atmosphere he would discover that John Dewey had moved from one place to the other. It might be a long time before the psychometeorologist would trace these thought currents spreading over the continent back to their origin, a secluded classroom where the most modest man imaginable was seated and talking in a low voice for an hour or two a day. John Dewey is not famous like W. J. Bryan or Charlie Chaplin. He is not even known by name to most of the millions whose thought he is guiding and whose characters he is forming. This is because his influence has been indirect. He has inspired individuals and instigated reforms in educational methods which have reached the remotest school houses of the land. The first of the Dewey cyclones revolved about psychology, the second about pedagogy and the third about philosophy.

I was a thousand miles away from the first storm center yet I distinctly felt the vibrations. That was in the University of Kansas when the psychology class was put in charge of a young man named Templin just back from his *Wanderjahr* in Germany. This study had hitherto belonged *ex officio* to the Chancellor of the university who put the finishing touch on the seniors' brains with aid of McCosh. But the queer looking brown book stamped "Psychology—John Dewey" that was put into our hands in 1887 relegated the Princeton philosopher to the footnotes and instead told about Helmholtz, Weber, Wundt and a lot of other foreigners who, it seemed, were not content to sit down quietly and search their own minds—surely as good as anybody's—but went about watching the behavior of children, animals and crazy folks and spent their time in a laboratory—the idea!—measuring the speed of thought and dissecting brains. This young man in Michigan made bold to claim psychology as a natural science instead of a minor branch of metaphysics and he did the best he could to prove it with such meager materials as were available at the time. His "Psychology" appeared, as should be remembered, six years before the epoch-making work of James. Dewey was called to the University of Michigan as instructor at the age of twenty-five and he was the youngest professor ever appointed in that institution. In taking down again my battered brown copy of Dewey's "Psychology" I am surprized to find how trite and old-fashioned some of it sounds. Altho Dewey thought he had thrown overboard all metaphysics it is evident that he was then carrying quite a cargo of it unconsciously.

But the commotion started by Dewey's "Psychology" was a tempest in a tea pot compared with the cyclone that swept over the country when he began to put his theories into practice at the University of Chicago in 1894. I heard echoes of it as far west as Wyoming. The teachers who went to the summer session of the University of Chicago came back shocked, fascinated, inspired or appalled, according to their temperaments. The very idea of an "experimental school" was disconcerting, suggesting that the poor children were

being subjected to some sort of vivisection or—what was worse—implying that the established educational methods were all wrong. "He lets the children do whatever they want to do," whispered the teachers to their stay-at-home colleagues, who, like themselves, were spending their time in keeping the children from doing what they wanted to do and in making them do what they did not want to do. "He lets the children talk and run around and help one another with their lessons!" and all the teachers looked at each other with a wild surmise silent on the school room platform. Could it be that there was a better way, that this task on which they were wearing out their nerves, trying to reduce to rigidity for five hours a roomful of wriggling children, was no less harmful to the children than to themselves? "I'd like to see John Dewey try to manage my sixty," remarks the presiding teacher as she suppresses a little girl on the front seat with a smile and a big boy on the back seat with a tap of her pencil.

AS a matter of fact, the children neither studied nor did what they pleased, but the idea was that if children had a sufficient variety of activities provided they would like what they did and their activities could be so arranged as to result in getting knowledge and in forming good habits of thought. The common assumption that the main idea was to have the children do and study what they liked was a complete missing of the intellectual idea or philosophy of the school which was an attempt to work out the theory that knowledge, with respect to both sense observation and general principles, is an offshoot of activities, and that the practical problems arising in connection with consecutive occupations afford the means for a development of interest in scientific problems for their own sake.

The social grouping of children, and the attempt to get coöperative group work, was always just as important a phase as individual freedom — not only for moral grounds, but because of the theoretical conception that human intelligence developed under social conditions and for social purposes—in other words, "mind" has developed not only with respect to activity having purpose, but also social activity. These same notions of the central place of intelligence in action and the social nature of intelligence are fundamental in Dewey's "Ethics."

But even more revolutionary than Dewey's rejection of the strict discipline then prevailing in the schools was his introduction of industrial training as an integral part of education, not merely for the purpose of giving the pupils greater manual skill, still less with the object of improving their chances of getting a job or of making them more efficient for the benefit of the employer, but chiefly because it is only thru participation in industry that one can get an understanding of the meaning of science and the constitution of the social organism. In the old days when most industries were carried on in the household or the neighborhood children learned them by observation and participation. School was then a place where this very effective form of home education could be supplemented by "book learning."

BUT Dewey faced frankly the fact that the household arts and handicrafts had past away for keeps and he refused to join in the pretense that they could be profitably "revived" by the various esthetic and socialist movements of the William Morris and Ruskin type. He recognized that the machine and the factory had come to stay and if the worker is not to become a factory machine himself he must receive in school such a broad and diversified training as will make him realize the significance of the work he does. Or as Dewey said in "School and Society" in 1899:

> We sometimes hear the introduction of manual training, art and science into the elementary, and even into the secondary, schools deprecated on the ground that they tend toward the production of specialists—that they detract from our present system of generous, liberal culture. The point to this objection would be ludicrous if it were not often so effective as to make it tragic. It is our present education which is highly specialized, one-sided and narrow. It is an education dominated almost entirely by the medieval conception of learning. It is something which appeals for the most part simply to the intellectual aspect of our natures, our desire to learn, to accumulate information, and to get control of the symbols of learning; not to our impulses and tendencies to make, to do, to create, to produce, whether in the form of utility or art.

Mere "manual training," then all the rage, has failed, as Dewey said it would, because of its fictitious and adventitious character. His method was as different from the ordinary kind of "manual training" as hay-making is from dumb-bell exercize.

> We must conceive of work in wood and metal, of weaving, sewing and cooking, as methods of living and learning, not as distinct studies. We must conceive of them in their social significance, as types of processes by which society keeps itself going, as agencies for bringing home to the child some of the primal necessities of community life, and as ways in which these needs have been met by the growing insight and ingenuity of man; in short as instrumentalities thru which the school itself shall be made a genuine form of active community life, instead of a place set apart in which to learn lessons.

So Dewey set the children to solving the problems of primitive man and retracing for themselves the steps in the evolution of industrial processes. They picked the cotton from the boll, carded, spun it into thread and wove it into cloth on machines of their own making and for the most part of their own devising.

This gave opportunity for personal experimenting and taught them history by repeating history, not repeating a verbal version of history. And the history they thus learnt was the history of the human race, not the history of some chosen people.

This recapitulation theory, like all others, has since been carried to an extreme. Acting on the idea that the child normally passes thru the same stages as European civilization some teachers seem to think it necessary to keep them to the chronological curriculum.

So they cultivate a pseudo-savagery for a year or two, then make them pagans and later teach the ideals of the age of chivalry which are hardly less repugnant to the modern mind. So careful are they to avoid anachronism that if a boy should by any accident behave like a Christian before he reached the grade corresponding to A. D. 28 he would be likely to get a bad mark for it. So, too, I have known teachers of mathematics who would not allow their pupils to take a short cut to the answer by way of algebra unless it was in the algebra class and teachers of chemistry who would not permit the word "atom" to be mentioned in classroom until the term was half thru. But such extravagances find no countenance in Dewey's writings or the examples he cites.

IN the laboratory school of the University of Chicago Professor and Mrs. Dewey had for several years a free hand in developing and trying out their theories. Their aim was to utilize instead of suppress the fourfold impulses of childhood; the interest in conversation, the interest in inquiry, the interest in construction and the interest in artistic expression. The volume in which Professor Dewey explained what he was trying to do and why, "School and Society," was first published in 1899 and has been reprinted almost every year up to the present.* It might well have borne the same title as Benjamin Tucker's volume on anarchism: "Instead of a Book, by a Man Too Busy to Write One." It consists of the stenographic reports of three informal talks by Professor Dewey to the parents of his pupils and the friends of his school, supplemented by some fugitive papers. Yet it has an influence comparable to no other modern book of its size unless perhaps to Herbert Spencer's tract on "Education."

How far the seed was sown is shown by "Schools of Tomorrow,"* which tells of a dozen places where the ideas that were so novel and startling in the nineties are in practical operation. But it is characteristic of Dewey's self-effacement that he makes no claim for priority and there is no hint anywhere in the volume that many of the methods described were first devised and tried out in the Dewey school at Chicago nearly twenty years ago. He gives the credit for the theory to Rousseau and the credit for the practice to Mr. Wirt of Gary, Mrs. Johnson of Fairhope, Mr. Valentine of Indianapolis, Professor Merriam of Missouri and several others.

Mr. Wirt who organized the school system of the steel city of Gary, Indiana, and who is now employed in remodeling some of the schools of New York City, owes his inspiration and ideas, as I have heard him say, very largely to Dewey. The Gary system differs from the trade schools in that the industries are used for their educa-

tive value. The pupils are shifted around from one shop to another three times a year. Their tasks are artificial, symbolic or imitative, but from the fifth grade up real constructive work, for the boys making school furniture, iron castings, laying concrete, and printing; and for the girls, sewing, cooking, marketing, millinery, and laundry, and for both, gardening, pottery, designing, bookbinding and bookkeeping. Arithmetic, writing, history and geography come in necessarily and naturally in connection with their work. Under this regime the pupils make better progress in the traditional subjects than those who have to devote their whole time to books.

That it does not divert them from higher education is shown by the fact that one-third of all the pupils who have left the Gary schools in the eight years of their existence are now in the state university, an engineering school or a business college, a remarkable record for a population mostly composed of foreign born steel mill laborers.

All the school rooms are in use for something all day long so the "peak load" is avoided and a great economy effected. The grounds and buildings also serve as community centers and the last trace of the ancient feud between "town and gown" has been wiped out.

The old theory of education has been most pungently put by Mr. Dooley in one of his monologs with Mr. Hennessey: "It don't matter much what you study—so long as you don't like it." Professor Dewey takes almost the opposite ground when he says:* "Interest ought to be the basis for selection because children are interested in the things they need to learn."

WE have then two fundamentally different theories of training, the Dooley versus the Dewey system. They are now on trial in some degree all the way up from the beginning of the primary to the end of the college.* One is authoritarian; the other libertarian. One cultivates obedience; the other initiative. One strives for uniformity; the other diversity. In one the impelling motive is duty; in the other desire. In one the attitude of the student is receptivity; in the other activity. In one there is compulsory coordination; in the other voluntary cooperation.

Obviously neither could be carried to an exclusive extreme and in practise we find each more or less unconsciously borrowing methods from the others. Doubtless the optima for different temperaments, ages and studies will be found at different points along the line connecting the two extremes. How far one may safely go in either direction is to be determined by the pragmatic test of experiment. But at present it is safe to say that the tide of reform is running in the direction Dewey pointed out a quarter of a century before, tho recently a strong counter-current of militarism has set in. That Dewey is a true prophet is proved by the extent to which his ideas are being carried out in these "schools of tomorrow" that are already in existence today.

The third period in Dewey's life began with his appointment to the chair of philosophy at Columbia University in 1905. This relieved him of the burden of responsibility for the conduct of the laboratory school at Chicago and enabled him to concentrate his thought upon the fundamental problems of knowledge. It was then perceived that he belonged on the left or radical wing of that movement to which James applied Peirce's name of "pragmatism."

But Dewey is reluctant to call himself a pragmatist, partly because of his constitutional dislike to wearing a tag of any kind, partly, I surmize, because he has an aversion to the spiritualistic tendencies of the two men who are usually classed with him as the leaders of the pragmatic movement, James of Harvard and Schiller of Oxford.

Dewey's doctrine of cognition, the theory of instrumentalism, is now to be found in two recent volumes, one technical and the other popular. The ordinary skimming reader will find the "Essays in Experimental Logic" rather hard sledding so he will be relieved to find that it has been translated by the author into ordinary English in the little volume entitled "How We Think." This is intended primarily for teachers whose business is supposed to be that of teaching their youngsters how to think, tho in reality most of their time has to be taken up with the imparting of information.

The "Ethics" of John Dewey and James H. Tufts (Holt, 1908) is not only a practical text book admirably clear in expounding the conflicting theories and eminently fair in criticizing them, but it would be useful to any reader for broadening the mind and pointing the proper way of approach to modern problems. Professor Tawney of the University of Cincinnati in reviewing it for the *American Journal of Sociology* says: "Probably no more convincing effort to construct a system of moral philosophy by a strictly scientific method has ever been carried out."

DEWEY'S primary interest has always been the development of a type of ethical thinking and a method of school training suited to the democratic and industrial society of modern America. Speaking of the mental revolution that has been effected by the advance of science he says:

> Whether the consequent revolution in moral philosophy be termed pragmatism or be given the happier title of the applied and experimental habit of mind is of little account. What is of moment is that intelligence has descended from its lonely isolation at the remote edge of things, whence it operated as unmoved mover and ultimate good, to take its seat in the moving affairs of men. Theory may therefore become responsible to the practices that have generated it; the good be connected with nature, but with nature naturally, not metaphysically conceived, and social life be cherished in behalf of its own immediate possibilities, not on the ground of its remote connections with a cosmic reason and an absolute end.

A stranger who drops into one of Professor Dewey's classes is at first apt to be puzzled to account for the extent of his influence and the devotion of his disciples. There is nothing in his manner of delivery to indicate that he is saying anything of importance and it takes some time to realize that he is. He talks along in a casual sort of a way with a low and uneventful voice and his eyes mostly directed toward the bare desk or out of the window. Occasionally he wakes up to the fact that the students in the back seats are having difficulty in hearing him and then he comes down with explosive stress on the next word, a preposition, as like as not. His lectures are punctuated by pauses but not in a way to facilitate their comprehension. Sometimes in the midst of a sentence, perhaps between an adjective and its noun, his train of thought will be shunted off onto another line and the class has to sit patiently at the junction station until it comes back as it always does, eventually.

The difficulty of utterance in his lectures like the tortuous style of his technical writings results from overconscientiousness. When he misses the right word he does not pick any one at hand and go on but stops talking until he finds the one he wants and he is so anxious to avoid a misunderstanding that he sometimes fails to insure an understanding. Talking has never become a reflex action with Dewey. He has to think before he speaks. Few professors and almost no instructors are bothered that way.

IN profile Professor Dewey looks something like Robert Louis Stevenson, the same long, lean face and neck and nose. His long straight black hair, parted in the middle, is now getting gray, but his drooping mustaches, being twenty years younger, are still dark. His eyes are black and keen and one can catch a twinkle in them if the lids do not drop too quick. His necktie is usually awry and several thousands of orderly schoolma'ams have felt their hands itch to jerk it straight. His drawling careless tone and hesitant manner quite disguise the boldness of his thought and the logical order of its wording. Questions from the class never disconcert him, however inopportune, and the more he is heckled the better he talks.

Knowing that every biographer is expected to show that the subject of his sketch got his peculiar talents by honest inheritance I wrote to Professor Dewey to inquire what there was in his genealogy to account for his becoming a philosopher. His ancestry is discouraging to those who would find an explanation for all things in heredity.

> My ancestry, particularly on my father's side, is free from all blemish. All my forefathers earned an honest living as farmers, wheelwrights, coopers. I was absolutely the first one in seven generations to fall from grace. In the last few years atavism has set in and I have raised enough vege-

tables and fruit really to pay for my own keep.

John Dewey was born in Burlington, Vermont, October 20, 1859, the son of Archibald S. and Lucina A. (Rich) Dewey. His elder brother, Davis Rich Dewey, is professor of economics and statistics in the Massachusetts Institute of Technology and the author of the Special Report on Employees and Wages in the 12th Census as well as of many other works on finance and industry.

John Dewey went to the State University in his native town and received his A. B. degree at twenty. Being then uncertain whether his liking for philosophical studies was sufficient to be taken as a call to that calling he applied to the one man in America most competent and willing to decide such a question, W. T. Harris, afterward United States Commissioner for Education, but then superintendent of schools in St. Louis. Think of the courage and enterprize of a man who while filling this busy position and when the war was barely over started a *Journal of Speculative Philosophy* and founded a Philosophical Society and produced a series of translations of Hegel, Fichte and other German metaphysicians. It would be hard to estimate the influence of Dr. Harris in raising the standards of American schools and in arousing an interest in intellectual problems. When young Dewey sent him a brief article with a request for personal advice he returned so encouraging a reply that Dewey decided to devote himself to philosophy. So, after a year spent at home reading under the direction of Professor Torrey of the University of Vermont, one of the old type of scholarly gentleman, Dewey went to Johns Hopkins University, the first American university to make graduate and research work its main object. Here he studied under George S. Morris and followed him to the University of Michigan as Instructor in Philosophy after receiving his Ph.D. at Johns Hopkins in 1884. Two years later he married Alice Chipman of Fenton, Michigan, who has been ever since an effective collaborator in his educational and social work. In 1888 he went to the University of Minnesota as Professor of Philosophy but was called back to Michigan at the end of one year.

When President Harper went thru the country picking up brilliant and promising young men for the new University of Chicago Dewey was his choice for the chair of philosophy. During the ten years Dewey spent on the Midway Plaisance he had the opportunity to try out the radical ideas of education of which I have spoken. In 1904 Dewey was called to Columbia University where he has since remained. Besides his classwork he has always been active tho rarely conspicuous in many educational and social movements. One of the latest of these is the formation of the Association of University Professors of which he was the first president.

The title of his latest volume, "Democracy and Education," gives the keynote of his philosophy and the aim of his life:

> I am one of those who think that the only test and justification of any form of political and economic society is its contribution to art and science—to what may roundly be called culture. That America has not yet so justified itself is too obvious for even lament. . . . Since we can neither beg nor borrow a culture without betraying both it and ourselves, nothing remains save to produce one. . . . Our culture must be consonant with realistic science and with machine industry, instead of a refuge from them. . . . It is for education to bring the light of science and the power of work to the aid of every soul that it may discover its quality. For in a spiritually democratic society every individual would realize distinction. Culture would then be for the first time in human history an individual achievement and not a class possession.

* The University of Chicago Press published a second edition of "School and Society," revised and enlarged, in 1915.

* "Schools of Tomorrow," by John Dewey and Evelyn Dewey (Dutton) 1915.

* "Schools of Tomorrow," p. 301.

* See the admirable article in *Atlantic Monthly* of November, 1908, by President Pritchett of the Carnegie Foundation, contrasting Harvard and West Point, "The College of Freedom and the College of Discipline."

SOPHISTICATION

BY WILLIAM ROSE BENÉT

He loved to read some highly nauseous story,
And nod his head.
Thru its gray sewer, to him, streamed silver glory.
"That's life!" he said.

Love was a weary jade, and always painted
And cheaply bought.
Life was a side of raw beef, subtly tainted.
He loved the thought.

He analyzed a garbage heap's aromas
With rare delight.
Weak wild young men, and old roués in comas,
Gave appetite

For a full feast of life's more ghastly guises,
Despair's black brew,—
Until no further sham held more surprizes . . .
He knew—he knew!

He died—and found the clouds were made of cotton,
The stars were gilt.
The Universal framework? It was rotten
And jerry-built.

The spirits of the dead? Well, he could whisper
Scandal—of wings.
Why, even God—and here his tone grew crisper—
God winked at things . . . !

In the eternal immaterial circuit
Of his pale Hell,
He floats still fussing. Life, he could not shirk it.
Death stinks as well!

So sometimes he descends where he can float o'er
A cemetery
And gibber 'mid the graves, in bliss to gloat o'er
The things folk bury.

And God steps down the clouds, and from high Heaven
Occasionally
Calls him to Kingdom Come, and tea at seven,—
But a vast valley

Of stagnant mist shows forth that spectral creature
Peering and prying
Into some tawdry sunset's prime misfeature,
Some moon—caught lying.

The hastening dead confront his glittering fish-eye,
Forced to unhand him . . .
And God—just looks, and looks,—and sighs, "I *wish* I
Could understand him!"

The Amazing Story of J. C. Penney

How He Climbed from a Twelve Dollar a Week Job to the Head of a Twelve Million Dollar Business

By G. W. HARRIS

EIGHTEEN years ago J. C. Penney was a clerk in a small-town retail dry-goods store in the state of Wyoming. He was getting $12 a week. He had known poverty, and, indeed, still lacked everything but the bare necessities of life—you cannot indulge in many luxuries, or even in the common comforts and modern conveniences, on only $12 a week. He was 23 years old. He had made no stir in the world. He did not have any great educational advantages—had never been to college. His associates would have said that he had no unusual or particular ability, no special training, no extraordinary capacities or capabilities, and no prospects.

Today this young man—he is still a young man, in the full vigor of his manhood—is the head and controlling factor of the J. C. Penney Company, operating the largest chain of retail dry-goods and clothing houses in the world (popularly known as the "Golden Rule Stores"), comprising 175 stores scattered through 21 States, which in this year 1917 will do a business amounting to $12,000,000. Today J. C. Penney is rich, powerful, influential; he is a builder of business and of men, for he has helped to "make" scores of other successful men. He lives in New York City, where his family can enjoy every modern comfort and convenience and the greatest social and educational advantages in the world.

He and his family can have anything that money will buy. They live well, and enjoy life to the full. He is master of himself, master of his time, and master of several hundred co-workers, who respect and love him and work for him as well as for themselves.

The story of this man's rise from poverty to affluence, power, and influence is more interesting and more wonderful than any Arabian Night's tale ever told for the delectation of princes. And it is the more remarkable because Mr. Penney himself says:

"All that I have done, anybody can do. I do not consider myself an unusual man in any way. I am simply an average American citizen, without any exceptional powers at all. There are thousands of men all through the country with greater talents, more education, a better equipment for success than I possess. But I am making a success in my chosen line of work.

"Personal publicity is extremely distasteful to me; and I would much rather you would leave my name out of this story. But I am willing to let you publish it solely in the hope that it may help other men to find themselves, as I was helped. I could have accomplished nothing without help. The main thing for any man is to get the right help at the start—to make a right start.

"Until fifteen years ago I had never made a right start; I had not found myself, or found the stimulus and will power to compel achievement and make my life a success. I was working for little better than starvation wages. I thought that I was capable of better things, but I did not know how to get them. I was hungry—hungry for, I did not know exactly what, except pretty much everything that I did not have. And I was pretty much discouraged over my lack of prospects.

"Then something happened to me—the best thing, the most important thing—that influenced and dominated my whole career, I came upon the writings of Dr. Orison Swett Marden. In his writings I found what I wanted, and needed. The more I read of him, the more I wanted to read. His wise counsel and stimulating help were as refreshing to me as water to a thirsty traveler in a Sahara desert. In reading Dr. Marden I found myself. He aroused and stimulated my ambition and my determination, and gave me the courage and the will power to banish all thought of failure from my mind. With the inspiration Dr. Marden's writings gave me I set to work with a determination to win.

"For what I have won I do not take all credit to myself. I could not have accomplished anything without the help of loyal, faithful, hard-working partners. I have been fortunate in finding and in helping to develop that kind of men to work with me; and each one of these men, in turn, has been inspired, stimulated, uplifted, encouraged to the best there was in him by Dr. Marden. So, you see I owe a great deal of my success and the success of the J. C. Penney Company directly to Dr. Orison Swett Marden.

"From the Marden books I got not only the idea that I personally could succeed, but also the great truth that any man, yes every man, has in himself the capacity for success, if he will only use it. We started the "Golden Rule Stores" on the basic principle of co-operation. I said I would hire no one to work for me who has not the capacity to become a partner. I would have an understanding with each man I employed that as soon as he proved his ability he would become a partner in one of our stores and as he grew and the business grew, a partner in still other stores. I would give him a third interest, and he should pay for it out of his earnings.

"That is the principle on which our business has been built up. We started our first store in 1902, in the little town of Kemmerer, Wyoming. In that first year we did a business amounting to $29,000 in gross sales. In 1916, with 125 stores, our business aggregated a little better than $8,000,000. We are now adding 50 new stores, making a total of 175, and at the present rate of increase our business will amount to a total of at least $12,000,000 for the year 1917.

"Today I am seeking for men. Today my purpose is quite as much to build up men as to build up a successful business. And I know of no better foundation stone for building up a successful man than Dr. Marden's writings. Last summer when we had a convention, here in New York, of our 65 buyers, we had Dr. Marden come and give us an address and everyone of the 65 took new inspiration from that address."

"Mr. Penney," I asked, "which of Dr. Marden's books do you consider the best?" and he answered:

"'Everybody Ahead' is the greatest and best book Dr. Marden has ever written. This wonderful book contains the whole of Dr. Marden's teachings. It sums up and gives in full his whole philosophy of success and successful life. I am telling all my friends and everybody I meet to read this great book. I myself find continual help in reading and re-reading it. I wish that 'Everybody Ahead' could be placed in the hands of every ambitious man in America, because I know that it will make any man who will read it a better, more efficient and more successful man."

"Everybody Ahead, or Getting the Most Out of Life," is a big book both literally and figuratively—made up of 32 chapters, running to 535 pages; and it is packed from cover to cover with tested and proved wisdom. This book has a message of inspiration and help for YOU. What Dr. Marden's writings have done for J. C. Penney, and for hundreds of other leaders of men, including Theodore Roosevelt, Charles M. Schwab, Luther Burbank, Judge Ben B. Lindsey, Hudson Maxim, and John Wanamaker—all of whom have written to Dr. Marden in personal appreciation of his great work—this new and wonderful book is perfectly capable of doing for YOU—if you will let it.

Whether you are a youthful beginner who has not yet made his mark in the world, or a discontented and almost discouraged struggler whose portion seems to be naught but rebuffs and failure, or even if you are successful in your business and well-to-do, this book will help you, because it is a *great stimulator of ideas and developer of will power.*

"Everybody Ahead" is one of the few great books that YOU cannot afford to do without—because without it you are handicapping yourself for the battle of life.

If you act at once you may have the privilege of examining this wonder-working book absolutely free. Dr. Marden's publisher, Frank E. Morrison, 1133 Broadway, New York, has such unbounded faith in this powerful book that he is willing to send it to you, postage paid, on five days approval, *without any cost to you.*

If you really and earnestly want to prosper and succeed, want to double or triple or quadruple your earnings, want to acquire power and mastery for the rest of your life, you will send for this great book today. When you receive your copy for examination let me suggest that you put the book to the severest practical test that you can apply to any book; read a few pages, a chapter, or two, each day for the next five days, carefully and conscientiously, and prove for yourself what the book can do for you. After putting it to that thorough test, if you do not find this practical and helpful book worth more to you than $3.00, the publisher's price, return it and owe nothing.

Here is a chance to prove to yourself that, whatever your present condition in life may be, at least you have *will power* enough to seize an opportunity to investigate for yourself where you incur no risk whatever. Mail the convenient form below, NOW.

FRANK E. MORRISON, Publisher, Ind., Mar. 26.
1133 Broadway, New York.

Send me postpaid a copy of Dr. Orison Swett Marden's success inspiring book, "EVERYBODY AHEAD, or Getting the Most Out of Life," on approval. I agree to remit $3.00 or return the book in five days.

EIGHT GREAT SHORT STORIES
From American Literature

With Introductions by FREDERICK HOUK LAW

THE OUTCASTS OF POKER FLAT

BY FRANCIS BRET HARTE

BRET HARTE was one of the first Americans to choose American subjects. Irving, in "Rip van Winkle" and "The Legend of Sleepy Hollow," had shown the charm of the familiar. Hawthorne had written of New England, and Poe had presented strong local color in "The Gold Bug" and several other stories. But local color in stories before Bret Harte's time was more or less accidental. The author of "The Outcasts of Poker Flat" deliberately chose an American field and American daily life as the material for short stories. For that reason he is sometimes called inventor of the story of local color.

Altho Bret Harte was born in Albany, New York, in 1839, he is almost always associated with early California, whither he went at seventeen. Fifteen years in a crude civilization gave material for stories like "The Luck of Roaring Camp," "Tennessee's Partner" and "The Outcasts of Poker Flat." In later years he lived in New York, was United States consul in a German city and in Glasgow, Scotland, and for many years was a resident of London. He was a prolific writer, producing nearly fifty volumes of genuinely original poetry and prose that won well-deserved popularity.

"The Outcasts of Poker Flat," written when Harte was about thirty, is one of the best of his stories. In characters, settings and plot material the story is realistic, drawn from the rough life of the frontier; in treatment it is romantic, telling of life under most unusual conditions. Like all romance it tells a higher truth than mere realism—in this case, proclaiming that goodness is dormant in characters that seem utterly bad.

The method is the artistic method employed by Poe: a single situation and the development of a single effect. The story has the theme and somewhat the method of Dickens' "Tale of Two Cities." Instead of Paris the scene is a snowed-in cabin in the mountains; instead of the fury of the Revolution, the fury of the storm; instead of Sidney Carton, John Oakhurst, quiet, resourceful, starving himself, inspiring others to sacrifice, and at last giving his life without a murmur. The effect is the same as in Dickens—a kind of awed recognition of the greatness of humanity, an increased sympathy for all.

BRET HARTE

The climax is prepared from the beginning. Oakhurst is cool, unselfishly gives his horse to the woman, is determined to bring safety to all, and never thinks of forsaking his weaker companions. He is sympathetic, understanding, thoughtful, and even childlike, kissing the "Duchess" as he goes to his sacrifice just as Sidney Carton kissed the little dressmaker in "A Tale of Two Cities."

The atmosphere, too, is romantic; the amphitheater with precipitous cliffs, the shadows creeping up the mountain, the moaning of the trees, the great storm, the snow drifting down on the dead—the atmosphere of romance.

The story is one of contrast: the good and the bad thrown together; wicked outcasts singing a hymn; ignorant people enraptured by the Iliad; the flower of goodness springing in the hearts of those too evil even for Poker Flat.

Simple, tender, poetic, elemental, "The Outcasts of Poker Flat" is a noble story.

AS Mr. John Oakhurst, gambler, stepped into the main street of Poker Flat on the morning of the twenty-third of November, 1850, he was conscious of a change in its moral atmosphere since the preceding night. Two or three men, conversing earnestly together, ceased as he approached, and exchanged significant glances. There was a Sabbath lull in the air, which, in a settlement unused to Sabbath influences, looked ominous.

Mr. Oakhurst's calm, handsome face betrayed small concern of these indications. Whether he was conscious of any predisposing cause, was another question. "I reckon they're after somebody," he reflected; "likely it's me." He returned to his pocket the handkerchief with which he had been whipping away the red dust of Poker Flat from his neat boots, and quietly discharged his mind of any further conjecture.

In point of fact, Poker Flat was "after somebody." It had lately suffered the loss of several thousand dollars, two valuable horses, and a prominent citizen. It was experiencing a spasm of virtuous reaction, quite as lawless and ungovernable as any of the acts that had provoked it. A secret committee had determined to rid the town of all improper persons. This was done permanently in regard of two men who were then hanging from the boughs of a sycamore in the gulch, and temporarily in the banishment of certain other objectionable characters. I regret to say that some of these were ladies. It is but due to the sex, however, to state that their impropriety was professional, and it was only in such easily established standards of evil that Poker Flat ventured to sit in judgment.

Mr. Oakhurst was right in supposing that he was included in this category. A few of the committee had urged hanging him as a possible example, and a sure method of reimbursing themselves from his pockets of the sums he had won from them. "It's agin justice," said Jim Wheeler, "to let this yer young man from Roaring Camp—an entire stranger—carry away our money." But a crude sentiment of equity

The Laugh of Super Health and Power

You can't laugh wholly, fully, sincerely, if your heart or liver, stomach or nerves are not completely alive, healthy and co-operating with your brain. You can't laugh unless you can take your full share of pleasure and success without noticing mental or physical exhaustion.

By W. W. WASHBURN

ON my way to California, I met a crowd of my old friends. I was down and out, physically, mentally and personally. I had lost my nerve. I had lost my business sense. I feared to let go of a dollar because I did not believe it would ever come back to me. I was afraid to invest in government bonds for fear that somebody would change the government and in some manner I would lose my money. I was afraid of my own shadow. I was afraid of my friends. I was afraid of everything. I could not eat a moderate meal. I could digest practically nothing. Doctors had me living on food that seemed to me only fit for sick infants. I had no pleasures. I never laughed. I had no hope. I had constipation, indigestion, stomach acidity, anemia, nervous prostration, weakness all over. I was going to California because I was sent there by my doctors who believed it would ease my mind and also ease my wife's anxiety.

While passing through Wyoming, just west of Cheyenne, we passed a cemetery. It is strange what thoughts flash through a sick man's mind when he passes a cemetery. We were all seated in the observation car, some of us were talking while others were reading, and I had in my hand a copy of the Saturday Evening Post. Among other things which seemed to have no interest for me, I read an advertisement and an announcement, promising superior health, confidence, virility, youth, strength, a healthy stomach, superior kidneys, a new heart—in short, super health and mind power. Ordinarily I would have paid no attention to it, but every word sounded so sincere that I decided to write for more particulars. I said to my friends that I would become interested, and that I believed that here was something radically different, that there was something that sought to make you better from within instead of attempting to benefit you by putting something into your system from without. After showing this momentary burst of confidence and hope, my friends all laughed.

They were all healthy. At least, they thought they were. They could laugh. But, on my part, I was serious. I made up my mind to write a postcard, which I did. In a few days I obtained the information I was looking for. Never in my life did I read such a book as was sent to me. It gave me a clearer insight into my own human condition than all the doctors I had consulted. It gave me more information about myself than I secured all through my college years.

I learned that there were 25,000 followers of Swoboda in New York City. I discovered that there were 12,000 in Chicago—15,000 in Philadelphia—7,000 in Boston—5,000 in Pittsburgh. I discovered that there were 25,000 in England. I discovered that in all there were over 262,000 followers of this man who had devoted his life to making other people healthy and happy.

I also received the most wonderful guarantee of satisfaction I have ever read. It made me the sole judge of whether or not I was benefited. It asked me to give up nothing that I wanted to do. There was nothing objectionable about the proposition at all. There were no cold tub baths, electricity or massage—no dieting, no deep breathing, no apparatus of any kind. There was nothing to take internally. There was no violent exercise. It required no drugs or medicines of any kind.

The whole thing was as clear as a bell. The book explained how the body is made up of billions of tiny cells—how our health depends entirely on the condition of these cells. It showed that by consciously energizing every cell, tissue and organ in the body, health, strength, power, ambition, must inevitably result. It showed that it was totally unnecessary for anyone to take less than his full share of pleasure and success. It showed the close relationship between physical health and mental energy.

Page after page I read. I was fascinated. I read the statements of some of the 262,000 people who had adopted SWOBODA'S System of Conscious Evolution. I had tried practically everything. I was on my way to California almost as a last resort. Since there was nothing that could possibly hurt me—and since I was risking absolutely nothing in view of the startling guarantee sent to me, I grasped the opportunity as a drowning man grasps a life-preserver.

When the first instructions arrived I tried them at once. The first five minutes I began to feel better. The next day I devoted a few minutes longer to the instruction. In an amazingly short time, I became well, strong, vigorous, manly. I developed every desirable characteristic; I even discovered that in Conscious Evolution not only the physical and physiological forces are modified, amplified, and thus highly organized, but that the personality is intensified; and that through Conscious Evolution not only immediate results of a wonderful character were accomplished for me, but that I also obtained an ultimately permanent advantage in the form of higher consciousness, a more intense consciousness.

In the realization of this fact, I looked back to that observation car way out in Wyoming when I gave expression to my hope, in seeing the announcement in the Saturday Evening Post of Conscious Evolution, and I wonder how many unfortunate human beings neglected to write for the literature offered free.

Fate chuckles in her sleeve at many a man and woman who believe themselves smart, and highly efficient, and who fail to consciously evolutionize because they are satisfied. Fate laughs at many an individual who laughs at the idea of creative evolution.

If you want to laugh, if you want unusual health, unusual vitality, unusual living power, unusual pleasure obtaining power, unusual youth, unusual thought power, get that booklet of Swoboda's as I did. It will enlighten you. It will educate you. It will show you that what you think is health is only sickness.

Regardless of how young you may feel, of how efficient you may think you are—regardless of how active, energetic and alert you may consider yourself—regardless of how healthy, wealthy, or successful you may be, you cannot afford, in justice to yourself, to miss the interesting and instructive secrets explained for the first time in this startling new book.

A mere reading of "Conscious Evolution" will so fill you with enthusiasm and ambition, that you will not rest until you have yourself acquired the Swoboda kind of health and energy by cultivating and revitalizing intensively every cell, tissue, and organ in your own system. Write a letter or a postal card and mail it today. Even if you gain but one suggestion out of the 60 pages you will have been repaid a thousandfold for having read it. I urge you by all means not to delay, not to say, "I'll do it later," but to send NOW, while the matter is on your mind. Remember, the book is absolutely free for you to keep—there is no charge or obligation now or later. Write NOW. Address ALOIS P. SWOBODA, 2212 Aeolian Bldg., New York City.

Your Vanity Doesn't Go Far Enough

VANITY which prides itself merely on a good complexion isn't enough. A thorough-going pride in a healthy body is much more worth while cultivating.

You cannot have a good complexion or a healthy body if your system is continually clogged with waste matter.

Nujol, unlike physics or drugs, will effectively relieve constipation without in any way disturbing the normal bowel function. It prevents the intestinal contents from becoming hard, lubricates the intestinal tract, and so facilitates normal movements. Nujol does not gripe or upset the system. Being tasteless, it is not unpleasant to take.

The Standard Oil Company (New Jersey) has used its world-wide resources in producing Nujol and its reputation is behind the product.

Nujol is the only remedy for constipation we manufacture. The genuine sold only in pint bottles bearing Nujol trademark. All bottles filled at our Nujol plant, absolutely modern and sanitary.

Write today for instructive booklet, using the coupon below.

residing in the breasts of those who had been fortunate enough to win from Mr. Oakhurst overruled this narrower local prejudice.

Mr. Oakhurst received his sentence with philosophic calmness, none the less coolly that he was aware of the hesitation of his judges. He was too much of a gambler not to accept Fate. With him life was at best an uncertain game, and he recognized the usual percentage in favor of the dealer.

A body of armed men accompanied the deported wickedness of Poker Flat to the outskirts of the settlement. Besides Mr. Oakhurst, who was known to be a coolly desperate man, and for whose intimidation the armed escort was intended, the expatriated party consisted of a young woman familiarly known as "The Duchess"; another, who had gained the infelicitous title of "Mother Shipton"; and "Uncle Billy," a suspected sluice-robber and confirmed drunkard. The cavalcade provoked no comments from the spectators, nor was any word uttered by the escort. Only, when the gulch which marked the uttermost limit of Poker Flat was reached, the leader spoke briefly and to the point. The exiles were forbidden to return at the peril of their lives.

As the escort disappeared, their pent-up feelings found vent in a few hysterical tears from "The Duchess," some bad language from Mother Shipton, and a Parthian volley of expletives from Uncle Billy. The philosophic Oakhurst alone remained silent. He listened calmly to Mother Shipton's desire to cut somebody's heart out, to the repeated statements of "The Duchess" that she would die in the road, and to the alarming oaths that seemed to be bumped out of Uncle Billy as he rode forward. With the easy good-humor characteristic of his class, he insisted upon exchanging his own riding-horse, "Five Spot," for the sorry mule which the Duchess rode. But even this act did not draw the party into any closer sympathy. The young woman readjusted her somewhat draggled plumes with a feeble, faded coquetry; Mother Shipton eyed the possessor of "Five Spot" with malevolence and Uncle Billy included the whole party in one sweeping anathema.

The road to Sandy Bar—a camp that, not having as yet experienced the regenerating influences of Poker Flat, consequently seemed to offer some invitation to the emigrants—lay over a steep mountain range. It was distant a day's severe journey. In that advanced season, the party soon passed out of the moist, temperate regions of the foot-hills into the dry, cold, bracing air of the Sierras. The trail was narrow and difficult. At noon the Duchess, rolling out of her saddle upon the ground, declared her intention of going no farther, and the party halted.

The spot was singularly wild and impressive. A wooded amphitheater, surrounded on three sides by precipitous cliffs of naked granite, sloped gently toward the crest of another precipice that overlooked the valley. It was undoubtedly the most suitable spot for a camp, had camping been advisable. But Mr. Oakhurst knew that scarcely half the journey to Sandy Bar was accomplished, and the party were not equipt or provisioned for delay. This fact he pointed out to his companions curtly, with a philosophic commentary on the folly of "throwing up their hand before the game was played out." But they were furnished with liquor, which in this emergency stood them in place of food, fuel, rest, and prescience. In spite of his remonstrances, it was not long before they were more or less under its influence. Uncle Billy passed rapidly from a bellicose state into one of stupor, the Duchess became maudlin, and Mother Shipton snored. Mr. Oakhurst alone remained erect, leaning against a rock, calmly surveying them.

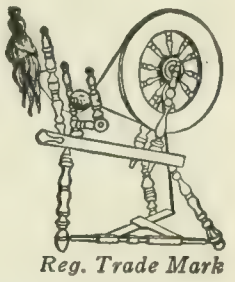
Mr. Oakhurst did not drink. It interfered with a profession which required coolness, impassiveness, and presence of mind, and, in his own language, he "couldn't afford it." As he gazed at his recumbent fellow-exiles, the loneliness begotten of his pariah-trade, his habits of life, his very

vices, for the first time seriously opprest him. He bestirred himself in dusting his black clothes, washing his hands and face, and other acts characteristic of his studiously neat habits, and for a moment forgot his annoyance. The thought of deserting his weaker and more pitiable companions never perhaps occurred to him. Yet he could not help feeling the want of that excitement which, singularly enough, was most conducive to that calm equanimity for which he was notorious. He looked at the gloomy walls that rose a thousand feet sheer above the circling pines around him; at the sky, ominously clouded; at the valley below, already deepening into shadow. And, doing so, suddenly he heard his own name called.

A horseman slowly ascended the trail. In the fresh, open face of the newcomer Mr. Oakhurst recognized Tom Simson, otherwise known as "The Innocent" of Sandy Bar. He had met him some months before over a "little game," and had, with perfect equanimity, won the entire fortune —amounting to some forty dollars—of that guileless youth. After the game was finished, Mr. Oakhurst drew the youthful speculator behind the door and thus addrest him: "Tommy, you're a good little man, but you can't gamble worth a cent. Don't try it over again." He then handed him his money back, pushed him gently from the room, and so made a devoted slave of Tom Simson.

There was a remembrance of this in his boyish and enthusiastic greeting of Mr. Oakhurst. He had started, he said, to go to Poker Flat to seek his fortune. "Alone?" No, not exactly alone; in fact—a giggle—he had run away with Piney Woods. Didn't Mr. Oakhurst remember Piney? She that used to wait on the table at the Temperance House? They had been engaged a long time, but old Jake Woods had objected, and so they had run away, and were going to Poker Flat to be married, and here they were. And they were tired out, and how lucky it was they had found a place to camp and company. All this the Innocent delivered rapidly, while Piney—a stout, comely damsel of fifteen—emerged from behind the pine tree, where she had been blushing unseen, and rode to the side of her lover.

Mr. Oakhurst seldom troubled himself with sentiment, still less with propriety; but he had a vague idea that the situation was not felicitous. He retained, however, his presence of mind sufficiently to kick Uncle Billy, who was about to say something, and Uncle Billy was sober enough to recognize in Mr. Oakhurst's kick a superior power that would not bear trifling. He then endeavored to dissuade Tom Simson from delaying further, but in vain. He even pointed out the fact that there was no provision, nor means of making a camp. But, luckily, "The Innocent" met this objection by assuring the party that he was provided with an extra mule loaded with provisions, and by the discovery of a rude attempt at a log house near the trail. "Piney can stay with Mrs. Oakhurst," said The Innocent, pointing to the Duchess, "and I can shift for myself."



Nothing but Mr. Oakhurst's admonishing foot saved Uncle Billy from bursting into a roar of laughter. As it was, he felt compelled to retire up the cañon until he could recover his gravity. There he confided the joke to the tall pine trees, with many slaps of his leg, contortions of his face, and the usual profanity. But when he returned to the party, he found them seated by a fire —for the air had grown strangely chill and the sky overcast—in apparently amicable conversation. Piney was actually talking in an impulsive, girlish fashion to the Duchess, who was listening with an interest and animation she had not shown for many days. The Innocent was holding forth, apparently with equal effect, to Mr. Oakhurst and Mother Shipton, who was actually relaxing into amiability. "Is this yer a d——d picnic?" said Uncle Billy, with inward scorn, as he surveyed the sylvan group, the glancing fire-light, and the tethered animals in the foreground. Suddenly an idea mingled with the alco-

New Models
Women's Wear

at

McCutcheon's

Reg. Trade Mark

James McCutcheon & Co. are now displaying their smart new wearing apparel for Spring and Summer. Correct models in Women's and Misses' Outer Garments for all occasions are shown in the many new materials.

If Your Eyes Are Not Normal

there is a perfectly safe and natural way of restoring perfect circulation of blood, which is all that weak eyes require.

It is in the nature of a gentle massage given over the closed lids for five minutes at a time twice a day, and for twenty years this method had been successfully used in correcting eye troubles and bringing back normal eyesight to young and old——

Many of those whom it has benefited had very serious eye troubles too, as is shown by their voluntary letters on the subject.

Just note what leading authorities say on the subject of eye massage—Doctor De Schweinitz of Philadelphia, Professor of Ophthalmology at Jefferson College, has stated that in treating even so serious a condition as dreaded cataract of the eye, massage of the eye-ball "has been followed by improvement in vision and deepening of the anterior chamber." The Medical Record, in treating the same subject, says that "the most feasible plan seems to be properly applied massage."

This system of massage to which we refer is fully explained in a scientific book on "The Eyes—Their Care, Their Ills, Their Cure," which may be obtained free on request from *The Ideal Masseur Co.*, 1968 Broadway, New York City, if you will write and mention The Independent.

The most effective helps for our weaknesses nowadays are often the most simple and safe. Hosts of people have saved themselves from the nuisance of constantly wearing eye-glasses by using this massage (or exercise), so it will probably be well worth your while to at least inform yourself further by writing for the little book which treats the subject so thoroughly.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

holic fumes that disturbed his brain. It was apparently of a jocular nature, for he felt impelled to slap his leg again and cram his fist into his mouth.

As the shadows crept slowly up the mountain, a slight breeze rocked the tops of the pine trees, and moaned thru their long and gloomy aisles. The ruined cabin, patched and covered with pine boughs, was set apart for the ladies. As the lovers parted, they unaffectedly exchanged a kiss, so honest and sincere that it might have been heard above the swaying pines. The frail Duchess and the malevolent Mother Shipton were probably too stunned to remark upon this last evidence of simplicity, and so turned without a word to the hut. The fire was replenished, the men lay down before the door, and in a few minutes were asleep.

Mr. Oakhurst was a light sleeper. Toward morning he awoke benumbed and cold. As he stirred the dying fire, the wind, which was now blowing strongly, brought to his cheek that which caused the blood to leave it—snow!

He started to his feet with the intention of awakening the sleepers, for there was no time to lose. But turning to where Uncle Billy had been lying, he found him gone. A suspicion leaped to his brain and a curse to his lips. He ran to the spot where the mules had been tethered; they were no longer there. The tracks were already rapidly disappearing in the snow.

The momentary excitement brought Mr. Oakhurst back to the fire with his usual calm. He did not waken the sleepers. The Innocent slumbered peacefully, with a smile on his good-humored, freckled face; the virgin Piney slept beside her frailer sisters as sweetly as tho attended by celestial guardians, and Mr. Oakhurst, drawing his blanket over his shoulders, stroked his mustachios and waited for the dawn. It came slowly in a whirling mist of snowflakes, that dazzled and confused the eye. What could be seen of the landscape appeared magically changed. He looked over the valley, and summed up the present and future in two words—"Snowed in!"

A careful inventory of the provisions, which, fortunately for the party, had been stored within the hut, and so escaped the felonious fingers of Uncle Billy, disclosed the fact that with care and prudence they might last ten days longer. "That is," said Mr. Oakhurst, *sotto voce* to the Innocent, "if you're willing to board us. If you ain't—and perhaps you'd better not—you can wait till Uncle Billy gets back with provisions." For some occult reason, Mr. Oakhurst could not bring himself to disclose Uncle Billy's rascality, and so offered the hypothesis that he had wandered from the camp and had accidentally stampeded the animals. He dropt a warning to the Duchess and Mother Shipton who, of course, knew the facts of their associate's defection. "They'll find out the truth about us *all*, when they find out anything," he added, significantly, "and there's no good frightening them now."

Tom Simson not only put all his worldly store at the disposal of Mr. Oakhurst, but seemed to enjoy the prospect of their enforced seclusion. "We'll have a good camp for a week, and then the snow'll melt, and we'll all go back together." The cheerful gaiety of the young man and Mr. Oakhurst's calm infected the others. The Innocent, with the aid of pine boughs, extemporized a thatch for the roofless cabin, and the Duchess directed Piney in the rearrangement of the interior with a taste and tact that opened the blue eyes of that provincial maiden to their fullest extent. "I reckon now you're used to fine things at Poker Flat," said Piney. The Duchess turned away sharply to conceal something that reddened her cheek thru its professional tint, and Mother Shipton requested Piney not to "chatter." But when Mr. Oakhurst returned from a weary search for the trail, he heard the sound of happy laughter echoed from the rocks. He stopped in some alarm, and his thoughts first naturally reverted to the whiskey, which he had prudently *cachéd*. "And yet it don't somehow sound like whiskey," said the gambler. It

The Books of the Month

ABRAHAM LINCOLN
BY LORD CHARNWOOD

"The most complete interpretation of Lincoln as yet produced, and presented in such artistic form that it may well become classic."—*American Historical Review.*
"Bound to take a first rank in the literature of Lincoln, and in many respects may be pronounced the best of the biographies yet produced."—*The Nation. Octavo, with portrait, $2.00 net.*

CENTRAL EUROPE
Translated from the German of Friedrich Naumann
BY CHRISTABEL M. MEREDITH

This notable book, written by a member of the German Reichstag, is "by far the most important and most interesting statement yet made of Germany's aims." It is regarded by the Allies as an official pronouncement. Its importance to American readers today should be obvious. *Octavo, 360 pages, $3.00 net.*

ALFRED A. KNOPF, Publisher, New York.

CHILDREN OF FATE
BY MARICE RUTLEDGE

Radically different from the usual war story, this novel gives a vivid picture of the other side of the question, the side that recognizes the trouble and bewilderment real thinkers the world over are beginning to express. A novel that will help people decide what they want the future to be when the war is over. *Cloth. 12mo. Net $1.35.*

FREDERICK A. STOKES COMPANY.

GETTING TOGETHER
BY IAN HAY

Author of "The First Hundred Thousand."

The average Englishman and the average American hold a friendly, open-minded "get together," about their countries' relations. Told with just that readable, human twist that made "The First Hundred Thousand" the most popular book of the war. *All Bookstores. Net 50 cents.*

DOUBLEDAY, PAGE & Co., and HOUGHTON MIFFLIN COMPANY.

GREENMANTLE
BY JOHN BUCHAN

Author of "The Thirty-Nine Steps," etc.

A gorgeous tale of mystery and romance—simon pure adventure which from start to finish never lags in interest. Sir W. Robertson Nicoll says of this book: "It is a triumph! A distinguished success! It must take its place as one of the most glorious yarns in the English language." *Second edition printing. 12mo. Net $1.35.*

GEORGE H. DORAN COMPANY, Publishers, New York,
Publishers in America for Hodder & Stoughton.

IN THE WILDERNESS
BY ROBERT HICHENS

Author of "The Garden of Allah," etc.

"Mr. Hichens' wonderful descriptive talent which took the world by storm when displayed in 'The Garden of Allah' once more works its spell upon the reader. . . . By far the best-constructed story that the author has yet produced. . . . Worked out with the consummate skill of a true artist. . . . A remarkable piece of work and absorbingly interesting."—*Philadelphia Public Ledger.*

FREDERICK A. STOKES COMPANY.

LYDIA OF THE PINES
BY HONORÉ WILLSIE

Author of "Still Jim," etc.

"Lydia is a better realized character, more interesting and more real than was Still Jim in the author's novel of that name, and the story is better handled, more compact, more smoothly evolved than was that tale. . . . It tells a deeply interesting and a thoroughly American story."—*New York Times.*

FREDERICK A. STOKES COMPANY.

PELLE THE CONQUEROR
BY MARTIN A. NEXÖ

The Nation says: "As with 'Jean Christophe,' it is a career of experiment, of search for the meaning of life—and a successful search. It is a book for the world; one cannot lay it down without a sense of quickened emotion and enlarged vision." Vol. I. Boyhood. Vol. II. Apprenticeship. Vol. III. The Great Struggle. Vol. IV. Daybreak. *English translation just completed in four volumes. Each, $1.50 net.*

HENRY HOLT & Co., 34 W. 33rd St., New York.

THE BALANCE
BY FRANCIS R. BELLAMY

"The best new novel we've read since 'Mr. Britling.'" "Extraordinary story." "Author bids fair to make his mark in American fiction." "I can remember nothing so poignant in all the fiction I have read." "As good as 'Queed.'" Clearly *Francis R. Bellamy* has arrived! *Illustrated. Net $1.35. All Bookstores.*

DOUBLEDAY, PAGE & Co.

THE BATTLES OF THE SOMME
BY PHILIP GIBBS

Author of "The Soul of the War."

In this, the first authoritative volume on the British offensive at the Somme, one of the few great correspondents of the war explains the meaning—and the real progress—of last summer's campaign . . . With this important book Philip Gibbs comes into his own as war correspondent of the new dispensation."—*London Bookman. Illustrations, maps. Octavo. Net $2.00.*

C. L. SEAGRAVES, Industrial Commissioner,
AT&SF Ry., 995 Ry. Exch., Chicago.

was not until he caught sight of the blazing fire thru the still blinding storm, and the group around it, that he settled to the conviction that it was "square fun."

Whether Mr. Oakhurst had *cachéd* his cards with the whiskey as something debarred the free access of the community, I cannot say. It was certain that, in Mother Shipton's words, he "didn't say cards once" during that evening. Haply the time was beguiled by an accordion, produced somewhat ostentatiously by Tom Simson, from his pack. Notwithstanding some difficulties attending the manipulation of this instrument, Piney Woods managed to pluck several reluctant melodies from its keys, to an accompaniment by the Innocent on a pair of bone castanets. But the crowning festivity of the evening was reached in a rude camp-meeting hymn, which the lovers, joining hands, sang with great earnestness and vociferation. I fear that a certain defiant tone and Covenanter's swing to its chorus, rather than any devotional quality, caused it speedily to infect the others, who at last joined in the refrain:

> I'm proud to live in the service of the Lord,
> And I'm bound to die in His army.

The pines rocked, the storm eddied and whirled above the miserable group, and the flames of their altar leaped heavenward, as if in token of the vow.

At midnight the storm abated, the rolling clouds parted, and the stars glittered keenly above the sleeping camp. Mr. Oakhurst, whose professional habits had enabled him to live on the smallest possible amount of sleep, in dividing the watch with Tom Simson, somehow managed to take upon himself the greater part of that duty. He excused himself to the Innocent, by saying that he had "often been a week without sleep." "Doing what?" asked Tom. "Poker!" replied Oakhurst, sententiously: "when a man gets a streak of luck—nigger-luck—he don't get tired. The luck gives in first. Luck," continued the gambler, reflectively, "is a mighty queer thing. All you know about it for certain is that it's bound to change. And it's finding out when it's going to change that makes you. We've had a streak of bad luck since we left Poker Flat—you come along, and slap you get into it, too. If you can hold your cards right along you're all right. For," added the gambler, with cheerful irrelevance.

"'I'm proud to live in the service of the Lord,
And I'm bound to die in His army.'"

The third day came, and the sun, looking thru the white-curtained valley, saw the outcasts divide their slowly decreasing store of provisions for the morning meal. It was one of the peculiarities of that mountain climate that its rays diffused a kindly warmth over the wintry landscape, as if in regretful commiseration of the past. But it revealed drift on drift of snow piled high around the hut; a hopeless, uncharted, trackless sea of white lying below the rocky shores to which the castaways still clung. Thru the marvellously clear air, the smoke of the pastoral village of Poker Flat rose miles away. Mother Shipton saw it, and from a remote pinnacle of her rocky fastness, hurled in that direction a final malediction. It was her last vituperative attempt, and perhaps for that reason was invested with a certain degree of sublimity. It did her good, she privately informed the Duchess. "Just you go out there and cuss, and see." She then set herself to the task of amusing "the child," as she and the Duchess were pleased to call Piney. Piney was no chicken, but it was a soothing and ingenious theory of the pair thus to account for the fact that she didn't swear and wasn't improper.

When night crept up again thru the gorges, the reedy notes of the accordion rose and fell in fitful spasms and long-drawn gasps by the flickering camp-fire. But music failed to fill entirely the aching void left by insufficient food, and a new diversion was proposed by Piney—story-telling. Neither Mr. Oakhurst nor his female companions caring to relate their personal experiences, this plan would have failed, too, but for the Innocent. Some

Today?

months before he had chanced upon a stray copy of Mr. Pope's ingenious translation of the Iliad. He now proposed to narrate the principal incidents of that poem—having thoroly mastered the argument and fairly forgotten the words—in the current vernacular of Sandy Bar. And so for the rest of that night the Homeric demigods again walked the earth. Trojan bully and wily Greek wrestled in the winds, and the great pines in the cañon seemed to bow to the wrath of the son of Peleus. Mr. Oakhurst listened with quiet satisfaction. Most especially was he interested in the fate of "Ash-heels," as the Innocent persisted in denominating the "swift-footed Achilles."

So with small food and much of Homer and the accordion, a week passed over the heads of the outcasts. The sun again forsook them, and again from leaden skies the snowflakes were sifted over the land. Day by day closer around them drew the snowy circle, until at last they looked from their prison over drifted walls of dazzling white, that towered twenty feet above their heads. It became more and more difficult to replenish their fires, even from the fallen trees beside them, now half hidden in the drifts. And yet no one complained. The lovers turned from the dreary prospect and looked into each other's eyes, and were happy. Mr. Oakhurst settled himself coolly to the losing game before him. The Duchess, more cheerful than she had been, assumed the care of Piney. Only Mother Shipton—once the strongest of the party— seemed to sicken and fade. At midnight on the tenth day she called Oakhurst to her side. "I'm going," she said, in a voice of querulous weakness, "but don't say anything about it. Don't waken the kids. Take the bundle from under my head and open it." Mr. Oakhurst did so. It contained Mother Shipton's rations for the last week, untouched. "Give 'em to the child," she said, pointing to the sleeping Piney. "You've starved yourself," said the gambler. "That's what they call it," said the woman, querulously, as she lay down again, and, turning her face to the wall, passed quietly away.

The accordion and the bones were put aside that day, and Homer was forgotten. When the body of Mother Shipton had been committed to the snow, Mr. Oakhurst took the Innocent aside, and showed him a pair of snowshoes, which he had fashioned from the old pack-saddle. "There's one chance in a hundred to save her yet," he said, pointing to Piney; "but it's there," he added, pointing toward Poker Flat. "If you can reach there in two days she's safe." "And you?" asked Tom Simson. "I'll stay here," was the curt reply.

The lovers parted with a long embrace. "You are not going, too?" said the Duchess, as she saw Mr. Oakhurst apparently waiting to accompany him. "As far as the cañon," he replied. He turned suddenly, and kissed the Duchess, leaving her pallid face aflame, and her trembling limbs rigid with amazement.

Night came, but not Mr. Oakhurst. It brought the storm again and the whirling snow. Then the Duchess, feeding the fire, found that some one had quietly piled beside the hut enough fuel to last a few days longer. The tears rose to her eyes, but she hid them from Piney.

The women slept but little. In the morning, looking into each other's faces, they read their fate. Neither spoke; but Piney, accepting the position of the stronger, drew near and placed her arm around the Duchess' waist. They kept this attitude for the rest of the day. That night the storm reached its greatest fury and, rending asunder the protecting pines, invaded the very hut.

Toward morning they found themselves unable to feed the fire, which gradually died away. As the embers slowly blackened, the Duchess crept closer to Piney, and broke the silence of many hours: "Piney, can you pray?" "No, dear," said Piney, simply. The Duchess, without knowing exactly why, felt relieved, and, putting her head upon Piney's shoulder, spoke no more. And so reclining, the younger and purer pillowing

"Well! Where has the Money Gone?"

Face to face with the New Month—and nothing but empty pockets and bills, Bills, BILLS

That's the dramatic, pitiful situation which confronts thousands of men and women the first of each month. And the irony of it is that the great majority of them are earning good salaries. But instead of forging ahead they are "going behind."

Far more deadly than the spectre of Poverty is the skeleton-in-the-closet of Debt. Poverty is honorable. Debt is humiliating. Hunger and want can be helped by Charity, but Debt can be wiped clean only with Cash.

Over 80% of Family Trouble is Due to Money Matters

A surprisingly large number of American families are bankrupt. They should according to all sane business principles be in the hands of a receiver. They spend their incomes haphazardly and unintelligently. The sole reason for this condition is their failure to place the family finances on a business basis.

The WOOLSON ECONOMY EXPENSE BOOK Will Put Your Finances Under Control in a Systematic and Effective Manner

Two minutes daily is sufficient to keep the Woolson Book up to date. At the end of each week and month and year you will not only know where every penny went but you will have an analysis and comparative table of all the various expenditures showing just what it went for. Every detail of money management is provided for by a simple, easy-to-keep system that a 12-year old child could handle.

The Woolson Economy Expense Book was originated by an Expert Accountant. It has for fifteen years been in successful use by people of large and small incomes. It will keep track of your money for four solid years. Think what it would mean to you to know how many dollars during the past year went for needless expenditures that might have gone into the savings bank account.

Are You Living Under False Pretenses?

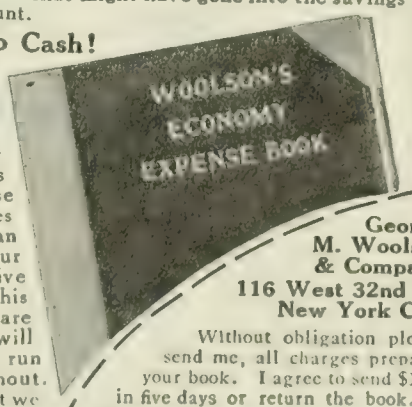
There are thousands of men and women whose lives are a mockery of lies. They masquerade under the pretense of prosperous family life. Behind the scenes are their creditors waiting to collect for groceries, coal, clothing, rent, medicine and the other necessaries of everyday life. You know this picture is true! You may not be one of the unfortunates in the clutches of Debt but there are many who are, and who cannot somehow free themselves.

SUCCESS OR FAILURE—Which?
Asks James J. Hill

"If you want to know whether you are going to be a success or failure in life," said James J. Hill, "you can easily find out. The test is simple and infallible. Are you able to save money? If not, drop out. You will lose. You may not think it but you will lose as sure as you live. The seed of success is not in you."

Forging Ahead in Life and Saving Money

On the other hand you know men and women who are steadily forging ahead. They always seem to have "plenty to do with"—money, luxuries, vacations, automobiles, and other material blessings which are denied you.



Don't blame your predicament to the "high cost of living." The fault is that you spend as you go without knowing what becomes of the money. You have no system of controlling your hard earned dollars. You let them slip through your fingers for this thing and that on impulse without rime or reason.

A Tested System of Accounting For Personal and Household Expenses

Woolson's Economy Expense Book has proven truly a God-send to thousands of people because it has taught them a sure way to manage their finances. With it you know every minute just where you are money-wise. It automatically shows every dollar and penny of income and outgo; just how much for groceries, dress, rent, insurance, medicine, carfare, etc., and all this automatically. It's as simple as A B C. Once you've started the Woolson Book you'll find it fascinating, interesting and a miser for saving.

Send No Cash! Study the Book First

Mail the coupon and we will forward you a copy of Woolson's Economy Expense Book all charges prepaid. You can examine it in your own home for five days. We make this offer because we are confident you will never wish to run your home without it thereafter. But we don't obligate you in any way. Mail the coupon Now with your business card or letter head or reference.

You Can Sort the Mail An Easy Way by Using a Weis MULTIPLE TRAY OUTFIT

(Pat. Applied For)

The device you have waited for to keep correspondence from littering desk—sorted and assembled for departments or future reference. Trays are easily and quickly adjusted and re-arranged to accommodate your workable space, or can be removed and replaced as readily as lifting them off your desk. Are strongly constructed of best grade Quartered Oak and Birch Mahogany with dovetailed corners and three-ply veneer, cloth covered bottoms and have brass label holders on one end. Support is interlocked and screwed to base having cloth covered bottom to prevent marring polished surfaces.

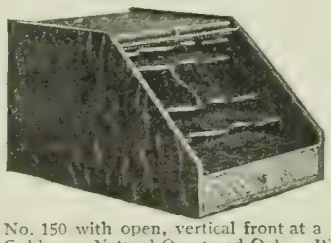
SEE YOUR DEALER FOR DEMONSTRATION

or order direct, specifying whether you desire Golden or Natural Oak or Mahogany finish. See note regarding delivery.

No. 9644—Four position Multiple Tray Holder and four Letter Size Trays with label holders - - **$6.00**

No. 9744—Four position Multiple Tray Holder and four Cap Size Trays with label holders - - - **$7.00**

No. 9633—Three position Multiple Tray Holder and three Letter Size Trays with label holders - - **$5.00**



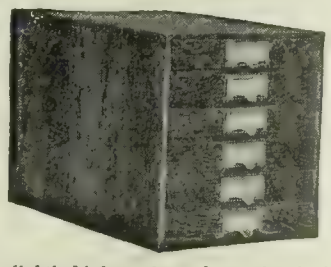
No. 9733—Three position Multiple Tray Holder and three Cap Size Trays with label holders - - - **$6.00**

No. 9622—Two position Multiple Tray Holder and two Letter Size Trays with label holders - - **$4.00**

No. 9722—Two position Multiple Tray Holder and two Cap Size Trays with label holders - - - **$5.00**

Weis STATIONERY CABINETS

Will save you money by eliminating waste. Keeps small supply of necessary sizes and kinds of stationery free from dust and flies and handy to user. Cabinet has compartments for letter, cap and note size papers, invoices, large and small envelopes and a drawer for carbon papers, erasers, etc. Made in two styles.



No. 140 $3.50 DELIVERED

with drop lid and No. 150 with open, vertical front at a lower price. Made in Golden or Natural Quartered Oak or Birch Mahogany. Procure one from your dealer or direct by parcel post. (See note.)

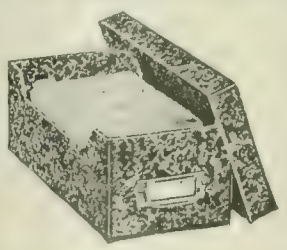
Weis UTILITY CABINET

Accommodates standard size legal blanks. Made heavy enough to hold engravings, electrotypes, etc. Case is corner locked, drawer fronts are flush. Provision is made so cabinets may be stacked one upon another and held in place. Have rubber feet to prevent marring desk. Plain Golden and Natural Oak:

No. 814 OAK $5.00 DELIVERED

Birch Mahogany at slightly higher price. A very handy desk accessory.

Weis SWINGING DESK STAND



Made to attach to either side of any style desk or to wall. Swings your typewriter, adding machine, reference book, etc., into instant use. Never in your way. The "Handy Addition" for holding stenographer's note book while taking dictation. Patented locking device keeps stand in any desired position. The 14x18 inch tops finished in Golden, Natural or Weathered Oak or in Birch Mahogany. No. 6 with Oxidized Metal parts and No. 7 with Nickel Plated parts, 50c. extra.

No. 5 BLACK ENAMEL $3.50 DELIVERED

FIBRE BOARD CARD TRAYS

Are cheaper than wood and strong enough for permanent use. Made in 3x5, 4x6, 5x8 cards; 4x9 cancelled check size. Have tight-fitting covers and easily adjusted, metal follow block to keep contents in vertical position. Also made in knock-down, easily set-up style for filing or transferring papers of letter, cap and invoice size of sufficient depth to take contents of regular filing cabinet drawer. Write for catalog and receive dealer's name.

NOTE: If we have no active dealer in your town, items marked "Delivered" will be sent prepaid to points in Eastern and Central States at prices quoted. Slightly higher in West and South. We reserve the right to ship via cheapest route or way.

"Filing Suggestions" will assist you in determining a method suitable to your filing needs. Catalog "J" illustrates and describes the proper equipment and supplies. Write today for your free copies and nearest dealer's name.

THE Weis MANUFACTURING COMPANY

61 UNION STREET, MONROE, MICHIGAN

New York Office, 368 Broadway — Address Mail to Factory

the head of her soiled sister upon her virgin breast, they fell asleep.

The wind lulled as if it feared to waken them. Feathery drifts of snow, shaken from the long pine boughs flew like white-winged birds, and settled about them as they slept. The moon thru the rifted clouds looked down upon what had been the camp. But all human stain, all trace of earthly travail was hidden beneath the spotless mantle mercifully flung from above.

They slept all that day and the next, nor did they waken when voices and footsteps broke the silence of the camp. And when pitying fingers brushed the snow from their wan faces, you could scarcely have told from the equal peace that dwelt upon them, which was she that had sinned. Even the Law of Poker Flat recognized this, and turned away, leaving them still locked in each other's arms.

But at the head of the gulch, on one of the largest pine trees, they found the deuce of clubs pinned to the bark with a bowie knife. It bore the following, written in pencil, in a firm hand:

†

BENEATH THIS TREE
LIES THE BODY
OF
JOHN OAKHURST
WHO STRUCK A STREAK OF BAD LUCK
ON THE 23RD OF NOVEMBER, 1850
AND
HANDED IN HIS CHECKS
ON THE 7TH DECEMBER, 1850

†

And, pulseless and cold, with a Derringer by his side and a bullet in his heart, tho still calm as in life, beneath the snow lay he who was at once the strongest and yet the weakest of the outcasts of Poker Flat.

PEBBLES

The Taxi Varlet: A real "auto"-crat.—*London Opinion.*

Convict—I'm in here for having five wives.

Visitor—How are you enjoying your liberty.—*Purple Cow.*

Cholly—Do you think it would be foolish for me to marry a girl who was my intellectual inferior?

Dolly—More than foolish—impossible.—*Passing Show.*

Guide (in Shakespeare's home town)—An' them you see in that jail are 'ardened criminals.

Tourist—Ah! The Barred of Avon.—*—Jack O' Lantern.*

Two youngsters, having cultivated the acquaintance of their neighbor across the aisle in the Pullman, because he was in uniform, asked him if he was a lieutenant in the navy like their Papa.

"Chaplain," the stranger answered.

"Oh, hello, Charlie!" they cried delightedly.—*New York Times.*

The man who had made a huge fortune was speaking a few words to a number of students at a business class. Of course, the main theme of his address was himself.

"All my success in life, all my tremendous financial prestige," he said, proudly, "I owe to one thing alone—pluck, pluck, pluck!"

He made an impressive pause here, but the effect was ruined by one student, who asked impressively:

"Yes, sir; but how are we to find the right people to pluck?"—*Judge.*

"Does your wife ever pay you any compliments?" asked Frederick Jimson of his friend Benderley.

"Never," replied Benderley.

"Well, mine does; she flatters me."

"Often?"

"Oh, yes, frequently—particularly in winter," replied Frederick.

"Why does she flatter you so much in winter?"

"Whenever the coal fire needs replenishing she points to the fireplace and says, 'Frederick, the grate.'"—*Puck.*

PEBBLES

"Haven't I seen you somewheres?"
"Oh, yes. I go there frequently." *-Lampoon.*

"Where did you learn to swim?"
"Why, I was a traffic cop in Venice."—*Yale Record.*

"Did you see those autos skid?"
"Sir, how dare you call me that?"—*Puppet.*

If Mr. Kipling writes a history of the war, he will presumably call it "The Bungle Book."—*London Opinion.*

U—What was night drawing on?
Boat—Search me!
U—The close of day.—*Brunonian.*

If paper keeps on going up in price, Chancellor Bethmann-Hollweg's famous scrap of it won't be such a negligible thing after all.—*Passing Show.*

Co-ed—I want to get a skirt.
Clerk—How long do you want it?
Co-ed—I don't want to rent it, I want to buy it.—*Syracuse Orange Peel.*

"Gracious, how close it is in here. Let's go out."
"But, my dear, the orchestra will change the air in a minute."—*Yale Record.*

Romeo—Oh Juliet, I don't feel preddy well now: I have a horse in my throat.
Juliet—Nein, das ist not right. You mean you half a colt in your head.—*Lehigh Burr.*

Teacher—Johnny, can you name the organ of smell?
Johnny—No, sir.
Teacher—Correct. Sit down.—*Sun-Dial.*

Queryer—How does that man keep his pants on without suspenders?
Answerer—Oh, he has an iron constitution and a magnetic personality.—*Chaparral.*

"Her ambition," Yip says of the Girl Next Door, "is to reach the high C. Occasionally she does. And we consider it a deliberately unfriendly note."—*New York Tribune.*

Admiral Scheer says, "My motto is 'Our future lies on the water'"—which seems a somewhat unfinished motto, for it fails to specify what the future lies are about.—*London Opinion.*

CHEM.

Little drops of acid,
Little bits of zinc,
Give us lots of learning
But raise an awful ——.

Gargoyle.

A rather critical old lady once said to a struggling author, "Have you ever written anything that will live after you are gone?"
"Madame," replied the author, politely, "what I am trying to do is to write something that will enable me to live while I am here."—*Periscope.*

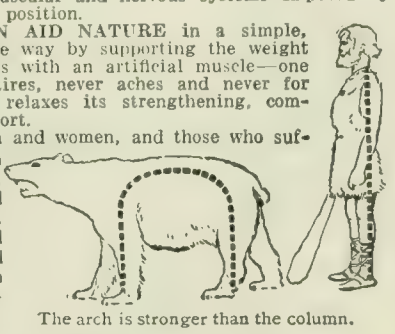
"Mother," said little Evelyn, "may I go out and play with the other children now?"
"You may play with the little girls, sweetheart, but not with the boys; the little boys are too rough."
"But, mother," rejoined the little miss, "if I find a nice, smooth little boy, can I play with him?"—*New York Times.*

The Sunday school teacher was talking to her pupils on patience. She explained her topic carefully, and as an aid to understanding she gave each pupil a card bearing the picture of a boy fishing. "Even pleasure," she said, "requires the exercize of patience. See the boy fishing; he must sit down and wait. He must be patient. And now, can any little boy tell me what we need most when we go fishing?"
The answer was quickly shouted with one voice: "Bait!"—*Passing Show.*

The Plattsburg Rookie Knows What a Drain on His Stamina It Is to Hike With a Heavy Equipment *on His Back*

He's conscious of the load every minute and mighty glad to drop it at the command "Break ranks!"

But there are thousands in the ranks of everyday life who carry just as heavy a load on their abdomens with never a moment's rest.



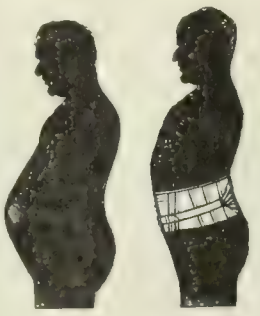
* * * *

Do you realize what a tremendous strain you are laboring under with this vertical pull exerted every moment of your waking, standing hours—tugging at spine, stomach, kidneys and intestines? Do you know that it is surely sapping the vitality and strength which Nature intended for a totally different purpose?

Helmholtz, the distinguished physiologist, remarked that if his mechanic made an instrument so imperfect as the human eye he would send it back for correction. It is true of other parts of the body. Scientists have long recognized that the body is but imperfectly adapted for the "upright position," for the reason that it is still "four-footed" in type. The arrangement of the internal organs proves this and much ill health is directly traceable to the strain on muscular and nervous systems imposed by the upright position.

YOU CAN AID NATURE in a simple, common-sense way by supporting the weight of the organs with an artificial muscle—one that never tires, never aches and never for one instant relaxes its strengthening, comforting support.

Stout men and women, and those who suffer with weak backs, will find relief, rest and renewed health in the wearing of the



The arch is stronger than the column.

WEIL ABDOMINAL BELT

"The Muscle That Never Tires"

This belt supports the relaxed abdominal muscles in a wonderful manner and eases the strain and pressure on spine and internal organs. The vertical strain on the heavy abdominal organs is absurd, unnecessary and often the reason for ill health.

A Weil Abdominal Belt assists in the proper functioning of the organs, is an aid to correct and deep breathing, gives one a normal, healthy poise, absolutely does away with excess stomach and paunch, and restores a drooping, fagged figure to vigorous, attractive style.

WEARERS OF THE WEIL ABDOMINAL endorse it in such positive terms that their testimonials are the most convincing argument we can use in urging you to give it a trial.

READ WHAT THEY SAY ABOUT IT

"If I could not procure another I would not part with mine for $100."
"I owe the first comfortable night's sleep in twenty-five years to the Weil Abdominal Belt."
"Does all and more than you ever claimed for it."
"I cannot too strongly endorse the Weil Belt for men who suffer the physical strain and embarrassment of a large abdomen."
"I feel ten years younger and would not go a day without it."
"My friends all comment on my improved carriage, better color and general physical appearance."
"No indigestion since wearing it."

The Weil Abdominal Belt is worn under the clothing, without discomfort. Physicians and surgeons recommend it for sufferers from weak backs and relaxed, heavy abdomens as well as for Obesity, Lumbago, Ruptures, Constipation, Spinal Deformities, Round Shoulders, and after Surgical Operations.

This belt is made of the highest grade coutil, fashioned by specialists who have made the design and manufacture of abdominal supports their life work. Reinforced and restitched at every point where stress and strain comes. As easily washed as any other garment. The patent coiled steel stays give the resilient, supporting "lift" which wearers find so comforting and helpful.

WEAR THE WEIL FIVE DAYS and prove for yourself its benefits. Give Nature a chance to build your body up in vigor and health by this simple, effective device. Know what it is to be free from the wearing, tearing strain on abdomen and spine and remember that over 85% of mental exhaustion and physical fatigue is due to this relentless drain on your energies.

SEND NO MONEY. Test the Weil Belt at our expense. Learn at first hand whether it will benefit you or not. If it doesn't do all and more for you, in better health, improved appearance and increased vigor, send it back, and we will cancel the obligation. If it does help you and you decide to keep it send us $3.50 in five days.

YOU CAN BE CORRECTLY FITTED BY MAIL. Just send us your normal waist measure, approximate weight and height. We guarantee a perfect fit.

GINN & COMPANY

BOSTON NEW YORK CHICAGO LONDON

THE NEW BOOKS

REINCARNATION

A gravely beautiful love story told in terms of a symbol is Algernon Blackwood's novel, *The Wave*. The wave is the symbol of Tom Kelverdon's emotional life and is associated with sound, scent, vision, contact—even taste—in his consciousness, so that when the power of it is felt most strongly he is aware of a curious foreknowledge and is enabled to look back upon early experience as one might look back on the lower curve of a spiral.

During boyhood and youth he feels the swelling urgency of the wave and knows that it is rushing upward to fall—that it will fall, at last, that he must meet it, and that after the fall he will emerge again with the one woman who is "real" for him. That he never doubts. The love of her persists and grows in him, altho she leaves him and marries, altho, after she is widowed, she seems to love his cousin. He trusts her entirely. He thrusts wider and wider the boundaries of his spirit. He grows. He survives all tests and the falling of the wave. The psychology of this book is so delicate and elaborate that it cannot be adequately described in a few words.

The Wave, by Algernon Blackwood. E. P. Dutton & Co. $1.50.

THE LONG WHITE ROAD

In the December 9th issue of the *New Republic* is reprinted a letter from Harriet Munroe, reminding F. H., that magazine's dramatic and literary critic, that at the time of the famous "Poetry Dinner" he had not yet awarded the laurel to the then little-known Nicholas Vachel Lindsay, and that therefore he cannot claim to be one of the first to discover him. Now, when critics begin to quarrel about the priority of their recognition of a young poet, and to say with asperity, "I found him first!" one may feel reasonably sure that that young poet has arrived.

A Handy Guide for Beggars, tho written partly in prose, but most of it, including the verses—pure poetry—is a sequel to, or continuation of *Adventures While Preaching the Gospel of Beauty*, and, like it, is a tale of the wanderings of a tramp-poet, a person one degree more fascinating than a knight errant. Now working for his board, now asking a night's lodging in return for the reading of poetry and the expounding of his doctrine, eating the coarse food so readily offered—for he goes always to the houses of the poor—sleeping in beds not always inviting, the poet finds time to look deep into the lives of his hosts, to get glimpses of the human comedy and tragedy and to tell of these with sympathy and understanding.

Mr. Lindsay's method is strikingly vigorous and masculine. The colors are laid on his canvas with short, brusque, almost rough strokes. The most remarkable instance of his "prose poetry," to use a much abused term, is the chapter on the *Falls of Tallulah*, which rises in singing ecstasy to the clean, hard, physical rapture of Browning's Saul.

Many of us long to fling conventions and duties out of the window and set off penniless, according to the Rule of the Road, on a joyous adventure. We never will do it; but such books as this tell us that this way lies great beauty, wide vision and tender wisdom.

A Handy Guide for Beggars, by Vachel Lindsay. The Macmillan Company. $1.25.

DUBLIN'S EASTER, 1916

This book is not a history of the Irish uprising of last year: it is the week's experience of a man who, on Easter Monday, stepped out of his door into the streets of Dublin, and to his surprize found himself in the midst of a sanguinary insurrection. The author is an Irishman, James Stephens, best known for "The Crock of Gold" and for several volumes of verse. As an authentic chronicle of incidents, it will contribute, in its degree, to the history of the Sinn Fein insurrection that is sure to be written in the near future. The author believes that Englishmen must "read in their own souls the justification for this rising and for all our risings." And he asserts that there is still a way to cure the grievous wounds of the conflict: "If England allows Ireland to formally make peace with her, that peace will be lasting, everlasting; but if the liberty you give us is all half-measures, and distrust and stinginess, then what is scarcely worth accepting will hardly be worth thanking you for."

The Insurrection in Dublin, by James Stephens. The Macmillan Company. $1.25.

AN OUTDOOR POET

The *Collected Poems* of William H. Davies will give pleasure to lovers of the lyric. Mr. Davies, who tramped over most of this country and Canada as hungry and thriftless as other tramps, established confidential relations with birds and beasts, with flowers and trees on "the open road." Perhaps this is why his lyrics celebrate the minute, beautiful things of the ancient out of doors with effervescent joy.

A rainbow and a cuckoo, Lord
How rich and great the times are now!

When Mr. Davies writes of cities and people he expresses a compassionate sorrow as unaffected and naïve as his joy. Nell Barnes, The Bird of Paradise and Night Wanderers are not to be forgotten. Indeed all the poems have a limpid clarity of phrase and a melody that makes them memorable. They are never "literary." One of the most beautiful is a little poem of spring

called Days Too Short, which ends with this stanza:

When small clouds are so silvery white
Each seems a broken rimmed moon—
When such things are, this world too soon
For me, doth wear the veil of Night.

Collected Poems, by W. H. Davies. A. A. Knopf. $1.25.

SCHOOL BOOKS IN PARIS AND BERLIN

"Every boy in Europe knows, as soon as he knows anything, that he owes a certain debt, service to his country. He learns that lesson in his home, in his school. It is in the atmosphere he breathes." So writes Ambassador Herrick in his foreword to J. F. Scott's *Patriots in the Making*. Here is a most enlightening account, drawn from a study of the elementary textbooks in use before the war, of the methods of teaching patriotism in the schools of France and of Germany. This study throws a light on the splendid unity, soberness and intelligence of the French that amazed the world in August, 1914, and a like light on the tragic ignorance of everything save loyalty and military science, on the part of the German people.

The book is full of suggestion and warning for the educational leaders of this land, and taken to heart might in a generation rid us of the reproach of having the least earnest and purposeful young people of any great nation.

Patriots in the Making, by J. F. Scott. D. Appleton & Co. $1.50.

LEARNING TO FARM

The literature about *The Agricultural College* lags so far behind that of her older and more classic sisters that any well written book on the subject commands attention. This is especially the case when the book is so clear and radical as that of Professor Waugh of the Massachusetts State College. He discusses all the problems which agricultural education has been trying to settle since the days when Senator Morrill and President Lincoln first evolved the idea of the land grant colleges.

Professor Waugh has no hesitation in releasing the classic clutch that has hampered the free development of agricultural colleges. He deliberately ignores the fact that other colleges exist and faces solely the needs of these schools. He clings to some humanities, but maintains that technical training has in itself a high cultural value; he exalts the instructor above his subject; he would place technical training before scientific; and he frankly admits that much instruction in the agricultural colleges is poorly given. Hence he would cling to modern languages, which admirably counteract the looseness of agricultural instruction though as they are now taught he thinks they have no practical or cultural value. He also wishes to do away with the summer vacations, faculty making of the curriculum and all faculty meetings. It is a book for those who attend faculty meetings, for fathers with sons who want this kind of vocational education, and above all for legislators.

Eleven Rooms Heated for $35

Another Guaranteed Underfeed Saving

Just read the following letter. It tells its own eloquent story of *guaranteed* saving and comfort with a Williamson UNDERFEED. Then remember, there are over forty thousand other Williamson UNDERFEED users enjoying this same economy and heating efficiency. Here's the letter:

"The UNDERFEED is built on the right principle for obtaining all of the heat from the coal. The cost of heating my residence, consisting of eleven rooms, three stories high, for the past three years has been only a trifle more than the ice bill of the summer, the average for that period being less than thirty-five dollars a season."
(Signed) Clay H. Alexander, Counsellor at Law, Kansas City, Mo.

And, what is more, the Williamson UNDERFEED means less work. No stooping. A few easy strokes of a lever from a standing position replenishes the fuel supply. Easy to operate when the man of the house is away.

WILLIAMSON UNDERFEED
Furnaces and Boilers
Cut Coal Bills ½ to ⅔ Guaranteed

The UNDERFEED effects a first great saving by burning the cheaper grades of coal as effectively as others burn the costlier grades.

Because of the scientific principle of combustion, as explained to the right, there are no clinkers, no partly burned coals. Gas, smoke or soot—valuable heat elements — are consumed as they pass *up through* the fire. Ashes clean and white.

Cut-out view shows how the UNDERFEED burns coal on the candle principle. Fresh coal is fed from below. Clean, hot fire always on top in direct contact with most effective radiating surfaces. Fire never choked or smothered. All heat utilized instead of disappearing up the chimney in the form of smoke, gas and soot.

Money-Saving Book Free

It is called "From Overfed to UNDERFEED". and pictures and describes the scientific UNDERFEED principle. Send for this book now, it will save you good money some time, whether you heat with warm air, hot water, steam or vapor—a saving of ½ to ⅔ in coal cost—guaranteed with the UNDERFEED. Send coupon NOW—no cost—no obligation.

Unnecessary Indigestion

Indigestion, constipation and the ills they lead to are so *wholly unnecessary*—and cause so much *needless suffering*—that Dr. Kellogg, Chief Medical Director of the Battle Creek Sanitarium, has written a book, "Colon Hygiene," in which he tells you how such ills may be avoided. During his more than forty years' experience at the Sanitarium, Dr. Kellogg has prescribed for thousands of cases of indigestion, constipation and the more serious ills to which they lead. Therefore, what he tells you in his book, is the result of experience. He deals with facts—not theory. Dr. Kellogg recommends only natural methods—diet, exercise, rest and sleep. No drugs. Instructions given in "Colon Hygiene" are so full, complete and plainly stated that you can easily follow them right in your own home. No tiresome regime. No exhaustive system. Only what your own common sense promptly tells you is rational and natural. Over 400 pages. Many illustrations. Price $3. Write for the book today. You take no risk. For, after five days' examination, if you are not entirely satisfied, you may return the book for prompt refund of your money. Is this fair? We let you judge the value of this book for your own needs.

PIN-A-DOLLAR

If the lawmakers of all our states would read it before making appropriations to state institutions they might be able to deliberate more intelligently. Professor Waugh is always fair minded, tho now and then one wishes he hadn't been born and educated in Kansas.

The Agricultural College, by F. A. Waugh. Orange Judd Company. $1.10.

"WHO GOES THERE?"

Earl Cromer in introducing *The Pangerman Plot Unmasked,* by André Chéradame, was mistaken in assuming we have not heard of it. Other books have duly warned us, only in this case the plot thickens with a vengeance. It appears, according to M. Chéradame, that it's into everything and everywhere. It is terrifying to glance at the author's map of the United States and notice how the Pangermans have preëmpted all the best real estate. Their intrigues would seem to overlook nothing from our own wild bird food to banking, and since there are 15,000,000 Pangermans settled here, the other 90,000,000 of us are in danger of being subjected to slavery, i. e., unless we realize it mighty quick and help block their designs on the Persian Gulf.

The Pangerman Plot Unmasked, by André Chéradame. Charles Scribner's Sons. $1.25.

AMERICAN RAILROADS

Johnson and VanMetre's *Principles of Railroad Transportation* is a thoroughly modern treatise dealing with the origin, the development, and the present organization of American railroads. It analyzes the problems of passenger and freight transportation. It discusses the relation of the railroads to the Government. It indicates the probable benefits of exclusive federal incorporation and regulation. It presents the advantages and drawbacks which would result from government ownership. It lends itself equally to the uses of the general reader and of the college student. It is non-partizan, without being non-committal as books of this sort are apt to be.

Principles of Railroad Transportation, by E. R. Johnson and T. W. VanMetre. D. Appleton & Co. $2.50.

THE EARTH AND THE AIR

The Birth-Time of the World and Other Scientific Essays, by Professor Joly, of the University of Dublin, will be of interest to speculative geologists. The book contains some excellent half tones from photographs taken in the Alps. (E. P. Dutton & Co., $3.50.)

It was fitting that one of the scholarly volumes that celebrated the semi-centennial of Vassar should come from the department made famous in its beginning by the work of Maria Mitchell. The contribution to astronomy is *An Introduction to the Study of the Variable Stars,* by Caroline E. Furness. (Houghton, Mifflin Company, $1.75.)

Radiodynamics is an outline of the history, methods and apparatus of the wireless control of torpedoes and other mechanisms, by B. F. Meissner, expert radio aide of the United States Navy. He has presented the subject clearly and concisely, assuming a considerable knowledge of electricity on the part of his reader. (D. Van Nostrand Company, $2.)

For the majority of us who prefer to read about aeroplane flying as well as for those who intend to become "birdmen," there can hardly be a more informing and

A place to meet Your kind of People—

MODERN FILING

A Textbook on Office System

Covers all efficient systems in common use, such as alphabetical, numerical, Direct Name, geographical, subject, follow-up, document and check filing; indexing, card ledgers, stock records, card systems; vertical, Shannon, loose-sheet filing, etc. Illustrated.

Published by the world's leading manufacturers of systems, and written out of their rich and practical experience. Price $1.00; Canada, $1.50. Money refunded on return of book in 10 days if not satisfactory. *Get a copy for yourself—for your file clerk—for your office library.* Specimen pages on request.

YAWMAN AND ERBE MFG. CO.
390 St. Paul St., Rochester, N. Y. Branches Elsewhere

interesting little book than *Learning to Fly*, by Claude Grahame-White and Harry Harper. Student tuition, the perils of the air, the human element in efficiency and safety, methods of flight, and an optimistic prophetic view of the aeroplane's future usefulness fill the chapters. (The Macmillan Company, 75 cents.)

ALL SORTS OF CLASSES

A *Primer of Parliamentary Law* gives in a pocket pamphlet the essential points to be regarded in carrying on meetings in orderly and just fashion. (Y. W. C. A. Press, 10 cents.)

It is odd that in the constant search for topics, the seven wonders of the world have so often escaped attention. There is easily room for *The Seven Wonders of the Ancient World*, a popularly written, well illustrated handbook, by E. J. Banks. (Putnam, $1.50.)

The psychology of the growing girl, the development of thought from year to year, the romantic period, how these should be met and may be guided, are the topics of M. E. Moxcey's *Girlhood and Character*. A full bibliography of books relating to girls and women is a valuable addition. (Abingdon Press, $1.50.)

The *Arden Shakespeare*, edited by J. C. Smith. The chief virtue of this abridged edition is that the notes are separate from and do not mar the text. It contains careful studies of meters, sources of plots, variations, and a glossary. The text is based on the Globe edition. (Boston: D. C. Heath & Co., 25 cents each.)

Prof. John Dewey, of Columbia, who has had a large share in the development of the pragmatic philosophy, has brought together some of his older and more recent studies of the theory of knowledge in *Essays in Experimental Logic*. The mere title of the volume will make the blood of the formal logician run cold—or hot. (University of Chicago, $1.75.)

Workmanship in Words is an entertaining volume largely garnished with examples of various grammatical slips by writers of note. Mr. Kelly discusses truth as affecting style, and comments on the "monotonous cleverness" of the fifteen cent magazines. Altogether there is much here besides other people's blunders. (Boston: Little, Brown & Co., $1.)

A Concise Grammar of the Russian Language, by L. A. Magnus, comes in response to the demand that has arisen, notably in the last three years, for a knowledge of this tongue. Practically we must be promptly about its conquest if we are to share, as we ought, in the activities that the close of the war will open in Russia. (E. P. Dutton & Co., $1.50.)

The Way Life Begins, by Bertha C. Cady and Vernon M. Cady, will be welcomed by parents and teachers desiring, as an aid in the sex education of children, an attractive, scientifically accurate book on plant, animal and human reproduction, adequately illustrated. An excellent introduction to sex knowledge. (American Social Hygiene Association, $1.25.)

Mrs. Stoner's interest centers in exceptionally capable children. The *Manual of Natural Education* gives concrete illustrations of methods used in educating the author's daughter. These include Latin Lullabies, Mother Goose in Esperanto, mathematics thru games, the abolition of examinations, and emphasis on health and character development. (Indianapolis: Bobbs Merrill Company, $1.)

A useful series of readers has been arranged by Dean Hodges and others concerned for the ethical instruction of children. These books, of which four, *The Way of the Stars, of the Mountains, of the King's Gardens, of the King's Palace*, are arranged for children from ten to fourteen, contain well told stories, possibly in the last volume a bit obviously didactic, but all of real value to teacher or parent who wishes to make moral values familiar. (The Macmillan Company, 75 cents each.)

FINANCE AND FARMS

BY WILLIAM P. G. HARDING

GOVERNOR OF THE FEDERAL RESERVE BOARD

IT is doubtless true that at no time within the recollection of any who may read this article, have this country and the world been confronted with a situation so grave, so complex, and so uncertain as that existing today.

The conflagration in Europe is raging with unabated violence, and the flames are licking in this direction; the greatest of European nations, from the standpoint of population and area, is in the throes of a revolution, which has apparently broken an autocracy whose power had been perpetuated for more than three hundred years. In our own country we can note on every hand the signs of social unrest due to the advancing cost of the necessities of life, which will mount still higher should the paralysis of our transportation facilities, now seriously threatened, become an actual fact. Yet this situation, ominous as it is, differs only a degree from other circumstances thru which we have passed unscathed during the past two years. There is no apparent excitement and the general feeling, as far as surface indications go, is one of serenity and confidence. Have the American people become callous? Are they lulled by the thought that this country is the spoiled child of the goddess of "Good Fortune," or is their sense of security warranted by basic conditions?

When one considers the vast, if not highly organized resources of this country, and the inherent patriotism and resolute determination of the American people which have never failed in time of need, and the splendid leadership which Providence has vouchsafed to it in every crisis, this last hypothesis must be accepted as correct.

Our real wealth comes from the soil. This truism is as old as the human race. Greek mythology tells of Antaeus, renowned as a wrestler, who could not be overcome, for whenever brought to his knees he would receive renewed strength from his mother, Earth, and was enabled thereby to rise in his might and overcome his adversaries. It is becoming more and more evident that upon the products of the soil, their abundance and distribution, will depend the outcome of the great war, and that the size of the crops now in the ground or about to be planted will determine more than any other single factor the measure of prosperity to be enjoyed by the people of this country. Thruout the world millions of men have been withdrawn from their ordinary avocations, and are devoting themselves entirely to military duties. Other millions have, during the past thirty-six months, been killed or permanently disabled, leaving behind them millions of dependents more or less helpless.

The abnormal volume of our exports, during the past two years, amounting to more than $7,000,000,000, has resulted in an addition to the gold holdings of this country of more than $1,000,000,000, and this process still continues. This gold inflation has contributed to a rise in prices which can best be counteracted by a corresponding expansion of the volume of our crops. In view of the demand for food and clothing in all parts of the world, it is clearly the duty of the farmers of the United States, and to their self-interest as well, to prepare for the largest crops of all kinds it is possible to produce. In view of the erratic course of prices and the congestion of our transportation facilities, farmers as a rule should not devote themselves to a single crop, but they should diversify with the idea of growing, as far as possible on their own lands, everything necessary for the sustenance of their families and of their domestic animals.

Three years have elapsed since our fertilizers have contained an adequate supply of potash, and while under present conditions it is hardly probable that there can be produced an excessive supply of the staple from which the cheapest clothing is made—cotton—it is none the less desirable that the farmers of the cotton states should plant diversified crops. By adopting this policy they need have no uneasiness as to the price of cotton as their purchases of foodstuffs will be diminished and more of the money received for cotton will remain in their hands. No state or section can prosper if the farmers devote their energies to the cultivation of a single crop, be it cotton or be it grain or hay, and to obtain the best results diversification is necessary. Farmers should be imprest with the necessity of rotation of crops, in order that their soil may not be impoverished, and if they plant several products they are not so much affected by the price of any one of them. There is no question that the greatest service the farmers can render their respective sections and the world in general is to coax from the soil in the year 1917 as great an abundance as possible of crops of all kinds.

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

In view of the bearing that our gold supply has upon commodity prices, it seems proper to refer to a great problem which is now confronting the banking system of the United States—a problem which relates to the effective treatment of two conditions of opposite character, one the abnormal and uncontrolled inflow of gold, and the other the excessive and unregulated outflow of gold.

From August 1 to December 31, 1914, exports of gold exceeded imports by $81,719,000, so that the total accretion to the stock of gold in the United States since the outbreak of the European war has been $1,015,350,000. The question is sometimes asked, if the war should come to an end within a few months what would our position be? How much of this billion dollars in gold which has come to us from over the seas would we be called upon to send back? Suppose the war should come to an end, and the nations concerned should form an offensive and defensive industrial and commercial alliance, and should decide to keep their markets to themselves? Suppose they should apply the gigantic power of centralized government toward controlling the trade of the world, what would our position then be?

Even if we admit, for the sake of argument, that such an alliance is possible between nations having such conflicting interests, we would be immune from such an attack upon our finances for a considerable period of time. We are not indebted to foreign countries. The United States is now a world banker and has become a world power. We hold at this time about $2,300,000,000 of foreign securities and obligations and the aggregate amount is constantly increasing. Most of this indebtedness is in the form of short-term obligations which will prove an effective buffer for an appreciable time against any economic assaults that can be made upon our financial structure. No one can foretell the changes that will occur in the trade currents of the world after the war ends, but there seems to be no reason to fear that we shall have to resort to any hasty or ill-considered action in the matter of economic defense. In the course of time a revision of some of our tariff schedules may be necessary, possibly a general revision, but a tariff commission has been appointed whose duty it is to study this whole question and to report from time to time such changes as may be necessary under new conditions.

Washington, D. C.

MR. PURINTON'S EFFICIENCY QUESTION BOX

402. Mr. W. W. H., Pennsylvania. "You have given such good suggestions in your department that I am prompted to ask your advice. I am twenty-three, a graduate in chemistry, now employed in a general laboratory. (a) What methods would you advise to give me greater efficiency? (b) Are there any organizations besides the Chemists' Club which act as clearing houses for positions? (c) How can I learn of the advantages and opportunities that the big chemical lines offer, so as to choose intelligently the industry to enter?"

(a) Write the Librarian of the Chemists' Club, 52 East Forty-first street, New York also Chemical Catalogue Corporation, 437 Fifth avenue, New York; and learn how to keep in touch with the new books, discoveries, and developments. Read magazines like: *The Scientific American, The Industrial Outlook, National Engineer, System;* and plan how your knowledge can earn or save money for big manufacturing concerns. Investigate the work of such practical chemists as Dr. Harvey W. Wiley and Prof. L. B. Allyn. Follow the lead of a progressive organization, such as American Chemical Society, 42 West Thirty-ninth street, New York.

(b) Submit question to Society of Chemical Industry, Parker C. McIlhiney, secretary, 50 East Forty-first street, New York.

(c) Borrow a New York City *Red Book* from a friend here who is a telephone subscriber, and look up addresses under headings "Chemical Engineers," "Chemists," "Chemicals," etc. Obtain literature of firms that interest you.

---

403. Miss A. W., Oklahoma. "Please inform me about your Independent course of study. I have been advised to take it, and will appreciate your service."

From your letter we do not know whether you refer to the various reading and study courses offered by Chautauqua Institution, Chautauqua, New York, or the course in Efficiency announced recently by the National Institute of Efficiency, Union Trust Building, Washington, D. C. Write each organization for particulars, and thus have at hand information on all courses officially endorsed by The Independent.

You should find the National Institute Efficiency Course peculiarly timely and helpful, because of its having been prepared by the Directors of The Independent Efficiency Service, largely in response to thousands of questions and problems of Independent readers, on matters of personal efficiency, economy, health, work, business, finance, education, home life. Many of these queries have been partially answered in the Efficiency Question Box and series of Independent articles. But the full answers to the most vital problems, with detailed personal application, could seldom be given here because of lack of space, and will be found in the National Institute series of personal lessons.

---

404. Mrs. A. F. P., Ohio. "Please tell me how to persuade our daughter of nineteen to do housework regularly, promptly, thoroly and cheerfully. Girls of today in high school or college seem to have no time for household duties. Their fraternity, club and class meetings and social obligations are more important than their studies, and very much more so than helping at home. Perhaps I am too old-fashioned."

No, you are not old-fashioned enough; you should have learned the gentle art of locking her young ladyship in her room, or sending her to bed without her supper, when she misbehaved. The time to control a daughter of nineteen was about eighteen years ago—how can we undo the parental follies of all these years?

But we will offer suggestions. Obtain literature of Camp Fire Girls for ideas—the book "Wo-he-lo" from Efficiency Publishing Company, with other data, should serve your need. Learn principles of *making housework attractive.* Call your kitchen a "domestic science experimental laboratory"—and watch the young lady suddenly take notice! Get modern, scientific books and implements. Organize a home efficiency club—and make it fashionable. Subscribe

No Time Like the Present

TO make permanent provision for dependents, securing to them a monthly income for life.

In order to acquire the protection which life insurance affords, it must be taken when you can secure it. When you become uninsurable you will feel the need of it—but it will be too late.

Berkshire Life Insurance Co. **Pittsfield, Mass.**

for elegant-looking household magazines. Take a home-study course yourself in household science. Put your daughter in a school where it is ably taught.

---

405. Miss L. B., Wisconsin. "I have just read your book 'Efficient Living' with much interest. I note that upon application you will kindly suggest books, institutions and other aids to efficiency study. Please do so."

We would gladly, but your request is too general and vague. What is your occupation, your ambition, your special lack or weakness, your greatest problem or difficulty? There are now hundreds of institutions, organizations and mail courses, thousands of books and magazines, devoted to some branch of personal, technical, or industrial efficiency. Even to mention a partial list likely to interest a progressive reader would take a full page of The Independent.

We advise you to grade yourself on the various tests found in the chapters of "Efficient Living," then apply to Efficiency Publishing Company, Woolworth Building, New York, for specific aid in the line where you are weakest as shown by the various percentages. Inquire also for names of books, magazines, mail courses, that would help you in your profession, stating in your letter just what your work is, and how you desire to improve it.

---

406. Mr. E. I. F., District of Columbia. "I have been advised to consult a character analyst. The one recommended to me charges $15 for a reading by mail. (a) Is not this fee too high? (b) Would a personal consultation be more satisfactory? (c) Can you recommend an authority in Washington City?"

(a) If character analysts only did what they claim to do, $15 would be remarkably cheap for a "reading" by mail. But I have yet to find one who gives wholly satisfactory results. No matter what you see in flaming advertisements, bear in mind that, so far, there is no complete science of character analysis. For the "reading" you are likely to get from any single person, $15 is too high a minimum charge.

(b) Yes. (c) No.

For $6 to $10 you can buy a good assortment of the new books on character analysis and vocational guidance. Then you can judge the merits of different systems without paying a large fee to any one exponent. Obtain list of books from Efficiency Publishing Company, Woolworth Building, New York. And ask for names of leading character readers; look up several before consulting any.

---

407. Prof. D. N. J., New York. "I am sick unto death of the word *efficiency*. Why don't you get a new word for the exceptionally fine service you offer? This word has been so greatly overworked and misapplied that some of my critical friends ridicule my serious attempts to practise the most modern efficiency teachings."

A good word, like a good man, is generally overworked. The words *law, medicine, science, religion, love,* are all overworked—they are used for imitations, for limitations, for excesses, for excuses, for many things but their real nature and purpose. We don't abolish them—we should have to abolish human nature.

The word *efficiency* has been made by some a fad and a fetish. Don't hate the word—rescue it from its enemies.

But we always strive to please. Therefore we will coin a few original words, never used before, and dedicate them to your most highly acidulated critic. When you mean efficiency, don't say it; say "autogenetics," or "micro-macro-kinesis," or "endo-exo-ontogony," or "hypo-ego-metamorphology." But when you roll these awful sounds into the atmosphere of your neighbors, don't blame us for what happens!

---

408. Prof. W. C., Virginia. "I read very carefully all your Question Box answers. Two months ago I wrote you, but the answer has not yet appeared. (a) Why is this, (b) I am a school principal, but desire another place. Have several college degrees, but not the arts of popularity. Can you help me to a better position?"

(a) Hundreds of Question Box letters were here to be answered when yours came. Do you realize that you are only one of several hundred thousand readers of The Independent—and all have equal rights in the Question Box? Learn patience, brother.

(b) You don't want the "arts of popularity." You want the science of efficiency, joined to the art of advertising. First, do better work—don't waste time hankering for a better place. Have

you made a conspicuous, far-famed success *where you are?* We doubt this from study of your letter, which we think a disgrace for a school principal—written on cheap, ruled paper, no margin at side, no paragraphing, punctuation faulty, penmanship weak, and ink poor.

Study Roland Hall's book on "Applying for a Job," and Sherwin Cody's on "Business Letter Writing"; both from Efficiency Publishing Company. Then try for the place you want.

---

409. Miss G. S., Indiana. "I am twenty-four years old, anxious to find remunerative work. Studied English five years, taught three years. (a) Would my knowledge of English help me to a good position? (b) If so, how? (c) What salary could I expect?"

(a) Only indirectly—you must gain some technical knowledge with commercial value before the English can be utilized. In common with thousands of other high school and college graduates, you are a victim of the follies and unrealities of the American school system. Don't bank on your academic schooling when hunting for a position—bank only on your tried capacity for long, hard work done rapidly, thoroly, cheerfully.

(b) You might become a stenographer and typist; or a business correspondent; or a visiting or private secretary; or a proofreader; or a special writer for newspapers and magazines; or a teacher of public speaking and business English for women; or an examiner in a correspondence school; or a welfare secretary in a large corporation employing many girls; or a saleswoman or demonstrator; or an official in a publishing concern.

(c) Perhaps $10 a week to start—when you have technical training.

---

410. Miss J. E. R., Connecticut. "I have recently read your 'Efficient Living,' and secured much help, inspiration and pleasure therefrom. I think it has much improved my attitude toward my work—that of private secretary and office manager. My great problem is to hold up to our employees the required efficiency standard. How can I help them take their jobs more seriously, and turn out more and better work?"

Read my article "Everyman's Office," published in The Independent last November. Check all ideas and plans worth trying out. Make a list of them, keep on file till every point is covered. Ask us how to develop the two or three most important ideas.

Grade yourself on test chart accompanying the article. Determine your own special weakness or fault, and use every means you know to correct it.

Ask Efficiency Publishing Company, Woolworth Building, New York, for list of books and magazines on office management. Buy at least two books; then study, and apply. Get sample copies of three or four business journals, choose the one you want most, subscribe for it, read it regularly.

Have a copy of "Efficient Living" put in the hands of each employee, offer a prize for the best short review, or application of the book to your work.

---

411. Mr. S. F., New York City. "I studied French two years at high school, but am forgetting the language; want to renew study. Have been advised to take up Dr. Rosenthal's language phone method. Would you recommend it?"

The most effective way to learn a live language seems to be to talk it with a cultured native. Why not join a conversational French class or club? See advertisements of language schools in New York papers.

The Rosenthal method should be helpful. Always choose by comparison, however—don't buy anything before examining others of its kind. Look up also these schools of language: Berlitz, 1122 Broadway; Edmonds, 71 West Forty-sixth street; General, 233 East Fourteenth street; Ideal, 80 Wall street; all of New York.

---

412. Prof. B. A. L., Nevada. "Please tell me the address of some firm that makes the oiled duster mentioned in your article on 'The Efficient Housewife.' I want it for dusting a schoolhouse, to replace feather duster."

Any large drug store, department store, house-furnishing store, hardware store should keep several kinds. If you have trouble in locating one write to Channell Chemical Company, Chicago, for particulars of the "O-Cedar" mop and polish; also to Buffalo Specialty Co., Buffalo, New York, about "Liquid Veneer" dust cloth.

"War Loans and the United States"

The Story of War Financing and Its Bearing on National Growth

HISTORY proves that the sacrifices and discipline of War have served to increase thrift, create efficiency and develop resources. The financial record of American Wars is one of patriotism and vision. War obligations have been readily met and economic progress made.

For the first time in its history, the United States has now become a creditor nation, and by meeting the needs of other nations is able to strengthen its own financial and commercial position.

Every citizen is concerned in the situation presented and its relation to its own affairs.

How American Wars since 1776 have been financed and these War debts discharged; the economic effect of War loans in this country and in Europe; lessons taught by experience and the opportunities offered for the future are described in a booklet entitled "War Loans and the United States," issued and sent upon request by the

LIFE INSURANCE IN NINETEEN-SIXTEEN

LIFE Insurance, like other lines of business, follows the ascending or descending line which describes the fluctuations in our national prosperity. That it automatically responds and may thus be taken as an indicator, pointing one or the other way, is open to question. Its momentum generally carries it, in point of time, much beyond the beginning of conditions which finally result in economic depression and adversity. It slows down very imperceptibly, due, perhaps, to the redoubled efforts of its workers to overcome additional obstacles thrown in its way by the contraction in all lines which is occurring around it.

In 1896, which will be remembered as the year of the death struggle between the bi-metallic and the single or gold standard, when industry was paralyzed, financial failures were numerous and prices for all commodities had declined to ruinously low figures, I was in the field selling life insurance. Every one knew when the year opened that the advocates of free silver at 16 to 1 were going to make a desperate effort to graft that plausible absurdity on the economic policy of this nation. It chilled enterprize. As the year advanced, confidence declined, mills and factories closed down, banks restricted their operations. The value of land in all the agricultural districts went down from forty to sixty per cent of normal, and in Kansas it was not equal to the amount for which it was mortgaged. "Hard times" had hit the country as with a blight. These conditions worsened under the demagogic appeals of Bryan and his ilk. Food was cheaper and money with which to buy it was harder to get than ever before or since in my recollection.

No more discouraging conditions for the sale of such a commodity as is life insurance can easily be imagined. The men who were selling it that year had to earn their salt if ever they did, and those who failed even to do that were not few. And yet hundreds of millions in new policies were placed on the lives of the American people.

I look back thru the New York Insurance Department reports and find that while the amount written in 1896 was less than in the year before, the difference was not large. Of course, the New York report contains the records only of those companies that were doing business in that state, but the the facts are representative. In 1895 the companies reporting to the New York Department issued new insurance to the total amount of $864,815,534 and had in force at the end of that year $4,831,680,098. The amount of new insurance sold in 1896 aggregated $796,124,326. This is less by $68,691,208. But the amount remaining in force when the year ended was $4,967,576,418, a gain of $125,896,320, showing that even under the most discouraging social and economical circumstances progress was not only not arrested but made a small advance. Normal conditions were not wholly resumed the following year, 1897, when the new insurance amounted to $923,692,754—an increase of $127,204,506 over 1896 and of $58,877,220 over 1895, but the situation was immensely improved.

I have cited this case as an indication to me that life insurance does not immediately respond to adverse economic conditions. It does eventually, to be sure, but only by slow gradations. This is peculiar in the case of an instrumentality the use of which men generally defer to a time they regard as more convenient to themselves.

NOW as to the effect which sudden prosperity has on it. The year 1915 and 1916 were two full years of war in Europe, during which period our trade had multiplied many fold, how many, I don't know and refuse to guess. But it has been enormous. We are supposed to have been exceedingly prosperous. I am not entirely convinced of that fact myself. Gross figures are interesting and sometimes entertaining. But they merely bulk the volume of the story; the pith of it is in the net figures. If a man sells his labor for $2 a day and his actual expenses are $1, he is twice as well off as he would be if his wage were $4 a day and his expenses $3.50. Personally, I have not met many people who have been unusually prosperous during the past two years. There are many—farmers, dealers and workers in metals and chemicals, foundrymen, machine shops, automobile manufacturers and dealers, dry docks and shipyards. A vastly greater number of work people have had steady employment at what would be high wages if the necessaries of life averaged at the prices prevailing in 1913 or prior. But I think it quite likely that the net value in the hands of the masses is little larger than it was in 1913.

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

The complete insurance figures for the year 1916 are not available yet and I will have some difficulty in appraising the life insurance performance for that year. Lacking full data, I have selected ten companies which rank in the forefront of the field for vigorous prosecution of the business. By comparing the new business they transacted in 1914, 1915 and 1916 we will get a reasonably fair idea of the increased effect, if any, on life insurance, of the industrial and commercial expansion in 1916. I have included in this calculation the industrial business of the Metropolitan and Prudential for obvious reasons.

I find that the ten companies selected wrote new paid-for business in 1914—the year in which the European war was begun, but during which our domestic conditions remained about normal—aggregating $1,959,709,690 and that they had remaining in force at the end of that year $14,437,404,757.

During the succeeding year, 1915, the total of their new paid-for business was $2,142,932,189 and their insurance in force at the close of that twelve months was $15,164,873,805. We were in that year fairly launched on the sea of trade expansion. Our manufacturing, agricultural and mercantile facilities were running at top speed. Labor had grown scarce and prices were steadily rising. We were almost submerged by prosperity; or to be more accurate all the causes which make for prosperity were in vigorous and healthy operation.

The gains made in 1915 over 1914 were: new paid-for business written: $183,222,499, equaling 9.3 per cent; total insurance in force, $727,469,048, equaling a small fraction in excess of 5 per cent.

In 1916, the gains over 1915 were: new paid-for business written, $268,702,120, or 12.5 per cent; total insurance in force, $1,138,790,584, or 7.6 per cent.

If we accept as normal the business and results of 1914, a period antedating our commercial expansion, we find that the gains made in the two succeeding years, when our prosperity was at high tide, were respectively, in new business written 9.3 per cent and 12.5 per cent.

I do not regard the progress made in 1915, as compared with the record of 1914, as much, if at all, above the average, indicating the soundness of my previous observation that alterations in general business conditions are not immediately reflected by insu-

rance. During 1916, life insurance was responding in an increased degree and in my opinion it will continue to do so more fully each year, and for several years, after our economic conditions have resumed their normal volume and channels. As the reader will notice, the gain in paid-for business during 1916 over 1915, 12.5 per cent, is but a small advance, only 3.2 per cent, on that made in 1915 over 1914. The same thing is true of the total insurance in force, the gain as between the two years being but 2.6 per cent. As intimated a moment ago, the largest results will probably be recorded in the reports of the next two or three years.

Last year, after carefully investigating the matter, I arrived at the conclusion that the total insurance in force in old line companies on the lives of the American people was, in round numbers, $22,000,000,000. Now, if the figures of the ten companies which were compiled for this article may be taken as a guide, that figure had grown at the end of 1916 to about $23,700,000,000. That is a large amount, but its value does not equal the insurance in force, say ten years or even five years ago.

This is a feature of the life insurance situation which buyers of life insurance have given little or no consideration. They should not neglect it. They know by the prices they have been paying for the necessaries of life that the value of the dollar has undergone serious depreciation. As compared with five years ago, that decline cannot be less than forty per cent. This means that it will now buy the same commodities which cost only sixty cents in 1912. Calculating on that basis, the insurance in force now, nearly twenty-four billions, has the purchasing power which fourteen and a half billions possest at that time. A dependent family left with a life policy of $10,000 receives, as measured by the standards of five years ago, but $6000. It is clearly apparent from this showing that as the purchasing power of money declines, as the cost of living increases, the family's protective line of life insurance should increase.

There are many uses for life insurance, even the very rich employ it. But the great mass of it exists as a strong shield of defense over the families of the poor and those in moderate circumstances—the vast army of producers in the fields, workshops and offices of the nation, the great majority of whom are without any income save that which they earn from week to week in exchange for their labor. How true this is may be seen in the fact that the average policy is in amount less than $2500.

Those whose incomes have been increased during recent years—and I fear the advance does not equal their increased expenses at current prices for commodities—should, if possible, make as large an addition to their life insurance as they can.

1916

Atlantic Mutual Insurance Company

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$28,813,527,723.00	
Received premiums thereon to the extent of		$293,478,757.42
Paid losses during that period	$146,054,578.61	
Issued certificates of profits to dealers	$92,312,810.00	
Of which there have been redeemed	$85,117,690.00	
Leaving outstanding at present time	$7,195,120.00	
Interest paid on certificates amounts to	$23,439,603.45	
On December 31, 1915, the assets of the Company amounted to		$15,582,763.48

The profits of the Company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

ALL SORTS OF AUTHORS

March 30, 1816, 33 Danes and natives of Iceland met at the University Library of Copenhagen at the invitation of the philologist, Rasmus Christian Rask (1787-1832), an enthusiastic student of the land and people of the famous North Atlantic isle. He had found out to his great regret that its printing presses, standing under direct episcopal supervision, mainly issued Bibles, prayer books and other devotional treatises, while the works of great historic and literary value were passed in manuscript form from hand to hand, from generation to generation. Besides, the population was kept in absolute ignorance of the literary products of the foreign countries, no foreign work of any importance having ever been translated into the Icelandic language.

This state of affairs suggested to Rask the idea of founding an "Icelandic Literary Society" (Hid islenska Bókments felag), with the triple purpose of, first, publishing the main works of Icelandic literature, second, providing the people with translations of the best in the foreign literatures, and, finally, of reviving the Icelandic language itself.

Owing to the monotony of their dark, long winter days the art of story telling has reached with the Icelandic people a rare degree of perfection. The survival of oral literature there reminds us of the Agaean Islands at the times of the Homeric rhapsodists.

The earliest and most famous monument of Icelandic literature, the so called *Elder Edda*, is a collection of poems of varying length and character, the oldest portions of which belong, in their present form, to the 10th century. When the manuscript was first discovered in 1643, its authorship was wrongly attributed to Saemund the Wise (11th-12th centuries). As with the Iliad and the Odyssey, the real author still remains unknown.

The Younger or Prose Edda is a kind of Anthology for the benefit of young poets. One of the most curious works of Icelandic literature is the "Landtaking Book," by Ari the Wise (1067-1148) which has been translated into German (1891) and English (1898). It describes the discovery and settlement of the island, containing detailed accounts of 3000 persons and 1700 places. But, after the Bible, the most popular work to this day among the Icelandic people is the *Heimskringla* (Circuit of the World) by Snorri Sturluson (1179-1241), one of the most brilliant historical writers of the Middle Ages. F. Jónsson's edition (1893-1901) has been translated into Dano-Norwegian by G. Storm (1900), receiving a large subvention from the Norwegian Parliament. We have two English translations of this great work, one by David Laing (1841-1889), the other by W. Morris and E. Magnusson (1895).

The three best known *sagas* (heroic stories) are the *Völsunga Saga*, traces of which we find in the Nibelungenlied; the *Vilkina Saga*, treating of King Dietrich of Bern (Verona), which, in its turn, betrays already German influence, and the *Fridthiofs Saga*, which has become popular in Western Europe and with us, thru its adaptation by the great Swedish poet, Esaias Tegnér (1782-1846).

The art of printing was introduced in 1530 by the last Roman Catholic bishop of the island; 10 years later the Icelandic translation of the New Testament appeared.

Not to offend the sensibility of the reader—it is not agreeable to have one's ignorance shown up too roughly—we mention of the pleiad of great Icelandic poets but two: Jón Thorlákson (1744-1819), the translator of *Paradise Lost* and Klopstock's *Messias*, and the still living dramatist Matthias Jochumsson (1835-). To lovers of fiction we recommend Thoroddsen's *Lad and Lass*, in Reeve's excellent translation (1890), and the gourmets of literary news will certainly be interested to learn that Rasmus Rask's Literary Society, now under the efficient presidency of Professor Björn Magnusson Olsen, counts

DIVIDENDS

UNITED FRUIT COMPANY
DIVIDEND NO. 71

A quarterly dividend of two per cent. (two dollars per share) on the capital stock of this Company has been declared, payable on April 14, 1917, to stockholders of record at the close of business March 24, 1917.

The transfer books do not close.

JOHN W. DAMON, Treasurer.

THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY

NOTICE OF DIVIDEND ON PREFERRED AND COMMON STOCK.

The second installment of 2% of the 8 per cent. dividend upon the outstanding Preferred Stock and of 1¾% of the 7 per cent. dividend upon the outstanding Common Stock of the American Brake Shoe and Foundry Company, which were declared on December 12, 1916, will be payable on March 31, 1917, to the stockholders of record at 3 o'clock P. M. on March 23, 1917. Checks will be mailed.

G. M. JUDD, Secretary.

Dated March 13, 1917.

THE ELECTRIC STORAGE BATTERY COMPANY

Allegheny Avenue and Nineteenth Street.

Philadelphia, March 7, 1917.

The Directors have declared a dividend of one per cent. (1%) from the net earnings of the Company on both Common and Preferred Stocks, payable April 2, 1917, to stockholders of record at the close of business on March 19, 1917. Checks will be mailed. WALTER G. HENDERSON, Treasurer.

LIGGETT & MYERS TOBACCO COMPANY.

St. Louis, Mo., March 12, 1917.

An extra dividend of four per cent. (4%) has been declared on the common stock of LIGGETT & MYERS TOBACCO COMPANY, payable April 2, 1917, to stockholders of record at the close of business March 23, 1917. Checks will be mailed.

T. T. ANDERSON, Treasurer.

THE NEW YORK CENTRAL RAILROAD CO.

New York, March 14, 1917.

A Dividend of One Dollar and Twenty-five cents ($1.25) per share, on the Capital Stock of this Company has been declared payable May 1, 1917, at the office of the Treasurer, to stockholders of record at the close of business April 6, 1917.

EDWARD L. ROSSITER, Treasurer.

PACIFIC GAS AND ELECTRIC CO.

COMMON STOCK DIVIDEND NO. 10.

A meeting of the Board of Directors has been called for 12:00 o'clock noon March 31, 1917, for the purpose of declaring a quarterly dividend (No. 10) at the rate of $1.25 per share upon the Common Capital Stock of this Company, payable on April 16, 1917, to stockholders of record at 12:00 o'clock noon March 31, 1917. Checks for the dividend will be mailed. The Transfer Books will not close and owners desiring checks payable to themselves should have stock certificates issued in their own names on or before the last mentioned date.

D. H. FOOTE, Secretary of the
PACIFIC GAS AND ELECTRIC COMPANY.
San Francisco, California, March 9, 1917.

UNITED SHOE MACHINERY CORPORATION

The Directors of this Corporation have declared a quarterly dividend of 1½% (37½c. per share) on the Preferred capital stock, and a dividend of 2% (50c. per share) on the Common capital stock, both payable April 5, 1917, to stockholders of record at the close of business March 20, 1917. L. A. COOLIDGE, Treasurer.

A constantly increasing number of readers has been following the weekly

INSURANCE DEPARTMENT

of The Independent.

Many of them are securing valuable information through the Insurance Service Department, conducted by Mr. W. E. Underwood, to aid them in selecting the right insurance.

about 1000 members, many of whom are spread over our own country.

*

When, in the summer of 1795, the first rumors of the danger of a French invasion were beginning to spread thru England, mainly caused by the uncommonly large forces concentrated by Bonaparte, Burns joined the corps of Volunteers, formed at Dumfries. At a dinner given by the magistrate of that town, at the occasion of the King's birthday, our poet proposed the somewhat unfortunately worded toast: "May we never see the French, and may the French never see us!"

Taunted, therefore, with cowardice by some ill-humored critics, Burns went home and wrote the following "Invasion Song," which aroused a tremendous enthusiasm thruout Scotland. The poem appeared subsequently in the *Dumfries Journal:*

Does haughty Gaul invasion threat?
Then let the loons beware, sir;
There's wooden walls upon our seas,
And volunteers on shore, sir.
The Nith shall rin to Corsincon,
And Criffel sink in Solway,
Ere we permit a foreign foe
On British ground to rally.

*

The British lion was not less awake in Napoleonic days than he is now. Nothing was talked of or thought of in the British Isles but things military. Statesmen and preachers delivered stirring speeches. Hogg wrote his famous "Donald MacDonald." A Glasgow divine, Paterson by name, prepared the field for the then Minister of Munitions, by preaching on the text: "He that hath not a sword, let him sell his garment and buy one." Every small town and village had its drilling ground, and every country laird was turned, for the time being, into an amateur officer. Sir Walter Scott, who was quartermaster of the Edinburgh Light Dragoons (to whom he addrest his "War Song") and, at the same time, sheriff of Ettrick Forest, humorously wrote: "My field equippage is ready, and I want nothing but a pipe and a *Schnurrbaertchen* to convert me into a complete hussar." He soon had the opportunity to show his horsemanship. When the false alarm was sounded on that fateful night of January 31, 1804, Sir Walter rode from Gilsland to Dalkeith—a distance of 100 miles—in 24 hours.

*

The *Iliad* is a picture of the genius of Force set out before us to warn us of its evils and to instruct us as to how nature often compels us. In order to picture Force properly, the work begins by showing its great failing, namely unreasonable wrath, the whole world made to suffer; and then Force returned to its proper function in consequence of a noble but equally unreasonable grief. This is in fact a primordial lesson to humanity, when it exists principally under the government and influence of Force. But there is more in the allegory than this, because the figure of Achilles is not only that of force but also of what we call genius, and is indeed almost the embodiment of the original for Dionysus—before he took to wine.

On the other hand, the *Odyssey* is a great allegory of high and normal human intelligence, and in order to form the picture, Homer plunged Ulysses in difficulty after difficulty that by his wisdom, cunning and virtues he might be able finally to emerge. This again was a prime lesson to humanity, and the Greek tragedies gave us apologue after apologue with similar high meanings.

*

The 1916 Shakespeare tercentenary was the first Shakespeare Jubilee, properly speaking, 1664, 1764 and 1864; 1716 and 1816 are bleak days in the Shakespeare Calendar. The nearest approach to a celebration was that of September 6, 1769, at the occasion of the inauguration of the new townhall at Stratford-on-Avon, his native town.

CHARTERED IN 1830

NEW YORK LIFE INSURANCE & TRUST COMPANY · PROTECTION FOR WIDOWS, CHILDREN AND OLD AGE · 1830 ·

THE PENNSYLVANIA FIRE INSURANCE COMPANY

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

Sophistication. By William Rose Benét.

1. Define the following words: nauseous, jade, aromas, roues, comas, jerry-built, gibber, tawdry.
2. What sort of literature and what sort of people does the poem satirize?

The Outcasts of Poker Flat. By Francis Bret Harte.

1. What is a "local color" story? Why is Bret Harte called "inventor of the story of local color"?
2. In what ways is "The Outcasts of Poker Flat" realistic? In what ways is it romantic?
3. In what ways is the story like "A Tale of Two Cities"?
4. In what ways is the story founded on contrast?
5. Give a full explanation of the character of John Oakhurst.
6. Why were John Oakhurst and his companions exiled from Poker Flat?
7. In what way does the setting add to the effect of the story?
8. What differences are there between the characters of John Oakhurst and of Uncle Billy?
9. Why did the company sing a hymn? Why did John Oakhurst tell stories from Homer?
10. What goodness appears in the various persons who have been exiled from Poker Flat because of their bad lives?
11. Why did John Oakhurst kill himself? In what way is he like Dickens' Sidney Carton?
12. What gives the story its highly pathetic quality?
13. In what ways is the story unusual?
14. Write a short story in which you show fundamental goodness in a supposedly evil character.

All Sorts of Authors.

1. In what ways were Burns and Sir Walter Scott connected with war?
2. What has aided the development of literature in Iceland?
3. What are the Icelandic Eddas? What are the Icelandic Sagas?
4. What recent literature has Iceland produced?
5. Point out differences between the Iliad and the Odyssey.

SECTION II. COMPOSITION

John Dewey: Teacher of Teachers. By Edwin E. Slosson.

1. Write an exposition on "John Dewey as a Major Prophet of Today."
2. Write expositions based on the following expressions: "Experimental School"; "Industrial Training"; "Recapitulation Theory"; "The Gary System." Tell why you would like or dislike the adoption of any of these for your own school.

Freeing Russia. By G. J. Sosnowsky.

1. Write a short summary of the causes of the Russian Revolution as explained in this article.

Editorial Articles.

1. Write a short oration in which you show the advantages of life in the United States rather than in Mexico under the new Mexican constitution.
2. Write a composition on "The Rising Tide of Democracy" mentioned in "The Doom of the Dynasties."

The Story of the Week.

1. Write an account of the Russian Revolution. Show in what ways it is like or unlike the French Revolution.
2. Write a comparison or contrast on "The Russian Revolution and the American Revolution."
3. Write a character sketch of any one of the important figures in the Russian Revolution.
4. Write a contrast on "The Government of Russia and the Government of the United States."
5. Write an exposition of the reasons that have led China to break relations with Germany.
6. Write, as if for your school paper, an editorial article on "The Sinking of American Ships."

Milukov, Professor of Progress. By Samuel T. Dutton.

1. Write a short character sketch of Professor Milukov.
2. Write a comparison or contrast on "George Washington and Milukov."
3. Write a paragraph in which you show in what ways Professor Milukov is or is not well fitted to act as leader of a people.

In General.

1. Cut out various suitable pictures from the advertisements in this issue and write a story based on the pictures.
2. Write a description based on any picture in this number.
3. Write a letter ordering any of the articles advertised in this number.
4. Write an exposition in which you show the appropriateness of the cover of this number of The Independent.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.
PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. The American Navy and American Trade—"Our Billion Dollar Navy," "Uncle Sam's Ships."

1. Write a brief summary of the history of the American navy in the following periods: (a) from 1776 to 1812, (b) from 1812 to 1865, (c) from 1865 to 1898, (d) from 1898 to the present.
2. In studying the history of the navy, what connection do you note between it and the development of a merchant marine?
3. What action has the United States taken during the past two years for the upbuilding of its merchant marine? What has been the result?
4. From a study of Secretary Daniels' article, what is the probable future of the American navy as compared to that of the various European countries?

II. The Railroads and the Unions—"The Railroad Situation," "The Eight-Hour Day."

1. Review the history of railroad development in the United States, especially during the past thirty years. What agencies has the United States established for controlling the companies?
2. Review the history of labor unions during the same period. Study especially the great struggle between the unions and the railroads in 1893.
3. Look up in The Independent of last September the story of the controversy between the companies and the brotherhoods which resulted in the passage of the Adamson Law.
4. Why has the controversy broken out again just now? How has it been settled for the time?

III. The Russian Revolution—"Freeing Russia," "Milukov, Professor of Progress," "The Doom of Dynasties," "The Passing of Old Russia," "The Russian Revolution," "The Czar and the Duma."

1. Review the history of the attempts at reform in Russia during the nineteenth century.
2. Review the history of the attempted revolution of 1905. Why did that revolution fail? Why does the present revolution give some promise of better success?
3. Look up in The Independent of March 13, 1916, and December 4, 1916, the two most recent changes in the government of Russia.
4. Explain the relation of the Duma and the Zmestvos to the general government of Russia.
5. Why, when Czar Nicholas has been forced to abdicate, is his younger brother, Grand Duke Michael, called upon to assume the leadership of Russia?
6. Look up the career of the men like Stürmer, Milukov and others whose names are prominently mentioned in connection with this revolution.
7. Note in the editorials and in the news items how frequently the present revolution is spoken of as a sign of other revolutions to come into Germany and Austria. How do you account for the association? Why not a revolution in Great Britain also?
8. Note in the editorial "The Passing of Old Russia" the comparison between Nicholas II and Louis XVI. Compare the present revolution in Russia to the beginnings of the French Revolution.

IV. Changes in France—"French Ministry Resigns."

1. Make a study of the organization of the French Government as it existed before the beginning of the war. Write a brief historical sketch of the growth of this form of government in the last fifty years.
2. Look up in The Independent of March 27, 1916, and December 18, 1916, the two most recent changes in the French Cabinets. In each case what has been the real cause of the change?
3. Note in your daily newspapers that there is talk of another change in England. What is the reason for that?

V. National and International Trade—"Finance and Farms."

1. What, in your judgment, are the chief points in this article? Summarize each of these points.
2. ". . . conditions may render necessary a revision of our tariff schedules." Why?
3. "No state can prosper if its farmers devote their energies to the cultivation of a single crop," etc. Why not?
4. "We are not indebted to foreign countries." "The United States is now a world banker and has become a world power." Justify this statement.
5. Discuss the question: "Are they (the American people) lulled by the thought that this country is the spoiled child of "Good Fortune," or is their sense of security warranted by basic conditions?"

TIFFANY & CO.

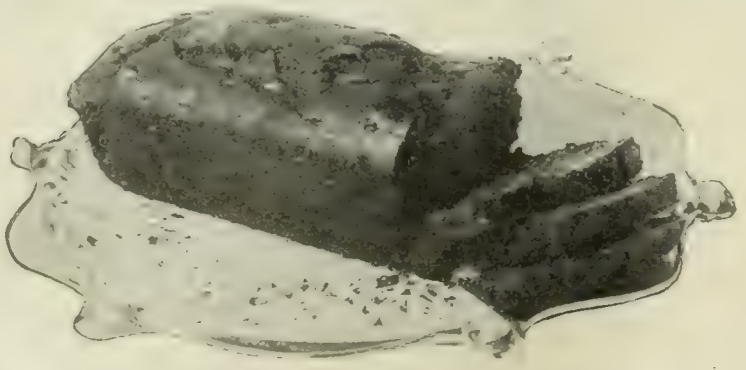
JEWELRY SILVERWARE

THE HIGHEST QUALITY
ASSURES
PERMANENT SATISFACTION

THE TIFFANY BLUE BOOK-NOT ILLUSTRATED
GIVES DESCRIPTIONS AND PRICES

FIFTH AVENUE & 37TH STREET
NEW YORK

By the use of



ROYAL

a Cream of Tartar

Baking Powder

fewer eggs may be used in baking with excellent results

Many experiments have successfully demonstrated that the number of eggs may be reduced in nearly all recipes and often omitted altogether by using an additional quantity of Royal Baking Powder, about a teaspoon, in place of each egg omitted. A booklet of recipes, which have been tested in this way and which economize in eggs and other expensive ingredients, will be mailed free. Address Royal Baking Powder Co., 102 William Street, New York City.

The following recipe is a practical illustration:

EGGLESS, MILKLESS, BUTTERLESS CAKE

1 cup brown sugar
1¼ cups water
1 cup seeded raisins
2 ounces citron, cut fine
⅓ cup shortening
1 teaspoon nutmeg
1 teaspoon cinnamon
½ teaspoon salt
2 cups flour
5 teaspoons Royal Baking Powder

DIRECTIONS:—Boil sugar, water, fruit, shortening, salt and spices together in saucepan 3 minutes. When cool, add flour and baking powder which have been sifted together. Mix well; bake in loaf pan about 45 minutes.

The old method (Fruit Cake) called for two eggs

Royal Baking Powder is made from Cream of Tartar, derived from Grapes, and adds none but healthful qualities to the food.

No Alum **No Phosphates**

A POEM TO PAN

But hush! ah, hush! lay listening ear
To earth! Dost thou not hear
His rhythmic tread? The gladdened air
Drips with the wood-scent from his tossing hair;

The very cloud
Trails lower; the oriole's loud,
Bright plaint is piercing, unsubdued,
The lattice of her leaf-wrought solitude;
The robin blither sings,
The blindworm dreams of wings.
Lower! bow low! abase thy trivial state, O man!
He comes, the earth-god, Pan.

—*Alice Brown, in The Road to Castaly*

REMARKABLE REMARKS

T. J. MCCORMACK—States do not possess a unit psychological heredity.

BENJAMIN C. MORRIS—The railroads are fighting to get champagne prices.

FRANCIS NELSON—The only result of secret diplomacy is sudden war.

JAMES HUNEKER—The "grand manner" in piano playing has almost vanished.

SECRETARY ROBERT LANSING — The church is drifting away from spirituality.

CONGRESSMAN JEANNETTE RANKIN—I am able to have a lot of fun at the movies.

EDGAR L. MOORE—The German Emperor is hopelessly addicted to the use of drugs.

WALTER CAMP—No game develops youth as nature intended it so much as football.

SIR SAM HUGHES—New York City need have no fear of being attacked by submarines.

R. W. WOODWARD—The characteristic defect of deliberative bodies is lack of deliberation.

WOODROW WILSON—It is much less of an advantage to write history than to try to enact it.

ALOIS P. SWOBODA—You can easily become a giant thru conscious development of every cell.

W. A. EVANS, M.D.—The policy of going corsetless promises a longer continuance of good figure.

W. H. TAFT—Washington's warning against entangling alliances was not meant for this period.

ISRAEL ZANGWILL—I take the crown of thorns from Israel's head and I place it upon Armenia's.

ALMA GLUCK—Shoot your sons dead, American mothers, before you allow them to enlist for war.

BARON SHIBUSAWA—We should cooperate with America whose supply of capital is almost limitless.

REV. CHARLES A. EATON—The red-blooded men of the country are bedevilled by wild-eyed women.

JOHN MCCORMACK—A sentimental song with a very simple direct appeal—that's what the public adores.

SENATOR MARTINE—No one can ever say that James E. Martine was a moral coward or a pretender.

JANE ADDAMS—We can't prevent people from amusing themselves badly unless we show them a better way.

MRS. AUGUST BELMONT—The younger generation of players know little or nothing of how to read blank verse.

M. CLEMENCEAU—The republic of the United States possesses a government capable of decision and action.

PROF. E. R. A. SELIGMAN—It takes more brains to run a big railroad than to be President of the United States.

LILLIAN RUSSELL—I approve of a thoro washing once a day, especially when one is obliged to live in smoky cities.

VICE-PRESIDENT MARSHALL—The time I am liable to be wholly wrong is when I know that I am absolutely right.

REV. H. W. PINKHAM—It is not the wickedness of war that chiefly impresses me, but its damned foolishness.

E. H. FORBUSH—In 1911 the Society for Prevention of Cruelty to Animals killed 303,947 cats in New York City.

H. G. WELLS—In the British papers there has appeared and gained a permanent footing this phrase "ton for ton."

GENERAL KUHN—If we manage to keep out of the war we will have all the money in the world and Europe all the guns.

JOSEPH MCCABE—The population of Germany is now, and will be at the close of the war, greater than it was in 1914.

COLONEL GOETHALS—The American in his optimism is slow to rise, and then attempts to do the impossible, forgetting the element of time.

DAVID LLOYD GEORGE—I cannot say whether I ought to treat newspapers as a luxury, a comfort, a stimulus, a necessity or a nuisance in life.

REV. KARL RIELAND—The general antics, shoulder lurches, palm and arm pumping, the clasps, clutches and holds of some of the modern dances seem to suggest type reversion, a kind of ancestor worship exhibiting a viciousness unlovely in our species.

THE HOUSE OF SORROW

In spite of the concealment of the wounded, the population begins to understand its loss. One night I went to the station to see a big detachment leave for Wilma. They had all been in war before. Their uniforms were dirty and patched. They sat on benches clinging to a loved one's hand, or stood in listless groups. No one talked. They were like tired children. They needed food and bed. The scenes of farewell were harrowing.

Here was a young boy saying good-by to a mother and three aunts. He was all they had—their whole life. Here a father saying farewell to a wife and three sons, all under seventeen. Or a mother in deep mourning taking leave of her last son, or a young wife with a baby in her arms giving a last embrace.

As the train moved out of the station there were no shouts, no cheers, no words of encouragement. Instead there was a deadly silence. The men leaned out of windows, stretching despairing hands toward loved ones. As the train pulled away the little groups broke into strangling sobs. They were shaken as by a mighty tempest. Paroxysms of grief rent and tore them. They knew the end had come. A man may go once into battle and return, but not twice and thrice. Life held no hope. As I came away I stopped before the big building which conducts military affairs. It is known as the "House of Sorrow." On its rear wall is posted the list of dead and wounded.—*Madeleine Z. Doty, in "Short Rations."*

STERLING

SILVERWARE

THERE comes a time in the history of an industry, as in the history of a people, when one name shines forth above others as the embodiment of all those qualities whereby leadership is established and sustained.

In the silversmithing arts it is now an almost century-old tradition that the finest examples of the silversmithing craft, whether lavish in design or economical in cost, carry the name and insignia of

A Journal of Civilization

FOR HUMANITY AND WORLD PEACE

THE United States of America is about to enter the Great War. The American people, thru their chosen representatives, are about to declare themselves at war with Germany. In what spirit shall the declaration be made? On what grounds shall we base our acceptance of the role thrust upon us of enemy of the German nation? To what end shall we wage war? How shall we fight?

The unbelievable patience and long-suffering of the American people before the iterated and reiterated assaults of German arrogance upon the ancient rights of humanity are the best evidence that we shall send our forces against Germany more in sorrow than in anger. Our quarrel is not with the German people or with any legitimate aspiration of the German nation to growth and development; it is with the brutal and ruthless will to conquer of German autocracy. Only with the keenest regret and the profoundest reluctance shall we draw the sword; for it is the sad fact that we cannot fight German autocracy without fighting the German people who suffer that autocracy to endure.

We must accept the challenge of German barbarism on no niggling statement of technical wrongs, with no thought of revenge, or retaliation, or even punishment. It is not Germany the invader of American rights, not Germany the destroyer of American ships, not even Germany the slayer of American citizens—tho in each of those capacities Germany has amply earned the burden of our hostility—but Germany the enemy of humanity, the foe to justice, the menace to world peace, that we accept as our enemy. It is that Germany that we shall do our part in rendering impotent to do its frightful will. It is to that end that we must wage this war into which we have been dragged. We shall wage war on behalf of civilization; we must not hold our hand till civilization is made secure.

How shall we fight? With every ounce we have to give, with every dollar, every resource, every industry, every hand and brain and heart. For two years and a half we have kept aloof from this great struggle. But now we have been compelled to hold aloof no longer, because we prefer civilization to barbarism, humanity to frightfulness, Christianity to kultur. Being in, national honor and self-respect demand that we shall fight with everything of courage and power and resourcefulness that we have. This is for us a war of defense—but not merely defense of our own boundaries, our own homes, our own selves. We shall fight in defense of human rights, of democratic ideals, of eternal principles of justice and humanity. In such a war we must fight where the enemy is, for he must be defeated tho his arms never menace our shores.

Shall we join the Allies? Unquestionably. We are all fighting in the same cause. Not to seek instantly the most complete coöperation with them in their military and naval plans and operations would be folly and madness. Once at war with Germany, our one consuming purpose must be to defeat Germany. The Allies are well on the road to such a consummation. If we do not fight shoulder to shoulder with them we shall be impotent and ridiculous. We cannot reach Germany by land or by sea except by the roads that the Allies are treading. We must fight with them if we are to fight at all.

How shall we fight with the Allies against our common enemy? Lend them money. A great national loan to France would be a splendid recognition of a debt of sentiment and gratitude we have owed since the sword of French chivalry aided us to our national independence; a great national loan to Belgium would be a splendid recognition of the sorrows and sufferings and wrongs of that indomitable race; a great national loan to Russia would be a splendid recognition of the successful strivings of that wonderful people toward the light of democracy and government by the people; a great national loan to England would be a splendid recognition of the essential solidarity of the Anglo-Saxon race in the quest of freedom and justice for all. For two years and a half the treasure of the world has been pouring into our laps. It now becomes our turn to pour it out again in the great cause in which we are to take our part.

But not only money. We must give our energy in every form in which it will be useful. Resources, munitions, food, clothing, medical and hospital supplies, everything that the fighting men of the Allies need and their families behind them need we must send in an ever increasing stream from our abundance. But we must send more than that. Men. They say that the Allies need our money and our munitions, but "they have men enough of their own." Men enough for what? To endure and suffer and be broken and die? And in our quarrel? Shall it be said that the American people, going to war side by side with France and Belgium and Russia and England against a common enemy, sat safely and comfortably at home, giving money and munitions and things, and letting Frenchmen and Belgians and Russians and Englishmen do the dying for them? If this quarrel is not good

Drawn for The Independent by W. C. Morris

DIE NACHT

DER TAG, "THE DAY" TO WHICH GERMAN MILITARISM FOR YEARS LOOKED EAGERLY FORWARD AS ITS GOAL, IS RAPIDLY DARKENING INTO NIGHT

enough for Americans to die in it is not good enough for America to be in. Wars are fought with blood and treasure. We cannot without eternal disgrace offer the treasure and refuse to shed the blood.

So we must fight this fight. We must draw the sword against a ruthless enemy of humanity. We must fight in the cause of human rights and the peace of the world. We must not sheathe the sword until those sacred things are made secure.

THE BUDGING LINE

THE snaky line of trenches that sprawled across the map from Switzerland to the sea has lain so still for more than two years that it seemed as fixed a feature of the landscape as a river or a mountain chain. The sacrifice of millions of men and billions of money has not availed to budge it perceptibly. But now we behold it in motion, receding so rapidly that a map a week old is out of date. Where the British and French have been accustomed to count their gains by the yard, as tho it were on a football field, they now have to use cavalry to keep in touch with the retreating foe. Redoubts that have resisted the strongest attacks for months are discovered to be empty shells. Of the eight thousand square miles of French territory which the Germans held at the beginning of February, they had spontaneously relinquished one thousand before the end of the month.

Spontaneously, but not voluntarily. The Germans call it "a strategic retreat," and they are right. But no army makes a strategic retreat when a strategic advance or a strategic standstill is possible. The ground gained by the Anglo-French forces on the Somme last fall was pitifully small in comparison with its terrible cost, but this proved that the Germans could be blasted out of their subterranean fortresses at any time. And the Germans knew from the preparations they saw before them that the Allies were determined to fight it out on this line if it took all summer. The nibbling process had been carried so far that large segments of the front trenches were bound to be captured as soon as the spring campaign opened.

So the Germans chose to take the initiative and abandon without a fight what they could not long hope to hold. Then for a time it seemed to the newspaper reader that the dispatches must have been mixt, for Berlin confest the surrender of towns that Paris and London did not profess to have taken, a startling reversal of wartime custom. Peronne the Impregnable, Bapaume, Chaulnes, Roye, Nesle, Noyon, the capture of any one of which would have been accounted a great victory, were gained in a day. The French moved forward twenty-five miles without a battle.

What, then, did Hindenburg gain by this wholesale surrender of debatable land? He gained what a chess-player generally gets by a gambit; he got the move on his adversary. Hindenburg does not like trench warfare; he plays an open game. Whenever in his Russian campaigns he found his way blocked he secretly shifted his forces behind the front and struck at another point, a maneuver that has become famous as "Hindenburg's castle." We naturally suspect such a move in the present case, tho it remains to be seen whether he will strike at Paris or Petrograd. He has at any rate gained the privilege of choosing his own ground for the coming conflict.

It may seem that the Germans are no wiser than the couple in the old story who were caught in the rain and took refuge under a tree, proposing when that tree got wet thru to run to another. But the so-called "Hindenburg line" will have several advantages besides its newness. The old German line was located by accident, for it was drawn wherever the Germans happened to be when on their retreat from the Marne they first got time to dig themselves in. The line to which they now retire, wherever it may be, has been selected from all the *Hinterland* as being the safest and shortest, and the German engineers have been working over its fortifications for more than a year.

Directly in front of the old German line were the trenches of the Allies, with guns in place and stores of ammunition ready and roads leading to the bases in the rear. But the approach to the new German line is thru ten to twenty-five miles of country so ruthlessly devastated that—to borrow the phrase of our Civil War—"a crow could not fly over it without carrying a knapsack." For the Allies to bring up their guns and get ready for as strong an attack upon the new line as they were prepared to deliver upon the old will require a month or more, and meantime the U-boats were expected to gain command of the sea. But the U-boat campaign seems to be a failure. Instead of bringing England to her knees it is bringing America to her side.

But more important than the gaining of time is the saving of men. The old line made nearly a right angle about Noyon and had been so nibbled, gnawed and bitten into that it was by no means the shortest distance between two points. If the new Hindenburg line could be drawn straight from Arras to the Aisne below La Fere it would be only about sixty-five miles long, whereas the old line between these points was about one hundred and ten miles long. Probably, then, Hindenburg will save a third of his men by moving into his new quarters.

But whatever Hindenburg may have gained by this maneuver he has lost prestige. It is a public confession of failure, a mere postponement of defeat. Of what avail to gain a little time when every day the Allies are becoming stronger and Germany weaker? Of what avail to save a few soldiers when Germany has made five hundred million new enemies within the last two months?

FOUR GOOD DEEDS OF THE CZAR

NO event of the war has pleased us more than the news that Mr. Nicholas Romanov had retired to private life. We trust that he will be able to spend the rest of his life in peace and quietude, for as an individual he does not deserve the enmity which progressive Russians have felt toward him as a czar. Few czars have been better; most of them have been much worse. It is impossible to say in how far he has been personally responsible for the good and evil of his reign, but there are at least four acts that are ascribed to him for which Russia owes him a great debt of gratitude.

The first was the calling of The Hague Conference. This did not accomplish what he hoped for, the reduction of armaments, the elimination of the brutalities of war and the maintenance of world peace, but it was a great step forward in the promotion of internationalism and the idea of it is now dominant in all plans for future peace.

The second was when he called the representatives of the people to assemble in a Duma. It may be said that this was forced upon him by a threat of revolution, but, nevertheless, it was against the advice of the conservative court party that he made this concession to popular demand. The first Duma was a chaotic and incompetent body, but from it has grown the present level-headed and efficient parliament.

Thirdly, on the outbreak of the war he exercized his autocratic power and banished vodka from Russia. This meant, as his financial advisers pointed out, a loss of nearly half a billion dollars just when money was most needed. But it was a wise act, for it saved the country much more than the cost of the liquor and made the people prosperous in spite of the war. That the revolution was effected with so little rioting was due to the elimination of alcohol.

Finally he deserves credit for the last act of his reign, his resignation. When he was met at the ancient free city of Pskov by the representatives of the Duma with an edict of abdication ready for him to sign, General Ivanov advised him to refuse, saying: "There is only one thing to be done. Open the Dvina gate and let the Germans clean out the canaille of the Duma." But the Czar said, "No, I will never betray my country to maintain my throne." Not so did Louis XVI and Louis XVIII and Francis Joseph and many another sovereign act in similar situations.

Against the long list of crimes which are charged against czardom these four beneficent acts at least are to be credited to Nicholas II.

A POINT OF ORDER

HAVE colleges and universities an obligation to require the decent observance of good manners by students and instructors? Have boards of education an obligation to insist that social centers and civic forums which have received permission to use public school buildings, shall maintain order and shall conduct their meetings respectably?

That these questions should now be pertinent and necessary is a sorry evidence that the decencies of life have fallen into neglect.

They are pertinent because shocking examples of an outrageous disregard of civility and decorum are multiplying. They are necessary because true academic freedom is being endangered by abuses too often associated with it.

Freedom of thought and speech are vital to civilization. Without them there can be no progress in science, no great creative work in literature or in art, and no safeguarding of liberty. Unpopular opinions must get a respectful hearing. Criticism and censure of men in positions of authority, and dissent from governmental policies, must be tolerated. Intellectual fighting must be encouraged on penalty of intellectual and moral backsliding.

But freedom to express opinion is not abridged by requiring those who wish to be heard to use the language tolerated among gentlemen and to observe the ordinary forms of decorum. Parliamentary bodies permit dissent from any proposition, the arraignment of any official, or the advocacy of any measure in parliamentary language. When speech becomes unparliamentary the point of order is raised. Under no circumstances does any self-respecting parliamentary body tolerate the language of the gutter-snipe.

Not only should academic officers feel safe in putting forth results of research that challenge accepted views, and, as citizens, in taking positions on public questions that other men denounce as radical; they should also enjoy immunity when, in a respectful way, they dissent from the policies adopted by boards of trustees in academic matters or object to administrative rulings by presidents. Only so can the academic life be kept wholesome and progressive. Students, also, should have liberty to talk wisely or foolishly in mass meetings or in college publications about all manner of things that interest them, so long as they speak decently and keep within the parliamentary proprieties. But when professors or students say or print things about one another, or about academic officers, or about the established institutions of education, law, family life and government, in words that no parliamentary body in civilization would tolerate, and that any decent club would ban as language unbecoming a gentleman, they have morally forfeited their academic rights. When debaters in civic forums holding meetings in public schools descend to coarse vulgarity, use offensive language about public officials, and insult the flag or the law, or religion, they forfeit all claim to be heard, or further tolerated.

We think that the time has come when colleges, universities and public school authorities should deal sternly with this abuse. It is getting out of hand. We do not share the view of those who think that it is becoming a public danger. The low-lived creatures who are guilty of these offences have not brains enough to be dangerous. But they are an exceedingly disgusting public nuisance. Their indecencies are a disgrace, and should be supprest.

NEXT?

THE American Revolution, the French Revolution, the Chinese Revolution, the Russian Revolution.

THE FINANCIAL PROBLEM

IN financial circles as in the country at large, the President's call for Congress to meet on April 2, with the further announcement of "grave matters of national policy" which "should be taken under immediate consideration," was accepted as foreshadowing actual war. What will such action mean to the United States financially? So far as regards the Government's own fiscal measures, no new problem would have been created. In the armed ship bill, which was passed in the House of Representatives during February by a vote of 403 to 13, and which would have passed the Senate but for the six obstructionists, provision had already been made for a national loan of $100,000,000; to be issued not below par at an interest rate of 3 per cent, but to be convertible, like the British war loans, into any future United States loans up to December 31, 1918, which should be placed at a higher rate.

The amount to be borrowed would undoubtedly be made larger in case of actual hostilities; the common estimate has been $500,000,000. But that such a loan would be readily taken by American investors, in the present prosperous condition of our investment markets, has at no time been doubted. Our people's subscription

to $1,900,000,000 foreign loans during 1915 and 1916, and the fact that the American markets are now taking $1,250,000,000 loan of England and another $100,000,000 loan of France, are evidence of the market's capacity.

It is true, a 3 per cent rate would be lower by 2 to 3½ per cent than the rate paid on these foreign loans; but the present price of outstanding United States Government bonds on the market, and the fact that even New York City's 4 per cents have sold this month at par, indicate the higher valuation placed by investors on high grade home Government securities. The $200,000,000 war loan of 1898, also issued at par on a 3 per cent basis, elicited 320,000 separate subscriptions. It was all taken by the smaller applicants and was seven times oversubscribed. As for the national revenue, that also was largely increased by the last Congress for defense purposes. There are easy means of increasing it much further for any immediate needs of war time.

The larger question remains, What would be the effect on the American financial situation generally in the event of war with Germany? It was inevitable that the general public should have regarded this question apprehensively, in view of what they remembered to have happened in European finance when war broke out in 1914. Those results, which marked the utter demoralization of the financial system, were brought about by three main factors which then arose in the European situation; all of them greatly emphasized by the fact that Europe was taken completely by surprize.

The first cause lay in the enormous amounts of securities of every European country which were held by enemy communities, and which were being sold at once and at any sacrifice on the stock markets of those other countries. To avert the resultant disastrous collapse of values and credit, the stock exchanges, originally of the belligerent countries and then of the entire world, had to shut down for months. The second cause was the imminence of insolvency for great international banking houses because of the enormous obligations due them from enemy markets; payment of such indebtedness being cut off by war, yet the funds involved being needed at once to meet maturing home obligations. The result of this was Europe's moratorium on debts. The third influence was the run on Europe's banks and the hoarding of cash by the frightened public, as a result of which enormous issues of new paper currency—much of it on a makeshift basis, and some of it a matter of pure inflation—became a problem of the most serious sort in European finance. The virtual depreciation of these currencies followed shortly.

Will all this happen in the United States? The reply made by experienced financiers and by the stock market itself (which advanced with great rapidity and confidence on the very day when news of Germany's overt act of war arrived) has been that it will not happen because, under the conditions now prevalent in American finance, it cannot. Germany has already resold to us practically all her holdings of American securities. From the outside world as a whole, our immense prosperity of wartime has enabled us to redeem probably $2,500,000,000 of the $3,500,000,000 American securities held abroad in 1914; the balance being now for the most part pledged as collateral against our loans to England and France. There will hardly be any serious foreign liquidation, and our stock exchanges will not close.

Our bankers and merchants have today, as they always have, large international commitments; especially in the nature of credit balances on foreign markets. But in our relations with Germany, these outstanding balances are so trifling as to be inconsiderable. Such engagements usually arise either from international trade in merchandise or from international loans. But as to the first, our trade with Germany, which amounted to $536,000,000 in 1913, footed up only $8,000,000 in 1916—a plain result of England's blockade of the German ports and the disappearance of Germany's foreign commerce. As for international loans, our advances of perhaps $1,800,000,000 to belligerent Europe include hardly more than $10,000,000 in the way of loans to Germany, and the bulk of that has lately been extended, apparently because Germany did not wish to pay it off.

As to hoarding of cash (especially gold) that usually happens when any nation goes to war. Runs on the banks very frequently accompany it. Even at the time of the Spanish War, our bankers hurriedly made arrangements to import $60,000,000 gold from Europe when the breach with Spain appeared inevitable; their purpose being to fortify American bank reserves against such coming strain. The result in 1898 was that no run occurred and no perceptible hoarding. In the present case, what has happened is that since 1915 the United States has imported $420,000,000 more gold than it exported and that in 1916 the inward balance was $530,000,000; the total gain thru importations, therefore, being nearly $1,000,000,000 in two years, whereas the largest net inward movement of any two previous consecutive years had been $297,000,000. Since 1917 began between $200,000,000 and $300,000,000 more has been imported.

New York bank reserves in March were higher by $164,000,000 than the percentage to deposits required by law; and if this surplus should be drawn down by any cause, it may be increased at once by the simple process of rediscounting individual bank loans at the new Federal Reserve Banks. Such a process, under the new banking law, not only relieves the individual banks of obligations to their customers, but the credit established at the Reserve Bank may be counted as part of the individual bank's reserve. Now in March the amount of such rediscounts at the Federal Reserve Bank in New York amounted to the very small sum of $25,000,000. There was an almost indefinite field of increase if it should be needed.

But beyond all this, even supposing such rush of money hoarders as should imperil the circulating money supply, the Federal Reserve Board lately stated in an official bulletin that the facilities of the system have been so little utilized, and the gold in the hands of the Reserve Banks is so enormous, that the supply of paper currency, issued on a sound and lawful gold basis, might be increased immediately by no less than $700,000,000. Since this new currency is known to be available for whatever need could arise, there would probably be no necessity for any such heavy issue. There is no reason whatever, therefore, to apprehend a collapse in the bank position or resort to the makeshift currencies of 1914.

These are the circumstances and conditions which explain the undoubted confidence and composure of the financial community and the financial markets, even in the face of impending war.

THE STORY OF THE WEEK

The Hindenburg Line

The second line of defense to which the Germans are withdrawing, the so-called "Hindenburg line," is supposed to run just west of the fortified cities of Cambrai, St. Quentin, La Fere and Laon. That this is where the Germans will make their next stand seems to be confirmed by the increased resistance encountered by the Allied troops as they approach this line. The French have followed the retreating Germans more closely than the British, altho on the French front the withdrawal was much more extensive than on the British. In fact the French are already pounding away at the fortifications of La Fere, twenty-five miles in advance of their former line, while the British have not yet made their way across the evacuated area. This may be due to more difficult ground or to greater resistance on the British front. Both armies are using cavalry for almost the only time in two years.

The evacuation was carried on so secretly and skilfully that the entire region, covering some thousand square miles, was practically denuded of troops before the Allies were fully aware of it. No detachments of importance have been cut off and few prisoners are reported. Some of the towns and entrenchments were occupied by small rear guards with machine guns who were instructed to hold out as long as possible. The strength of the fortifications abandoned amazed the British who entered them. These concrete shelters, labyrinths of ditches and forests of barbed wire would have cost the lives of tens or hundreds of thousands if they had had to be carried by storm. The territory so far relinquished by the Germans contains no fortresses or cities of importance and has been so thoroly devastated as to be of little value to anybody. The military significance of the maneuver we discuss editorially on another page of this issue.

A Land Laid Waste

The Germans, in announcing their evacuation of the Somme front and the Noyon angle, tried to forestall neutral criticism by sending to America by wireless the following defense in the name of "a higher German military authority":

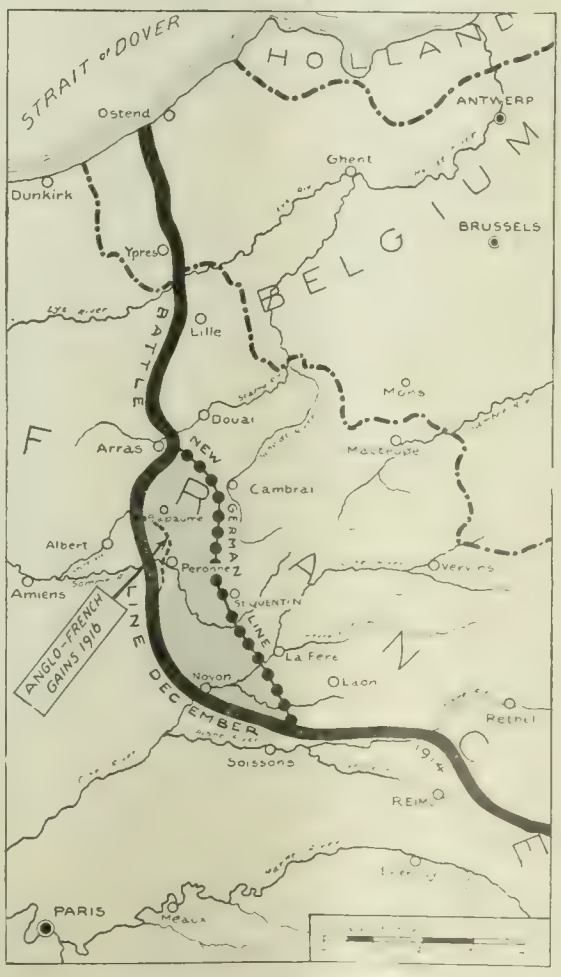
I regret exceedingly that this move is forcing a great destruction of a beautiful part of France. Yet the destruction is not so great as the devastation inflicted by the British and the French on the Somme battlefield, and when the Entente refused our peace proposal it took the responsibility of this destruction upon itself. It is a war measure. We are compelled to take it to carry out a military plan to meet the big offensive the Entente had planned. We have destroyed nothing except out of military necessity. We have saved everything we could. We did not wish to destroy homes or other structures which offered no military advantage to the enemy, but we had to make a battlefield out of the territory we were giving up, for in it fighting will now take place and we could leave nothing in the hands of the enemy.

So we were forced to destroy roads, railroads, wells, buildings of value for military purposes, depots, even whole cities. It has been hard, too, for the French population, but that is the fault of their Government. All the men of military age we took back with us. The rest we have turned over to their countrymen and they are now in French hands. I know we will be accused again of barbarism, but we are fighting for our existence.

THE GREAT WAR

March 19—Ribot forms new French Cabinet. French battleship "Danton" torpedoed in Mediterranean and 296 men lost.

March 20—Czar and Czarina arrested. Liberties of Finland restored.



March 21—Seven American lives lost in sinking of American tank steamer "Healdton." French and British occupy territory evacuated by Germans.

March 22—American Ambassador at Petrograd is first to congratulate new Russian Government. Austrians shell Gorizia.

March 23—Grand Duke Nicholas removed from command. French attack Bulgars north of Monastir, Serbia.

March 24—President orders American Relief Commissioners to leave Belgium. British take Roisel.

March 25—Germans gain on Rumanian front. French take outer forts of La Fere.

THE GERMAN RETREAT

The greatest change that has been made in France since the war began is shown on this map. The Germans have evacuated the angle nearest Paris and retired to a new and straighter line some twenty miles to the rear

Such an apology, however, will do little to mitigate the indignation excited by the descriptions of the harrowing scenes witnessed by the correspondents who entered the devastated territory for, in addition to the destruction necessary to impede military operations, there were evidences on all sides of malicious mischief and wanton cruelty. Towns and villages, farmhouses and chateaux, were pillaged and burned. Furniture was broken, mirrors and pictures shattered, and crockery smashed. Carts and farming implements were cut up. The large trees which line the roads were sawn thru and the fruit trees were cut down. Some of the wells are reported to have been poisoned with arsenic; others were filled up with filth. Bridges were, of course, destroyed and at the cross-roads craters were formed by the explosion of buried mines. In most of the villages enough of the American bread was left to keep the inhabitants alive for five days, but in many cases they were found quite destitute. Besides taking away all the men of military age, the Germans also carried off many of the young women, presumably to work in the munition factories of Maubeuge. The town of Noyon was evacuated too hastily to have been completely destroyed.

Sea War

For the week ending March 18 the British Admiralty reports the loss of sixteen British ships of over 1600 tons, eight smaller ships and twenty-one fishing vessels. This is somewhat higher than either of the two previous March reports.

Besides this an unknown number of French and neutral ships fell victims to the U-boats. Among them was the Standard Oil steamer "Healdton," which was torpedoed without warning off the coast of Holland at 8:15 on the evening of March 21. The "Healdton" sailed from Chester, Pa., with a cargo of refined petroleum for Rotterdam and was within the so-called safety zone when attacked. The torpedo struck the illuminated sign marking the name and nationality of the ship. Thirteen out of the forty-one composing her officers and crew were Americans and of these seven were drowned or killed by the explosion. Twenty lives were lost altogther.

The German sea-raider "Möwe" returned to a home port reporting the capture of twenty-two steamers and five sailing ships, chiefly British. Their aggregate tonnage is 123,100. This beats the record of the "Möwe's" cruise of last March, when she took fifteen vessels. The "Möwe" brought in 593 prisoners. Her other captives had been sent in by the Japanese steamer "Hudson Maru" to Pernambuco, Brazil, and in the Brtish steamer, "Yarrowdale," to Germany.

A DUEL BETWEEN A U-BOAT AND AN ARMED MERCHANTMAN

This sketch from the *London Sphere* shows how a rapid-fire gun on the stern of a steamer will compel the submarine to submerge, leaving only the top of its periscope out of water. If this is hit the submarine is blinded. The speed of the submerged submarine is reduced by half and it cannot use its guns. The torpedoes can be discharged while the submarine is under water, but only a few torpedoes are carried and they are not so accurate as shell fire

The New Regime in Russia

The provisional government established by the Duma seems to be in full control and to be carrying out its very radical program with little opposition. It has received the support of the army and navy with the possible exception of some of the troops in the Riga section. Three reactionary premiers, Stürmer, Goremykin and Golitzin, are safely imprisoned in the fortress of St. Peter and St. Paul. With them are former Minister of War Sukhomlinov and Minister of the Interior Protopopov, whose tyranny and treachery precipitated the revolution.

The disorders in Petrograd were more bloody than was at first reported. Three thousand persons are said to have been killed and four thousand wounded. In Moscow and other cities of the empire the transfer of authority was effected with little friction.

Elections for a constituent assembly will soon be held to determine the form of government. In these elections women will vote as well as men. The municipal council of Petrograd has unanimously agreed to appoint a certain proportion of women on several of its committees.

The restrictions on the educational rights of Jews have been removed and they are now allowed to enter any school or university in any numbers. The political censorship has been abolished and the newspapers are permitted to discuss all questions freely except military affairs. A committee of arts and letters has been formed with Maxim Gorky, the Socialist author at its head, to protect the historic buildings and works of art.

Since the Orthodox Church is a department of the Russian Government it also has undergone a revolution. The reactionary bishops, Pitirim of Petrograd and Makary of Moscow, have been removed and more liberal priests put in their place. The prayers for the Emperor and imperial family have been dropt from the service and the words "holy Russia" substituted. The ministers of the new government are addrest as "Mr." instead of "Your Excellency" and officers in the army are forbidden to use the familiar "thou" in speaking to a soldier since this implies that he is a servant or inferior.

The United States was the first to extend, thru Ambassador Francis, its recognition and congratulations to the new Government. There is now no obstacle to the renewal of treaty relations with Russia.

It is feared that the Germans may take advantage of present disorganization to mass troops on the Riga front and make a drive at Petrograd.

The Prisoner of the Palace

The Russian revolution has already swept beyond the limits it had set for itself. After the abdication of Nicholas II at Pskov it was proposed to allow him to retire to his estates at Livadia in the Crimea. But it was soon perceived that this involved a double danger. On the one hand attempts might be made to assassinate the ex-Czar and on the other he might serve as a rallying point for a counter-revolution. So he was formally arrested at Mohilev by four members of the Duma and taken to Tsarskoye-selo, the summer residence of the Russian emperor fifteen miles south of Petrograd. Here he is confined in the Alevandrovsky Palace, over which now waves the red flag of revolution instead of the imperial standard. The palace stands in spacious grounds enclosed by a spiked iron fence around which the soldiers of the Duma are stationed. The imperial prisoners are not allowed to use the telephone or to meet outsiders.

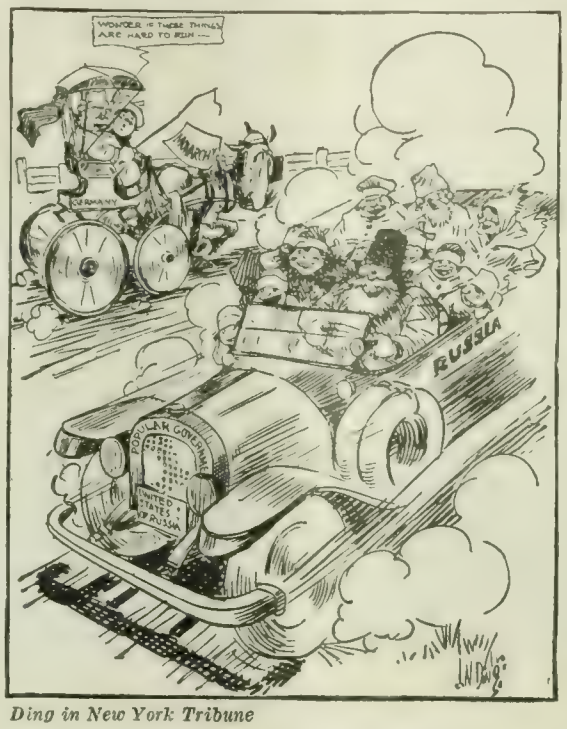
Within the palace is also the ex-Empress Alexandra with her five children, all of whom are down with the measles. There are two doctors and several ladies-in-waiting, among them Mlle. Viruvova, who was responsible for introducing Rasputin to the Empress. This coarse and ignorant monk acquired such an influence over the Empress and thru her over the Emperor that he was murdered in Petrograd at the beginning of the year. When his body was discovered in the ice of the Neva it was placed in a silver coffin and taken in the imperial car by Minister of the Interior Protopopov to Tsarskoye-selo for burial. The Emperor himself was one of the pall bearers and the Empress in deep mourning followed the coffin. Such honors paid to an immoral and traitorous priest shocked enlightened Russia. When the revolutionists took possession of Tsarskoye-selo last week they had the body of Rasputin dug up and hauled away.

The Grand Duke Nicholas will not, as was first announced, be recalled from the Caucasus and again put in charge of the Russian armies. Altho he has pledged his support to the Duma it is feared that placing any member of the Romanov family in power would either endanger the new Government or cause the radicals to question its sincerity.

A Minister of Justice

The young Socialist Deputy Kerensky of Saratov, who has been made Minister of Justice, is exerting a powerful influence in two ways; on the one hand in steering the new Government in a democratic direction and on the other in moderating the violence of his followers, many of whom are demanding revenge on the old régime, He appeared on the platform of a mass meeting of socialists and workingmen at the City Hall of Petrograd and having secured attention by waving a red handkerchief he called upon them to repudiate one of their banners which read, "Death to Our Enemies, the Old Ministers." The Minister then said:

> Russian freedom is based on justice to every man. Those Ministers, many of whom are sitting in the fortress of St. Peter and St. Paul tonight, are entitled to justice, not



vengeance. As far as I can prevent it no wrong shall be done to them, but they shall have fair treatment and full justice.

At the conclusion of his speech the mass meeting gave him a vote of confidence by acclamation and quietly dispersed. Thru his influence the Council of Workmen and Soldiers voted by 1170 to 30 to return to work and many of the factories have resumed operations. The Government has promised to pay the strikers their usual wages for the week of the revolution, on the ground that their activity in overthrowing the autocracy was a service to the state.

Minister Kerensky is taking a manifest delight in releasing the political prisoners confined in Russian dungeons or banished to Siberia. The former president of the Finnish Diet has been recalled from Tobolsk, whither he was sent because he tried to uphold the ancient rights of Finland against the Czar. The Russian governor of Finland, General Seyn, has been arrested and sent to a Petrograd prison. The new Government has issued a manifesto restoring the Finnish constitution and annuling all the edicts of the past eighteen years that were in contradiction with it. A Finnish Diet has been called to convene on April 4 to reestablish an autonomous government.

Minister of Justice Kerensky also favors autonomy for Armenia and independence for Poland. The Constantinople question he would settle by internationalizing the Straits. In regard to the effort of the British Government to prevent a revolution and save the Romanov dynasty Minister Kerensky said to a correspondent of the London *Chronicle*:

I must tell you frankly that we Russian democrats have been latterly rather worried about England, because of the close relations between your Government and the corrupt Government we had. But now, thank God, that is over and our deep, strong feeling for England as the champion of liberty will come to its own again. Now at last the war will be really a war of liberation and the democracies of England and Russia will be linked by close bonds of sympathy and common effort.

Ding in New York Tribune

ANOTHER SPRING DRIVE

Among the exiles who have been brought back in triumph to the capital is Catherine Breshkovskaya, known thruout the world as "the grandmother of the revolution." She is now 73 years old and has spent thirty years of her life in prison or in exile. She twice escaped but was recaptured. In 1904 she visited the United States, where she collected over $10,000 from the friends of Russian freedom. On her arrest when she returned to Russia many prominent Americans petitioned for her release.

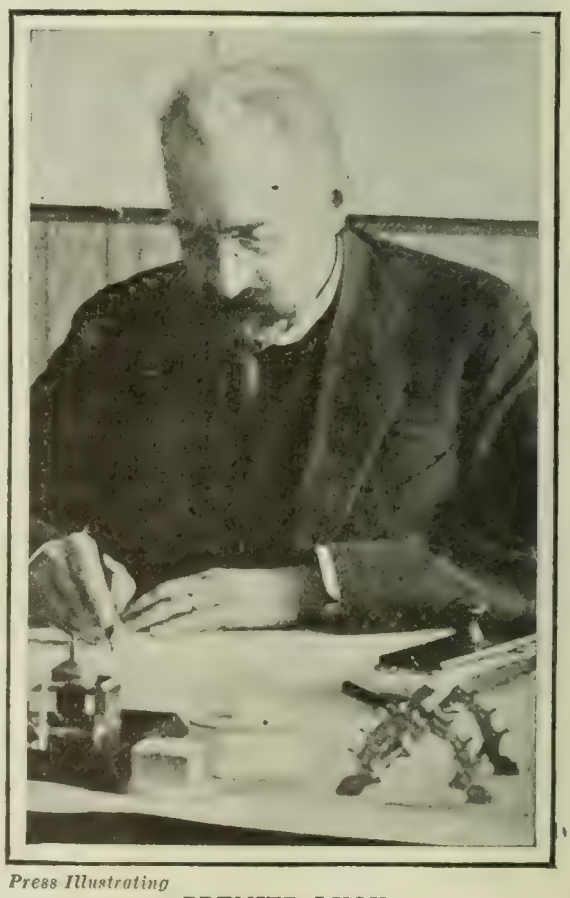
Among the visitors of the Minister of Justice was an army officer who tried to shoot him, but being seized turned his revolver on himself and blew out his brains.

Foreign Loans Commended

The Federal Reserve Board has issued a statement intended to restore public confidence in foreign loans as sound and proper investments. When J. P. Morgan & Co. attempted last November to distribute among commercial banks an indefinite supply of British treasury bills the Federal Reserve Board advised the banks not to invest in foreign treasury bills of this character and urged private investors to be cautious in putting their money into unsecured war loans of foreign nations. The Board's recent statement explains that there was no intention of singling out any particular investments as unsafe and that its advice referred simply to the general banking principle that an undue proportion of the resources of American banks should not be tied up in foreign loans. "So far," says the Board, "from objecting to the placing of foreign loans in the American market, it regards them as a very important, natural and proper means of settling the balances created in our favor by our large export trade. There are times when such loans should be encouraged as an essential means of maintaining and protecting our foreign trade." There has recently been a decline in orders for munitions of war which seems partly due to the lack of credit in this country for the purchase of such supplies.

Congress to Meet Early

The most striking evidence of the gravity of the international crisis is the proclamation of President Wilson summoning Congress to meet in special session on the second of April. The significance of this call lies in the fact that the date of the opening of Congress had recently been fixed for April 16. The sudden conclusion of the President that he could not wait an unnecessary fortnight shows that in his opinion there has been a complete alteration in the situation confronting the United States as a result of recent German submarine activity. The President keeps his own counsel and refers in general terms to "a communication by the Executive on grave questions of national policy" as the reason for an earlier summoning of Congress, but it seems universally admitted that the President's communication to Congress will be either a request that Congress declare war on Germany or a statement that Germany has already committed acts of war against the United States and that war now exists.



The new Congress will undoubtedly recognize the existence of a state of war if President Wilson is sufficiently insistent, and under the new Senate rules obstructive tactics could not delay for many days any legislation demanded by the majority. But it is still

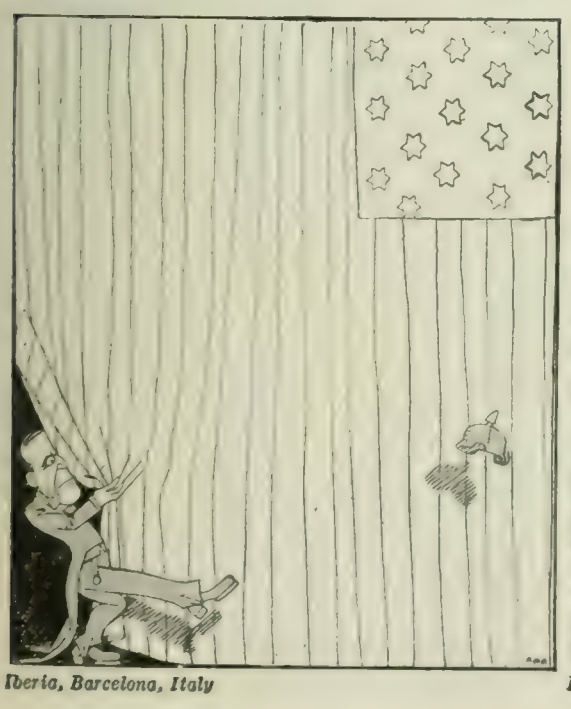
an open question what means of warfare Congress will specifically authorize. There is, for example, the complex question of army organization. The army appropriation measure, which failed to secure a final vote in the sixty-fourth Congress because of the filibuster against the armed neutrality bill, will probably be reintroduced in a much more drastic form. There will be many advocates of a system of universal military training in the new Congress, and there is a possibility—tho hardly a probability—that the international crisis may enable the friends of compulsory service to carry their point. A rival plan which finds many supporters is the creation of an army of a million men, including the regular army, the national guard, and half a million volunteers from civil life. Many Congressmen will, of course, oppose any important army increase and contend that the United States should confine its participation in the Great War to subsides to the Allies, and the destruction of German submarines. Whichever of these plans is adopted Congress will be faced with the necessity of providing unprecedented sums for equipment and munitions.

Underwood & Underwood

THE FIRST LADY IN THE NAVY

An eighteen year old Philadelphia girl, Miss Loretta Walsh, has been accepted by the U. S. Navy—but it's not quite so picturesque as it sounds; she will be clerical assistant to Commander Payne, executive officer of the Philadelphia Naval Home

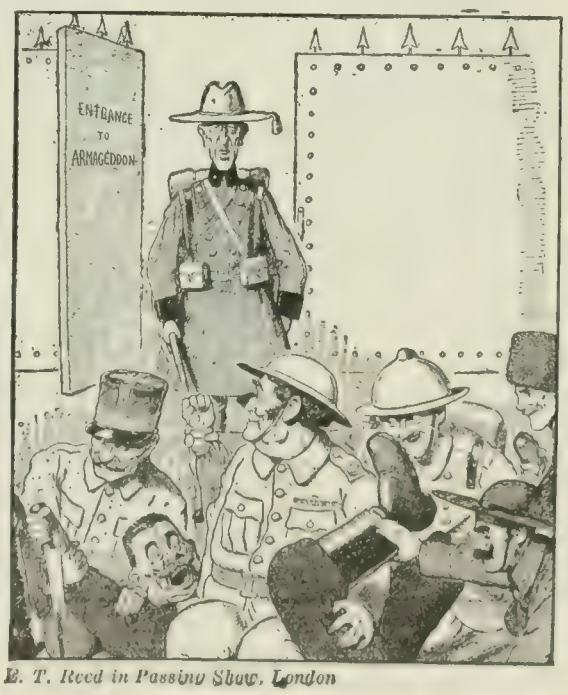


Aspects of Preparedness

Altho the principal measures of preparation for war must await the authorization of Congress, the army and navy authorities have undertaken such parts of the preparedness program as are possible with the funds now in hand. President Wilson has directed Secretary of the Navy Daniels to use immediately the emergency appropriation granted by the sixty-fourth Congress for hastening the construction of ships of war. A large fleet of "submarine chasers," or small craft designed to hunt down and destroy submarines, will be built within three or four months. Aeroplane construction is also being speeded up and many private individuals have offered both their machines and their services as aviators to the government. Orders have been issued to recruit the navy at once to its full legal strength. In some cases the administration has even anticipated the probable action of Congress. Without waiting for appropriations Secretary of War Baker has made contracts with manufacturers for military supplies. Of course the manufacturers are turning out these supplies at their own risk in assuming that the necessary funds will be voted, but the risk is not regarded as a serious one. The government is said to have an ample supply of rifles, but it is exerting every effort to secure an equally adequate supply of ordnance, uniforms and personal equipment. The branch of the war department directed by the Quartermaster General expects to have ready all necessary supplies for an army of half a million men for war service at home or abroad as soon as such an army is wanted.

Secretary Daniels has announced a series of rules for the guidance of newspaper correspondents. These prohibit the printing of rumors about the military and naval policies of the Government, tho not restricting comment on such policies if they are officially announced; prohibit the publication of details about the movements of the army or navy, the departure of merchant vessels, the transportation of military supplies or "activities in or about arsenals, fortifications, army posts, naval magazines, navy yards, naval bases and radio stations"; and prohibit the publication of maps, diagrams and photographs likely to be of value to the enemy. These rules are not as yet obligatory but it will, no doubt, be one of the tasks of Congress to embody them into law and attach penalties to their violation.

The war risk insurance bureau of the Government has determined to broaden the scope of its operations and insure all forms of contraband destined for European ports with the exception of arms and ammunition. Hitherto only non-contraband has been insured by the Government and the change in policy is a significant step toward the abandonment of neutrality.



In some cases there has been actual mobilization. On Sunday, March 25, President Wilson called into the Federal service fourteen national guard regiments from eastern states. Several of these states had already put their militia on a war footing. The purpose of the mobilization is to protect munition plants, bridges, railroads and other endangered property from any violence that may arise in connection with the present international crisis.

Iberia, Barcelona, Italy

Ruy Blas, Paris

E. T. Reed in Passing Show, London

THE ALLIES' WELCOME

Three recent cartoons from Italy, France and England: "Better Late Than Never" is the Italian viewpoint. Paris sees us promising the Kaiser to send "a new kind of message from a new kind of machine." "The Eleventh Hour Recruit" comments London in answering President Wilson's question, "Say, boys, here I am: Now what can I do to help?" with the suggestion "Well, Woodrow, we are holding the gentleman, at all points, but you can help me sit on his bread-basket."

The government announced also the organization of two new departments of the regular army; the northeastern, comprizing the New England states, and the southeastern, including the southern states east of the Mississippi.

Mobilizing Public Sentiment

The Federal Government continues to receive assurances of support from state legislatures, governors and individual members of Congress with such hearty unanimity as to prove that the nation is today at least as united as it has been upon any previous occasion of war or rumor of war. Even such strong pacifists as Governor Capper of Kansas have urged unhesitating support of the President and exprest the opinion that submission to Germany would be a worse evil than war. It is more surprizing, perhaps, to read a manifesto signed by such Socialist leaders as Charles Edward Russell, Charlotte Perkins Gilman, William J. Ghent, Upton Sinclair, J. G. Phelps Stokes, and William English Walling, not only supporting a war policy but recommending universal military training as the only safe and democratic basis for national defense. The loyalist wing of the Socialist party, represented by the signers of this manifesto, is pacifist rather than militarist in tendency, but does not believe that nonresistance is the way to establish internationalism.

Advocates and opponents of a war policy have been holding many mass meetings and public demonstrations, especially in the great cities. At a rally in Madison Square Garden, New York City, resolutions were adopted urging an immediate declaration of war and the enactment of universal military service. Elihu Root, the principal speaker of the meeting, declared that the United States was protected from a German invasion by the Allied fleet, and Mayor Mitchell urged that an American army be sent to France.

ENLISTING YOUNG AMERICA—

Brass buttons play a very small part in modern preparedness; we need soldiers, but we need machinists, too. Stevens Institute of Technology is drilling this squad in readiness for war

German Plot Rumors

The Federal authorities and their agents have been busy for the past month in tracing the plots actual or rumored of German sympathizers in the United States. The most useful evidence in the possession of the Government is the collection of documents seized in the raid on Wolf von Igel's office a year ago, implicating the two dismissed attachés of the German embassy, Boy-Ed and von Papen, the Hindu conspirators Chakraberty and Sekunna, and many other persons.

Even more serious than the attempts to use the territory of the United States as a basis for conspirators against the Allies are the many cases where attempts have been made to cripple the military effectiveness of our own Government. In Hoboken, New Jersey, Fritz Kolb and Hans Schwartz were arrested for storing powerful explosives with apparent intention of wrecking munitions plants. In Galveston, Texas, bombs were discovered on board a grain ship and in a grain elevator. Two German agents, Albert Sander

TWO PHASES OF WAR SERVICE

Here is the more picturesque end of war-making: setting-up drill on board the U. S. battleship "Kearsarge"

and Charles Wunnenberg, on trial in New York City, confest that they had been guilty of espionage. Perhaps the most remarkable plot was hatched in Philadelphia, where Adalbert Fischer, president of a machine manufacturing company which has executed contracts for the American navy, was arrested for conspiring with the captains of interned German commerce raiders in the port to obtain and transmit to Germany secret information about the American navy.

The Railroads and the Court

The decision of the Supreme Court confirming the constitutionality of the Adamson eight-hour law for railroad operatives was the judgment of a bare majority of the Court. Justices McKenna Holmes, Brandeis and Clarke agreed with Chief Justice White that the law was in all respects within the limits set by the constitution to the powers of Congress. Brandeis and Clarke are appointees of President Wilson; Justice Clarke taking the place of Ex-Justice Hughes who left the bench to run for President on the Republican ticket and who based his campaign largely upon opposition to the Adamson law. Justices Pitney and Van Devanter concurred in a minority opinion emphasizing the contention that regulation of wages was the chief intent of the statute and that this power was not involved in the right to regulate interstate commerce. Justice McReynolds, appointed to the bench by President Wilson, took the same ground in a separate decision. Justice Day did not deny the right of Congress to fix wages on common carriers, but insisted that in this instance Congress had acted in an arbitrary and unreasonable manner and had virtually taken property from the railroad companies without due process of law.

Many labor leaders have hinted that they would have been better pleased if the Supreme Court had not decided in favor of the law. One reason for this apparent paradox is that the railroad brotherhoods had already won the eight-hour day for which they contended before the decision was made, and labor unions as a rule prefer to gain their objects by direct negotiation with employers rather than invite the intereference of the legislator. Another reason is that the majority decision of the Supreme Court brought out the fact that while the public interest justified the Adamson law it would also justify limitations on the right to strike.

The railroad companies have accepted the situation and have reached a full agreement with the brotherhoods as to the details of carrying the Adamson law into effect. In order to meet the increased wages budget the chief railroads of the northeastern states have petitioned the Interstate Commerce Commission to permit a general increase in freight rates. The desired increase will, if granted, be about fifteen per cent above the present rates. Railroads in other parts of the country are expected to present similar demands.

THE AUTHOR OF "CROWDS"

THE PRESIDENT, THE PEOPLE AND THE FATE OF THE WORLD

BY GERALD STANLEY LEE

IF the average citizen of America were to act just as he feels underneath, in the present crisis from day to day in America, we would begin to see tomorrow morning in the Lost and Found columns of our newspapers from Maine to California advertisements like this:

LOST! Somewhere near the great Four Corners of the World, on or about Sunday, August 2, 1914, my Native Country—America. Any person who knows where America is, or who has seen America or anything that looks like America anywhere since above date, will please report to Woodrow Wilson, The White House, Washington, D. C., or to William Hohenzollern, Potsdam, Germany, at earliest possible moment.—John Doe.

We are all hoping that in the crisis like the present one, so great as almost to drive a man into greatness, our President is going to prove to be a great President. But he cannot be a great President all alone, and at present our President is perhaps the loneliest President America ever had. When our President looks at our people and hears what they say and watches what they do, he could not but be lonely with the people. The people are lonely with one another. Anybody can go out into the street anywhere in America tonight and be lonely about this war. Any man can take any crowded street and see for himself. He can pass miles of men who in their hearts are calling him a coward because he has one idea of how to defend America and they have another. If one were to take any ten blocks of Broadway and let all the people walking along stop just where they are and begin talking with the men right next to them about what we ought to do in this war, they will begin thinking they are not Americans, wanting to throw each other off over the edge of the country—partitioning each other off into mollycoddles, traitors, pussy-foots, safety-firsts, bullies, braggarts and pacifists—and while they might keep up appearances and try to be polite on the surface with strangers, that whole section of Broadway would be mad all thru for ten blocks. One would have ten blocks of feeling superior and despising people—every man looking askance at every other man for having a different idea of America from his idea of America.

Mount Tom is the highest mountain in America. The geographies do not say so, but we would ask who has a wider vision than Gerald Stanley Lee? From his eyrie on Mount Tom he sees not only crowds but children, not only millionaires but machines, and he loves all that he sees, even the machines and the millionaires. Half the population of the United States have figured as heroes in his writings; the other half as heroines. But tho Mount Tom seems taller than any other peak-pulpit in the land, Gerald Stanley Lee, strange to say, never looks down on the people but rather looks up to them. In this he differs from some philosophers who occupy less lofty eminences.—THE EDITOR

If the President were to steal along thru the ten blocks and overhear the people, he would feel lonely with them. The only way not to feel lonely on ten blocks of Broadway just now would be to put up signs and labels over doors of theaters and announce speakers and check people off as they go along, into separate audiences. The Peace Society would sort out a thousand people on Broadway and coop them up in a hall to agree with each other, and the Security League could sort out another thousand and coop them up in a hall to agree with each other, but if there ever were any way of holding down a whole hallful of people and making them listen hard to another whole hallful of people, all that would be left after a minute of listening would be each audience shouting pooh! pooh! to the other audience and saying, "You are not America. We only are America!"

This makes the President lonely. We elected him a few months ago to be President of all of us. It is slow work being President when there are ten groups of people who will not listen

to each other and when everything a man says merely acts as a pile driver on his own opinion.

If America cannot act like a great country or let its President act like a great President because we are a people that will not listen to each other, it is obvious that the first thing for our nation to do is to make some determined dogged listening arrangements for our people. We will see to it that our agreements and disagreements shall be advertised, got together, brought face to face with each other and have it out.

I PROPOSE that we proceed to call in the course of the next few weeks a kind of National Town Meeting—that we arrange to get together a conference which shall be made up of delegates and representatives of all the leading societies and organizations in the nation interested in preparedness and national defense.

Action taken to this end, while it should meet with the approval of the President, will probably be the most effective and spontaneous in proportion as it is non-political and is initiated and used, not as a national authority but as a national self-revelation, of which Congress and the President can avail themselves in deciding what seems best for the Government to do. The invitation to delegates could best be sent out to each society perhaps by the League to Enforce Peace—the society which, owing to the various possible meanings of the word "enforce," is the largest, most catholic and inclusive of all societies. The League to Enforce Peace would seem to be the most natural temporary chairman for our National Town Meeting. When the conference assembles and the public vision and will of the nation has informally and more or less spontaneously called itself together, we will then proceed in America at least in the sight of all to take for this country an inventory of what people believe.

A nation, after all, is a kind of big village of belief. Our national faith divides off into typical representative national characters, according to temperament, location, circumstance and education, and all these characters need and modify each other. A National Town Meeting could be called by any of several names. It could be organized as a National Inventory Society or as a kind of impromptu pro tem American Focus Club or as an American Clearing House of Belief or as a National Pool of Ideas, or we could call it our National Attention Engineering Club or our National Congress of Attention Engineers. Perhaps the name that would express it best would be the National Focus Club. (A nation cannot be blamed for having a vague, blank look before it is focused any more than an opera glass can.)

When our National Focus Club is called together it will proceed to go over points now at issue among our people item by item, and put them where they belong.

The points that people agree on will be put in one row, and we will ask the Government to submit them to immediate national action. The points we disagree on we will put in another row and we will ask the Government to submit them at once to national experimentation. Where we agree we will act. Where we disagree we will agree to experiment—we will set up laboratories of our ideas, on a small scale, and will try out samples.

Instead of hitting out right and left at everybody we see, having an idea or doing anything and stopping them because we do not agree with them—which is what we are all doing now—we will instal matter of fact experiments for agreeing with them or making them agree with us. We will set up working models—what might be called conclusion engines or agreeing motors.

Then we will act on the facts.

If a democracy will use the scientific method it can be as simple and direct, clear-cut and efficient as a monarchy.

I WOULD like to see my country at the present moment stop hemming and hawing and looking every which way before the fire—leap to the rescue of Europe at once and make some great national drive for the future of the world. I would like to think it is natural to my country at heart to do a thing in the way a man I saw in the Pennsylvania Station the other day would do it.

I saw him on the moving stairway running up the running steps two steps at a time. There was something about it—about his running his own running on top of the running the steps were doing for him besides—which made me feel about him the way I would like to feel about my country. I will never see him again, I suppose, but as he flashed up past me and as I saw him flying out thru that hole of light that was Thirty-fourth street, I wanted to follow him and know him. He was not content as other people were with sogging back on a single step and letting himself be hauled up into New York on a kind of crowd-windlass—hauled up like so much merchandise or like meat taken off of himself or like flour on a belt. I do not deny that there are people who naturally ride in everything. I am not unaware that there are people who, if all our sidewalks everywhere were moving sidewalks—would bring out their ottomans and their crickets with them when they came out of the house. They would walk thru the streets sitting down. One has to allow for people in every nation who are born passengers on events and who instead of adding to events or picking out a few extra ones and making them happen on top of the regular machine ones like my friend in the Pennsylvania Station, would expect to be carried—to be rolled on castors into History.

But I will not admit that these people are typical Americans in a great crisis of the world.

And yet for the moment why do they seem to be?

Why is it that I am obliged to watch my country this day as I write, being carried into a war on a technicality or being carried out of war on a law or rule or precedent or a piece of moral machinery instead of being full of some eager new constructive desire of her own which makes her run with vision to the rescue of the future of the world?

There is one main reason for it, I believe, and I think the reason can be stated and removed.

We have not thought out what a democracy is like and what is the natural and the powerful way for a democracy to act if it is going to be as efficient as an empire. We see empires all about us acting in a splendid, finished, imperious, overriding, one-sided way, and because we obviously cannot act offhand—and all in a minute—as they do, we slump back into the conclusion that all we can do, or all that any democracy can do in a sudden crisis with a hundred million people to run around and ask—is hemming and hawing and yearning and practically not acting at all.

The reason we are hemming and hawing is because we are trying to act like an empire and cannot. America is slow in expressing itself because we are all supposing that one-half of us has got to be prussianized by the other half before the nation can speak up.

America cannot quite bring itself to say to the other nations of the world, "Fifty-one millions of us in America have shoved aside forty-nine millions of us who do not want to do it and who have to pay for nearly half of it, and we are raising a great army and navy to keep your respect with when you agree with us, and to make you afraid of us when you do not." Naturally America has too much a sense of humor to say a thing like this. So she keeps still and is doing nothing.

Keeping still and doing nothing misrepresents us all. Every man of us feels abused and ashamed with regard to his native country.

THE only way America can express herself promptly and reveal her whole heart to the world is for America to make provision at once for expressing all of us instead of merely a majority of us.

It is the failure to provide for the expression of minorities which makes democracy inefficient. It makes everything a democracy does or says hang every few minutes upon what a majority may decide to do. It becomes more and more difficult for each man to make up his mind, and if he has one, he uses it mainly for guessing on other people's. The majority's scientific way of expressing itself is in action, a minority's scientific way of expressing itself in a live and shrewd democracy is experiment. This right of a minority to express its idea in experiment or in some miniature form, so that the majority can look the minority idea over and see if it does not want it more than it thinks it does, has not been recognized and allowed for by America yet. All a very large minority is allowed by America to do is to express faintly at

the polls a more or less banal, helpless wish that it was a majority. In a live, flexible and vigorous democracy while we ask a majority to express what it means in action, we will ask a minority to express what it means by giving a small working model of it.

The only way America allows now for a stupendous vital process in a democracy like the developing of a minority into a majority is to let a minority talk. A little more laboratory and a little less talk would be more practical in a democracy where vast numbers of more or less uneducated minds are asked to decide things—where large numbers of people can only understand ideas in the concrete.

It is on this principle that it has seemed to me our people, as a great people in a great crisis, trying to find out what they believe about self defense, would welcome and back up for the nation in its present crisis, the national experiment of getting all of its minorities together in a National Town Meeting, polling their convictions and programs, submitting their agreements to action and their disagreements to experiment, and confiding to the nation and to the President and to the world at last, what can be expected and what cannot be expected of the people. Such a National Town Meeting will do as it likes, but I believe it will be in the spirit of such a Town Meeting to recommend a National Defense Department in two sections—one a section in which the majority did as it liked and the other a section in which the minority shows what it would like to do—in which it can prove that it is right or wrong—dispose in behalf of the nation of the question of being wrong or being right quickly and conclusively, putting the nation in a position to act as a whole and at once and with clearheadedness and power to lay out its course plainly before itself and the world.

WHILE the majority of our people in America are hoping that our President is going to prove to be a great President, we cannot feel at heart that Armed Neutrality, a kind of slow, cold, grudging going into war on a technicality or because we are being inconvenienced ourselves, comes up to the standard the President set for himself in his Monroe Doctrine for the World speech.

But the President wants to feel backed up in his Monroe Doctrine for the World speech if he is to feel that the speech was America's speech.

The President's stand as taken in his speech in the Senate was largely called by the peoples of European nations noble and idealistic.

The immediate business that confronts the League to Enforce Peace and the American people is to find some way of proving that while the President's speech may seem idealistic to the nations of Europe, it seems to us the most realistic, the most up-to-date and matter of fact vision of the world as it is today which any great ruler has ever exprest, and it seems to us the only vision of our modern world which anybody can ever make work. All that we require to make it work is to get enough of us together and to look far enough ahead.

The moment we get together in America in a National Town Meeting and throw on the screen of this nation what we are going to do day after tomorrow, we will know what we mean by what we do today and do it as if it meant something.

Whether we go into war or stay out of it, we will decide among ourselves first what we mean by going in or staying out. We will be able to state to ourselves and give to the nations not only the motives and plans, but the directions and destinations of our action. We will not indulge in a puttering, hand to mouth accommodation train method or in wandering in way stations for our souls. We will be able to give to the nations a map, a schedule, a time table of the thru-train of our national vision and our national will. We will give in the eyes of the world the force of the next five hundred years to what we do today. Why should America make what it does today a little thing in the eyes of the nations—a feverish, weak, anxious clutch in behalf of the destiny of the world? Europe will bring history to bear. America will come with her prayers, her visions and faiths and the voices of her children.

What is there that America and The League to Enforce Peace can do and do now to put what President Wilson has said into dramatic form so that the brave, grim nations of Europe, hardened by self-sacrifice and cynical in sorrow and death, will not accuse the American President and the American people of being vaguely lazily optimistic; superficial and rainbow-minded?

Mount Tom, Massachusetts

THE LAW AND THE PROFITS

BY ELLIS O. JONES

"DID I understand you to say that it was a good thing for the children to be thus employed at hard day labor?" inquired the Man from Mars, as he was being shown thru the mill by the Pompous Proprietor.

"Why, yes," replied the Pompous Proprietor. "You don't suppose a man of my standing in the community would be a party to anything that was not unquestionably beneficial to the younger generation, do you?"

"I beg your pardon," said the Man from Mars sincerely. "There was no implication in my question. You must remember that I am merely a humble seeker after information. Of course, I must assume that you are practical. Otherwise, this mammoth business organization would be impossible."

"There you've hit it!" exclaimed the other with great enthusiasm. "Practical! The very word. Those who are not practical, the theorists and maudlin sentimentalists, claim that child labor is injurious, but we practical men know better."

The Man from Mars stopped and scrutinized a number of the little workers at close range. "In what way would you say briefly that this sort of thing benefited them the most?" he asked at length.

"Every way," declared the Pompous Proprietor. "It keeps them out of mischief. It increases the economic value of young manhood and young womanhood. It develops initiative. It keeps them from being mollycoddles and inefficients. It makes for morality, industry, self-restraint."

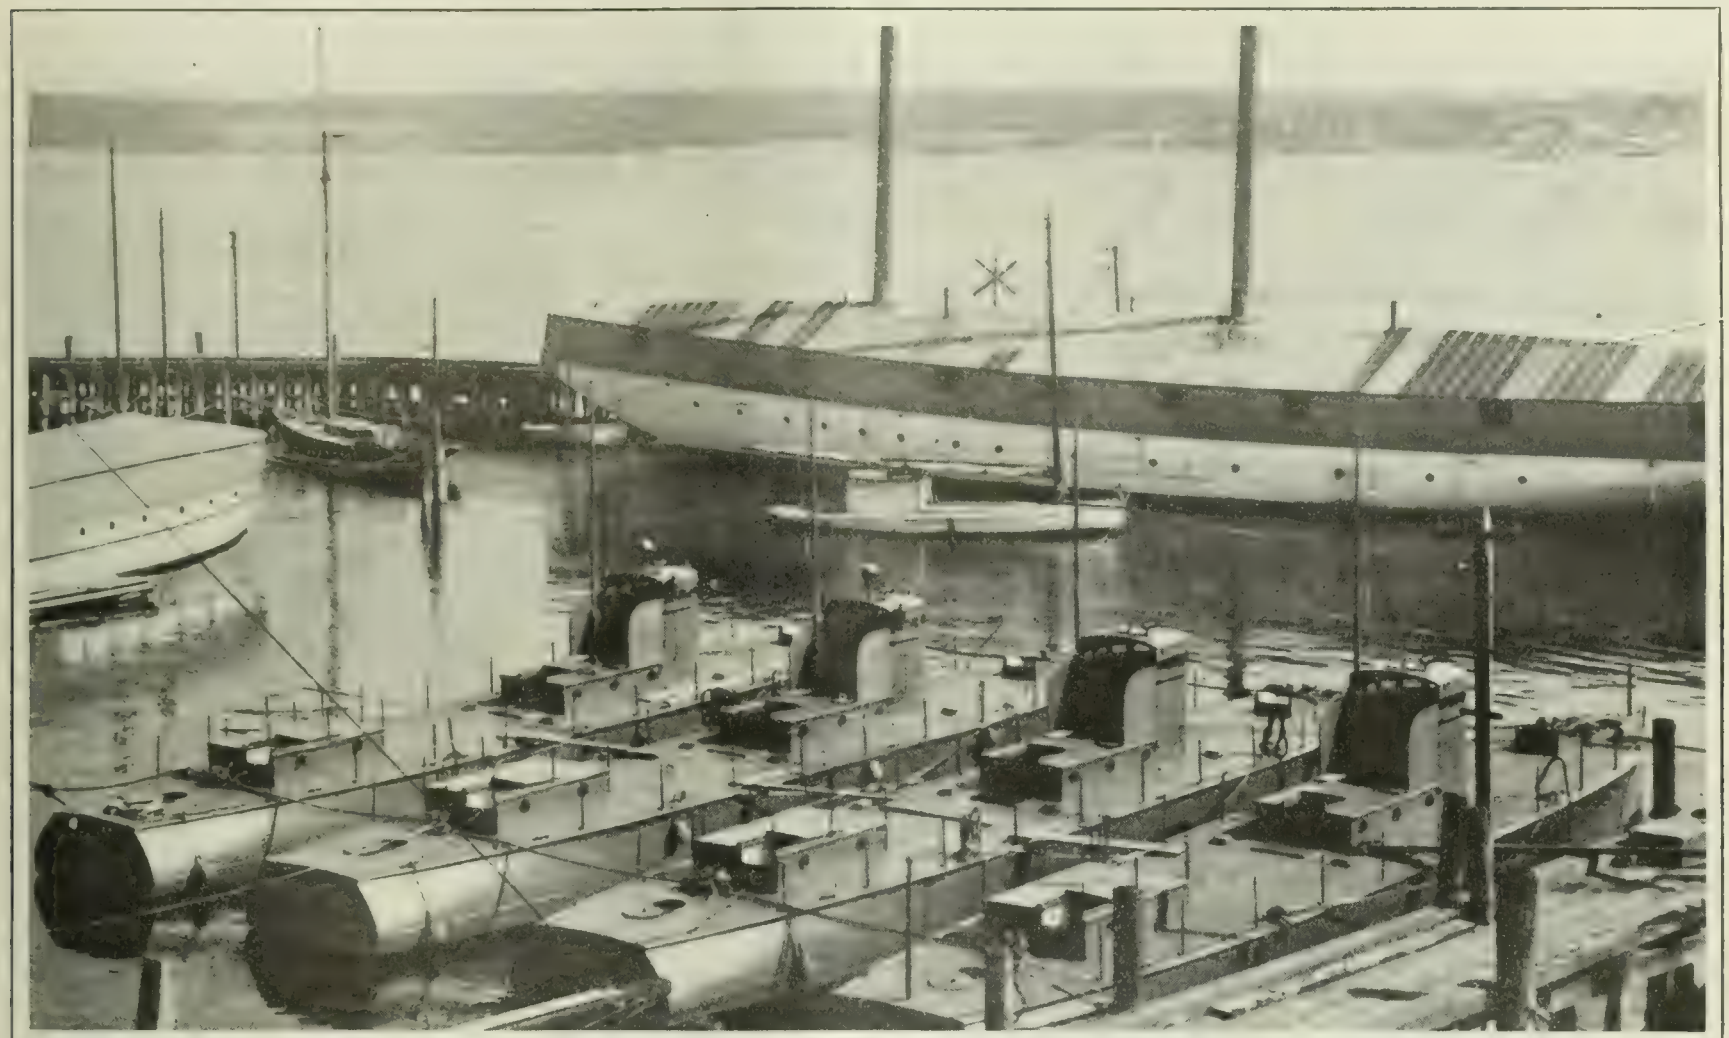
"Very interesting and enlightening, I'm sure," observed the Man from Mars thoughtfully. "It never would have occurred to me to look upon an institution such as this as being so ideally philanthropical. How very happy it must make you to be able to do such a work!"

"It would make me happy, very happy indeed, if the reformers and the legislators would only let me alone," replied the Pompous Proprietor a little sadly. "They are always wanting to regulate the labor of the children, claiming that my chief incentive is the profit I make out of it. That, of course, is absurd."

"It must be," rejoined the Man from Mars. "But what do the reformers want to do with the children?"

"They want to put them into school. Bah! What good could that do them?"

"Please don't ask me?" protested the Man from Mars. "Now as to your own children. You said you had several, did you not?"



"Oh, yes, indeed," replied the Pompous Proprietor.

"In what department of your factory do they work, may I ask?"

"Why—ah—as to that—of course, you understand that my—ah—my own children do not work here. That would be—ah—well, to tell the truth, it would be very selfish of me to put my own children in here, for, don't you see, that would simply mean taking the jobs away from poor children who needed the work. I am really sorry, however, that you can't meet my children. My girls are away at finishing school and my boys are at college. Of course, you understand it is very self-sacrificing for me to treat them in this way, but I must say that, considering the disadvantages I have given them, they compare very favorably, very favorably."

ZEMSTVO RUSSIA

BY SAMUEL N. HARPER

"WE may be forced to have a revolution in order to win the war." This statement, made to me by many Russians last summer, was often supplemented by the phrase, "We hope America will understand that any such revolution is a political revolution, and one which will not weaken Russia for the prosecution of the war." At a small gathering of radicals, which was called specifically to help me understand what was going on in Russia last summer, one man insisted that a revolution was absolutely necessary. The others unanimously answered him, "If you can guarantee to complete the revolution within a month, go ahead; but if it takes more than a month, and is accompanied by serious disorders, the army will deal with you according to your deserts." This was the situation the Russian patriots had to face. As at other crises in her history, Russia, that is the Russian people, was equal to the emergency.

The revolution was therefore first and foremost a war measure, and was justified as such. All reforms that will be introduced will also be proclaimed as war measures. Justice will be done to the Jews, as a war measure, to secure and maintain the unity of the country, which was threatened by the shortsighted—perhaps deliberately conceived—policy of the former rulers. It might be added that the real Russia, which has now come into its own, has never accepted without protest the policy of intolerance toward the non-Russian elements of the Empire.

Revolution was resorted to only after moral pressure had been used. The revolution aimed at and has secured responsible government. In July, 1915, after the disasters in Galicia, the public, thru the Duma, secured the removal of the ministers who, during the first year of the war, left the armies unsupplied, tho they had impeded any organization of the country to support the army. The Duma then demanded a government that would trust the people, who had shown beyond any question their loyal support of the war, a government which would, in turn, enjoy the confidence of the public. The leaders of the public, such as Prince Lvov, Alexander Guchkov, and Milukov, petitioned the sovereign to receive them, and listen to their declarations of unqualified loyalty. A speech was carefully prepared, to be read to the sovereign at the audience. This speech made clear the loyalty and patriotism of the people, as represented in these men and other members of the deputation. On the advice of his Prime Minister, the old Goremykin, the Emperor refused to receive them.

In the Duma was formed, in August, 1915, a coalition of the six central parties. This "Progressive Bloc" drew up a program of the reforms considered absolutely necessary to strengthen and unify the country. It again demanded a government enjoying the confidence of the public. Of the cabinet then in office, the majority satisfied these demands. Such men as Sazonov, Minister of Foreign Affairs, and Polivanov, Minister of War, were acceptable to the country. But the Prime Minister and Minister of the Interior were distrusted, for they refused to trust the public and let it organize to support the army. The majority of the cabinet of August, 1915, asked the Emperor to instruct them to coöperate with the Duma. But the Prime Minister reached the ear of the Emperor before the memorandum of the other ministers arrived, and secured the edict to dissolve the Duma. The ministers who signed the memorandum urging concessions to the demands of the Duma and the public were gradually eliminated from the government.

Professor Harper, who is in charge of the department of Russian language and institutions at the University of Chicago, has visited Russia nearly every year since 1904 to study the social and economic development of Russia. He is the author of "The New Electoral Law for the Russian Duma."—THE EDITOR.

THE new men appointed to replace the retired ministers were men of the old bureaucratic school, reactionaries, men who soon came to be called quite frankly "Pro-Germans." The existence of "dark forces" operating behind, and in support, of these men laid the foundation for the belief in a pro-German intrigue. As evidence to support this suspicion became clearer and rapidly cumulative, the Duma demanded more specifically *ministerial responsibility*, which would guarantee responsible government. The Duma formulated the demand, and it was supported by a majority of the Imperial Council, Russia's Upper House, half of whose members are appointed by the sovereign. Even the conservative United Nobility, holding a congress at that same moment, demanded the elimination of the "dark forces." The country, thru the organizations working for the army, and the press, was behind the Duma. In the Duma session of last autumn the former reactionary deputy, Purishkevich, turned to the ministers with a passionate appeal: "Take the first train to headquarters, fall on your knees to the Tsar, and tell him he must open his eyes to what is going on. This is your duty to your sovereign."

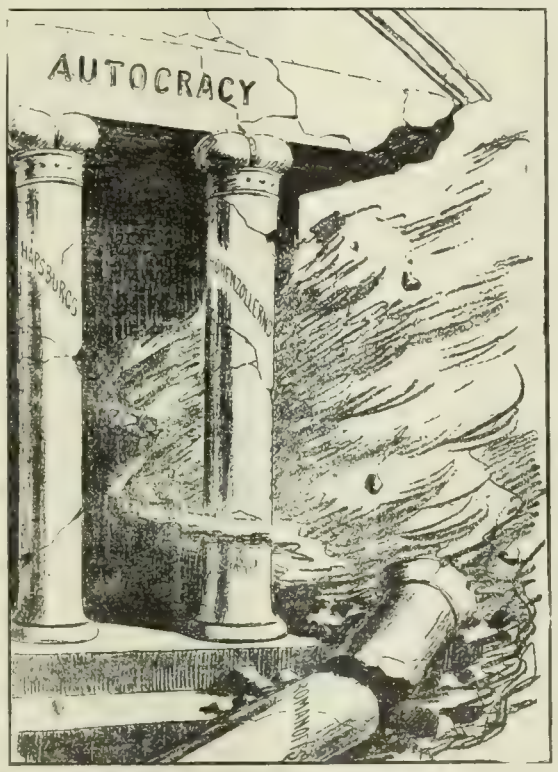
Dana in New York Tribune

THE WILL OF THE PEOPLE

The Emperor is reported to have exclaimed when he abdicated: "I have been betrayed." The Duma and the leaders of the public have been trying for over a year to persuade him of this fact. Five years ago the President of the Duma explained to me that the main effort must be to get "Constitutionalism" talked in the Emperor's circle. "But what chance have we, when he is so carefully ringed in by a group whose selfish interests are served by autocracy," he added. It was hoped all this last year that the army would have a liberalizing influence on the Emperor.

The revolution therefore was not essentially anti-dynastic. The monarchial idea is very strong in the broader masses of the people. Among the workmen and the intellectuals of the liberal professions, republicanism is theoretically at least talked and accepted. But if the coming constituent assembly can be made to represent truly the majority opinion of the country—it is to be elected on the basis of universal suffrage—the present writer feels that Russia will establish definitely responsible government, but under the form of a constitutional monarchy. The abdication of Michael is only suspended until the opinion of the country is formally stated.

Will the new government, instituted by a purely political revolution, conceived and carried out in order to hasten the victorious conclusion of the war, be able to accomplish the great task it has to face, and maintain the confidence of the public? The second part of the question will in large measure be answered by the solution of the first problem. The food supply problem must be solved without delay. On the whole it is a comparatively simple problem. The food is there, and only has to be distributed. The means of distribution are at hand.



The men who make up the new government have proved themselves able and efficient executives. Prince Lvov, the new Prime Minister, and Minister of the Interior, is, one might say, an organizer by profession. For many years he has been one of the most outstanding figures in local government work. The term "Zemstvo Worker" has a definite meaning to the Russian. The Zemstvos—local provincial councils—were instituted in 1864, among other reasons to train Russian

society in civic and public work. Lvov first trained himself and then trained others in Zemstvo work. In 1891 he helped organize relief work in the famine-stricken districts of Central Russia. In 1904 he organized a Zemstvo Union to help care for the wounded soldiers during the Russian-Japanese war. In 1905 he was a member of the Zemstvo deputation which was received by the Emperor after the Battle of Tchusima, when the Russian fleet met disaster because of bureaucracy's mistakes. It was to that deputation that the Emperor reiterated, as his "inviolable will," his intention to convoke "representatives of the people to share in legislation." In 1914—within ten days after the outbreak of the war—Lvov had brought together in Moscow Zemstvo workers from all parts of Russia, who organized the Russian Zemstvo Union, electing Lvov as the President.

Another name in the new cabinet guarantees that the new government will be able to handle the food situation, and also the ammunition-supply problem—the name of Alexander Guchkov. He was President of the third Duma, and contributed perhaps more than any other single man to the reorganization of the Russian armies after the Russo-Japanese war. He showed his energy and ability in the organizing of Russian business and industrial interests, during the same years of 1908-1914. Then, finally, Guchkov was one of the most active initiators of the movement to mobilize the industries of the country after the defeats of 1915.

THE old government was set aside so easily because no one, except a small group who profited by the old regime, had confidence in it. Will the new government hold the confidence of all classes at the critical moment when suspicion and uncertainty must still prevail after the experience of the last year and a half? Lvov and Guchkov are moderate liberals—some will call them conservatives. But they have proven themselves real patriots, as well as organizers. In 1915, I gained permission to visit the front thru Guchkov. At the front the name of Lvov was on everybody's lips; he was the "feeder and clother of the army." When I visited the country districts I found evidence of the wide activity of the Zemstvo Union at every turn. Peasants explained to me that the Zemstvo Union was "feeding our soldiers at the front."

I have emphasized the names of these men in the new government because of what they will represent to the army, to the peasant, and also, tho not to the same extent, to the workmen. Tho moderate liberals, they will have the confidence of the public. But the new cabinet contains democratic liberals such as Milukov, Shingarev and Manuilov. Milukov, the new Minister of Foreign Affairs, is too well and widely known in America to require long comment. He has been one of the most active champions and leaders of liberalism in Russia for over a decade. This last year he was always jokingly referred to as the "'Papa' of the Progressive Bloc." He is the framer of party platforms, the political leader *par excellence*. Shingarev is his right-hand man, considered by many as a man of even greater force and ability. Shingarev was elected from Petrograd, where the elections were direct. It is often emphasized that he received more votes at the election than any other individual member of the Duma. Manuilov is one of Russia's most prominent economists. Until recently he was Chancellor of the University of Moscow, and during the last years he has been the editor-in-chief of a most influential liberal newspaper of Moscow. The students, who have always played so important a rôle in any political

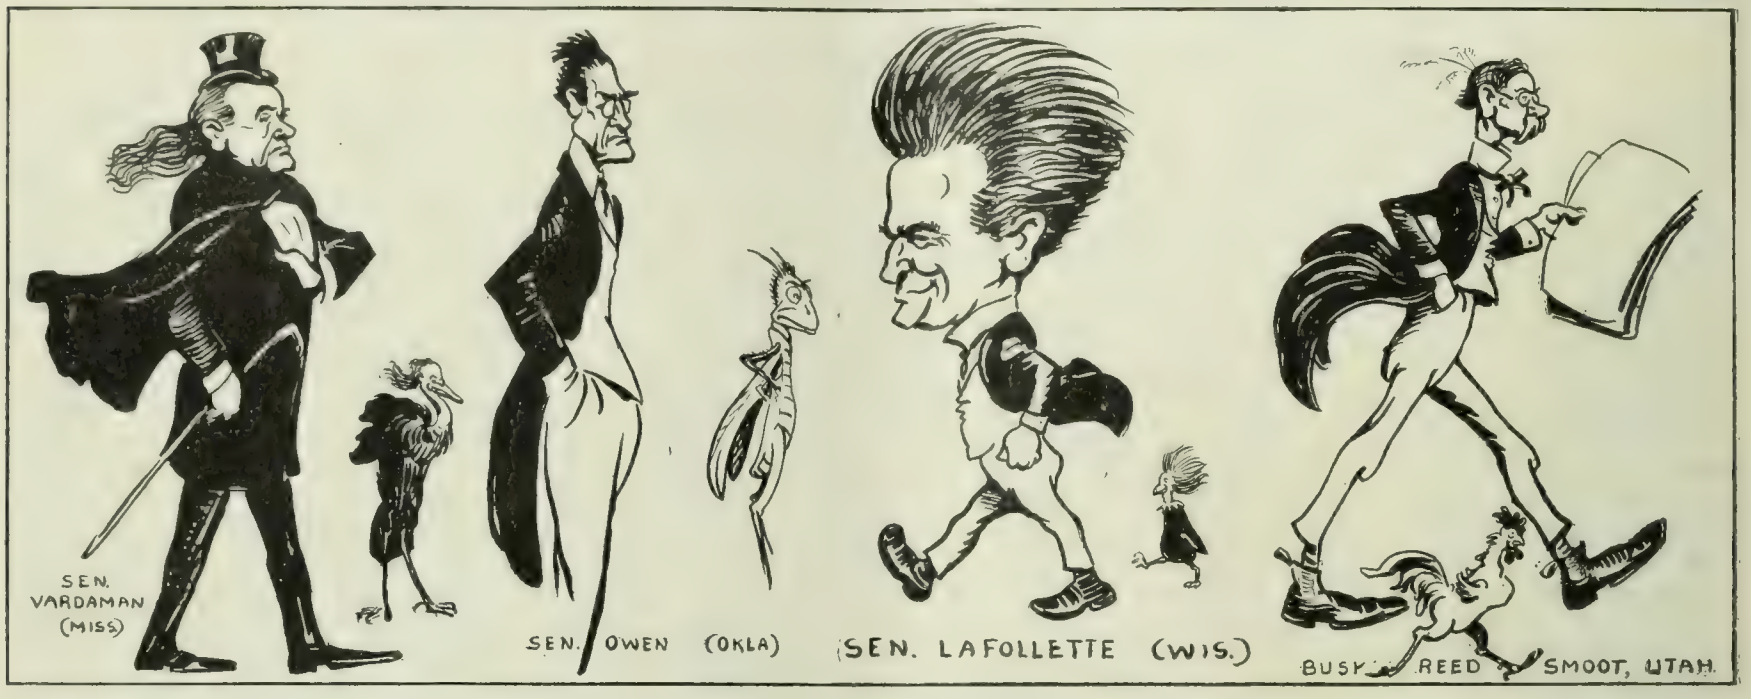
Harding in Brooklyn Daily Eagle

NEXT?

movement in Russia, will rally to the support of Manuilov.

Finally, the Deputy Kerensky, the new Minister of Justice, is a Socialist and the leader of the Labor Group. Last summer Shingarev said to me: "We don't deceive ourselves; we know that the workmen don't follow us; Kerensky is their leader and idol." The one danger that confronted the new government was the possible radicalism of the workmen and the younger elements. "Reaction and radicalism have been the two great evils in Russian life," said Mr. V. Maklakov, the leading lawyer and deputy of Moscow, to a group last summer. The conditions that went with the police regime of autocracy and bureaucracy were largely responsible for this radicalism. Reaction bred revolution in Russia, just as it has in other countries. The atmosphere of liberty which has prevailed in Russia the last two weeks will do much to moderate the natural radicalism of many groups. There will be irresponsible individuals or groups, perhaps outside Russia more than in Russia itself, who will urge the "Social Revolution" which is on their program. But Kerensky has proclaimed, just as he has been saying since the outbreak of the war, that even a workman movement at the present crisis will be correctly interpreted by the comrades at the front as treason.

ALL the organizations, especially the Zemstvo Union, thru which the peasants also could act, were originally and primarily started to support the army. They will now serve to control and direct public opinion. They have been supplemented by professional unions, which will bring in the groups which before could not directly participate in the work of organizing—"organizing for victory" as the motto read. Thru these organizations the new government will work to solve the problem of food supply in the rear, and provide for adequate equipment and support of the army. The vast majority of the lower bureaucracy, excluding always the political police—the main weapon of self-defense which autocracy perfected and employed—will fall into line.



Russia has not been further disorganized by the *coup d'etat*. The aim of the revolution, and we see that the aim is already being realized, was to make possible the most thoro organization of all the resources of the country for a more vigorous prosecution of the war. The revolution was the work of a people facing a crisis in sober seriousness and without vindictiveness. Recalling what thousands of individuals have suffered at the hands of the irresponsible bureaucracy, one would not have been surprized at manifestations of extreme bitterness, and corresponding excesses, perhaps even acts of vengence. But the Socialist member of the new government, Kerensky, gave another keynote of the revolution when he proclaimed that the new Russia would not have recourse to the methods used under the old regime. As Minister of Justice, he promised that every one, including the former ministers now under arrest, would be assured of a fair and public trial.

The new government is composed of representatives of various political parties. But they have been working together for over a year in the Progressive Bloc of the Duma, and for over two years in the various organizations, such as the Zemstvo Union and the War Industries Committee. The program of the Progressive Bloc has been formulated and discussed for eighteen months. Every measure included in the program is justified as a war measure, to strengthen and unify the country. The head of the new government is an "organizer," known not as a purely political leader, but as the feeder of the armies, the leader of Zemstvo Russia. For it must be always emphasized that the first aim of the revolution—its justification—was to create conditions that would make it possible for Russia to put forward the full measure of her strength in the coming military campaign of these next months.

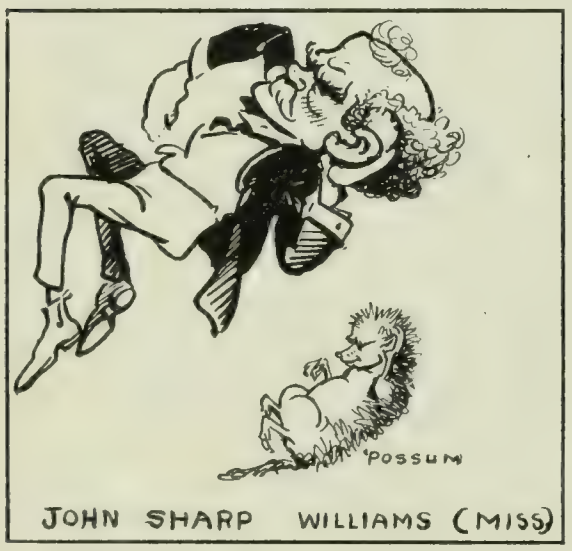
A CAPITOL ZOO

BY LOU ROGERS



OLLIE JAMES of Kentucky, the hugest man in all Congress, is not a prehistoric beetle, but he certainly gives you a sudden jolt when he spreads his great hands above the Senate and roars.

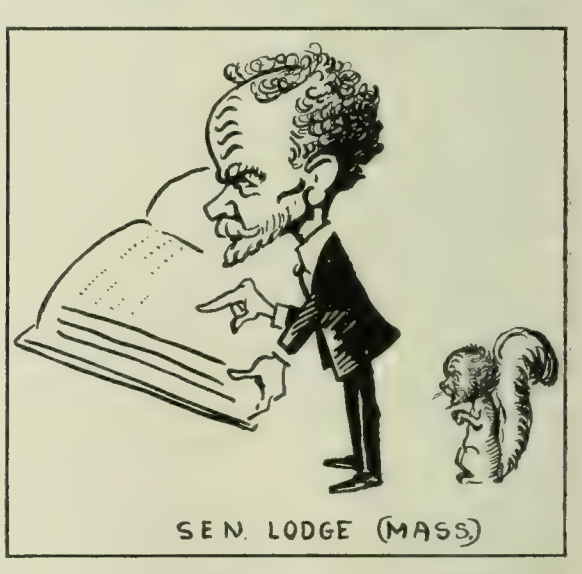
There is nothing colossal about John Sharp Williams of Mississippi. You have to look at his desk twice before you spy him. He seems to be always balancing on one ear with his hand propping up the other. He has the look of a napping 'possum.

OLLIE JAMES (KEN) IN ACTION
(ALWAYS DROPS HIS Gs)

JOHN SHARP WILLIAMS (MISS)

When Senator La Follette's head and desk make a sky line you'd take him for a tuft of Wisconsin bunch-grass waving in a stiff breeze. But catch a glimpse of him scurrying along the Senate lobby and he's a crested guinea fowl after a juicy bug.

If you like things that wave, watch Vardaman of Mississippi. There's a rare specimen of jungle heron, called *Ardeomega Goliath,* like Vardaman.



Now Reed Smoot of Utah isn't like that. Tailor him, gold lace him, polish his whole outside and he'd still have it—that look of a long-geared Plymouth Rock rooster.

"Doc" Gallinger of New Hampshire takes you off among the thistles and thank-you-marms, too. When he harangues the Senate, pacing back and forth with hands behind his back, the solemn-jowled turkey of his native land would be honored to bear him company.

In the row of seats back of him sits Senator Lodge of Massachusetts in a rock pile of mossy tomes. When some senatorial utterance bings against the boulders, up bobs the Senator's head and he scolds all over, from his kinky gray hair to his proper coat tail.

Senator Stone of Missouri looks for all the world like an emaciated hen-hawk hovering over a chicken coop.

And Senator Owen, the Indian sky-scraper from Oklahoma, gives a successful imitation of a seven-year locust just before he tackles the green stuff.

SEN. LODGE (MASS.)

SEN. STONE (MO.)

"DOC" GALLINGER (N.H.)

FORETASTE

BY HELEN HOYT

I shut the book together,
Lay it by;
Punch down the pillow,
Turn,
Snap off the light;
With sleepy hands pull up the coverlid
And close my eyes.
I have turned off the light;
Turned off the world;
And laid aside my life and thought and motion,
And laid myself in my straight grave,
Resigned to darkness and nonentity.

THE LADY FROM MISSOULA

BY DONALD WILHELM

TO be spokesman of all the women in the world is, for most of us, a function devoutly undesired. To be the lone woman to venture out of the silence of forty centuries from a little house in a side street of Missoula, Montana, U. S. A.—to venture past the mossy old traditions in the path of things into the arena of world legislation to take issue with 434 Congressmen, would seem, with baldheads to right of one and baldheads to left of one and broadbacks all around, to be the job of an Amazon.

But Miss Jeannette Rankin is no Amazon. She is a little woman—a girl, one is almost inclined to call her—who steps briskly, firm of foot and quick of stride, out of a private office to greet you. She is dressed well and she looks well—young enough to be attractive, old enough to be taken seriously—thirty-three.

She is energetic—vastly more energetic than any Congressman to be found lazing in the House cloak room. Her energy pervades one. It is infectious. It is to be hoped that it will infect those stale, tobacco laden shut-in spaces of the national capitol.

She is forceful, and not talkative. Her keen, quick eyes, which you are pleasurably surprized to find are brown and not gray, take you in from head to foot before you know it. "How do you do!" she says cordially. And then she waits to hear what *you* have to say!

"I hardly know," I stuttered, "whether to address you as 'Congressman' or as 'Miss Congressman,' as 'Congresswoman' or as 'Miss Congresswoman' or as 'Miss Rankin.'"

"It makes no difference at all," she said very directly—so directly that the hope I had of this interview being something of a social event went sky high. "You see I was elected from my state as one of its two Congressmen because I represent certain ideas, or ideals. It just happened that way. The most important of these ideas is equal suffrage—a national amendment."

Because she personifies certain ideals, perhaps it is to be expected that Congresswoman Rankin, elected as she was on the Republican ticket in a state that went overwhelmingly Democratic, is disposed to be much more interested in the United States than in her own state. It is was not surprizing therefore for her to say that she hoped and believed that "party prejudice and political incompetency in Congress are breaking down."

"It may happen more than once that you will have the balance of power in the passing or defeat of legislation," she was told—a consideration that may, perchance, conjure a strange situation in the imagination of President Wilson, who is not now in favor of a national amendment giving women the vote for electors. "Would you bargain for equal suffrage if such an opportunity came?"

She smiled, without answering.

Miss Rankin has made no announcement of any plans, yet she authorized The Independent to quote her as follows: "My state has sent me to Washington to work for the national enfranchisement of women. I intend to give my principal energies to that end. I intend to do my utmost to consolidate all the factors that have been working all over America for suffrage and I hope to be able to effect a successful national campaign because of the strategic position that I happen to have been chosen to fill. I intend to do everything that I can, in Congress and on the lecture platform, to force the necessary legislation to give women everywhere in America the vote."

© Underwood & Underwood
THE FIRST CONGRESSWOMAN

Any Congressman who thinks that Miss Rankin will not be able to shy her castor into the ring because to right and to left of her may sit old stalwarts of conservatism, will do well to remember that she knows the psychology of such old stalwarts. She was in charge of the campaign that put suffrage thru the Montana Legislature in 1911-13. She was chairman of the Montana Suffrage Association and campaigned thruout her state in 1913-14. She was field secretary for the National Suffrage Association and sole lobbyist for suffrage in the New York Legislature in the session of 1912, had charge of the suffrage bills in the legislatures of Delaware, Florida, North Dakota and New Hampshire and worked in the United States Congress during two sesions in the interests of national suffrage. Add to all this the fact that she was carefully trained as a girl by her mother, who was a New Hampshire school teacher who taught in Montana until she married Miss Rankin's father, a rancher; that she was graduated from the University of Montana and from the New York School of Philanthropy and has done work of one kind or another in nearly every state of the Union and even in faraway New Zealand, the ideal commonwealth, and you may see clearly that the Congressman lazing in the House cloakroom who asserted that "it will be fun watching 'Jenny'" had better look to his footing.

Many Congressmen—so any one with any considerable acquaintance with them knows—reason from premises gathered in their own back yards. To the typical one his district is the whole of these United States—and it needs invariably a new postoffice or a river or harbor improvement.

Thus it may be guessed that Congressmen, especially those who are grinding their axes back home, getting ready to make an example of the lone little Congresswoman, may very likely find her setting them an example instead. At least she knows the nation every state of it—and the big social and economic problems everywhere in it. She will take her seat in the House of Representatives prepared—almost ideally prepared.

New York City

FOR LOVE OF COUNTRY

THREE POEMS BY VERNER VON HEIDENSTAM

Translated by Charles Wharton Stork

HOME

I'm longing for the forest:
The pathway in the grasses,
The house that on the ness is.
What orchards hold such apples
Deep-hid from eager spying?
What grain, when zephyr dapples,
Can breathe so soft a sighing?
Where could I hope as well to slumber
When bells the hours of evening
number?
Where do my memories tarry?
Where are my dead still living?
And I, while gray and gaunt still
With harsh, relentless finger
The years my fate are weaving?
I am a shade, and haunt still
The place where memories linger.

Oh, seek not near to hover,
Altho the doors are fastened
And matted leaves now cover
The steps where winds have
hastened
And dropt their withered quarry.
Let other's laughter carry,
And new floods, wilder, stronger,
Bear me, their banks o'erswelling,
To those that speak no longer.
I sit within there lonely,
Myself a memory only—
That is my kingly dwelling.
Oh, say not that our elders,
Whose eyes are closed forever,
That those we fain would banish
And from our lives would sever—

Say not their colors vanish
Like flowers and like grasses,
That we from hearts efface them
Like dust, when one would clear it
From ancient window-glasses.
In power they upraise them,
A host they of the spirit,
The whole wide earth enshrouding,
The thoughts too overclouding
Of men in distant places,
Thoughts that, like swallows
crowding,
Fly home at evening duly.
A home! How firm its base is,
By walls securely shielded—
Our world—the one thing truly
We in this world have builded.

THE FOREST OF TIVEDEN

Hark how the fir-trees in dismal tones,
Like the minor discords of drum and horn,
Sing a weird lament, all squeaks and groans,
That trolls have composed in this land forlorn!

And here, while gnat-swarms pipe and dance,
Past ages arise as in a trance.
These ferns have survived an earlier aeon;
Those moss-grown rocks with impending mass
Are piled in a rampart cyclopean;
Each rotten log in the wild morass
Is a deep-sea monster, that here sticks out
At the edge of the water his dripping snout.

With its reptile scales yon pine-tree's root
Stands deep in the ooze, like a saurian's foot;
And others, like spiders, are poised unsteady
On the edge of cliffs where the step grows giddy.

But, silence! A shaggy head is breaking
Thru the net of twigs, then with bristles shaking
It sinks to browse in the heather dense.
'Tis the elk. As mighty and immense
As a mastodon, he now is slaking
His thirst in the swamp. He looks about,
Wild-eyed, at the mountains that shut him in,
While silver trickles are running out
Of his panting muzzle and bearded chin.

The haughty pine, as if in fear
Of the light, creeps close to the gravel here.
See the mountains! they rise not in splendid shapes
Of eternal snow, but are squat and gray;
They stand like beggars in threadbare capes
That are dingy now this many a day.
And had we the murkiest words at hand
They would be dark or gloomy enow
To paint in verse that primeval land,
Which is ever preaching, "Renounce, forsake!"
The peasant bites at his black rye cake,
And loose stones rattle beneath his plow.
How gray, how clad in joylessness
Are all of the scenes that meet me!
My land, arrayed in the ragged dress
Of poverty, you greet me.

THE BURIAL OF GUSTAF FRÖDING

Forth they go
In endless procession
One by one with their silent tread.
Bells are tolling. Deep, slow,
With rumbling vibration
Singing their song to the march of the dead.

I hear, as I sit half-dreaming,
The bell-notes that beat from miles away.
All of our land, beneath winter gleaming,
Hears the bells as they ring today.
Summer wert thou and blossoming spring,
Sigh of the sedge by the lake-lapped strand.
Sleep, our poet, whom now they bring
Upborne by many a hand.

White was your hair, and long your beard;
The sun shone in on your Bible's page,
And you in your bare-walled room appeared
Like Job 'mid his ashes, bent with age.
How wondrously great is man's destiny:
Dreams and old tales and the flowing sea,
Floods and flames and the choir of the storm!—
But weak as a reed is his own frail form.
Die, die!—so echoes the cry
To him that creates with yearning passion.
All must perish,
All that is earthly must die, die;
But no, 'tis himself that his strong hands fashion.
Pass, oh bard, erect as a king,
To the host of the shades thru the darksome portal!
Still we cherish
Thy limpid-silvery notes immortal,
Singing to us as they used to sing.

THE POET OF SWEDEN

BY CHARLES WHARTON STORK

AUTHOR OF "SEA AND BAY"

THE most remarkable thing about Verner von Heidenstam is that he has become the living voice of his native country, Sweden. He has the further good fortune that his countrymen recognize him in this capacity. Many people all over the world now think of Walt Whitman as the voice of America, but few Americans listened to him while he was yet alive. Heidenstam, however, has come to mean Sweden in the minds of his five and a half million compatriots; he is hardly less symbolical than the blue and yellow national flag. He would be a man worth knowing about even if he had not just been given the high international honor of the Nobel Prize for Literature.

But before considering how Heidenstam has won his enviable place we must glance at the tradition from which he has sprung. We may begin by saying that Swedish lyric poetry compares favorably with that of any nation in the last fifty years. To be sure, Sweden had, as far back as 1750, such noteworthy masters as Bellman, Tegnér and Runeberg; but these have been duly chronicled in encyclopedias. A period of fancy and sentimentality supervened after the death of Tegnér in 1846.

Toward 1870, however, realism revived in the work of Viktor Rydberg and Count Snoilsky. The former, chiefly known as an idealistic poet of the highest type, has also charming poems of popular superstition such as "The Goblin," and vivid idyllic pictures like that in "The Bathing Children." The earlier poems of Snoilsky, written in Italy, remind one strongly of the younger Goethe in their joyousness of color and high-spirited love of life. Later Snoilsky returned to Sweden and celebrated in a more chastened style the exploits of his country's history.

Finally in 1890 appeared, as Mr. Edmund Gosse very truly says, "three very great lyrical artists." Of these Heidenstam is still surviving; the other two were Oscar Levertin and Gustaf Fröding. Levertin had the mystical tinge and the artistic delicacy of his Jewish ancestry. Naturally enough he is the least Swedish in tone of all the poets named thus far. Fröding, on the other hand, is rivaled only by Burns in his ability to interpret the rough tragicomedy of peasant life. To this faculty he adds a wonderful command of imaginative beauty and a personal note as alternately humorous and pathetic as life itself. Dissipation closed the career of this brilliant master and left the name of Fröding to be hallowed with equal admiration and regret.

Heidenstam meanwhile, beginning with hardly less acclaim in his first poetic volume "Pilgrimage and Wanderyears," had sufficient physical and spiritual stability to outlast his two contemporaries. Like Snoilsky he first

Press Illustrating

VERNER VON HEIDENSTAM
Winner of the Nobel Prize for Literature

struck an exotic note and later changed to one with a national ring. In his travels he learned to value the scenes of his birthplace as he might not have done had he never left them. Consequently his two later volumes of lyrics are saturated with Sweden, both in picture and in feeling. In prose as in poetry Heidenstam turned from romanticism to patriotism.

THE preceding sketch of recent Swedish poetry has been of little value if it has not served to indicate that love of country is a prevailing characteristic of all the great masters—Levertin being, on account of his alien birth, an exception. If, then, all the best Swedish poets are strongly national, it becomes necessary to define the nationalism of Heidenstam more particularly. How, for instance, does it differ from that of Fröding?

To answer this question we must glance for a moment at the contrasting temperaments of the two. Fröding is the typical Bohemian, both of the country and of the town: universal in appeal, contagiously daring, prodigally rich in emotional sympathy. Add to this an almost unequaled magic of rhythm, of imagery, and of vivid phrase, and the reader will begin to understand why the poetry of Fröding is to the Swede what that of Burns is to the Scotchman. Heidenstam is almost the exact opposite of this. Born an aristocrat and educated in solitary wandering, he seems almost morbidly sensitive and aloof. His style is abrupt, involved, and self-contained—in fact, no style could well have less the quality of *camaraderie.* Here is surely not a poet to win one on first acquaintance.

Nevertheless, Heidenstam is one of the greatest poets now living; the more deeply one learns to know him, the stronger is one's conviction of his genius. Of his personal qualities perhaps the most conspicuous is his nobility of spirit, a nobility wrought of intense *intellectual* emotion and of the most undoubted sincerity. Truth is for him the object of a passion, and to it he entirely sacrifices beauty in the sentimentally accepted sense. His style is, therefore, astonishingly penetrative and illuminating. Whether he is examining his own consciousness, or whether he is analyzing the *mood* of a landscape, he always gets below the surface. It is not the external but the inner truth which he is after. And when we learn to trust the poet's vision, we are continually surprized at the glimpses of spiritual beauty which he gives us, a beauty always full of the most profound feeling. It is the struggle of the poet to reach these founts of feeling which makes his method seem so difficult; he achieves his attempt by successive flashes of insight.

In subject-matter Heidenstam's poetry falls into two classes: first, introspective poems that deal with his own emotions *per se;* and, secondly, poems that interpret his larger self, namely, his native land. It is in the latter class that he makes his finest appeal, for in interpreting his country he draws from the source of his most powerful inspiration. Especially compelling is his ability to create the atmosphere of the past, whether of prehistoric ages or of childhood associations. In this, his work overlaps that of his most notable living contemporary, Erik Axel Karlfeldt; but Karlfeldt is more homely and winsome, Heidenstam more intellectual and elevated.

I have selected three translations of Heidenstam's poems to illustrate his genius. None of these is patriotic in the narrower sense of the word, but two of them are full of a love of country that strikes its roots from his own remembered experience and the lives of his ancestors into the very heart of the Swedish soil. The poem on Fröding is notable for its direct presentation of his own philosophy.

Note that in "The Forest of Tiveden," tho the scene described is uncanny and forbidding, we feel a strange assurance that the poet loves it more than if it were the loveliest vision of a tropical paradise. This is shown more clearly in "Home," a lyric in every Swedish anthology. "The Burial of Gustaf Fröding" is a succession of vivid pictures, apparently disconnected but in reality merely the changing thoughts in the poet's mind. The conclusion is a superb epitome of Heidenstam's belief in immortality.

Philadelphia, Pennsylvania

EIGHT GREAT SHORT STORIES

From American Literature

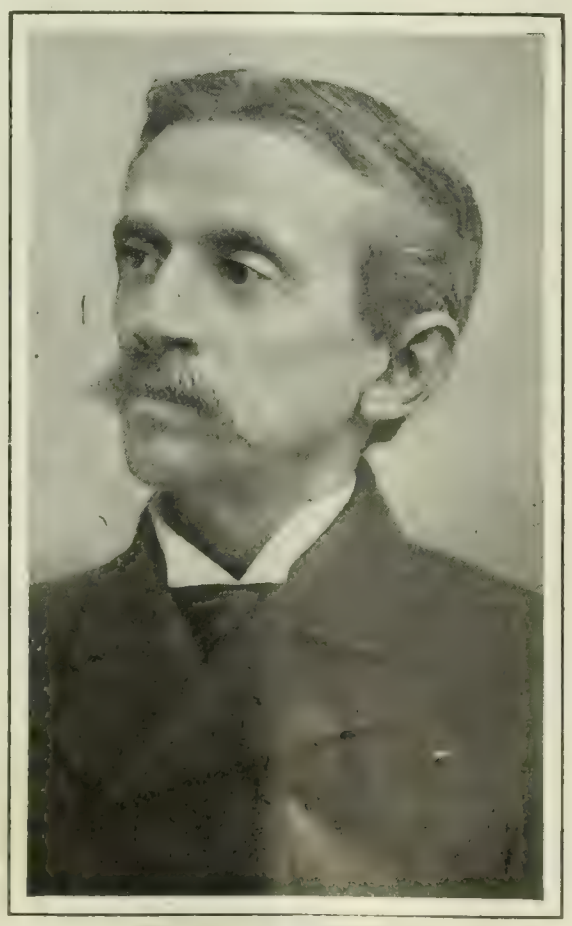
With Introductions by FREDERICK HOUK LAW

"THE Lady or the Tiger" has all the fame that any short story can desire. Like the hero of Stockton's "Vizier of the Two-Horned Alexander" it has gained eternal youth. Read and re-read, it never loses interest, never needs apology, is always new, and always awakens discussion. "Was it the Lady or was it the Tiger?" The question was asked of Stockton from the time he wrote the story in 1884 until his death in 1902, but however cleverly it was put he evaded a direct answer and left an interested world still asking: "Was it the Lady or the Tiger?"

The author of this ingenious story, Francis Richard Stockton, was born in Philadelphia in 1834. With only a high school education he set out as a wood engraver, little by little gained success as a writer, and filled editorial positions on *The Philadelphia Morning Post, Hearth and Home, Scribner's Monthly,* and *St. Nicholas.* In his last twenty-two years he wrote independently, living in New Jersey, and, for a time, on his West Virginia estate, once owned by George Washington.

Stockton loved the unusual, the humorous, the fantastic, but he placed his stories upon a footing of reality that made them all the more whimsical. His "Rudder Grange" and "The Casting Away of Mrs. Lecks and Mrs. Aleshine" represent American humor at its best. "The Adventures of Captain Horn" and "Mrs. Cliff's Yacht" are novels of fantastic adventure, and such books as "The Great Stone of Sardis" are more "Vernesque" than Jules Verne himself. Stockton's short stories show him to best advantage, his usual method being to conceive a bizarre situation, develop it with realistic detail, and conclude with a surprizing turn of thought that does not fail to leave the reader more interested than ever.

"The Lady or the Tiger" is an example of this short-story with surprize at the end. It has ingenious plot, is cleverly devised, clearly and briefly presented, and ends with an unexpected demand that the reader solve the problem. The first words, "In the very olden time," take one into a world where all is possible. Such expressions as "His barbarism had become semified" and "Every barleycorn a king" give a whimsical effect as tho we were at the fect of some smiling story-teller who laughs with us at his story. The author uses every effort to make the plot entirely clear, omitting every unessential detail, telling his story simply, repeating frequently for the sake of emphasis, and, with easy but perfect art, making every detail lead to the puzzle. And that puzzle is more than one of plot: it is founded ultimately upon character analysis. The fantastic story leads to psychology—to analysis of human nature. The Princess knew what was behind each door; with jealous hatred founded upon previous events she hated the Lady who might be her rival; she passionately loved the young courtier; her answer was not a moment's decision but one thought out after days and nights of anguish; and she was semi-barbaric! What did she do?



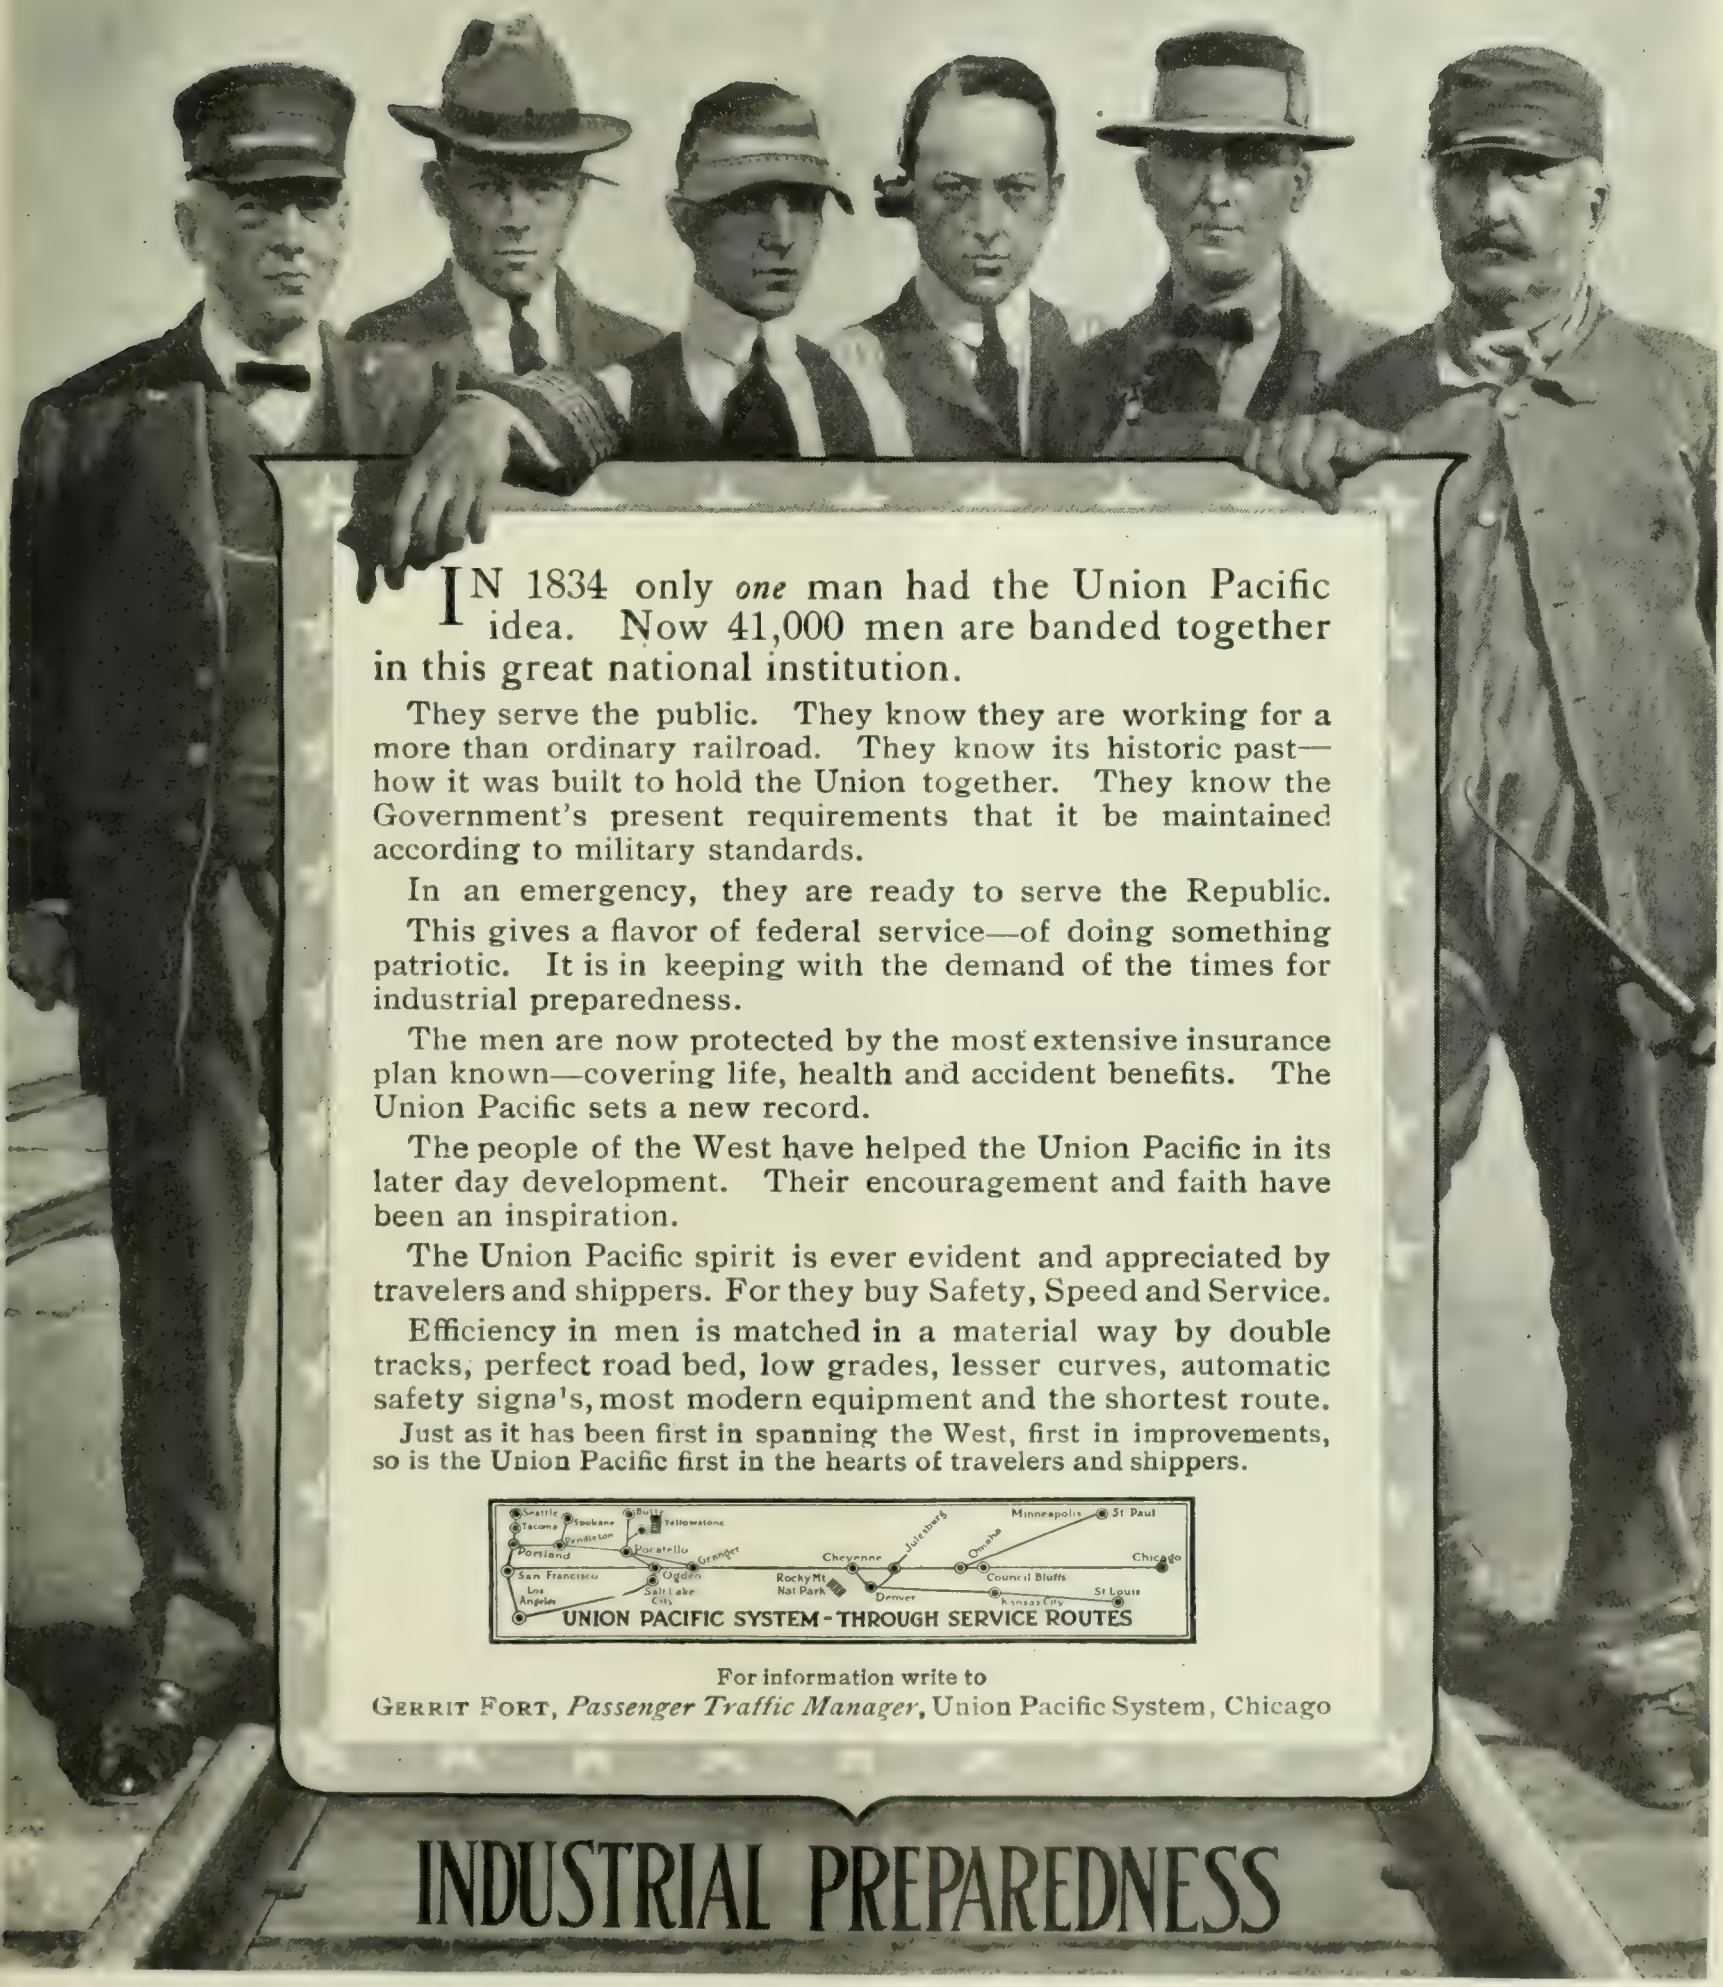
THE LADY OR THE TIGER?

BY FRANK R. STOCKTON

IN the very olden time, there lived a semi-barbaric king, whose ideas, tho somewhat polished and sharpened by the progressiveness of distant Latin neighbors, were still large, florid, and untrammelled, as became the half of him which was barbaric. He was a man of exuberant fancy, and, withal, of an authority so irresistible that, at his will, he turned his varied fancies into facts. He was greatly given to self-communing, and when he and himself agreed upon anything, the thing was done. When every member of his domestic and political systems moved smoothly in its appointed course, his nature was bland and genial; but whenever there was a little hitch, and some of his orbs got out of their orbits, he was blander and more genial still, for nothing pleased him so much as to make the crooked straight, and crush down uneven places.

Among the borrowed notions by which his barbarism had become semified was that of the public arena, in which, by exhibitions of manly and beastly valor, the minds of his subjects were refined and cultured.

But even here the exuberant and barbaric fancy asserted itself. The arena of the king was built, not to give the people an opportunity of hearing the rhapsodies of dying gladiators, nor to enable them to view the inevitable conclusion of a conflict between religious opinions and hungry jaws, but for purposes far better adapted to widen and develop the mental energies of the people. This vast amphitheater, with its encircling galleries, its mysterious vaults, and its unseen passages, was an agent of poetic justice, in which crime was punished, or virtue rewarded, by the decrees of an impartial and incorruptible chance.



FRANK R. STOCKTON

When a subject was accused of a crime of sufficient importance to interest the king, public notice was given that on an appointed day the fate of the accused person would be decided in the king's arena—a structure which well deserved its name; for, altho its form and plan were borrowed from afar, its purpose emanated solely from the brain of this man, who, every barleycorn a king, knew no tradition to which he owed more allegiance than pleased his fancy, and who ingrafted on every adopted form of human thought and action the rich growth of his barbaric idealism.

WHEN all the people had assembled in the galleries and the king, surrounded by his court, sat high up on his throne of royal state on one side of the arena, he gave a signal, a door beneath him opened, and the accused subject stepped out into the amphitheater. Directly opposite him, on the other side of the enclosed space, were two doors, exactly alike and side by side. It was the duty and the privilege of the person on trial to walk directly to these doors and open one of them. He could open either door he pleased. He was subject to no guidance or influence but that of the aforementioned impartial and incorruptible chance. If he opened the one, there came out of it a hungry tiger, the fiercest and most cruel that could be procured, which immediately sprang upon him, and tore him to pieces, as a punishment for his guilt. The

UNION PACIFIC

IN 1834 only *one* man had the Union Pacific idea. Now 41,000 men are banded together in this great national institution.

They serve the public. They know they are working for a more than ordinary railroad. They know its historic past—how it was built to hold the Union together. They know the Government's present requirements that it be maintained according to military standards.

In an emergency, they are ready to serve the Republic.

This gives a flavor of federal service—of doing something patriotic. It is in keeping with the demand of the times for industrial preparedness.

The men are now protected by the most extensive insurance plan known—covering life, health and accident benefits. The Union Pacific sets a new record.

The people of the West have helped the Union Pacific in its later day development. Their encouragement and faith have been an inspiration.

The Union Pacific spirit is ever evident and appreciated by travelers and shippers. For they buy Safety, Speed and Service.

Efficiency in men is matched in a material way by double tracks, perfect road bed, low grades, lesser curves, automatic safety signals, most modern equipment and the shortest route.

Just as it has been first in spanning the West, first in improvements, so is the Union Pacific first in the hearts of travelers and shippers.

INDUSTRIAL PREPAREDNESS

What about the Interior?

Do you want individuality in woodwork? Of course, because it reflects your own good taste in decoration.

To accomplish a decorative scheme which is at once artistic and satisfactory, the wood itself must be properly adapted to the preferred color treatment

As a particular homebuilder, you will find

ARKANSAS SOFT PINE

a thoroughly dependable finishing wood of moderate cost which is not surpassed in beauty or texture and which takes stains or enamel with complete success.

Our attractively illustrated finishing book tells how, and our homebuilders book why. Sent free on request. Also Architects Manual and finished samples.

Arkansas Soft Pine is Trade Marked and sold by dealers. Yours can supply it.

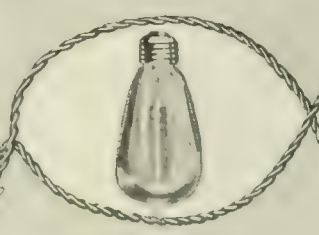
moment that the case of the criminal was thus decided, doleful iron bells were clanged, great wails went up from the hired mourners posted on the outer rim of the arena, and the vast audience, with bowed heads and downcast hearts, wended slowly their homeward way, mourning greatly that one so young and fair, or so old and respected, should have merited so dire a fate.

BUT if the accused person opened the other door, there came forth from it a lady, the most suitable to his years and station that his Majesty could select among his fair subjects; and to this lady he was immediately married, as a reward of his innocence. It mattered not that he might already possess a wife and family, or that his affections might be engaged upon an object of his own selection. The king allowed no such subordinate arrangements to interfere with his great scheme of retribution and reward. The exercizes, as in the other instance, took place immediately, and in the arena. Another door opened beneath the king, and a priest followed by a band of choristers, and dancing maidens blowing joyous airs on golden horns and treading an epithalamic measure, advanced to where the pair stood side by side, and the wedding was promptly and cheerily solemnized. Then the gay brass bells rang forth their merry peals, the people shouted glad hurrahs, and the innocent man, preceded by children strewing flowers on his path, led his bride to his home.

This was the king's semi-barbaric method of administering justice. Its perfect fairness is obvious. The criminal could not know out of which door would come the lady. He opened either he pleased, without having the slightest idea whether, in the next instant, he was to be devoured or married. On some occasions the tiger came out of one door, and on some out of the other. The decisions of this tribunal were not only fair—they were positively determinate. The accused person was instantly punished if he found himself guilty, and if innocent he was rewarded on the spot, whether he liked it or not. There was no escape from the judgments of the king's arena.

The institution was a very popular one. When the people gathered together on one of the great trial days, they never knew whether they were to witness a bloody slaughter or a hilarious wedding. This element of uncertainty lent an interest to the occasion which it could not otherwise have attained. Thus the masses were entertained and pleased, and the thinking part of the community could bring no charge of unfairness against this plan; for did not the accused person have the whole matter in his own hands?

THIS semi-barbaric king had a daughter as blooming as his most florid fancies, and with a soul as fervent and imperious as his own. As is usual in such cases, she was the apple of his eye, and was loved by him above all humanity. Among his courtiers was a young man of that fineness of blood and lowness of station common to the conventional heroes of romance who love royal maidens. This royal maiden was well satisfied with her lover, for he was handsome and brave to a degree unsurpassed in all this kingdom, and she loved him with an ardor that had enough of barbarism in it to make it exceedingly warm and strong.



This love affair moved on happily for many months, until, one day, the king happened to discover its existence. He did not hesitate nor waver in regard to his duty in the premises. The youth was immediately cast into prison, and a day was appointed for his trial in the king's arena. This, of course, was an especially important occasion, and his Majesty, as well as all the people, was greatly interested in the workings and development of this trial. Never before had such a case occurred—never before had a subject dared to love the daughter of a king. In after years such things became commonplace enough, but then they were, in no slight degree, novel and startling.

Electrical Household Helps Tie the Servant to the Housewife

WHY are you having trouble in keeping a girl—even in getting one? Why do girls prefer working in a factory to working in homes? As a housewife you are vitally interested in the answer.

The war has practically stopped immigration from Europe—that's one reason. But the most important reason is the unattractiveness of housework—the long hours—the dull, ceaseless drudgery.

The remedy is right at hand—in your electric light sockets. It is *Electricity*—the labor saver—the final answer to the servant problem. Just as certain as an electric fan brings cooling breezes, just so sure will electricity make housework more attractive—to you as well as to your servants.

The weekly electric-light bill in this average home is 45 cents and only 36½ cents more for operating all these appliances.

These labor-saving Household Helps—and many more—all with the quality mark "Western Electric"—are easy to buy and they soon pay for themselves.

If you have a servant problem in your home, why not find out how electricity can help you solve it?

This New Range Is A Wonder For Cooking

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

There is absolutely no danger in this combination, as the gas section is as entirely separate from the coal section as if placed in another part of the kitchen.

Gold Medal

Glenwood

Two Gold Medals—Highest Award at San Francisco Exposition, 1915.

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

The large oven below has the Glenwood Patent Oven Indicator, and is heated by coal or wood.

See the cooking surface when you want to rush things—five burners for gas and four covers for coal.

The entire range is always available as both coal and gas ovens can be operated at the same time, using one for meats and the other for pastry. It's the range that

Makers of the Celebrated Glenwood Coal, Wood and Gas Ranges, Heating Stoves and Furnaces.

The tiger cages of the kingdom were searched for the most savage and relentless beasts, from which the fiercest monster might be selected for the arena, and the ranks of maiden youth and beauty thruout the land were carefully surveyed by competent judges, in order that the young man might have a fitting bride in case fate did not determine for him a different destiny.

Of course, everybody knew that the deed with which the accused was charged had been done. He had loved the princess, and neither he, she, nor any one else thought of denying the fact. But the king would not think of allowing any fact of this kind to interfere with the workings of the tribunal, in which he took such great delight and satisfaction. No matter how the affair turned out, the youth would be disposed of, and the king would take an esthetic pleasure in watching the course of events which would determine whether or not the young man had done wrong in allowing himself to love the princess.

THE appointed day arrived. From far and near the people gathered, and thronged the great galleries of the arena, while crowds, unable to gain admittance, massed themselves against its outside walls. The king and his court were in their places, opposite the twin doors—those fateful portals, so terrible in their similarity!

All was ready. The signal was given. A door beneath the royal party opened, and the lover of the princess walked into the arena. Tall, beautiful, fair, his appearance was greeted with a low hum of admiration and anxiety. Half the audience had not known so grand a youth had lived among them. No wonder the princess loved him! What a terrible thing for him to be there!

As the youth advanced into the arena, he turned, as the custom was, to bow to the king. But he did not think at all of that royal personage; his eyes were fixed upon the princess, who sat to the right of her father. Had it not been for the moiety of barbarism in her nature, it is probable that lady would not have been there. But her intense and fervid soul would not allow her to be absent on an occasion in which she was so terribly interested.

From the moment that the decree had gone forth that her lover should decide his fate in the king's arena, she had thought of nothing, night or day, but this great event and the various subjects connected with it. Possest of more power, influence, and force of character than any one who had ever before been interested in such a case, she had done what no other person had done—she had possest herself of the secret of the doors. She knew in which of the two rooms behind those doors stood the cage of the tiger, with its open front, and in which waited the lady. Thru these thick doors, heavily curtained with skins on the inside, it was impossible that any noise or suggestion should come from within to the person who should approach to raise the latch of one of them. But gold, and the power of a woman's will, had brought the secret to the princess.

Not only did she know in which room stood the lady, ready to emerge, all blushing and radiant, should her door be opened, but she knew who the lady was. It was one of the fairest and loveliest of the damsels of the court who had been selected as the reward of the accused youth, should he be proved innocent of the crime of aspiring to one so far above him; and the princess hated her. Often had she seen, or imagined that she had seen, this fair creature throwing glances of admiration upon the person of her lover, and sometimes she thought these glances were perceived and even returned. Now and then she had seen them talking together. It was but for a moment or two, but much can be said in a brief space. It may have been on most unimportant topics, but how could she know that? The girl was lovely, but she had dared to raise her eyes to the loved one of the princess, and, with all the intensity of the savage blood transmitted to her thru long lines of wholly barbaric ancestors, she hated

Leak Proof— Trouble Proof

Because there are *no holes in the wall* the ink cannot get out.

That's why it is SAFETY-SEALED and insures against ink bursting through to soil hands and linen.

Even should the rubber sac burst, Parker is still in commission until repairs are made.

Carry it in any position without danger of leaking. Fills in 2 seconds by pressing a SAFETY-SEALED button.

At all good dealers $2.50, $3, $4, and $5.

the woman who blushed and trembled behind that silent door.

When her lover turned and looked at her, and his eye met hers as she sat there paler and whiter than any one in the vast ocean of anxious faces about her, he saw, by that power of quick perception which is given to those whose souls are one, that she knew behind which door crouched the tiger, and behind which stood the lady. He had expected her to know it. He understood her nature, and his soul was assured that she would never rest until she had made plain to herself this thing, hidden to all other lookers-on, even to the king. The only hope for the youth in which there was any element of certainty was based upon the success of the princess in discovering this mystery, and the moment he looked upon her, he saw she had succeeded.

Then it was that his quick and anxious glance asked the question. "Which?" It was as plain to her as if he shouted it from where he stood. There was not an instant to be lost. The question was asked in a flash; it must be answered in another.

Her right arm lay on the cushioned parapet before her. She raised her hand, and made a slight, quick movement toward the right. No one but her lover saw her. Every eye but his was fixed on the man in the arena.

He turned, and with a firm and rapid step he walked across the empty space. Every heart stopped beating, every breath was held, every eye was fixed immovably upon that man. Without the slightest hesitation, he went to the door on the right, and opened it.

NOW, the point of the story is this: Did the tiger come out of that door, or did the lady?

The more we reflect upon this question, the harder it is to answer. It involves a study of the human heart which leads us thru devious mazes of passion, out of which it is difficult to find our way. Think of it, fair reader, not as if the decision of the question depended upon yourself, but upon that hot-blooded, semi-barbaric princess, her soul at a white heat beneath the combined fires of despair and jealousy. She had lost him, but who should have him?

How often, in her waking hours and in her dreams had she started in wild horror and covered her face with her hands as she thought of her lover opening the door on the other side of which waited the cruel fangs of the tiger!

But how much oftener had she seen him at the other door! How in her grievous reveries had she gnashed her teeth and torn her hair when she saw his start of rapturous delight as he opened the door of the lady! How her soul had burned in agony when she had seen him rush to meet that woman, with her flushing cheek and sparkling eye of triumph; when she had seen him lead her forth, his whole frame kindled with the joy of recovered life; when she had heard the glad shouts from the multitude, and the wild ringing of the happy bells; when she had seen the priest, with his joyous followers, advance to the couple, and make them man and wife before her very eyes; and when she had seen them walk away together upon their path of flowers, followed by the tremendous shouts of the hilarious multitude, in which her one despairing shriek was lost and drowned!

Would it not be better for him to die at once, and go to wait for her in the blessed regions of semi-barbaric futurity?

And yet, that awful tiger, those shrieks, that blood!

Her decision had been indicated in an instant, but it had been made after days and nights of anguished deliberation. She had known she would be asked, she had decided what she would answer, and, without the slightest hesitation, she had moved her hand to the right.

The question of her decision is one not to be lightly considered, and it is not for me to presume to set up myself as the one person able to answer it. So I leave it with all of you: Which came out of the opened door—the lady or the tiger?

31 miles of concrete built by the Toronto-Hamilton Highway Commission, Geo. H. Gooderham, Chairman; H. S. Van Scoyoc, Chief Engineer, Toronto.

Traffic Increased Fivefold on New Concrete Road

When roads are to be improved it is not safe to allow for only an ordinary increase in traffic. A good road not only attracts traffic from other roads but it creates new traffic. This is especially true of motor and truck traffic. Nothing less enduring than concrete will last under constant shearing and tearing of power-driven wheels. Concrete is hard, rigid and unyielding; even, but not slippery.

After concreting the Toronto-Hamilton Highway in Canada, the Commissioners wrote:

> "The use of the highway has greatly exceeded what was estimated by the Commission. A count was taken in October, and at the western end near Hamilton, the number of horse-drawn commercial vehicles was greater than the entire traffic counted in 1914. Our highest count was almost five times the highest count made at the same point on the highway in 1914. In addition to the natural increase in traffic, the road is carrying a great deal of the traffic that formerly used parallel routes."

The fact that good roads concentrate traffic upon a few of them enables a community to build a connected system. It is estimated that 15% of the highways carry 85% of all traffic. A relatively small mileage will serve, and that mileage can be built of the most durable construction at a total cost which, if properly financed, any community can afford.

Concrete Least Expensive Durable Road

It costs less per mile than any other permanent road material, and its annual upkeep is really negligible. It has the same strength and durability on roads which make it universally used in important engineering works.

We will send you free a copy of "Concrete Facts About Concrete Roads." (Ask for Bulletin No. 136.) It gives reasons why so many states and counties have selected concrete for main highways and contains a variety of illustrations. Our engineers will help you to interest your neighbors and road officials. Write today.

CONCRETE FOR PERMANENCE

THE NEW BOOKS

A SPRING ADVENTURING

In general opinion the reviewer is Prince Fortunatus. His days are one happy round of entertaining reading. For his regular job he is in the position of that ever enviable man who may turn at will into a book shop, spare dollars in purse, spare time in hand. No dull book-worm is the reviewer, either, mousing thru second-hand shelves in search of cheap or quaint matters. His quest is for no forgotten treasures, but for those new created, the very latest cry in literature!

Of course, every reviewer knows—but we will not discuss it. On a certain day, however, when the calendar had out an unfilled order for spring scents and the shelves spilled over a flood of spring publications onto chair and floor, the reviewer suddenly decided for once to live up to his reputation. He would treat his shelves as a counter and he would be an impecunious gentleman of leisure. System should go to the March winds. He would set books together whether they had connection or not. He would forget the specialists who could review every book he was especially interested in better than he could! He would pay no attention to the possible desires for information on the part of subscribers. He would simply go off with a handful of books with attractive titles and enjoy himself in an easy chair.

Naturally, Stephen Graham's *Russia in 1916* was one of the books made off with. Mr. Graham was in Russia when the war broke out, and before. He was back in 1915 and again last autumn. Slight tho this last book is, it has the advantage of being by one who knows Holy Russia. It was last October that Mr. Graham prophesied what we see today, that no attempt on the part of the Russian and the German Governments for a separate peace could succeed, that the army and the people would rise, as now they have.

He chose Elsie Singmaster's *Martin Luther*, somehow expecting it to read a bit like a narrative of the Pennsylvania Dutch, which it does not! It is a worth while contribution to the four hundredth aniversary of the Reformation, however. Tho one could wish made more vivid the daily life of the plain folk of whom Luther was one, yet here is a swift, clear account of the causes of the great struggle, of the events of Luther's life and his lovable personality, all to be read almost at a sitting.

Printed some while since in limited edition, two more dramas by Masefield are now published. Both are one-act plays, vivid, dramatic, and with sharply drawn characters. Masefield spends no time on forewords or stage setting. Directions are cut as short as may be. He is all in haste to be on with his story and tell it he does in swift, sure words. *The Sweeps of Ninety-eight* is of another Irish insurrection, and has Irish humor in its grim comedy. But *The Locked Chest* is tense with emotion and tragedy, its simple action revealing long years of life, and supprest, unrecognized passions. Such a play stands forth like a Rodin figure, stripped of all unessentials.

When, with a memory of the charm of "Black Sheep," the reviewer opened Jean Kenyon Mackenzie's *African Trail* to find questions at the close of a chapter, marking it a book for Mission Study Classes, he confesses to feeling cheated. But a phrase here and there caught the eye and then, skipping the questions, he read the whole book. For here is far more than simply an account of religious work among the Bulus. It is a poetic, impassioned setting forth of the great romantic endeavor of the messengers of the "tribe of God"; a description in few words of the effect on the white man of life among strange peoples; a remarkable analysis of the first results of the "technique of Christian living," the "ten tyings," on the heathen mind. The book is full of original and enlightening expressions, of keen psychology, of human sympathy. It stands beside Keable's beautiful "City of the Dawn," tho broader in scope and deeper in thought. It may be a good textbook. It certainly is literature.

Great Companions, Edith Wyatt's essays, were snatched from the unmerited oblivion of the review column, and they hold many wise and witty words. There is an excellent short paper on Henry James, among others, and one of most welcome appreciation of William Dean Howells, its essence given in its title, "A National Contribution." Under the heading, "Nonsense About Women," are refreshing comments on that singularly unhealthy mentality, "Fiona MacLeod," and, at the other pole, a thought-provoking study drawn from some two thousand answers sent in reply to the Agricultural Department's letter to the farm women of the United States asking them to state their chief needs. Here we are back at the actualities of life with a vengeance and we close the book feeling that the reviewer's job, after all, is pretty varied and not the least interesting on the list.

Russia in 1916, by Stephen Graham. The Macmillan Company. $1.25. *The Locked Chest* and *The Sweeps of Ninety-eight*, by John Masefield. The Macmillan Company. $1.25. *Martin Luther*, by Elsie Singmaster, Houghton, Mifflin Company. $1. *An African Trail*, by Jean Kenyon Mackenzie. Central Committee on the United Study of Foreign Missions. West Medford, Mass. 50 cents. *Great Companions*, by Edith Franklin Wyatt. D. Appleton & Co. $1.50.

GOOD BUSINESS

In these days, when the voice of the social reformer is abroad in the land, usually raised in lamentation, it is encouraging in the highest degree to read such a book as Ida M. Tarbell's *New Ideals in Business*, based on an extensive study of the methods by which some of the richest and most powerful industrial organizations of today strive to promote the well-being of their employees. The most hopeful part of it is that the regulations for safety and sanitation, the rest rooms and lunch rooms and gymnasiums, the better hours, better houses, and better pay, spring, not from motives of charity or from a sense of duty, but from a business policy.

The fact that a man does his best work when he is well fed, sufficiently rested, sober, well paid, justly treated, and, above all, satisfied with his job and his employer, is beginning to be perceived and some of the wealthiest corporations are putting it to the test of a thoro trial, and finding that it can be proved.

Optimistic, however as the book is, it is not in the least visionary. The writer knows only too well how ample is the room left for improvement, especially where the employer is not intelligent enough, or not rich enough, to pro-

Press Illustrating

IDA M. TARBELL

vide for his employees all the costly paraphernalia which great and progressive corporations offer for the health and comfort of their workers. But once the principle that justice is the best policy is established, the rest will follow, and perhaps the vext problem of Capital and Labor will work itself out along these lines to their mutual satisfaction.

New Ideals in Business, by Ida M. Tarbell. The Macmillan Company. $1.75.

KIPLING, WELLS AND THE WAR

The British authorities have shown commendable intelligence in permitting two of the greatest living English writers to obtain a close acquaintance with the operations of the Allies in the Great War. Best of all the veteran pens of Rudyard Kipling and H. G. Wells were sent to "cover" aspects of the war which do not figure so largely in the official despatches and the narratives of war correspondents as the great battle line of France and Flanders. Rudyard Kipling's *Sea Warfare* deals chiefly with the work of the trawlers, destroyers and other minor craft which scout the grey waste of the North Sea for German raiders or stalk the elusive submarine. *Italy, France and Britain at War*, by H. G. Wells, is based upon a visit to the Italian front, that area of romantic mountain warfare where progress is slow since it involves the mastery of military problems in three dimensions.

Kipling's book is much the shorter and less pretentious of the two. It contains no discussion of the problems of the coming peace and very little about the problems of the present war; it does not take the space to justify the cause of the Allies or to draw up an indictment against Germany. *Sea Warfare* is simply a collection of journalistic sketches of the work of the navy from day to day. At the head of each chapter is a short poem celebrating the pluck, modesty and devotion to duty of the British sailor. These verses have all Kipling's old-time technical facility (he is perhaps the only war poet who dared introduce the word "tri-nitro-toluol" into his verse), but the fire and enthusiasm which made his poetry of India and of the Boer War so inspiring seem to have departed forever.

Mr. Wells has always hated war but he has always made a hobby of it. In nearly every one of his sociological works he has devoted a chapter or so to the future of warfare and not a few of his novels have forecasted developments of military science which he meant to be taken seriously by the British public. He devotes much of his present book to the discussion of military methods; the use of the aeroplane, the possible development of the "tanks," the obsolescence of cavalry, the unimaginative conservatism of the British military authorities. Everything which Wells saw on his trip to the front started a line of thought which often wandered on for many pages before he could get it under control again, so the amount of actual description in the book is relatively small. Yet we have interesting accounts of Alpine

IMPORTANT NEW PUBLICATIONS

OBSTACLES TO PEACE

By S. S. McCLURE

An Extract from Mr. McClure's Conversation with Count Tisza, the Austro-Hungarian Foreign Secretary:

"Let us admit," I said, "that the Servian ultimatum was none of Russia's business. Still, did you not know that Russia would make it her business?"

"We thought the chances of Russia's interfering were about fifty-fifty, but that whatever the consequences were, we must remove the Servian menace."

"Did you not know that if Russia came in all Europe would be involved?"

"It was none of Europe's business. Europe must interfere at her own risk."

During a recent trip to Europe, Mr. McClure met and talked with Zimmermann, Lord Northcliffe, Count Tisza, Lord Haldane, Talaat Bey, and many more of the men in whose hands lies the fate of Europe. Not only did these men discuss with extraordinary frankness the issues of war and peace, but they also put him in possession of invaluable documents.

There are to-day two kinds of obstacles to peace, the material obstacles such as the division of territory, and the spiritual obstacles of the enormous hatreds engendered. In this book these obstacles are, for the first time, analyzed in the light of information gained from responsible sources. The result is a work that we believe will be *the outstanding war book of the year.* $2.00 *net.*

Of Varied Interest

The Life of Ulysses S. Grant

By **Louis A. Coolidge**—"A real addition to existing material. . . . Mr. Coolidge has treated his entire subject with such clearness, interest and sympathy as to make the book readable indeed."—*Boston Herald. Illustrated.* $2.00 *net.*

war and of interviews with General Joffre and the King of Italy, both of whom he found peculiarly democratic and unpretentious in spite of their elevated rank.

The bulk of Wells's book is devoted neither to descriptions of contemporary war nor to speculations regarding its future possibilities but to the organization of a world peace. Wells is an earnest, determined pacifist who proves his desperate sincerity by constantly harping on the same points; that the German menace must first be destroyed, that kingship must everywhere give way to republicanism, that national boundaries must be redrawn to conform not to the will of the victor but to the interests of the people directly concerned, that equal economic opportunities must be guaranteed to every nation, that the liberal powers must combine to crush any future attempt to break the peace and that men must learn to reserve their highest loyalty not for any class or any empire but for the Kingdom of God on earth. For the negative pacifist, the "conscientious objector," he has only contempt. Non-resistance he regards as anarchism, obstructiveness, a deliberate refusal to take part in the task of building an enduring peace by discouraging militarist aggresion, and he has little patience with the neutral. In spite of an occasional outburst of impatience, Wells remains thruout his book a constructive statesman and philosopher. Kipling never rises above the level of a photographer of the passing show.

Sea Warfare, by Rudyard Kipling. Doubleday, Page & Co. $1.25. *Italy, France and Britain at War*, by H. G. Wells. The Macmillan Company. $1.50.

CUBA

The Early History of Cuba, 1492-1586, by I. A. Wright, tells the story of the island under Spanish dominion previous to the coming of Sir Francis Drake. The raid of the "Great Corsair" put an end to the first period of Spanish history in America, the period during which Cuba was a mere wayport between Spain and the American continents. Thereafter Cuba began to develop her own resources and the struggle between the European nations for the control of the islands and of the continents began. The book is compiled from the documents in the archives of the Indies at Seville rather than from secondary sources. It offers the serious student an opportunity to acquaint himself with the early history of the island and should prove an excellent introduction to the history of the West Indies, in which the people of this country are becoming more and more deeply interested each year.

The Early History of Cuba, 1492-1586, by I. A. Wright. The Macmillan Company. $2.

ABOUT MUSIC

Dr. Dayton Clarence Miller's *Science of Musical Sounds* should prove a valuable textbook in the study of acoustics, especially as applied to the speaking or singing voice. It may serve as well the composer, and, in some degree, the poet who would make all possible use of vowel effects. Nearly 200 most illuminating illustrations of

apparatus, experiments and sound waves are photographed. "Tone Qualities of Musical Instruments" is a specific lecture of wide interest and practicality. (The Macmillan Company, $2.50.)

Elementary terminology and notation, rhythmic forms, chromatic tones, common and compound measures, major and minor scales, intervals, and a half-dozen rules for the singing voice, comprize Inez Field Damon's *Primary Elements of Music*. Relative to music as the A-B-C's to letters. (A. S. Barnes Company, 32 cents.)

David C. Taylor, in his *New Light on the Old Italian Method*, shows in brief but clarifying outline the general developments, thru the centuries, in voice culture, and pleads for emphasis on rudiments, on the ear and on Nature as a guide in the training of such an impulsive and inherent thing as that exaltion—singing. (H. W. Gray Company, $1.)

Writing the Popular Song, by E. M. Wickes, gives most suggestive hints toward "hits," "song-cycles," and has seven chapters on lyric construction. It imparts practical information as to free lance versus staff writing, collaboration, manuscript preparation, selling outright, royalties, the deadly song shark, and gives a list of dependable publishers. (Springfield, Mass.: The Home Correspondence School, $1.25.)

The origins of music; the primitive instruments of the various ancient peoples; musical gropings thru the dark ages; accounts of specific composers, inventors, patrons, make up *A History of Music*, by C. V. Stanford and Cecil Forsyth. Chapters on Chinese and American music (each little known to us!) are especially informative. An important and reasonably interesting reference book, having certain very poor jokes, poor English, and poor knowledge of the animals and birds used to construct the "origins." (The Macmillan Company, $2.)

ARTS, MAJOR AND MINOR

In small compass H. C. Candee manages to pack much handy information on *Jacobean Furniture*. The book, with its many illustrations, is especially useful now, when this style is coming to the fore, old specimens being watched for, and copies, more or less incorrect, filling the shops. (F. A. Stokes Company, $1.25.)

From the *Print Collector's Quarterly* have been reprinted, with their small, clear cuts, some half dozen essays by W. A. Bradley on *French Etchers of the Second Empire*. There is a paper on Corot as a lithographer, and two on Meryon, with translations of his poems, which are playful and stern and bitter, but always simple and direct. (Houghton, Mifflin Company, $2.)

Dr. Kunz adds another standard work to his record. In *Rings for the Fingers* he has gathered the quaint lore on rings of all materials, from gold to horseshoe nails; of all times and lands; of varied significance, talismanic, medical, religious, and in his registry of pretty "posies" he revives delightfully a bit of seventeenth century sentimentality. (Philadelphia: J. B. Lippincott Company, $6.50.)

A pleasant example of sincere book making is the reprint of H. R. Plomer's *Short History of English Printing*. From 1700 on records of the English printers are hard to come at and this book, with its accounts of the Baskerville, Pickering, Ballantyne and Kelmscott presses as well as of their great forerunners is of value to every one who cares for book making as an art. (E. P. Dutton & Co., $1.25.)

The loveliness and individual charm of the exposition buildings and gardens at San Diego, kept intact thru all of two years (thanks to the climate and the irrepressible publicity-makers of Southern California) are well described in the pictures and text of *The Architecture and the Gardens of the San Diego Exposition*, by its architect, Bertram Grosvenor Goodhue, and others. (San Francisco: Paul Elder & Co., $2.)

"The Bible and Britannica of Farm and Garden Folk"

NOW COMPLETED IN SIX LARGE VOLUMES

THE STANDARD CYCLOPEDIA OF HORTICULTURE

By L. H. BAILEY

With the assistance of over 400 Collaborators

A few of the features which make the New Standard Cyclopedia of Horticulture the most modern work of its kind:

Contributors

Four hundred leading botanists and horticulturists of North America, each selected as the expert of the highest reputation in his specialty under the General Editorship of L. H. Bailey.

Size, Illustrations, Scope, Etc.

Six large quarto volumes, over 3,600 pages, 24 exquisite, full-page color plates, 96 special full-page halftones, more than 4,000 text engravings, approximately 3,300 genera, 20,000 species and 40,000 plant names. Each state of the union has separate treatment and there are special articles on Canada, Porto Rico, Hawaii and the Philippines. It has taken over five years to amass, edit and print the vast amount of material contained in the Cyclopedia.

Key to the Identification of Plants

The "open sesame" to the vast store of scientific information contained in the Cyclopedia, so simply constructed and worded as to be equally useful to the amateur, botanist or commercial expert.

The Glossary and Bibliography

A comprehensive analysis and definition of all technical terms used in this work and in similar works. A list of the important American books on horticulture with dates of publication, the publishers and all editions.

Important Miscellaneous Features

Among the numerous special features are articles on Commercial Flowers, Tree Planting, Greenhouses, Planting Tables, Fruit-growing, Cropping under Glass, etc.

The Cyclopedia of Horticulture

"is the best obtainable for all who are connected, either remotely or intimately as amateurs or professionals, with horticultural pursuits."

Delivered, Carriage Prepaid

Send us your check for $36.00 and the six volumes of the Cyclopedia will be delivered to you at once, carriage prepaid. Or fill out the coupon and we will mail you a detailed circular of this important work. *The Cyclopedia may also be bought on a monthly payment plan. Write us for full particulars if this special proposition interests you.*

The Railroad Problem

By Edward Hungerford

"The Railroad," says this well-known writer, "is the great sick man of the American business family. Just at present, owing to the extraordinary and abnormal prosperity that has come to the United States, largely because of the European War, he has rallied temporarily. His illness continues, however, and it is far too deep seated to be thrown off in a moment."

Mr. Hungerford has made in this work a careful study of the physical and financial plight that has overtaken the railroads, and the causes thereof. Then without bias or prejudice he shows what must be done *for* the railroads, and what *they* must do for themselves to bring about a cure. Large 12mo. $1.50.

The Japanese Invasion

By Jesse Frederick Steiner, Ph.D.

"The Japanese Invasion" is a comprehensive survey of the oriental problem. It contains a brief history of the developments of relationships between the East and the West dating from the early parts of the Sixteenth Century, and considers the Japanese-American question from the standpoint of race psychology, giving attention to the social, economic, and metaphysical differences between the two people. The author is not an alarmist, but nevertheless sounds a note of caution and suggests methods of inter-race relations. 12mo. $1.25.

Our Fellow Shakespeare

How Every Man May Enjoy His Works

By Horace J. Bridges

"Our Fellow Shakespeare" is at once an interpretation and a guide to the works of Shakespeare. It shows how they may be enjoyed, first for their dramatic and story interest, and later, if one so wishes, for their intellectual appeal. The leading plays are discussed at length. 12mo. $1.50.

A. C. McCLURG & CO.

330-352 E. Ohio Street CHICAGO

MOTOR PROGRESS

By

John Chapman Hilder

IN The Independent for March 5th I described briefly the first steps necessary for a complete overhauling and cleaning of the car in order to put it into condition for the touring season. The article ended with the carbon removing and valve grinding stage of the work. When this has been done satisfactorily, the car is ready for further operations..

After you have successfully removed the carbon and ground in the valves, cleaned the spark plugs, valve springs, stems and guides, replace them. In doing this be careful to put each part back where you took it from, guided by the figures in chalk with which you have marked it.

While your attention is focused on the engine, it is well to make such adjustments or replacements as may seem desirable because of engine noises. Noises around the engine are sometimes a little difficult to run to earth, because there are so many of them, all sounding at once; it is usually safe, however, to inspect the valves first, since they are frequent offenders. There are several ways of discovering whether the valves are or are not to blame. Lack of space prevents my giving these methods here, but I shall be glad to send them to you by mail if you will ask me. As a rule it is a good thing to time the valves—or at least to see that they are correctly timed—whenever you overhaul your engine. Connecting rod and main crank shaft bearings, wrist pin bushings, badly fitting pistons and piston rings and timing gears all are capable of producing noises. Before you completely reassemble the engine, examine these for looseness. It may be that adjustment will remedy the trouble. In some cases you may find replacement necessary. If your engine is noisy and you do not know the reason, write me and I will tell you how to investigate.

Assuming that all adjustments and repairs on your engine have been made and that everything is clean, replenish the oil reservoirs with fresh, new oil. You will then be ready to pass along to the clutch and the gearset.

There are three types of clutch in general use, the cone, multiple disc and plate types. Their construction and operation is, on the whole, so simple that it seems unnecessary to describe them here. If there is anything you would like to know concerning the clutch used on your car, I shall, of course, be glad to explain it for you in a letter.

WANTED

1000 Book-Lovers

With paper soaring, with every other material increasing greatly in cost—the price of fine books is becoming prohibitive. The only remedy is the Ben Franklin plan of buying—eliminating all middlemen's profits.

This pioneer group of co-operative book-lovers—now grown to such a size that it purchases entire Remainders of Editions, Publishers' Overstocks, etc.—offers its members a rare opportunity to secure finest books in sets, de luxe single volumes and standard fiction at a mere fraction of publishers' prices. To the first thousand book-lovers who qualify for membership it offers

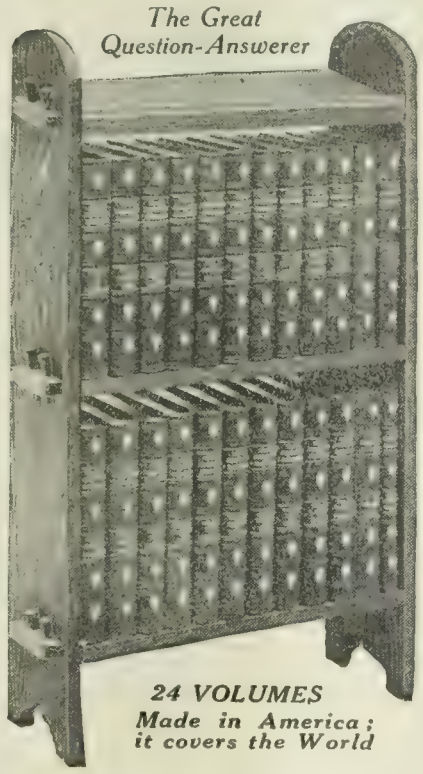
If yours is a cone clutch, clean the facing—if of leather this may be done with a dry cloth, if of fabric you may use a squirt-gunful of kerosene. Use plenty of oil on all the clutch connections, all joints and bearings from the pedal down to the clutch itself. Be careful, however, not to get lubricating oil on the clutch facing for this will cause slipping. If the clutch facing is of leather, dress it with neatsfoot, or castor oil. This keeps the leather soft. If the leather is worn so that it fits the flywheel poorly, you will do well to replace it with a new facing. Cutting and fitting new facings is no easy task. But it is possible for a layman to accomplish if he knows how to go about it. I will send you explicit directions on request. (In writing, please state make and model of your car.)

IN the event that your car is equipt with a multiple disc clutch of the type that runs in oil, drain out the oil and fill the housing with kerosene. Turn the motor over a few times—be sure the gear shift lever is in neutral—and have someone push the clutch pedal in and out for a few minutes, to work the kerosene in among the discs. Drain out the kerosene. Then fill the housing with oil, or a mixture of oil and kerosene—whichever is recommended for use by the manufacturer of your car.

Should you have a dry-disc, or plate clutch, syringe the discs with kerosene to clean off any gummy deposit which may have formed thereon, and carefully oil all connections, keeping an eye open for oil holes that may have become clogged with dirt.

The main clutch troubles, common to all types, are slipping and grabbing. When the engine of your car seems to have plenty of power, but the car itself lags, the clutch is slipping. When it is impossible to let in the clutch gently and the car bounds ahead with a sudden, fierce jerk, the clutch is said to grab. If you have noticed a tendency in your clutch to do either of these annoying things, now is your chance to get at it.



The various types of clutches may be cured of slipping and grabbing in different ways, according to their construction. Let me know what type you have on your car and I will write you how to adjust it. Some clutches run in oil, while others run dry. In overhauling your clutch, do not make the mistake of putting oil into a clutch that does not require it, or of withholding oil from a clutch that needs it. It is broadly true that cone clutches run dry, metal to metal multiple disc clutches run in oil, while metal and fabric disc and plate clutches run dry.

You now proceed to the transmission, commonly known as the gearset. On the top of this you will probably find a plate, fastened to the case with either hand screws or nuts. Remove the plate. Underneath the gearbox you will find a drain plug. Open it. Drain off the lubricant. Close the plug and half fill the gearbox with kerosene. Take a clean cloth saturated with kerosene and

The Importance of looking things up

Nowadays it is necessary to *know*, not *guess*. The *guesser* goes wrong and *loses*. The man who *knows* is the man who *wins*.

In order to *know* about things, especially about the *new things* that are the outgrowth of present-day progress, we must *look things up*, as they *come* up and to do this and do it *right* we must have at hand a *reliable, down-to-date* general reference-work—just such a one as

Know Your Shotgun Shells

YOU can't know too much about the shells you shoot. The information you should have is easy to obtain for it is told on the shell itself. The two ends give the story.

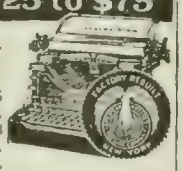
On the base you will of course find the name of the maker and the loader of the shell, and the gauge. At the other end, or the top wad, are printed the size and quantity of shot, the quantity of powder and, last but not least—*the name of the powder.*

Hercules Smokeless Shotgun Powders, Infallible and "E. C.", may be obtained in any standard make of shell. Undoubtedly the name of the maker of your favorite shell is given in the column to the right.

The next time you order shotgun shells it will pay you to see that they are loaded with Infallible or "E. C." Powder. By so doing you will obtain a powder of the highest quality and of uniform quality—a powder that gives unusually light recoil, high velocity, and even patterns. You will find the name of the powder stenciled on the outside of the box, as well as on the top wad.

For a booklet on ammunition, of interest to any sportsman, address

HERCULES POWDER CO.
1037 Market Street
Wilmington Delaware



At this end of the shell is the name of the powder. Ask for and look for

INFALLIBLE
or "E. C."

On this end is the name of the maker. Hercules Smokeless Shotgun Powders may be obtained in shells made by the following:

PETERS
REMINGTON
SELBY
U. S.
WESTERN
WINCHESTER

wipe the gears. Never use waste in cleaning the gears. Once more remove the drain plug. Now feel around in the gearbox to make sure that no gears are chipped or broken and that no stray bits of foreign matter of any kind are hidden there. If everything seems sound, replace the drain plug, pack the case with lubricant, and put back the cover with a new paper or asbestos washer under it.

After the gear-set you arrive at the most neglected parts of the whole car: the universal joints. These are sometimes housed, sometimes open. In any case, clean them thoroly with kerosene and pack them with grease. If the parts of the universal joints are loose they need rebushing.

Further along in the same direction is the differential housing, which contains the drive gears, differential gears and the ends of the axle shafts. This requires treatment similar to that given the gearset. First clean with kerosene and then pack with grease. For details of axle and differential adjustments, please apply by letter.

You are now ready for the brakes. To get at them best, remove the rear wheels. For this you may need a special puller. If you wish to know how to remove wheels I will advise you by mail. With the wheels removed, examine the brakes for worn lining, greasy drums or lining, muddy or loose connections. Brakes must be dry and clean and the lining must be in good condition. If the lining is greasy, but not worn, the grease can be removed. For instructions as to how to do this and also how to adjust brakes, please write me.

THINGS that still remain to be done are as follows: lining up front and rear wheels, adjusting wheel bearings, cleaning, adjusting and lubricating steering gear and connections, cleaning and lubricating springs, tightening all bolts and nuts, loosening demountable rims from wheels in case they have rusted on, inspection of electrical system for broken wires, loose connections, frayed insulation, dirty terminals, the cleaning and lubrication of magneto, distributor, generator, starter and their drive gears or chains, and, finally, attention must be given to the storage battery.

As I have repeated, rather tediously, I fear, thruout this article, it has been impossible for me in the space at my disposal to give adequate detailed directions for overhauling the car. But I will send you full and comprehensive advice if you will ask questions.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information about any individual product.—Address Motor Editor, The Independent, 119 West 40th Street, N. Y. C.

UNIVERSAL MILITARY SERVICE

A BRIEF FOR DEBATE

RESOLVED, That the United States should adopt universal military service.

This brief was prepared by Raymond A. Swink, Instructor in the School of Oratory at Ohio Wesleyan University.

ARGUMENT FOR THE AFFIRMATIVE

I. Universal military service is necessary as a military measure.

A. Change in world conditions demands it.

1. United States has new responsibilities as shown by Great War. a. Dependence on foreign markets to use our surplus makes freedom of seas imperative. b. Task of policing our possessions and upholding Monroe Doctrine greater than ever before.

2. Protection from attack or invasion no longer assured. a. Visit of German U-boats. b. Failure of treaties abroad.

3. Present and future probability of war demands it. a. Japan may cause trouble. (1) Her ambitions in Pacific. (2) Her control of China. (3) Monroe Doctrine interferes with her in South America. (4) Our alien land laws in West offend her. (5) She can strike at Philippines and Hawaii. b. Mexican difficulties show need. c. The "break" with Germany may lead us to war at any time. d. Present difficulties with England over her violations of our rights may cause trouble.

B. Voluntary method of raising recruits is a failure.

1. Has failed in the past. a. It failed in the Revolution, War of 1812, and Civil War. b. Failed last summer in Mexican mobilization.

2. England had to adopt conscription in present war.

3. It failed Belgium in her crisis.

4. Cannot meet our needs. a. War experts say we need 1,500,000 men at once. with 1,500,000 in ready reserve. b. Actual crisis cannot produce paper strength army of 250 000.

C. Universal Military Service as proposed in the United States not the "standing army" system of Europe.

1. Requires a few months as against years of training.

2. Short time does not make for subserviency or militarism in rank and file.

3. Continually changing personnel cannot form military caste.

4. Where opportunity is open to all as in a healthy democracy not enough men can be had for a "standing army."

D. Universal military service will supply our entire military needs.

1. Other democracies have found it successful.

2. Over 1,000,000 men come of military age annually.

3. Allowing exemptions, a few years would produce several million trained men within age limits of 19 and 25.

II. Universal military service will benefit the country in other than military ways.

A. It will promote democracy.

1. A hired, or professional, army is undemocratic. a. Such an army can be used by capital against labor.

2. Universal service army is wholly democratic. a. Requires equality of sacrifice—essence of democracy.

LIPPINCOTT BOOKS

1792 DROIT ET AVANT 1917

FOR SALE AT ALL BOOKSTORES

J. B. LIPPINCOTT COMPANY
MONTREAL PHILADELPHIA LONDON

Joseph Pennell's Pictures of War Work in England

With an Introduction. By H. G. Wells, 51 plates. Lithograph on cover. $1.50 net.

Mr. Pennell secured permission through Lloyd George to make these remarkable pictures of War Work in England, the making of great guns, of shot and shell, the building of air crafts and war vessels. Mr. Pennell's drawings leave an impression of a nation's grandeur more vivid even than the pictures of armies and navies in actual combat.

Some Russian Heroes, Saints and Sinners

By Sonia E. Howe, Author of "A Thousand Years of Russian History." 44 illustrations. $2.50 net

These stories are fascinating studies of Russia and present the intensely human side of a great people. They give one an understanding of Russian national life and character which is far more vivid than any historical work could possibly be. The author has selected all those historical and legendary characters that were types of their generation and prototypes of the Russians to-day.

Training for a Life Insurance Agent

By Warren M. Horner, Illustrated. $1.25 net

The author has had nearly twenty-five years' experience in the field and knows the business from A to Z. He presents the very essence of his business-getting success and his enthusiasm for the work bubbles over on every page. To those who hope to make Insurance their field it is invaluable. It covers every angle that one may wish information upon.

Laws of Physical Science

By Edwin F. Northrup, Ph.D. Limp Leather. $2.00 net

The only book published presenting in exact form all the fundamental laws of science.

Leading Books of the Spring Season

THE CHOSEN PEOPLE, by Sidney L. Nyburg, author of "The Conquest."
OH, MARY, BE CAREFUL, by George Weston. Establishes a record. Moving picture and dramatic rights sold within a month after publication.
THE MARK OF CAIN, by Carolyn Wells, author of the Fleming Stone detective stories.
THE BOOK OF THE PEONY, by Mrs. Edward Harding. The only work on this flower.
JOSEPH PENNELL'S PICTURES OF WAR WORK IN ENGLAND. 51 plates.

(See Description Below)

Sidney L. Nyburg

is marked as a brilliant novelist. His "The Conquest" was selected by H. W. Boynton as one of the ten noteworthy novels of 1916 (see January Bookman). Mr. Nyburg writes with a pen unthwarted by false notions, but alive with sincerity and genuine artistic impulse.

The Chosen People

is a novel of the Jews which strikes a note unheard in American fiction. Labor, capital, orthodoxy and free thinking, religious belief and religious life are among the forces which appear. The story is of a brilliant young Rabbi, his love for a girl and his belief in ideals, his struggles against forces of materialism and his reaction from them. Those interested in the spiritual life of America will read and talk of this story, as it is the most distinctive work of the year. $1.40 net

Oh, Mary, Be Careful

By George Weston, 7 delightful illustrations, handsome binding in a sealed transparency. $1.00 net

"Rollicking, amusing tale."—*Springfield Homestead.*

Just a Moment, Please!

Would you have been careful? Would your Friend have been careful? Would your Sister, Cousin or Sweetheart have been careful? Mary was. You see, there was a fortune between her and her husband. Yes, between her and any husband—but the rich aunt was fond of the girl and gave her three tests to judge those who tempted her. Could you pass those tests? Could your Brother, Friend or Husband? Find out in this delightful, witty and sweet story.

A New Fleming Stone Detective Story

The Mark of Cain

By Carolyn Wells, $1.35 net

Fleming Stone has become one of the great detectives of fiction, and "The Mark of Cain" is one of the most astounding mysteries which he has ever unraveled. Never have stranger occurrences, more unsuspected suspicions, more weird clues beset him than in the murder case of Roland Trowbridge.

The Only Book on This Exquisite Flower

The Book of the Peony

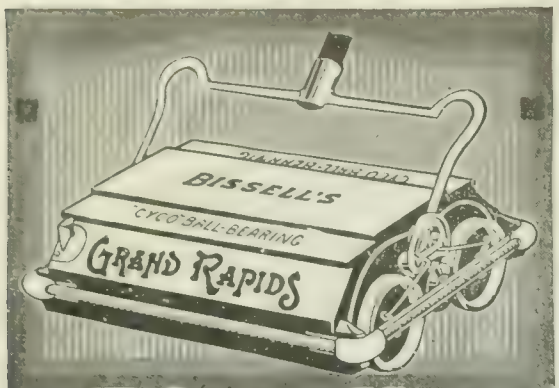
By Mrs. Edward Harding. 44 illustrations (20 in full color from autochromes and 24 half-tones from photographs). Handsome Octavo, $6.00 net.

This book, by an expert, covers the whole subject. The suggestions on purchasing are of the utmost value to the beginner. There are simple and explicit directions for planting (time, places and method), cultivating, fertilizing and propagating. In addition, there are very valuable lists, charts, tables and map.

The Standard Book on Rose Growing

The Practical Book of Outdoor Rosegrowing

By George C. Thomas, Jr., Garden Edition. Containing 36 illustrations. Decorated cloth. Octavo. Also bound in water- and acid-proof cloth for use in the field. $2.00 net.



This edition will be found of great practical help in the garden. It is a handy octavo size.

J. Horace McFarland, editor of the "American Rose Annual," says:

"So far as I know, yours (Mr. Thomas's) is the only impartial, definite and well-recorded rose trial garden in the United States which is at all inclusive in the scope of its varieties."

DE LUXE FIFTH EDITION.

This new printing contains a number of new illustrations in color. There are 96 in color and 20 in black and white. Handsomely bound octavo, in a box. $6.00 net.

Bissell's Carpet Sweeper

The greatest convenience ever invented for household use, an *indispensable convenience* in every home no matter how elaborate is the cleaning equipment.

For you don't want to hook up a power machine for the morning brushing-up; to take up crumbs from under the dining room table, or to sweep up sewing room litter. In addition to its handiness, this famous carpet sweeper is better fitted and more efficient for these sweeping jobs than the best vacuum made—not excepting Bissell's.

If you use Bissell's Vacuum Sweeper for your regular sweeping you still need the Carpet Sweeper.

Yes, you *must have a Bissell's Carpet Sweeper* if housework is to be made really easy. We recommend our Vacuum Sweeper for *keeping* rugs and carpets dust-free. And we advise the Bissell's Carpet Sweeper for coping with surface litter only.

"Cyco" Ball-Bearing Carpet Sweepers are $3.00 to $5.50; Vacuum Sweepers $7.50 and $9.00. A trifle more in the far West, South and Canada. Sold by dealers everywhere. Booklet on request.

BISSELL CARPET SWEEPER CO.
Oldest and Largest Exclusive Manufacturers of Carpet Sweeping Devices in the World

are used nowadays by every modern up-to-date business man; they bring you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC.
106-110 Seventh Ave., New York City

3. Will obliterate class distinctions. a. Rich and poor must take equal chances in trenches. b. Experience of France and Switzerland shows it.

4. Will aid in Americanizing our foreigners. a. Gives them a common purpose. b. It will improve physical efficiency of the nation.

ARGUMENT FOR THE NEGATIVE

I. Universal military service is not necessary as a military measure.

A. We are amply protected against attack.

1. Two oceans form first line of defense. a. No great trans-oceanic war has ever taken place. b. Difficulty of transporting troops great distance from supplies. c. Japan's victory over Port Arthur proves nothing. x. Port Arthur separated by frozen desert from rest of Russia. y. Yellow Sea small body of water in control of Japan.

2. Coast defenses, mines, submarines, aeroplanes, and first class battleships give ample protection. a. Allied fleets unable to land troops on German shores, yet only short distance from base of supplies. b. Failure of Gallipoli campaign shows efficacy of coast defenses. c. Navy cannot operate at over 50 per cent efficiency 3000 miles from base. d. Admiral Dewey said our navy is as good as any.

3. National Defense Act of July, 1916, provides greatest amount of preparedness ever known in time of peace.

B. Position of United States must be maintained by her navy.

1. Chief needs in a military sense are: a. To maintain rights on seas, and in foreign ports. b. To defend our coast cities from sudden attack. c. To protect our outlying possessions. d. To uphold Monroe Doctrine.

2. Only a navy can do this.

3. Conditions here unlike those in Europe. a. Two hostile countries like France and Germany, with overcrowded populations, do not exist here.

C. A large navy does not require universal military service to produce enough men.

1. England's navy, largest on earth, had but a few hundred thousand men in service before the war.

2. What is needed is smaller number of men highly trained.

3. Short term training will not produce type of men needed in navy.

D. Voluntary method of raising recruits will meet needs in time of crisis.

1. Has not failed us in the past. a. So-called failure in Revolution not due to defect in volunteer system. x. Real cause was lack of money and equipment. b. Did not fail in Civil War. x. Draft Act due to political blunders (short term enlistments at beginning, and Stanton's order to stop enlistments). c. Did not fail us in Mexican War. d. Did not fail us in Spanish-American War.

2. Did not fail England in present war. a. Adoption of conscription a political measure.

3. Is not failing us now. a. Plattsburg idea growing in popularity. b. Industries are coöperating with Government. c. Thousands of naturalized citizens offering their services.

4. Army and navy can be made more attractive to volunteers. a. Improve living conditions. b. Promotion based solely on service and merit. c. Provide technical education. d. Give army and navy a constructive work to perform along with military duties. e. Use Land-Grant colleges to better advantage. x. Nicholas Murray Butler says there are 500,000 young men in United States each year who want a college education, but cannot get it because of cost.

E. Universal military service is extravagant.

1. It provides millions of partially trained men.

2. General Scott says it takes at least a year of concentrated training to make a real soldier.

3. Most proposals are for from three to six months' training.

A Lifetime's VALET Service 1¢ a month

Press your trousers EVERY DAY of your life for less than 1 month's tailor's pressing bills, and look spick and span ALWAYS. Leahey's

Heatless Trouser Press

(U. S. Letters Patent No. 1,112,922)

makes a perfect knife-like crease in 15 minutes. Complete pressing in 2 to 3 hours. A Creaser, Presser, Stretcher and Hanger combined in one.

Preserve your trousers—no more hot irons to make shiny "pants" and destroy the original fibre of the cloth. Use the HEATLESS method—*first* cost is the *only* cost. Weight 20 oz. Of finest waterproof manila fibre board, with heavily nickel-plated clamps of finest-tempered spring steel. This

Wonderful Money-Saver

—no operating cost—cuts out all tailor's bills and saves trousers. Trousers pressed while you sleep or travel. West Point Cadets all use Heatless method.

New Trousers for Old

The HEATLESS method—no scorching iron—makes your trousers look like new daily. Average cost 1c a month. Money back if you want it. That's fair, isn't it?

This most dependable and durable outfit will be sent on receipt of $5.00. Send money order or request for complete particulars to Dept. 13 D.

Ideal Medical Appliance Co. 1968 Broadway, New York.

II. Universal military service would be a dangerous policy.

A. It will not promote democracy.

1. It does not involve equality of sacrifice. a. Conscription of wealth alone does that.

2. Does not break down class distinctions. a. Close study of conditions in France and Switzerland shows it.

3. It is enemy of democracy. a. 30,000 officers needed for every million soldiers. b. Their business is warfare. c. They chafe at restraints of civil law.

4. Testimony of great statesmen shows it. a. Viscount Bryce so testifies. b. Bismarck so testifies.

B. It will not promote the kind of discipline and obedience needed in a democracy.

1. It is a conscienceless type of obedience, such as sinks "Lusitanias," etc.

2. Kind needed is self-imposed kind, such as respects laws, tolerates freedom of speech, opinion, press and assembly.

3. Destroys people's powers to think clearly. a. Prussia at first opposed conscription bitterly. b. In few years they have become the "Nemesis of Docility."

C. It will not promote Americanism nor weld our racial elements.

1. Austria, Poland, and Russia stand as fine examples to refute this.

D. It does not promote the type of patriotism needed.

1. Emphasizes narrow nationalism, kind that brought on present war.

2. Real need is a patriotism that will give service to humanity as a whole, thru a League to Enforce Peace.

E. Our mission of democracy condemns it.

1. We are only nation left without militarism.

2. Allies claim to be fighting to destroy this very evil.

GOOD BOOKS

THE ABINGDON PRESS

RESPECT time—the stuff of which your life is made—too much to select reading that does not compliment your taste and your intelligence. For the hours are short wherein you may fashion your mind from more vital material than the physical surroundings of your daily life.

The books of The Abingdon Press are published for those who would make intellectual headway, who realize that constantly they must gain a broader, deeper grasp on the problems of life. Complete catalog on request. A few books of special interest are described here:

MEN WHO MISSED THE TRAIL, *By* GEORGE CLARKE PECK

Here is a book of imagination rather than biography; startling pictures of ancient "unworthies" so vividly done that they seem to live in our block and ride in the same trolleys with us. You will find it difficult to escape the grip of human interest on every page. Hard drives at perennial evils are balanced by generous praise of all the good in bad men. Whatever else the volume does, it will stimulate you.

Price, net, $1.25, postpaid

CHINA INSIDE OUT

By GEORGE A. MILLER

The author has described in graphic fashion the human and universal elements in Chinese homes, streets and crowds. These extremely interesting sketches are profusely illustrated with photographs taken on the spot, making the book attractive and profitable. *Price, net,* $1.00

JOHN AND HIS WRITINGS

By DOREMUS ALMY HAYES

The thesis of this book is that John is a Christian prophet and theologian beyond compare. John, the beloved disciple, at once historian, pastor and seer, moves through these pages a personality pulsating with life and radiating spiritual light. *Price, net,* $1.75

POPULAR ASPECTS OF ORIENTAL RELIGIONS

By L. O. HARTMAN

Wide travel and exhaustive reading combine to make this an unusually vivid and comprehensive study of six of the great religions of the Far East. The author tells how these beliefs find expression in the everyday lives of the people. Illustrated. *Price, net,* $1.35

RELIGIOUS EXPERIENCE: Its Evidential Value

By GEORGE PRESTON MAINS

A thoroughly evangelical and constructive study of the sources and evidential value of religious experience, with the emphasis upon the affirmation of Christian conversion. The book is a valuable addition to the literature of the religious life. *Price, net,* $1.25

BY LUIGI CRISCUOLO

GAINING A FINANCIAL EDUCATION

WE are coming to the fore as an *investing* nation—not merely as a great *creditor* nation. The granting of large credits to foreign governments may be only a temporary banking operation or a long term bond proposition. The obligations will undoubtedly be paid when due. But, the acquiring of the investment habit will be a permanent change that has been looked forward to for some years. Financial institutions and large investors have supplemented their usual investment in domestic securities with the purchase of enormous blocks of foreign government obligations. Industrial corporations have invested a part of their surplus in local securities or have taken foreign government bonds in part payment for war munitions. These securities include direct credit obligations of the belligerents or neutrals, either secured by collateral or plain bonds. It is estimated that the belligerents have borrowed of us over $2,313,375,000 while the total foreign loans placed in the United States amount so far to $2,500,000,000.

The flotation of many millions of new securities has attracted the attention of the man who has never invested and had a most meager knowledge of the science.

There is no science more interesting to the man who has funds, or expects to accumulate some, than that of investment. And it is surprising how much one can learn in six months or so from the perusal of a few non-technical books, a standard financial periodical and the market pages of any metropolitan daily newspaper.

The reader who knows little or nothing about securities can very profitably start his education by reading one or more of the following books, viz.: "A B C of Banks and Banking," Coffin, 65 cents; "Investment Bonds," Lownhaupt, $1.88; "Investors' Primer," John Moody, $1; "Book of Thrift," McGregor, $1.12; "Funds and Their Uses," Cleveland, $1.40; "Practical Investing," Escher, $1.60; "Cycles of Speculation," Gibson, $1.50. "The Stock Exchange from Within," by W. C. Van Antwerp, $1.60, was written by a member of the New York Stock Exchange—a defense of that institution against criticism. It is an intensely interesting as well as educative work on that exchange. Other books are: "How to Analyze a Railroad Report," Moody, $2.10, and "Railroad Reorganization," Daggett, $2.19. "Corporation Finance," Meade, $2.15, is an excellent book for the fairly advanced student and this is to be followed by "Principles of Bond Investment," Chamberlain, $5.20, which is the most complete book on bonds and factors applying to bond investment that we know of.

The student who reads the greater part of the works mentioned will be in a position to study individual securities as they are brought to his attention for investment. He can add to his library copies of the many instructive booklets distributed by investment houses and covering all subjects from $100 bonds to investments legal for savings banks or analyses of individual properties. "The Investor's Pocket Manual" is a fountain of information on all classes of securities having a general market and is sent free on request to any large firm.

For more detailed information on securities the various manuals such as Poor's or Moody's should be consulted in a library; other handy works of reference are "Earning Power of Railroads," Moody, $2.50; "Fitch Bond Book," $15, gives a description of all bonds having a general market; "Moody's Analyses," two volumes, $25, is a most elaborate work, giving statistics on corporations and ratings on individual securities. The student of individual railroad mortgage bonds can analyze the lien of such issues by reference to the "Fitch Atlas," $35, which shows graphically all of the prominent railroads in this country, with the relative position of individual bond issues. A most instructive book on bonds is "Holders of Railroad Bonds and Notes," by Heifft, $2.10, which sets forth in detail the rights of security holders. This is particularly interesting in this period when so many railroads are in process of reorganization.

It is realized that many of the works cited are so expensive as to make their purchase prohibitive excepting by men of means; they are suggested with a view to enabling those of our readers who are large investors to keep posted on intrinsic values rather than rely on hearsay or "tips." The small investor can buy one or two of the text books and content himself with what knowledge he can glean from the vast amount of literature that is given gratuitously by investment firms.

By the time the student has familiarized himself with securities in a very general way he should subscribe to a good financial periodical. There are many of these with subscriptions ranging from $3 to $10 yearly. A list will include: *The Financial World*, $4; *United States Investor*, $10; *Investment Weekly*, $5; *The Commercial and Financial Chronicle*, $10; includes valuable supplements with detailed in-

issued in multiples of $50.00 are most desirable investments. Booklet "A" Tells Why—it's Free. Paid-in Capital Half a Million Dollars

THE BANKING CORPORATION

HELENA MONTANA

formation regarding securities of all kinds. This publication is the most complete record of weekly financial doings that we know of and contains quotations on securities and commodities, general legislative and industrial news, offerings of new securities, etc. We recommend it to the large investor, bank official or advanced student. The *Wall Street Journal*, $12 yearly, is the leading daily financial paper and is also suitable for the advanced reader, but daily newspapers published in large cities have enough financial news and quotations for the average investor who reads a weekly.

The New York *Times*, *Sun*, *Post*, *Tribune*, Chicago *Tribune*, Chicago *Evening Post*, San Francisco *Examiner*, St. Louis *Globe-Democrat*, Philadelphia *Ledger*, Baltimore *Sun* and Boston *Transcript* have tables showing stock and bond prices to enable investors to keep in touch with current quotations, besides general news in condensed form and instructive advertisements. The New York *Evening Post's* Saturday edition is widely read for its editorials on finance and commerce and should be taken by the advanced student.

It must be borne in mind that the stock market *anticipates* events and discounts favorable or unfavorable developments. For these reasons, day-to-day fluctuations should not influence one in taking a position either to sell or buy. Fundamental conditions, intrinsic values and prospects for the *long swing* should govern.

While it is not possible for us to mention the names of the publishers of the works mentioned in this article, it will be said that if readers cannot purchase them from their own book dealers, we will endeavor to supply any book upon receipt of a money order covering the cost. We will also be glad at any time to prepare special courses of study to suit individual investors.

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

Since 1865 Investments

EVEN before the *Great Eastern* successfully laid the first Atlantic cable and the telegraph and telephone were yet limited in their scope, we served investors.

Since that time, a great many individual investors and banking institutions have used our services in purchasing investment securities. If you have funds which you wish to invest, of either large or small amount, we shall be glad to give you suggestions out of our experience, in regard to placing them to best advantage. Your bank can advise you about us.

Our booklet, "Investing $100 to $10,000," will interest prospective investors as well as those more experienced. Write to Department "D," 47 Exchange Place, New York, or 8-12 South Calvert Street, Baltimore.

You Be the Judge

Exact Size

Trust your taste, not mine. Before you buy a box of my J. R. W. cigars I want you to try five at my expense. Prove to yourself first that the J. R. W. cigar is *your* cigar.

All you have to do is to send me your name and address on a letterhead and 10c to partially cover packing, postage and revenue and I will forward you these J. R. W. cigars to try. If you like them, send me $2.60 for the full box of fifty. If you don't, they have cost you nothing.

My Business

About five years ago I started to sell my J. R. W. cigar. I started on the same plan I am using today. At the end of the first year I was selling about 90,000 cigars a year. Today I am selling over 2 million.

When you consider that every J. R. W. cigar I send out is smoked in a super-critical manner, the real merit of my cigar is proved. It has a mild and mellow, yet satisfying, taste that delights all smokers.

How I Do It

You buy the J. R. W. cigar direct from me. I eliminate all salesmen's salaries, store upkeep and dealers' profits. You are paying no intermediate profits. Just straight tobacco value.

And J. R. W. cigars are always fresh. They come straight from the factory to you. Weeks of standing on shelves or in cases until their fresh taste and delightful aroma are lost is eliminated. Write today for this delightful cigar and be convinced.

Insurance

Conducted by

W. E. UNDERWOOD

AGAINST CHANGING COMPANIES

There is a matter related to the Insurance Service of The Independent which I wish to make plain to readers. To begin with, I want it understood always—unless in particular instances the contrary is specifically exprest—that any criticism I may make of a policy, a plan, or a company, or any conclusion which may be arrived at as the result of a comparison in any of these things, my opinions are not to be accepted as recommendations either to abandon policies now held, or to avoid insuring in any particular company.

In discussing subjects treated or in answering questions, the best effort of which I am capable is made to get the facts, to secure the information. Sometimes this is both difficult and time-consuming. When secured, my judgment is founded on them and I endeavor to make that impartial. Care is exercized against uttering anything that may result in an injustice. There cannot be, for example, any comparison made, involving two or more like things, that will leave all of them even each with the other — there must remain a best and a worst.

These observations are addrest to my readers because I find that some of the conclusions I present from time to time on particular subjects bear fruit in the form of letters asking if the writers would not be exercizing prudence or good judgment in lapsing an existent policy and taking insurance in another company. To encourage that sort of thing would defeat the objects for which this department exists. It is a rare case in which a policyholder in a good, average company, after investing three or four years of time and premiums, can better himself by abandoning the policy held for one in even a company of superior merits. At any rate, I am not willing to advise it, especially at long distance. All that I have here written applies to old line, legal reserve life insurance.

On assessment life insurance my position is reversed. There are two or three fraternal orders and assessment associations worth remaining in. The others, viewed actuarially, are chimeras. They pretend to be mathematically scientific and succeed in being only fantastical. Again and again I have written that there is no bargain counter in life insurance. Its full price must be paid.

And so it usually happens when a man is not too old and he asks me, I advise him to give up reserveless assessment certificates for guaranteed reserve policies.

The Countryside
SUBURBAN LIFE

SIX GREAT SPECIAL NUMBERS FOR ONLY ONE DOLLAR

Because You Live in the Country

The Countryside Magazine is for you. And this offer is for you. Six great special numbers, with gorgeous covers by Paul Bransom; a wealth of beautiful pictures, and articles on every phase of country living, for only One Dollar. The numbers are:

April - - - - - Spring Planting Number
May - - - - - - Suburban House Number
June - - - - - Porch and Lawn Number
July - - - - - - Summer Sports Number
August - - - - - - - Motoring Number
September - - House Furnishing Number

This is the limited offer of the new owners (The Independent Corporation) to enable you easily to make the acquaintance of the greater Countryside Magazine. Good only if you accept before April 20.

Because you live in the country—or expect to live there some day—or go there now for rest and recreation, The Countryside is *your* magazine.

Every important problem that concerns your comfort or enjoyment as a country householder you will find discussed in The Countryside by recognized authorities who stand highest in their chosen fields.

Each number has its big central subject in season—but every number is a garden number, a building number, a house furnishing number, a decoration number, a poultry number, a motor number—a country living number in every sense. The Countryside service never stops, in any part of its field.

Note These Features

Space permits only brief mention of the editorial plans of the new owners.

Aymar Embury II, with five articles, inaugurates "The House Livable." Harold A. Caparn, former President of the American Society of Landscape Architects, is presenting a series of articles on "The House Outdoors." J. Horace McFarland launches our campaign "Better Roses for America" with an article in March illustrated in four colors.

"The Whole House—Room by Room" is another new feature to begin soon—a series of monthly manuals—taking up the problems of construction, decoration and furnishing as applied to each room as a unit from bedroom to library.

Churchill Ripley writes during 1917 on Rugs; E. I. Farrington writes on Poultry (every month); Harold D. Eberlein and Abbott McClure write on Furniture; William Haynes and Mrs. Leslie Hall write of Dogs and Kennel Interests; Charles Dexter Allen tells what is new in Textiles; Harold J. Howland supplies a monthly editorial on the Spirit of the Countryside; Theodore M. R. von Keler is the Motor Editor and conducts the Motor Service; F. F. Rockwell, Jessie P. Frothingham and Parker T. Barnes write on Horticulture and Gardening; Frank A. Waugh writes on Trees; Professor Hugh Findlay will conduct "The Countryside Garden Laboratory," a great new gardening manual to appear in The Countryside every month.

Note These Names

The roll-call of contributors under the new ownership includes such names as: Margaret Woodrow Wilson; Zona Gale, author of "Friendship Village"; George Madden Martin, creator of Emmy Lou; W. H. Truesdale, President of the Lackawanna Railroad; Rev. Harry Emerson Fosdick, of Union Theological Seminary; Mary Sargent Potter, daughter of Professor Sargent of the Arnold Arboretum; Hudson Maxim; Joyce Kilmer; Edna Dean Proctor; George W. Cable, author of "Old Creole Days"; Stewart Edward White, author of "The Blazed Trail"; Gutzon Borglum, Sculptor; Kathleen Norris, author of "Mother"; Walter Prichard Eaton; John Burroughs; Norman Harsele; Max Eastman; Josephine Daskam Bacon; Herman Hagedorn; May Irwin; Edward F. Bigelow; Jack London; Wilfrid Wilson Gibson; Cecilia Beaux; Herbert Reed (Right Wing); P. A. Vaile; Margaret Deland; Mary Roberts Rinehart; Marion Harland, and many others whose names stand high in American literature.

Note This Program

Here are the specific interests to which The Countryside devotes its attention primarily:

HOUSE BUILDING—The acquisition of land, selecting the building site, placing the house, scientific construction, modern efficiency, buying the best building materials and equipment, choosing the house plans, dealing with the architect and builder—on these subjects the country house owner needs sound advice. He gets it in The Countryside Magazine.

INTERIOR DECORATION—What is new in flooring, wall coverings, mantels, bath room fittings, lighting fixtures, wood finishing? The Countryside has articles and pictures about everything that goes to make the house inside comfortable, beautiful, sanitary and efficient.

HOUSE FURNISHING—Choosing rugs, curtains, hangings, furniture. Every object that helps to make your life indoors complete you will find discussed in The Countryside by writers who know their subjects well.

OUTSIDE THE HOUSE—Preparing and keeping up the grounds to make your house in the country beautiful in its setting, putting up greenhouse and garage, buying seeds and bulbs, planting the garden, choosing efficient tools, planning the flower bed, selecting porch and garden furniture and decorations, enriching the soil, raising small fruits, keeping poultry, dogs and live stock—all these delights of country living are dwelt upon in The Countryside by experts who write from scientific knowledge and experience, but in such a way that everyone may understand and receive the maximum of help and pleasure from their reading and from the pictures.

HORTICULTURE—Here again The Countryside enjoys unusual distinction because of its exceptional sources of information and its scientific and accurate presentation of horticultural knowledge.

SPORTS AND RECREATION—Life in the open air is a big factor in your scheme of country living. In The Countryside, as the seasons come round, you will find striking and picturesque articles on motoring, golf, tennis, riding, driving, skating, shooting, fishing, camping, boating and other sports—to help you get the most out of your life along the countryside.

THE NEIGHBORHOOD—Good roads for your motor car, better schools for your children, proper lighting for your side-walk, the country club for your recreation, the suburban church for your worship, improved railway stations and train service for your suburban travel, more attractive approaches for your town—these things concern you intimately; and these are things for which, as you will see, The Countryside stands.

The Countryside Shop

A new and unique service free to every reader. This alone is worth many times the full subscription price—merely in what it saves you.

The Countryside Shop keeps you in touch with the new things, and the best things, offered by the merchants and makers, growers and distributors. It brings you the new ideas of those who plan and execute. It tells you how to get things, what to get and where to get them. Its expert counsellors are leaders in their special fields. Consultation is free—regarding Seeds, Bulbs, Shrubs or Trees, Garden Equipment, Outdoor Adornment, House Plans, Building Materials, House Furnishings and Decorations, Furniture and Rugs, Motor Cars and Accessories, Trucks and Tools, Poultry and Dogs, Sporting and Outdoor Goods, Country Property.

Say Yes Now

Use the yes blank below. No matter about the money today. The main thing is—get your acceptance in and enjoy your first number of what we plan to make the most definitely useful periodical aid to country living in America—and the most interesting.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

Three Poems by Verner von Heidenstam.

1. Give the meanings of the following words that occur in the poems: ness, zephyr, quarry, trolls, eon, cyclopean, morass, ooze, saurian, mastodon, murkiest, primeval, limpid.
2. What emotions move the poet when he thinks of his country home?
3. In what respects is the forest of Tiveden primeval?
4. What does the poet mean by saying his land is "arrayed in the ragged dress of poverty"?
5. Explain the line " 'Tis himself that his strong hands fashion."

The Poet of Sweden. By Charles Wharton Stork.

1. Explain the following expressions: lyric, poetry, realism, idealistic poet, vivid idyllic pictures, joyousness of color, the rough tragi-comedy of peasant life, spiritual stability, exotic note, universal in appeal, vivid phrase, introspective poems.
2. In what way was Walt Whitman "the voice of America"?
3. In what ways is von Heidenstam "the living voice of Sweden"?

The Lady or the Tiger. By Frank R. Stockton.

1. What type of story did Stockton usually write?
2. What means did he take to make his stories appealing?
3. Explain clearly what is meant by "story of ingenious plot."
4. How much of "The Lady or the Tiger" depends upon plot and how much depends upon character?
5. Point out original humorous turns of expression.
6. Show how the plot of this story has been made unusually clear and emphatic.
7. Give a full exposition of the character of the Princess.
8. Give your answer to the question asked at the end of the story. Tell why you answer as you do.
9. What do the last seven paragraphs add to the story?
10. Write a short story of ingenious plot.

The Law and the Profits. By Ellis O. Jones.

1. What two serious points of view are presented in this satire?
2. What advantage has been gained by the use of dialog?
3. What is satirized in "Gulliver's Travels"? In what way does this satire resemble "Gulliver's Travels"?

SECTION II. COMPOSITION.

The President, the People and the Fate of the World. By Gerald Stanley Lee.

1. What serious criticism of our national life does this article present?
2. What constructive suggestions does the author make?
3. What is gained, and what is lost, by the humorous style?

Zemstvo Russia. By Samuel N. Harper.

1. Write a clear explanation of the Russian Revolution.
2. Write a short article in which you show what great advantages Russia has gained by the revolution.

The Lady from Missoula. By Donald Wilhelm.

1. Write a short character sketch of Miss Rankin.

Universal Military Service.

1. Without notes of any kind stand before the class and give any part of the debate here indicated.
2. Write a brief for a debate on some other topic of the day.

Editorial Articles.

1. Write a clear explanation of the purposes of the United States in moving toward the Great War.
2. Explain the methods by which it is advisable for the United States to fight.
3. Write a short composition concerning the present financial condition of the United States.
4. Write an explanation of the advantages gained by the Germans in retreating to a new line.
5. Write a short composition in which you show the various possibilities of the Great War.

The Story of the Week.

1. Explain the present situation of affairs in the Great War.
2. Write an argument based on "A Land Laid Waste."
3. Write any part of an oration based on "German Plot Rumors."
4. Write a composition of contrast concerning the present state of preparedness in the United States and the condition that you think would be ideal.
5. Write a clear explanation of the changes that have recently taken place in the government of Russia.
6. Show in what ways the Russian Revolution resembles the French Revolution as described in "A Tale of Two Cities."
7. Write an editorial article in which you express your opinion as to how the Russians should treat the deposed Czar.
8. Write a composition in which you point out important matters of public interest not definitely connected with the Great War.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. The United States and the Great War—"For Humanity and World Peace," "Aspects of Preparedness," "Mobilizing Public Sentiment," "Congress to Meet Early."

1. "The United States of America is about to enter the Great War." State as clearly as you can the reasons.
2. Answer the question: "To what end shall we wage war?"
3. What facts support the phrase: "The unbelievable patience and long-suffering of the American people"?
4. What form of activity is proposed as proper for the United States?
5. Analyze the news item: "Aspects of Preparedness." Is our preparation adequate?
6. What circumstances have led to the calling of the special session of Congress? What action will Congress probably take?

II. The American Army—"Universal Military Service."

1. Study both sides of this brief for debate. Choose the side which you favor and develop the proof in support of one or more of the headings; e. g., 1A, 1B, etc.

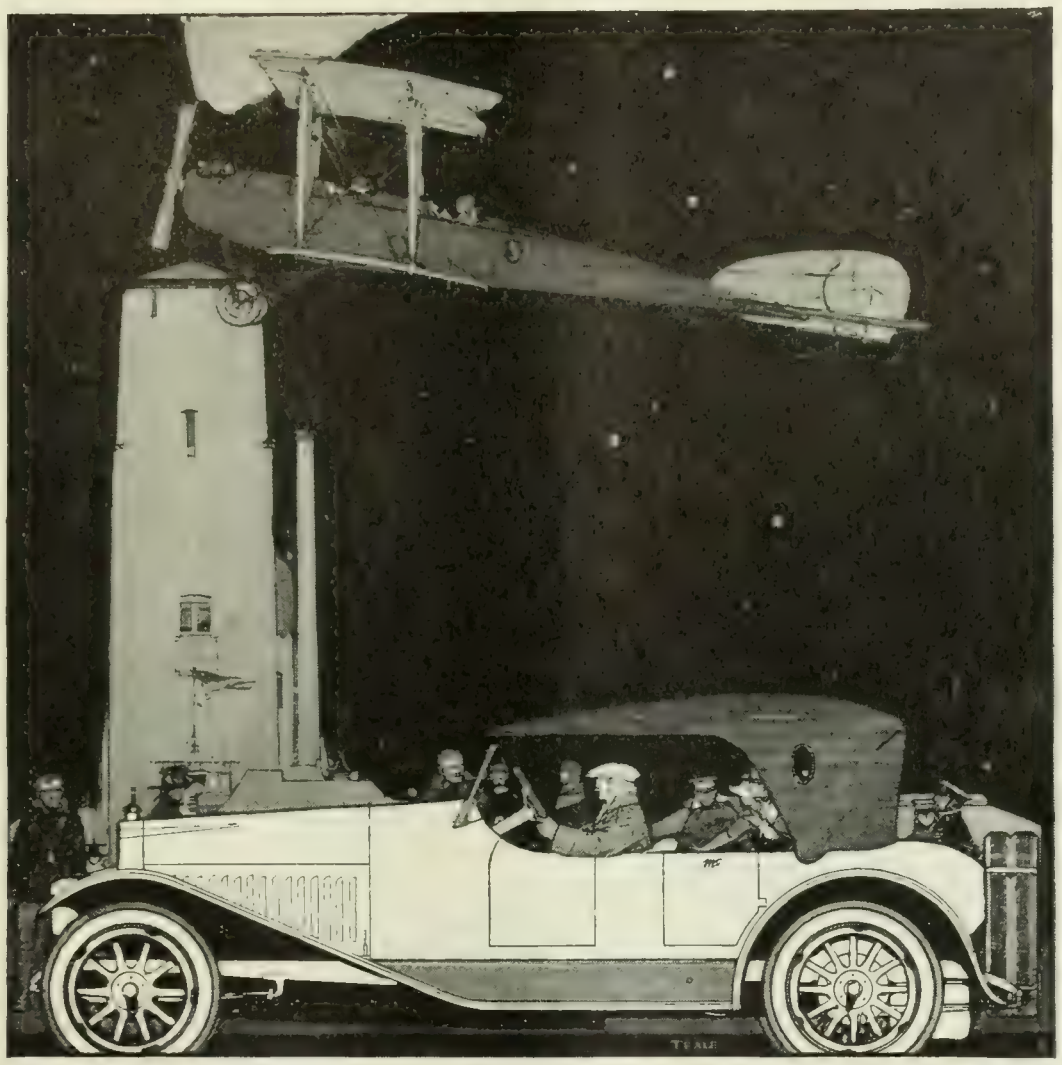
III. Woman's Suffrage—"The Lady from Missoula."

1. What, according to Miss Rankin's statement, is to be her chief interest in Congress? What training has she had for this work?
2. Study Article V of the Constitution. Describe the process necessary "for the national enfranchisement of women."
3. What is the status of the woman's suffrage movement in your own state? in the United States in general?

IV. The Progress of the War—"The Budging Line," "The Hindenburg Line," "A Land Laid Waste."

1. Review (a) the story of the German advance and retreat in the summer of 1914, (b) the German attack on Verdun, (c) the previous attempts of the British and French to break the German line.
2. Referring to the present activities the editorial says: "The Germans call it 'a strategic retreat.'" etc. Explain.
3. "Hindenburg does not like trench warfare," etc. Look up the story of Hindenburg's leadership on the eastern front for confirmation of this statement.
4. Can you see any connection between the German withdrawal on the west front and a possible military campaign in some other quarter?

V. The Russian Revolution—"Four Good Deeds of the Czar," "Zemstvo Russia," "The New Regime in Russia," "A Minister of Justice," "The Prisoner of the Palace."



1. "Few Czars have been better; most of them have been much worse." Study the history of Russia during the last century. Which of Nicholas II's immediate ancestors were better men than he is: which of them were worse?
2. "The revolution was therefore first and foremost a war measure," etc. What proof is given of this statement?
3. Make a list of the men discussed in the article, "Zemstvo Russia." Write a brief paragraph about each.
4. Compare the attitude of Minister Kerensky to the attitude of such leaders in the French Revolution as Danton.
5. "The New Government has issued a manifesto restoring the Finnish constitution," etc. Look up the history of the relation between Russia and Finland.
6. Compare the present position of the Czar to that of Louis XVI in 1789. Do you think that the fate of the Czar will be similar to that of Louis XVI? Why?

VI. International Trade and Finance—"The Financial Problem," "Foreign Loans Commended."

1. Study the figures concerning loans, securities, trade balances, bank reserves, gold importations, etc. Explain, as far as you can, the relation of these various items to foreign and domestic trade.
2. Note the causes of the breakdown of credit at the opening of the war. "Will all this happen to the United States?"
3. What is the purpose and the power of the Federal Reserve Board in domestic finance, in international finance?
4. Why has the Federal Reserve Board modified its warning of last November? What policy is it advocating now?

VII. Child Labor—"The Law and the Profits."

1. What are the arguments in favor of child labor? What are the arguments against it?
2. What provisions have been made in your state for regulating child labor? What further regulation, if any, would you suggest?
3. What action did the last Congress take on the question of child labor?

White Sixteen valve 4

THE Sixteen-Valve Four is an important step forward in the new trend of power plant development — utilizing the full *capability* of each cylinder rather than mere *multiplication* of cylinder units. Power and flexibility have been obtained by the simplest means.

In the new White motor, four cylinders accomplish the result of two or three times this number. Performance is even more satisfactory because of greater freedom from complications and is indefinitely *maintained at its best* by the simplicity and ruggedness of the four-cylinder type.

THE WHITE COMPANY
CLEVELAND

CHANDLER SIX $1395

THE CHANDLER CHECKS
With High-Priced Cars

CHANDLER checks in the most essential features of design and construction and equipment with the high-priced cars. Chandler *performs* with the high-priced cars.

The manufacturer of one Six can make just as big *claims* as any other. The Chandler Company likes to deal in facts.

For years the Chandler Company has made the Chandler a *fact*-car, not a *claim*-car. Claims sell a lot of cars, but facts sell *more* cars, just as fast as the buyers learn the facts.

The Chandler is honestly built and moderately priced. There is no other Six, selling at anything like the Chandler price, which will give you *so much* dependable service.

Thousands of motor car buyers recognize the mechanical superiority of the Chandler Six, mechanical superiority achieved through the Marvelous Motor—the *exclusive* Chandler Motor, powerful, flexible, simple and economical—and through the excellence of design and construction of the entire Chandler chassis.

So many recognize its superiority that the Chandler has earned a front rank position in the industry. So many recognize it that twenty-five thousand buyers this year will choose the Chandler as the Six to be preferred above all Sixes.

FIVE PLEASING TYPES OF BODY

Seven-Passenger Touring Car, $1395
Four-Passenger Roadster, $1395 *Seven-Passenger Convertible Sedan, $2095*
Four-Passenger Convertible Coupe, $1995 *Limousine, $2695*

All prices F. O. B. Cleveland

Write us today for catalog and booklet "See How the Chandler Checks With High-Priced Cars." This booklet tells how ***other*** medium-priced sixes ***do not*** check with high-priced cars. Write today, and see your dealer. Address **Dept. F.**

WHAT DO YOU KNOW?

For the lover of facts we are printing the accepted answers to the questions of the mental inventory published last month. Altho the faculties of the Friends' Schools of Germantown and Baltimore, to whom we owe most of the test, would probably not adopt amendments to their answers, yet for originality, imagination, subtlety and humor, we think some of the replies we have received far ahead of those that were marked 100 by the examiners.

The London *Times*, for instance, figures as a "humorous paper." Lots of people have thought that but haven't had the courage to state it. Procrastination appears as the "mother of invention." Sure enough, now we think of it, she is! If we would only put off till tomorrow all the piffling business of life there'd be some chance of everyone having time to originate something worth while.

What a pity that the suggestive explanations of poliomyelitis as a breakfast food, a result of the use of alcohol, and the worship of more than one god come too late to help last summer's puzzled health boards. It is again the practical scientist who explains that freezing water bursts pipes "because it has no other way to get out." True indeed! The youth, we are sure it was a youth, who took Mr. Britling for a "prominent baseball player" has an ear for euphony. The name has a baseballish sound. Or perhaps he mixed up Sunday hockey at Matchings Easy with the World Series.

Anent the war there is a group of answers quite too fine to be lost. A periscope is quite generally thought to be an instrument for searching the secrets of the heavens, a use certainly not often mentioned in the news columns. It is even more imaginative, however, to mistake it for a "Railroad Branch of the Pennsylvania Railroad" —Y. M. C. A. probably. A filibuster is "an outlaw that preys on people," "a war for financial benefit," "an Englishman in Revolutionary days." At least there is a unanimous opinion, that whatever the animal may be he is objectionable! There is more discouragement as to the outcome of the war, however, than we like to to see, in the statement that the other name of the Slough of Despond is the Atlantic Ocean, and that a dinosaur is an officer in the Russian Government. However, that probably means the late government.

For the benefit of our fellow suffragists we have saved Susan B. Anthony's life history to the last. She, it seems, was "a social talker," "a leader in the food riots," "a friend of Cæsar" and the "wife of Mark Anthony."

1. Miss Jeannette Rankin, of Montana. 2. James C. McReynolds; Louis D. Brandeis; John H. Clarke. 3. Newton D. Baker. 4. Francis Joseph I. 5. David Lloyd George. 6. Martin Luther. 7. Rabindranath Tagore. 8. Thomas Mott Osborne. 9. William Shakespeare. 10. California. 11. Danish West Indies. 12. Brigadier General John J. Pershing. 13. Admiral George Dewey. 14. Henry P. Fletcher. 15. Argentina, Brazil, and Chile. 16. President Wilson. 17 Poland. 18. Greece. 19. League to Enforce Peace. 20. Switzerland, Holland, Denmark, Sweden, and Norway. 21. Gilbert Stuart.

IMPOSSIBLE AND IMMORAL

MR. BRYAN has petitioned Congress not to declare war on Germany. He proposes that recourse be had first to the plan embodied in the peace treaties concluded with thirty nations when Mr. Bryan himself was Secretary of State. These treaties provided for a year of investigation by an international tribunal before resort to war. Mr. Bryan presumably would have the United States propose to Germany that the question, whether Germany is justified in sinking American ships on the high seas without warning and in killing American citizens traveling on the high seas in strict conformity with the regulations of international law and immemorial custom, shall be submitted to an international tribunal for determination. The thing is impossible.

In the first place it is inconceivable that Germany should do it. The submission to a tribunal, for judgment as to its justifiability, of the practice of sinking ships and killing noncombatants on sight would necessarily involve the suspension of the practise while the case was being adjudicated. Does any one believe for a moment that Germany in its present straits and its present temper would consent to interrupt its submarine war against England for a year? Does Mr. Bryan believe it? All Germany looks upon the submarine warfare as the one weapon that will bring victory to the German arms. It has been conclusively demonstrated that submarine warfare, to be effective, must be "ruthless." Every appeal that the United States has made to German respect for humanity and German regard for the rights of others has been fruitless. Will Germany now suddenly listen to reason and forego the use of its most powerful weapon while its right to use it is being debated?

In the second place, the United States ought not to do it. There is one exception to the proposition that every dispute between nations can and should be settled by peaceful means. In this proposition The Independent profoundly believes; but the proposition falls to pieces the instant one nation makes war upon another. *Inter armas leges silent*—in time of war the laws are silent. The one question which cannot be settled by peaceful adjudication is the question whether one nation shall continue to make war upon another. This fact is recognized by the League to Enforce Peace, whose basic principle is arbitration; for the program of the League provides that, as soon as a nation has made war without having first resorted to peaceful means, its use of force shall be met by concerted war.

Germany is making war upon the United States. The President and the Congress are about to recognize this fact. The only answer is war. The actual recourse to force can only be met by force. To deny this principle would be to ignore fundamental facts.

There are some things on which no man or nation will accept the judgment of others. Self-defense is an inalienable right of the individual. The defense of its citizens is not only an inalienable right of a nation but an unescapable duty. If a court should order a man not to defend his life against the attacks of another, he would defy the court and refuse to obey. He would be right to defy the court. Still more if the court should forbid him to defend his wife or his child. So, too, if an international court should forbid the United States to defend the lives of its citizens, the United States ought not to obey. If we know the American people at all, they would not obey. Respect for a court can only be predicated on the assumption that the court will not order a man or a nation to do wrong.

The United States, then, cannot submit to the judgment of others a question to which it is ready to accept but one answer. The United States would not accept the judgment of any tribunal in the world that Germany was justified in sinking American ships without warning and killing peaceful American travelers on sight. Since it could not, without doing violence to its own moral sense, accept such a judgment, it cannot go into court with the case. If Mr. Bryan and those who are spending a great deal of money to bring similar views to his before the American people believe that the United States could and ought to accept such a decision, we differ with them on fundamental moral grounds.

But Mr. Bryan and his associates put the whole matter on too low a level. They discuss it as tho it were merely a matter of American rights. It is vastly more than that. It is a matter of America's solemn duty. As the months go by and the evidence piles up it becomes ever clearer that the Great War is fundamentally a conflict between humanity and barbarism, between civilization and savagery, between democracy and autocracy, between right and wrong. In such a conflict how can the great democracy of the Western Hemisphere be neutral? How can we forbear longer to join hands with those who are resisting with all their force the evil that is menacing the world?

A nation may, if it will, give up its rights. It cannot, without eternal disgrace, repudiate its duties.

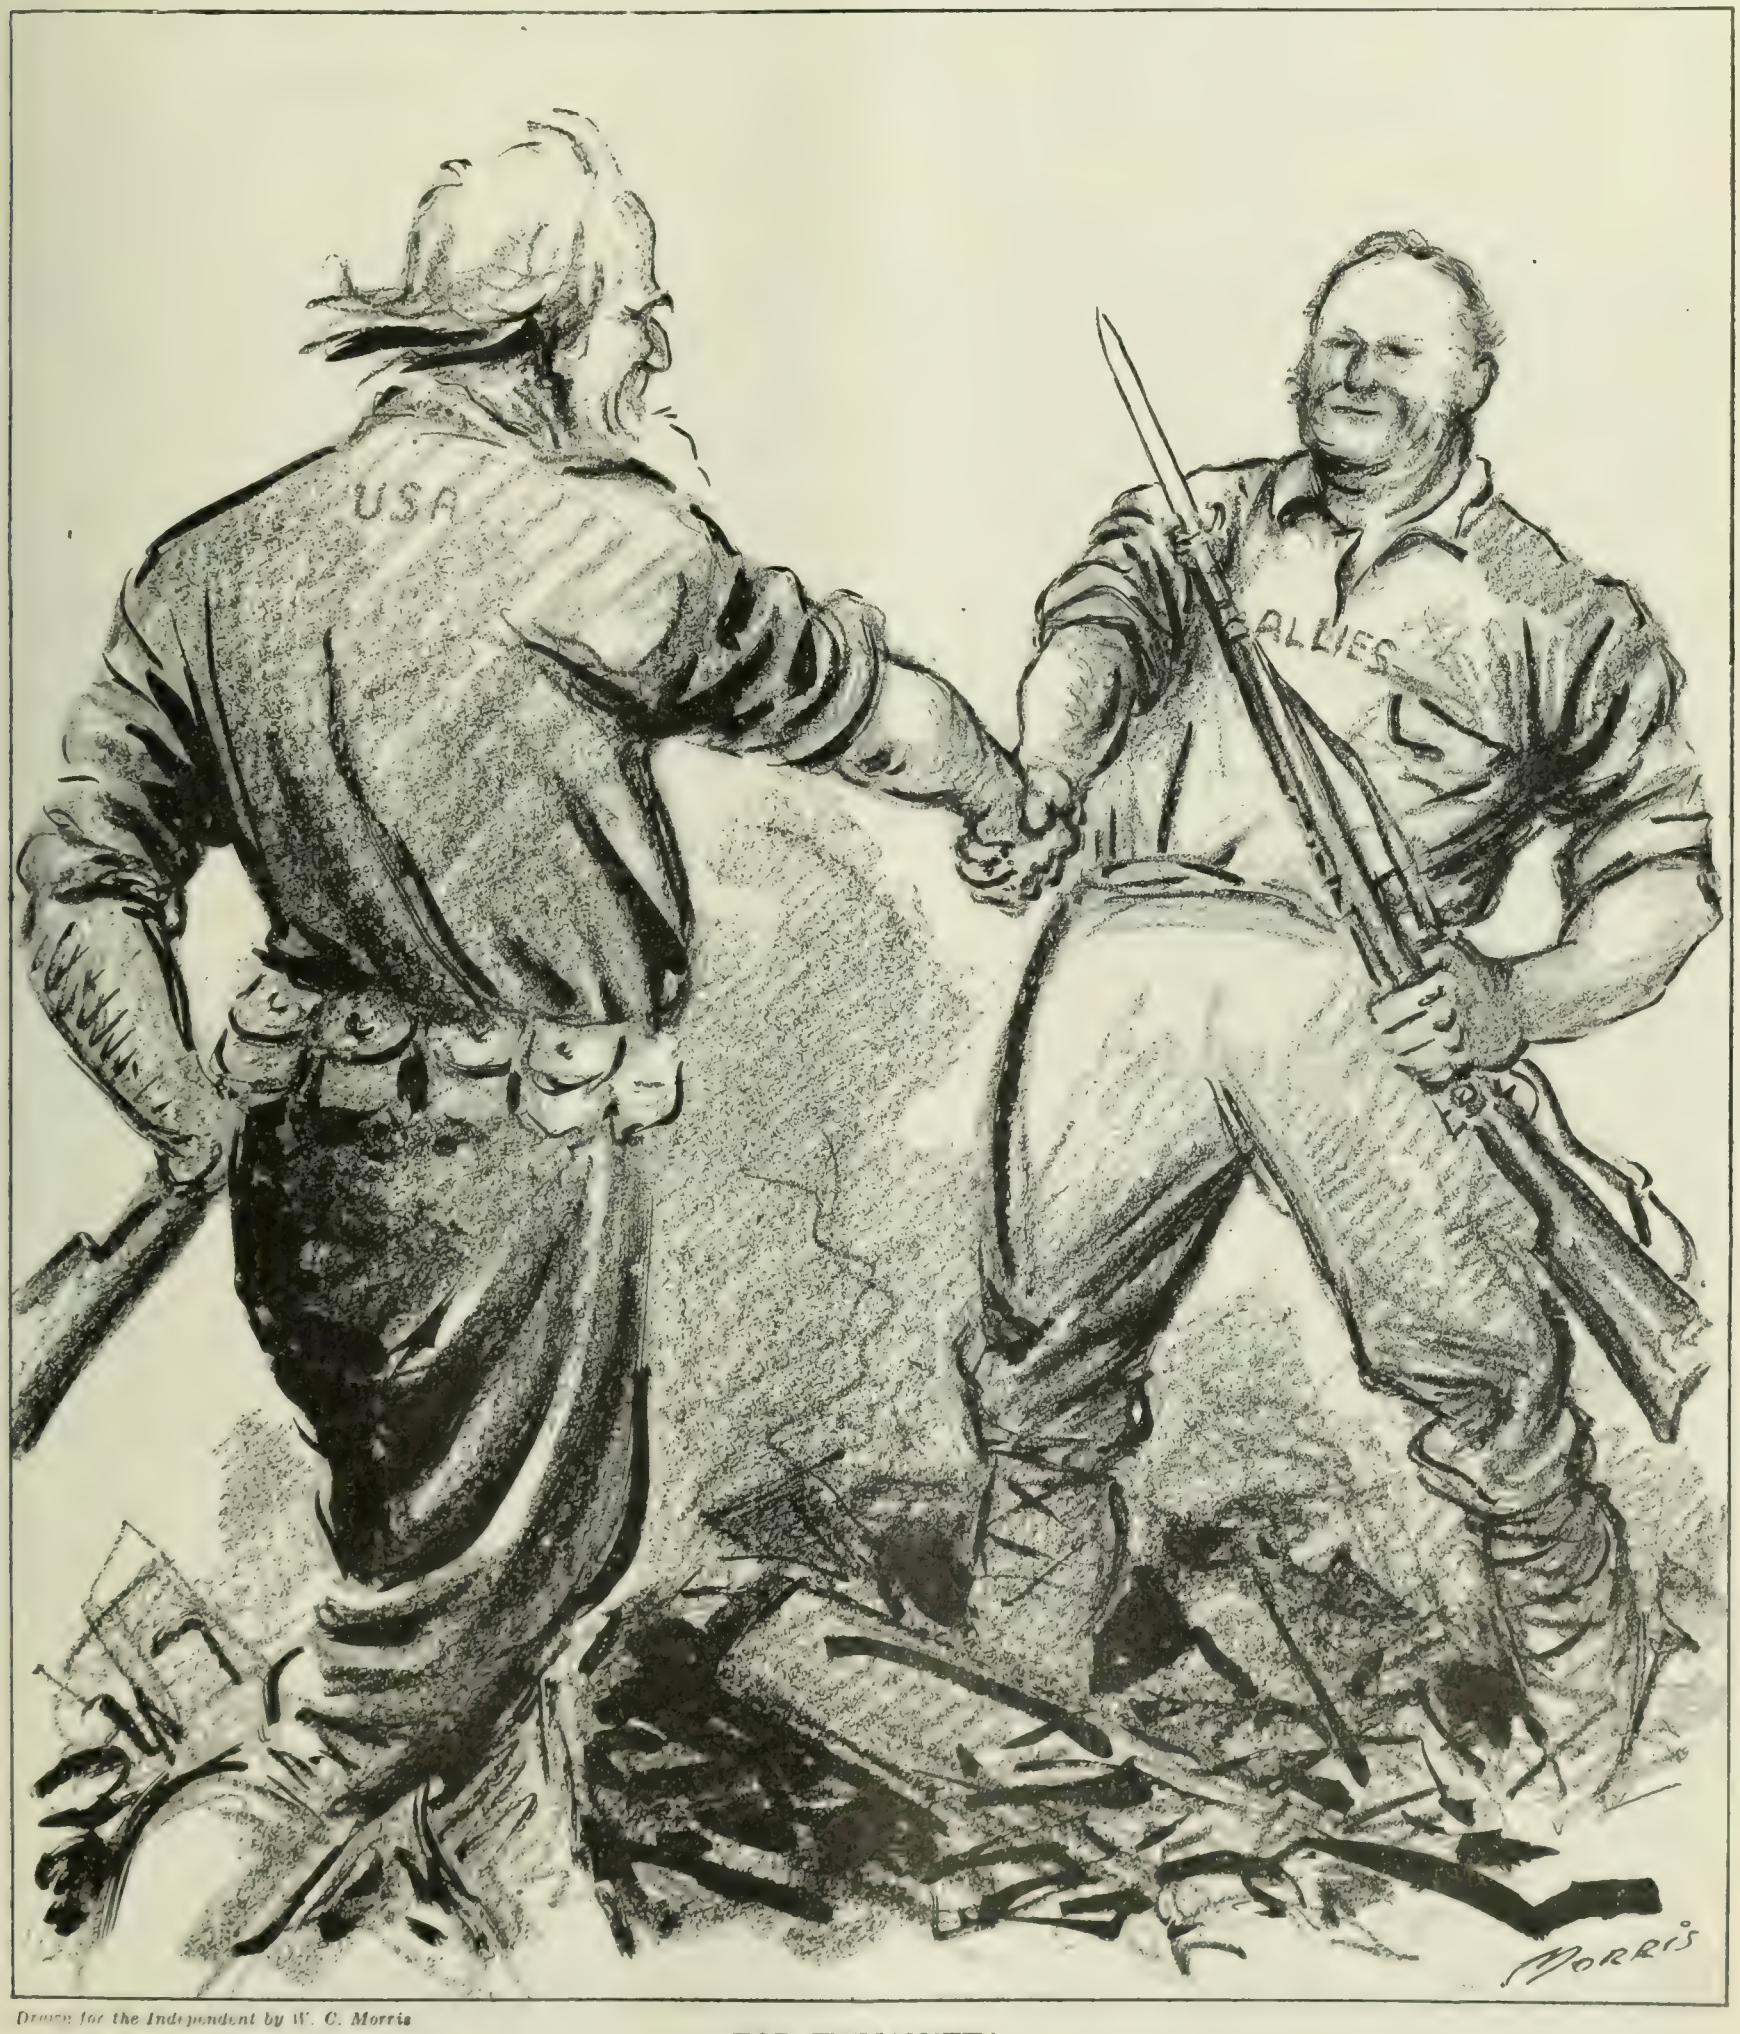
EFFICIENT DEMOCRACY

ADMINISTRATIVE efficiency is not the only test of good government. Even if some other type of government were superior to democracy in this respect, popular institutions could still be defended on the ground that they protected the weaker classes of the community from tyranny or that self-government was an educative experience of great value. But the competition of more and less efficient types of social organization will sooner or later result in the elimination of the latter, no matter what other merits they may have, just as the charming and varied culture of the Greek city-states proved unable to resist the less elaborate but better organized civilizations of Macedonia and Rome. Therefore the marvelous achievements of the Prussian autocracy have greatly alarmed Americans who believed in the principles of free government, but were very conscious of the economic wastefulness and political mismanagement prevalent in this country.

Is there no answer to the taunt of the critic of democracy that this country would be better off if it would import a kaiser to manage the public business which we bungle so atrociously? Russia is the answer to Prussia. The Russian revolution was not altogether the work of reformers and idealists who opposed autocracy on principle. It was very largely the work of hard-headed, conservative army men, disgusted with the graft which pervaded every branch of the civil service, the slovenly inefficiency that allowed people to starve in the midst of the broadest wheat fields in the world, the weakness of a ruler who was the victim of every superstition and the dupe of every charlatan. Democracy was Russia's only chance of conducting an effective war, and Russia rather than Germany is typical of the average bureaucratic state.

Germany, as we have said, is the great historic exception to the rule that popular government is more efficient than any form of class rule. But even Germany is beginning to see the price that is paid for tolerating a hierarchical social and political system. Her public policies have arrayed the world against her and her diplomacy has never failed to make a bad situation worse. The Germans now realize that a Bismarck is an accident that may come once a century, and that kings of the caliber of Wilhelm and his incompetent eldest son and diplomats of the Zimmermann type are the best that hereditary institutions can ordinarily produce. On the field of battle the Germans have been more successful, because statesmen must be born great, whereas war is only a highly specialized profession which may be taught to men of average capacity. Democracies are slow to develop efficiency in war because their tendency is pacific. But the example of France has shown the world that if a democracy is not overwhelmed by the first onrush of a military empire it can eventually become competent to meet all the tasks of war. England may be less efficient on land than France or Germany, but is it British democracy that is at fault or the tradition that the classical course in an exclusive and expensive school is the only training needed for an officer?

The reason why democracy is always more efficient in the long run than any other type of Government is not mysterious or metaphysical. It is simply the fact that democracy permits the rise to power of an aristocracy of talent from any class of the community, whereas all other systems narrow the field from which national leaders may be chosen. Lincoln could hardly have risen to supreme power in Austria unless he had been born an Abraham von Lincoln.



TOO MUCH HISTORY

WHEN the historian of the future examines the causes of the Great War he will list among them the unfortunate European habit of vividly remembering the remote past. Every nation which has lost a province cherishes the hope of some day reconquering it regardless of the changes which time has made. Every nation which was defeated in an ancient war broods still on "old, unhappy, far-off things and battles long ago." Worst of all, every crime that a nation has committed in past centuries is brought out from the cobweb-covered chambers of history and furbished up again to stimulate the hate of enemies and cool the friendship of neutrals or allies. Of course we do not object to insistence upon the past where it relates directly to the problems of the present, but we do not like this promiscuous resurrection of the irrelevant. It is right to point out, for example, that Prussia took part in the division of Poland since Prussia still denies national rights to her Polish subjects. But it would not be right to reproach Prussia with the sins of Frederick the Great if she would now turn over a new leaf and endeavor to undo his crime. It is right to point out that England denied the freedom of the seas in 1812, because such is her policy today. But it is absurd to insist, as some Germans do, that England put to death Joan of Arc, since England has for a long time honored the brave Frenchwoman as much as do her own countrymen.

The Germans, who have studied history more thoroly than most people, are victims of this bad habit of remembering the past not wisely but too well. It is a fact that practically every German apologist has attempted to justify the violation of Belgian neutrality by citing as a precedent the seizure of the neutral Danish fleet during the Napoleonic wars. Surely if the Germans must justify themselves from British history they could find some fresher iniquity of the island kingdom than one which occurred more than a hundred years ago! We have even heard the enforced exile of Belgian workingmen defended on the ground that the British once upon a time exiled the French from Acadia, a bit of history familiar to all readers of "Evangeline"; as if Mr. Asquith or Sir Edward Grey could have prevented what occurred generations before they were born. Few other nations are quite so given to the exhuming of ancient precedent as the German, but we could well spare the articles of French and English publicists who have so recently discovered that Germany has always been in a state of barbarism because the Roman Empire failed to conquer and civilize that part of Europe.

But we are chiefly concerned with the over-sensitive memory of the European peoples because there are those who would have us cultivate the same evil habit here. We hear on every hand that whether France is right or wrong we must always side with her because Lafayette was a Frenchman. Others retort that we must endure whatever Germany may do to us or to the world because once upon a time Frederick the Great felt kindly toward

the American revolutionists. Some say that we must support the most tyrannical acts of Russia on the ground that a Czar who is now dead befriended the cause of the Union in the Civil War. An even larger number cannot forgive the British because a stupid King persisted in governing his American colonies against their wishes, and incidentally against the advice of the ablest British statesmen of his time. We could multiply examples indefinitely of this incessant clamor to forget the present and remember only the past, but one more will suffice. There are many who tell us that England and the United States can never be anything but enemies because the British sympathized with the South in the day of our greatest national peril. As a matter of fact the reverse was the case. The masses of the people were openly for the Union thruout the Civil War; they proved it in speech, in print and by monster demonstrations. But they could not prove it by their votes because they were still disenfranchised and the actions of the government were controlled by the well-to-do minority. Should

Drawn for the Independent by W. C. Morris

FOR HUMANITY!

we debit a democratic government of the twentieth century with the blunders of a nineteenth century aristocracy?

This country could make no better resolution than to give every new government a clean sheet on which to write its own good and ill deeds. If Germany will repudiate the Empire, we should forget and forgive the events of the past three years and heartily welcome the Republic into the brotherhood of free nations. If the Great War results, as it seems that it will, in a "new Russia" we will not load it with the sins of the old. Let the dead past bury its dead.

AT WAR WITH GERMANY

PRESIDENT WILSON'S ADDRESS TO THE CONGRESS

APRIL 2, 1917

I HAVE called the Congress into extraordinary session because there are serious—very serious—choices of policy to be made, and made immediately, which it was neither right nor constitutionally permissible that I should assume the responsibility of making.

On the third of February last I officially laid before you the extraordinary announcement of the Imperial German Government that on and after the first day of February it was its purpose to put aside all restraints of law or of humanity and use its submarines to sink every vessel that sought to approach either the ports of Great Britain and Ireland or the western coasts of Europe, or any of the ports controlled by the enemies of Germany within the Mediterranean.

That had seemed to be the object of the German submarine warfare earlier in the war, but since April of last year the Imperial German Government had somewhat restrained the commanders of its under sea craft in conformity with its promise then given to us that passenger boats should not be sunk and that due warning would be given to all other vessels which its submarines might seek to destroy, when no resistance was offered or escape attempted, and care taken that their crews were given at least a fair chance to save their lives in their open boats.

The precautions taken were meagre and haphazard enough, as was proved in distressing instance after instance in the progress of the cruel and unmanly business, but a certain degree of restraint was observed.

The new policy has swept every restriction aside. Vessels of every kind, whatever their flag, their character, their cargo, their destination, their errand have been ruthlessly sent to the bottom without warning and without thought of help or mercy for those on board, the vessels of friendly neutrals along with those of belligerents.

Even hospital ships and ships carrying relief to the sorely bereaved and stricken people of Belgium, tho the latter were provided with safe conduct thru the proscribed areas by the German Government itself and were distinguished by unmistakable marks of identity, have been sunk with the same reckless lack of compassion or of principle.

International law had its origin in the attempt to set up some law, which would be respected and observed upon the seas, where no nation had right of dominion and where lay the free highways of the world.

By painful stage after stage has that law been built up, with meagre enough results, indeed, after all was accomplished that could be accomplished, but always with a clear view, at least, of what the heart and conscience of mankind demanded.

This minimum of right the German Government has swept aside under the plea of retaliation and necessity, and because it had no weapons which it could use at sea except these, which it is impossible to employ, as it is employing them, without throwing to the winds all scruples of humanity or of respect for the understandings that were supposed to underlie the intercourse of the world.

I am not now thinking of the loss of property involved, immense and serious as that is, but only of the wanton and wholesale destruction of the lives of non-combatants—men, women and children—engaged in pursuits which have always, even in the darkest periods of modern history, been deemed innocent and legitimate. Property can be paid for; the lives of peaceful and innocent people cannot be.

The present German warfare against commerce is a warfare against mankind. It is a war against all nations. American ships have been sunk, American lives taken, in ways which it has stirred us very deeply to learn of; but the ships and people of other neutral and friendly nations have been sunk and overwhelmed in the waters in the same way.

There has been no discrimination. The challenge is to all mankind. Each nation must decide for itself how it will meet it. The choice we make for ourselves must be made with a moderation of counsel and a temperateness of judgment befitting our character and our motives as a nation. We must put excited feeling away. Our motive will not be revenge or the victorious assertion of the physical might of the nation, but only the vindication of right, of human right, of which we are only a single champion.

When I addrest the Congress on the twenty-sixth of February last I thought that it would suffice to assert our neutral rights with arms, our right to use the seas against unlawful interference, our right to keep our people safe against unlawful violence.

But armed neutrality, it now appears, is impracticable. Because submarines have been used against merchant shipping it is impossible to defend ships against their attacks, as the law of nations has assumed that merchantmen would defend themselves against privateers or cruisers, visible craft, giving chase upon the open sea.

It is common prudence in such circumstances, grim necessity indeed, to destroy them before they have shown their own intention. They must be dealt with upon sight, if dealt with at all.

The German Government denies the right of neutrals to use arms at all within the areas of the sea which it has prohibited even in the defense of rights which no modern publicist has ever before questioned their right to defend.

The intimation is conveyed that the armed guards which we have placed on our merchant ships will be treated as beyond the pale of law and subject to be dealt with as pirates would be. Armed neutrality is ineffectual enough at best. In such circumstances and in the face of such pretensions it is worse than ineffectual. It is likely only to produce what it was meant to prevent. It is practically certain to draw us into the war without either the rights or the effectiveness of belligerents.

There is one choice we cannot make, we are incapable of making: We will not choose the path of submission and suffer the most sacred rights of our nation and our people to be ignored or violated. The wrongs against which we now array ourselves are not common wrongs; they cut to the very roots of human life.

With a profound sense of the solemn and even tragical character of the step I am taking and of the grave responsibilities which it involves, but in unhesitating obedience to what I deem my constitutional duty, I advise that the Congress declare the recent course of the Imperial German Government to be in fact nothing less than war against the Government and people of the United States; that it formally accept the status of belligerent which has thus been thrust upon it and that it take immediate steps not only to put the country in a more thoro state of defense, but also to exert all its power and employ all its resources to bring the Government of the German Empire to terms and end the war.

What this will involve is clear. It will involve the utmost practicable coöperation in counsel and action with the governments now at war with Germany, and, as incident to that, the extension to those governments of the most liberal financial credits, in order that our resources may, so far as possible, be added to theirs. It will involve the organization and mobilization of all the material resources of the country to supply the materials of war and serve the incidental needs of the nation in the most abundant, and yet the most economical and efficient, way possible.

It will involve the immediate full equipment of the navy in all respects, but particularly in supplying it with the best means of dealing with the enemy's submarines. It will involve the immediate addition to the armed forces of the United States, already provided for by law in case of war, of at least 500,000 men, who should, in my opinion, be chosen upon the principle of universal liability to service, and also the authorization of subsequent additional increments of equal force so soon as they may be needed and can be handled in training.

It will involve also, of course, the granting of adequate credits to the Government, sustained, I hope, so far as they can equitably be sustained by the present generation, by well conceived taxation. I say sustained so far as may be equitable by taxation because it seems to me that it would be most unwise to base the credits which will now be necessary entirely on money borrowed. It is our duty, I most respectfully urge, to protect our people so far as we may against the very serious hardships and evils which would be likely to arise out of the inflation which would be produced by vast loans.

In carrying out the measures by which these things are to be accomplished we should keep constantly in mind the wisdom of interfering as little as possible in our own preparation and in the equipment of our own military forces with the duty—for it will be a very practical duty— of supplying the nations already at

war with Germany with the materials which they can obtain only from us or by our assistance. They are in the field and we should help them in every way to be effective there.

I shall take the liberty of suggesting, thru the several executive departments of the Government for the consideration of your committees, measures for the accomplishment of the several objects I have mentioned. I hope that it will be your pleasure to deal with them as having been framed after very careful thought by the branch of the Government upon which the responsibility of conducting the war and safeguarding the nation will most directly fall.

While we do these things, these deeply momentous things, let us be very clear, and make very clear to all the world what our motives and our objects are. My own thought has not been driven from its habitual and normal course by the unhappy events of the last two months, and I do not believe that the thought of the nation has been altered or clouded by them.

I have exactly the same thing in mind now that I had in mind when I addrest the Senate on the 22d of January last; the same that I had in mind when I addrest the Congress on the 3d of February and on the 26th of February. Our object now, as then, is to vindicate the principles of peace and justice in the life of the world as against selfish and autocratic power and to set up amongst the really free and self-governed peoples of the world such a concert of purpose and of action as will henceforth insure the observance of those principles.

Neutrality is no longer feasible or desirable where the peace of the world is involved and the freedom of its peoples, and the menace to that peace and freedom lies in the existence of autocratic governments backed by organized force, which is controlled wholly by their will, not by the will of their people. We have seen the last of neutrality in such circumstances.

We are at the beginning of an age in which it will be insisted that the same standards of conduct and of responsibility for wrong done shall be observed among nations and their governments that are observed among the individual citizens of civilized states.

We have no quarrel with the German people. We have no feeling toward them but one of sympathy and friendship. It was not upon their impulse that their Government acted in entering this war. It was not with their previous knowledge or approval.

It was a war determined upon as wars used to be determined upon in the old, unhappy days when peoples were nowhere consulted by their rulers and wars were provoked and waged in the interest of dynasties or of little groups of ambitious men who were accustomed to use their fellow men as pawns and tools.

Self-governed nations do not fill their neighbor states with spies or set the course of intrigue to bring about some critical posture of affairs which will give them an opportunity to strike and make conquest. Such designs can be successfully worked only under cover and where no one has the right to ask questions.

Cunningly contrived plans of deception or aggression, carried, it may be, from generation to generation, can be worked out and kept from the light only within the privacy of courts or behind the carefully guarded confidences of a narrow and privileged class. They are happily impossible where public opinion commands and insists upon full information concerning all the nation's affairs.

A steadfast concert for peace can never be maintained except by a partnership of democratic nations. No autocratic government could be trusted to keep faith within it or observe its covenants. It must be a league of honor, a partnership of opinion. Intrigue would eat its vitals away, the plottings of inner circles would be a corruption seated at its very heart. Only free peoples who could plan what they would and render account to no one can hold their purpose and their honor steady to a common end and prefer the interests of mankind to any narrow interest of their own.

Does not every American feel that assurance has been added to our hope for the future peace of the world by the wonderful and heartening things that have been happening within the last few weeks in Russia?

Russia was known by those who knew it best to have been always in fact democratic at heart, in all the vital habits of her thought, in all the intimate relationships of her people that spoke their natural instinct, their habitual attitude toward life.

Autocracy that crowned the summit of her political structure, long as it has stood and terrible as was the reality of its power, was not in fact Russian in origin, in character or purpose, and now it has been shaken and the great, generous Russian people have been added in all their native majesty and might to the forces that are fighting for freedom in the world, for justice and for peace.

Here is a fit partner for a league of honor.

One of the things that has served to convince us that the Prussian autocracy was not and could never be our friend is that from the very outset of the present war it has filled our unsuspecting communities and even our offices of government with spies and set criminal intrigues everywhere afoot against our national unity of council, our peace within and without, our industries and our commerce.

Indeed it is now evident that its spies were here even before the war began, and it is unhappily not a matter of conjecture but a fact proved in our courts of justice that the intrigues which have more than once come perilously near to disturbing the peace and dislocating the industries of the country have been carried on at the instigation, with the support, and even under the personal direction of official agents of the Imperial Government accredited to the Government of the United States.

Even in checking these things and trying to extirpate them we have sought to put the most generous interpretation possible upon them because we knew that their source lay, not in any hostile feeling or purpose of the German people toward us (who were, no doubt, as ignorant of them as we ourselves were) but only in the selfish designs of a Government that did what it pleased and told its people nothing. But they have played their part in serving to convince us at last that that Government entertains no real friendship for us and means to act against our peace and security at its convenience. That it means to stir up enemies against us at our very doors the intercepted note to the German Minister at Mexico City is eloquent evidence.

We are accepting this challenge of hostile purpose because we know that in such a Government, following such methods, we can never have a friend; and that in the presence of its organized power, always lying in wait to accomplish we know not what purpose, there can be no assured security for the democratic governments of the world.

We are now about to accept gauge of battle with this natural foe to liberty, and shall, if necessary, spend the whole force of the nation to check and nullify its pretensions and its power. We are glad, now that we see the facts with no veil of false pretense about them, to fight thus for the ultimate peace of the world and for the liberation of its peoples—the German people included—for the rights of nations great and small and the privilege of men everywhere to choose their way of life and of obedience.

The world must be made safe for democracy. Its peace must be planted upon the trusted foundations of political liberty.

We have no selfish ends to serve. We desire no conquest, no dominion. We seek no indemnities for ourselves, no material compensation for the sacrifices we shall freely make. We are but one of the champions of the rights of mankind. We shall be satisfied when those rights have been made as secure as the faith and the freedom of the nation can make them.

Just because we fight without rancour and without selfish objects, seeking nothing for ourselves but what we shall wish to share with all free peoples, we shall, I feel confident, conduct our operations as belligerents without passion and ourselves observe with proud punctilio the principles of right and of fair play we profess to be fighting for.

I have said nothing of the governments allied with the Imperial Government of Germany because they have not made war upon us or challenged us to defend our right and our honor.

The Austro-Hungarian Government has, indeed, avowed its unqualified indorsement and acceptance of the reckless and lawless submarine warfare adopted now without disguise by the Imperial German Government, and it has therefore not been possible for this Government to receive Count Tarnowski, the Ambassador recently accredited to this Government by the Imperial and Royal Government of Austria-Hungary; but that Government has not actually engaged in warfare against citizens of the United States on the seas, and I take the liberty, for the present at least, of postponing a discussion of our relations with the authorities at Vienna.

We enter this war only where we are clearly forced into it because there are no other means of defending our rights.

It will be all the easier for us to conduct ourselves as belligerents in a high spirit of right and fairness because we act without animus, not in enmity toward a people or with the desire to bring any injury or disadvantage upon them, but only in armed opposition to an irresponsible government which has thrown aside all considerations of humanity and of right and is running amuck.

We are, let me say again, the sincere friends of the German people, and shall desire nothing so much as the early reëstablishment of intimate relations of mutual advantage between us—however hard it may be for them, for the time being, to believe that this is spoken from our hearts.

We have borne with their present Government thru all these bitter months because of that friendship—exercizing a patience and forbearance which would otherwise have been impossible. We shall, happily, still have an opportunity to prove that friendship in our daily attitude and actions toward the millions of men and women of German birth and native sympathy who live amongst us and share our life, and we shall be proud to prove it toward all who are in fact loyal to their neighbors and to the Government in the hour of test. They are, most of them, as true and loyal Americans as if they had never known any other fealty or allegiance. They will be prompt to stand with us in rebuking and restraining the few who may be of a different mind and purpose.

If there should be disloyalty, it will be dealt with with a firm hand of stern repression; but, if it lifts its head at all, it will lift it only here and there and without countenance except from a lawless and malignant few.

It is a distressing and oppressive duty, gentlemen of the Congress, which I have performed in thus addressing you. There are, it may be, many months of fiery trial and sacrifice ahead of us. It is a fearful thing to lead this great peaceful people into war, into the most terrible and disastrous of all wars, civilization itself seeming to be in the balance. But the right is more precious than peace, and we shall fight for the things which we have always carried nearest our hearts—for democracy, for the right of those who submit to authority to have a voice in their own governments, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free.

To such a task we can dedicate our lives and our fortunes, everything that we are and everything that we have, with the pride of those who know that the day has come when America is privileged to spend her blood and her might for the principles that gave her birth and happiness and the peace which she has treasured. God helping her, she can do no other.

THE STORY OF THE WEEK

On the Brink of War

The current of public opinion in all parts of the United States is setting in the direction of war. The best evidence of this is that states and cities are not waiting for the President and Congress to tell them what to do but are organizing for action on their own initiative. In many states the governors anticipated the action of the Federal Government in summoning the militia to the colors, and in Maine, Vermont and Illinois resolutions were introduced into the legislatures appropriating a million dollars for putting the defenses of the state on a war basis. Patriotic mass meetings have been held in almost every considerable town or city, and on the other hand civic authorities have in many places refused permits to anti-war mass meetings and public demonstrations. Surprizingly little difference is revealed in the indications of public sentiment in various sections of the country, and some of the Senators and Representatives who were strong pacifists in the Sixty-fourth Congress have come to the Sixty-fifth in a very different frame of mind. Nowhere has national enthusiasm reached a higher point than in the colleges and universities.

Samuel Gompers, head of the American Federation of Labor, is working in close touch with the Federal Government to secure an adequate labor supply for shipyards, arsenals and munitions plants and to prevent the rise of labor disputes over government work. He asserts that while labor is wholly loyal to the nation it will not stand for any exploitation by army contractors. "There is no patriotism," he says, "in selling the government something below the current inflated prices for war material, but at a profit far in excess of what would be expected in normal times." As chairman of the committee on labor affairs of the National Council of Defense, Mr. Gompers called a conference of 300 prominent labor leaders, manufacturers and scientists. Secretary of Labor Wilson will have charge of the mobilization of labor for national purposes.

Wilson Extends Civil Service

President Wilson, by executive order, has placed under the civil service rules more than ten thousand first, second and third class postmasterships. Incumbents in office are not affected, but when vacancies occur hereafter as a result of death, resignation or removal the civil service commission will hold open competitive examinations and the name of the highest eligible candidate will be submitted to the President. The Senate retains the right to reject presidential appointees. The present order is a further step in the direction of a civil service based on personal efficiency rather than political availability, and is the logical completion of President Taft's application of the civil service rules to fourth class postmasterships. George T. Keyes, secretary of the National Civil Service Reform League, declares that "President Wilson's order is one of the most progressive that any President ever issued."

THE GREAT WAR

March 26—British defeat 20,000 Turks before Gaza, Palestine. Twenty-five British ships reported sunk in past week.

March 27—French approaching La Fere and British approaching St. Quentin. Russian seaplanes bombard Constantinople aqueduct.

March 28—British freighter "Snowdon Range" sunk. Russian trenches in Carpathians attacked.

March 29—German Chancellor addresses Reichstag. British freighter "Crispin" sunk.

March 30—German raider "Seeadler" sends captives to Rio Janeiro. Russian Government abolishes death penalty and declares Poles free to choose their own form of government.

March 31—Danish West Indies transferred to United States. National Guard mobilized.

April 1—Russian armies invade Turkey from Persia. British extend danger zone in North Sea.

Virgin Islands Now Ours

On Saturday, March 31, the Danish West Indies were formally transferred to the possession of the United States. After the transfer the islands took the name of the Virgin Islands of the United States. Danish Minister Brun received a treasury warrant for twenty-five million dollars at eleven o'clock; whereupon the navy department wirelessed Commander Pollock, the ranking American naval officer at the islands, to take possession in the name of the United States. Rear Admiral James H. Oliver will act as governor until a permanent form of government has been arranged by Congress.

The Anglo-French Advance

The British and French troops are again in touch with the Germans practically all along what they call the "Hindenburg line," but what the Germans have named the "Siegfried line." Until the heavy artillery is brought up it cannot be told whether the Germans intend to make a determined stand here or will give way under pressure to some line further in the rear. There are rumors that they expect to have to relinquish a very much larger area of French and Belgian territory this summer. The two chief and central strongholds on the new line are St. Quentin and La Fere, but General Haig already has the former and General Nivelle the latter within easy range, not only from the west, but also from the southwest and northwest, so it does not seem possible that either could hold out very long.

The French are also advancing rapidly along the Aisne river south of Laon, a movement that endangers the left flank of the German line. The wanton destruction of historic monuments, as well as private property of all kinds, has incensed the French and shocked all observers.

U-Boats

It is impossible to ascertain the extent of the destruction accomplished by the German submarines. The French no longer report their losses.. The British report once a week the number of their vessels sunk but without giving names or other particulars. The Germans report whenever a U-boat returns to port the names and tonnage of her prizes but without giving dates. Thus on March 26 Berlin reported that "during the last few days" the U-boats had sunk 25 steamships, 14 sailing ships and 37 trawlers, with a total gross tonnage of 80,000. In the list are two American vessels, the "City of Memphis" and the "Illinois" which were reported lost from London on March 18. According to German estimates the total tonnage destroyed in February was 781,500 and if less was destroyed in March it was because fewer vessels were afloat.

The British on the other hand report their losses for the week ending March 25 as 18 merchant vessels of over 1600 tons, 7 smaller merchant vessels and ten fishing vessels. This brings the total number of British ships admitted lost during March to over 130.

Among the victims was the British hospital ship "Asturias," which was sunk without warning on the night of March 20. She was fully lighted and her Red Cross signs were illuminated. She had disembarked 900 wounded in England and was returning with several hundred nurses, physicians and other Red Cross aids. Thirty-one persons were killed, including two women.

The British freighter "Crispin" carrying horses to Liverpool, was torpedoed without warning on March 29. One American, a negro muleteer, and probably others, were killed.

The Sea Eagle

That a new German raider, the "Seeadler," has taken the place of the "Möwe" in the South Atlantic was disclosed on March 30 when the French bark "Cambronne" brought into Rio Janeiro 285 men from crews of captured vessels. The "Sea-Eagle" seems to be as successful as her predecessor, the "Sea-Gull," for she had already taken twelve vessels, seven of them British, four French and one Italian. All were sunk except the "Cambronne." The "Seeadler" is a three-masted, square-rigged ship of about 2800 tons, using gasoline engines.

The Chancellor's Speech

The speech of Dr. von Bethmann-Hollweg before the Reichstag on March 29 contained three important declarations of German policy. The first was that the submarine warfare was not to be abandoned under the threat of American intervention; the second was that Germany would never attempt to restore the deposed Czar to the Russian throne; the third was that no steps toward the reform of the Prussian franchise were to be taken while the men were in the trenches. In regard to the American menace he said:

Germany never had the slightest intention of attacking the United States of America, and does not have such intention now. It never desired war against the United States of America and does not desire it today.

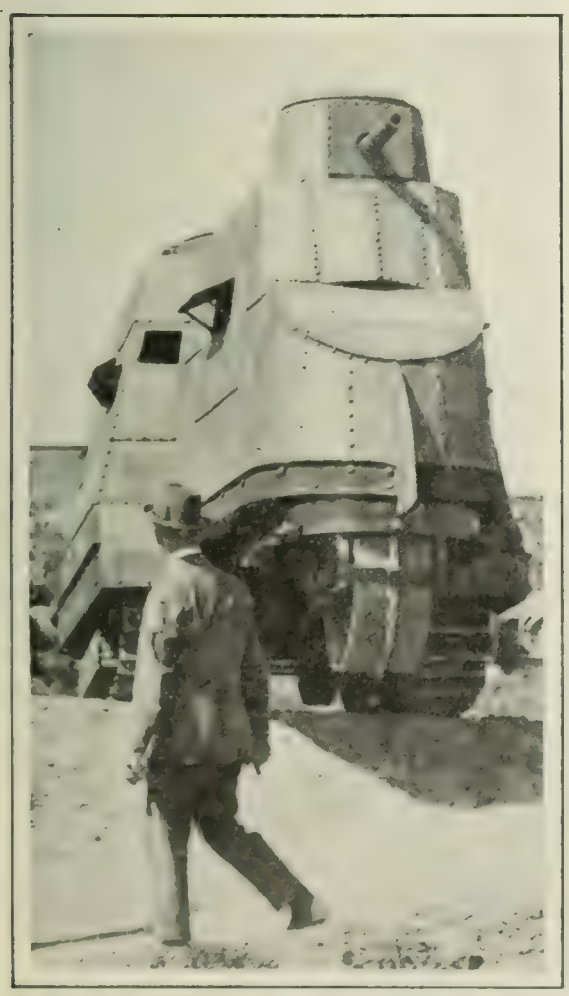
How did these things develop? More than once we told the United States that we withheld unrestricted use of the submarine weapon, expecting that England could be made to observe, in her policy of blockade, the laws of humanity and international agreements. This blockade policy (this I expressly recall) has been called illegal and indefensible [the Imperial Chancellor here used the English words] by President Wilson and Secretary of State Lansing.

Our expectations, which we maintained during eight months, have been disappointed completely. England not only did not give up her illegal and indefensible policy of blockade, but uninterruptedly intensified it. England, together with her Allies, arrogantly rejected the peace offers made by us and our Allies and proclaimed her war aims, which aim at our annihilation and that of our Allies.

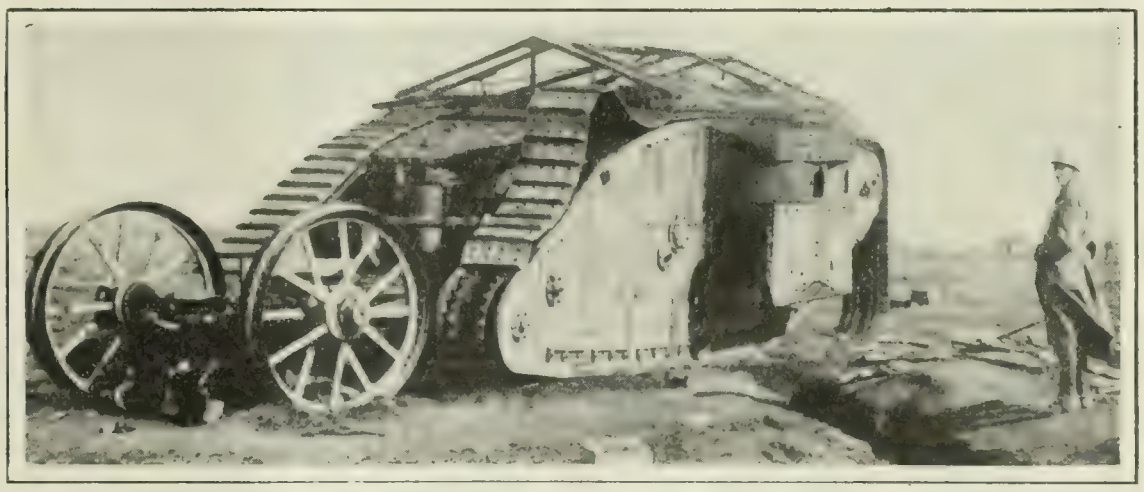
Then we took unrestricted submarine warfare into our hands; then we had to for our defense. If the American nation considers this a cause for which to declare war against the German nation with which it has lived in peace for more than one hundred years, if this action warrants an increase of bloodshed, we shall not have to bear the responsibility for it. The German nation, which feels neither hatred nor hostility against the United States of America, shall also bear and overcome this.

In regard to Russia the Imperial Chancellor said that it was false to suppose that the German Government had supported the autocratic reactionary policy in Russia against all the movements of liberty. On the contrary the German Emperor had advised the Russian Government during the revolutionary agitation following the Japanese war to concede the reforms demanded by the nation. But Emperor Nicholas had listened to other counsels and had come more and more under the influence of the Entente Powers and of the Pan-Slavic and pro-war party at home. The Chancellor added:

In Russia, had attention been concentrated on internal reconstruction, there would not have been room for the restless policy of expansion which finally led to this war, and which has changed the old regime so much that now it is hard even to do justice to natural, human pity for the downfallen house of the rulers.



Nobody can tell how things will develop, but our attitude toward Russian events is clearly outlined. We shall follow the principle that we never meddle with the internal problems of other countries. It is now maliciously reported that Germany wants to annihilate the hardly conquered freedom of the Russian nation and that the German Emperor wants to reëstablish the rule of the Czar over his enslaved subjects. All these are merely lies and slander, as I here expressly state.



How the Russian nation wants to construct its home is the business of the Russian nation only and we shall not meddle with it. The only thing that we hope is that in Russia foundations may develop which will make her the strong and firm bulwark of peace.

At the Gates of Gaza

A few weeks ago it was reported that the British troops from Suez had crossed the desert of Sinai and had entered Palestine at Beersheba. It was at the same time rumored that they were also invading Palestine from the Dead Sea side like the Jews under Joshua and had reached Hebron, only fifteen miles from Jerusalem. This rumor proved to be an error due to a confusion of Arabic place names. The British invasion is confined to the western frontier and here General Murray's army has achieved a notable success in the crushing defeat of a Turkish division of some 20,000 men on the Wadi Ghuzzeh, the river which runs five miles south of the old Philistine city of Gaza. The whole divisional staff was captured including the general and four Austrian officers and thirty-two Austrians and Germans of other ranks, as well as nine hundred men. Two Austrian howitzers of 4.2 inch caliber were taken. It was open fighting of the old fashioned sort with skirmish lines deployed, cavalry charging and artillery galloping into position. Australians and New Zealanders mounted on camels took part in the action. The British have laid a railroad from the Suez Canal to the Palestine border so the desert of Siani, which has for four thousand years formed a military barrier between Asia and Africa, is now overcome.

On the eastern side the Turks are also losing ground. The expedition under General Maude which captured Bagdad made a 110 miles in fifteen days crossing the Tigris three times in pursuit of the Turks who had been

THE ENEMY

The sins of the government are visited upon the people. But it is hard to reconcile the will that sank the "Lusitania" with faces such as these, the interned German sailors of the "Prinz Eitel Friedrich" being transferred from the League Island Navy Yard to army posts in Georgia

driven out of Kut-el-Amara. While the British are thus advancing up the Tigris the Russians in the north are fighting their way down to the river from Lake Van. At the same time the Russians from Persia have crossed the frontier into Turkey and are likely soon to make a junction with the British at Bagdad.

The proclamation of General Maude that the British have entered Bagdad to deliver the Arabs from the tyranny of the Turks has roused a rebellion among the tribes of Mesopotamia and the Syrian desert. In southern Arabia the Arabs have also risen and have cornered Turkish troops near the British port of Aden. In the Hedjaz the Grand Sherif of Mecca has renounced Ottoman rule and established an independent kingdom.

Turkey, then, is attacked simultaneously from the west, south, north and east by British, Russians and Arabs in coöperation. The situation is so alarming that the Kaiser has sent Field Marshal Mackensen, the conqueror of Galicia, Serbia and Rumania, to Constantinople to reorganize the Ottoman army and make what stand he can against the encircling enemies.

Reorganization in Russia

So far as can be told from the Russian despatches the new regime is being established with remarkable smoothness and success. The ex-emperor seems resigned to his captivity and gets exercize by shoveling snow in the courtyard of Czarskoye-selo. The Grand Dukes and Princes have announced their loyalty to the Provisional Government and turned over their lands to the state. The soldiers have been won over to the revolution, and, it is said, will fight with a new courage, altho there is some embarrassment over the abolition of military discipline and the establishment of equality between officers and men. The workingmen have decreed an eight-hour day, but express a willingness to work sixteen hours in the munition factories if necessary. They insist, however, upon their foremen and employers putting in as many hours as they do.

The Social Democrats have taken the unprecedented step of postponing for the present their demands for agrarian and social reform and will coöperate with the Provisional Government. In their declaration they state:

The program of the new Government is satisfactory to a sufficient extent. The present state of bourgeoisie and the capitalistic society no doubt precludes the possibility of changing the present revolution into a social one. Any effort in that direction might precipitate a counter-revolution and bring about the return of the monarchy.

The necessary democratic control of the work of the new Government can be achieved best by participation in the temporary administration of representatives of the workmen's democracy and a wide and stable organization of the popular forces and the army.

The victory of the Central Empires would bring ruin and reinstate the old regime. It is necessary now, more than ever before, to continue the struggle against the last bulwark of monarchical control in Europe.

A mass meeting of workingmen, soldiers and deputies held in the Duma building issued an appeal to the laboring classes of Germany and Austria to "throw off the yoke of autocratic rule as the Russian people have overthrown the imperial autocrats, and refuse to serve longer as a tool in the hands of kings and capitalists." But lest this should be taken as a plea for peace, it is further stated that "Russia will defend its new-found liberty against all interference, whether from within or without."

It is rumored in Russia that Hindenburg is massing troops on the Dvina front for a drive at Petrograd, but on the German side it is explained that no such action is contemplated, for the spring thaw would make an attack anywhere along the Russian front impossible for at least a month and besides German energies are absorbed by the campaign in France.

For Woman Suffrage in England

The announcement by the leaders of all parties that they were in favor of votes for women and the approval of the Government proposals for electoral reform by a vote of five to one in Parliament makes it practically certain that some form of woman suffrage will be granted. The committee on Electoral Reform recommended this as well as six months residence or the occupation of business premises to be the only qualification for voting, redistribution of seats, proportional representation in large urban areas, and all elections to be held on one day. All these recommendations will be embodied in the reform bill to be introduced by the Government. In bringing these proposals before the House of Commons Premier Lloyd George, who has always been an advocate of woman suffrage, declared that when after the war the nation came to recast the whole industrial fabric it would be an outrage to give women no voice therein; it would be inequitable, unjust and ungrateful.

The Secretary for the Colonies, Walter Hume Long, stated that he had been a lifelong opponent of woman suffrage, but if he still held the same views, which he did not, he would not raise his voice against granting recognition to women who had suffered and died for their country in the war, and without whose heroism, self-denial, skill, physical strength and endurance the country could never have faced its hour of crisis.

Ex-Premier Asquith, who has been regarded as the most formidable obstacle to the cause of woman suffrage, said that his opposition had been based solely on questions of expediency, but that after the war questions would arise with regard to women's labor functions and activities in which the women must have a voice. Since there had been for three years no recurrence of "the detestable campaign which had disfigured our public life" Mr. Asquith said, no one could say that in changing their position in regard to suffrage he and his associates had yielded to force what they had refused to yield to argument. With the exception of the actual bearing of arms in the field, there was hardly a service which had contributed to maintenance of the cause of the Allies in which women had not been as active and efficient as men. Wherever one turned might be seen women who, without detriment to the prerogatives of their sex, were performing work which three years ago would have been regarded as falling exclusively within the province of men.

Chancellor Bonar Law, leader of the Unionist party and hitherto an anti-suffragist, announced his conversion and declared that he would do his best to prevent any extension of the franchise to men if women were to be left out.

The Ghost of Home Rule Arises

The House of Commons was thrown into an uproar when T. P. O'Connor brought forward a resolution demanding the immediate application of the Home Rule statute to Ireland. This elicited from Premier Lloyd George the following remarkable statement of his policy:

I want not merely Irishmen to know, but I want men outside the confines of the United Kingdom and of the British Empire to know, what it is that today we offer. It is that that part of Ireland that clearly demands home rule—self-government—shall get it. There are two questions to be asked by all of us. The first is: Are the people of this country prepared to confer self-government on the parts of Ireland which unmistakably demand it? The answer which I give in behalf of the Cabinet is that the Government are firmly of that opinion and are firmly of the opinion that that represents the views of the vast majority of the people of this country.

The next point is this: Are the people of this country prepared to force the population of the northeastern corner of Ireland to submit to be governed by a population with whom they are completely out of sympathy? In my judgment, and here I speak in behalf of the Government, they are not.

This declaration brought down upon him such a storm of denunciation and jeers from the Irish party that he could not be heard. Finally the Nationalists, at the call of John Redmond, withdrew in a body and formulated a resolution accusing the Government of playing "into the hands of the Irish pro-German revolutionary party with stupid perversity worthy the worst reactionaries of Petrograd," and appealing "to the American people to urge upon the British Government the duty of applying to Ireland the great principles so clearly and splendidly enunciated by President Wilson in his historical address to the United States Senate."

Ex-Premier Asquith, with characteristic tact, interposed the suggestion that the question might be referred to "the Dominion statesmen to whom the problems of local autonomy have presented themselves in different forms and by whom they have been solved in different ways." This suggestion was welcomed by Mr. Lloyd George, who is anxious to give the Imperial Conference which he has called a wider scope and greater authority than it has hitherto had.

Press Illustrating

A FEMININE PHASE OF THE NAVY

Mrs. Abby F. Ransom, volunteer recruiting agent for a New York Navy station, has discovered a brand new job for a woman in wartime. She visits the homes of the boys who want to enlist to explain away parental objections

In reply to Liberal protests against shoving aside the Home Rule act as tho it were "a scrap of paper" Chancellor of the Exchequer Bonar Law announced later that the Government would make another attempt to settle the Irish question. In the meantime the Government is using the exceptional powers conferred upon it by the Defense of the Realm act to prevent another Irish rebellion. Last month about fifty members of the Sinn Fein, Gaelic League and Irish Volunteers have been arrested and deported to England where they will be interned without trial.

Making an Army

More than fifty thousand national guardsmen have been taken into the federal service to protect life and property thruout the country. Not all of these have been newly mobilized, as about 18,000 were still in service after the expedition to the Mexican border and were waiting their turn to go home when the order came to cease demobilization. Militia units from every part of the country are affected by the mobilization. Both the regular army and the national guard are rapidly recruiting, but a special effort has been made to bring the navy and the marine corps up to full war strength. To give the navy the seamen and marines that are required more than twenty-five thousand men must be recruited.

The action of the War Department in dividing the Eastern Department into three parts has caused much comment. The advantages of the administrative decentralization of army recruiting are unquestionable, but some army men were surprized to find Major General Leonard Wood, formerly chief of the whole Eastern Department, transferred to the new Southeastern Department. This has been construed, but perhaps quite unjustly, as a rebuke to General Wood for the active part which he has taken in political propaganda for a universal military service law. The new Eastern Department will be commanded by Major General J. Franklin Bell.

The question of universal training will be second only to the international crisis, the chief subject of consideration by the sixty-fifth Congress. The National Security League has made public the result of a canvass of the country on this question. Among those questioned were the mayors of all cities of more than five thousand population. Two hundred favored compulsory training; thirty-four opposed; the other replies were non-committal. The National Guard Association is divided upon the question, some fearing that universal service under federal control would cut the ground from under the present volunteer militia. Two thousand veterans of the National Guard, irritated by the failure of the Association to endorse compulsory military training, held a separate convention and passed resolutions in favor of exclusive federal control.

Old Treaties Invalid

The reply of the American Government to the request of the German authorities that we make plain our attitude towards certain old treaties and agreements entered into with the Prussian Government has been made public. The object of the German Government was to insure the safe departure of German subjects from the United States in the event of war and the

Central News

BACK TO WOODEN SHIPS

The war prices of steel have forced our merchant marine to return to the old-fashioned sailing vessels for coast trade, and shipyards, thought out of date, are being forced to work overtime to complete their orders. These schooners are being built by the Clooney Construction and Towing Company at Lake Charles, Louisiana

treatment of those who remained as if they were neutral alien residents. Under the German construction of the treaties with the supplementary changes which the Germans desire, enemy property, including merchant vessels, would be free from any sequestration except that applying to neutral property as well, and German contracts and patents would still remain valid. Secretary of State Lansing's note in reply declares that the violations of the very treaties in question have been so numerous that it was impossible to enter into further negotiation on the matter and that "this Government is seriously considering whether or not the treaty of 1828 and the revised articles of the treaties of 1785 and 1799 have not been in effect abrogated by the German Government's flagrant violations of their provisions; for it would be manifestly unjust and inequitable to require one party to an agreement to observe its stipulations and to permit the other party to disregard them."

The particular violations of the Prusso-American treaties which are specified relate mainly to the German submarine campaign. The sinking of American merchant ships, the destruction of American lives and property on foreign merchant ships and the proclamation of a "war zone" closed to commerce are all alike contrary to specific provisions of the old treaties. Secretary Lansing also complains that American citizens have been detained in Germany in time of peace, so the German Government could not with any show of consistency object to the detention of German subjects in the United States in war time. Of course the American reply does not mean that the Government will take steps to intern all German residents of the country; it implies only that any steps necessary to restrain conspiracy and espionage will be taken without regard to the terms of the treaty of 1828 and its predecessors. The note of refusal was transmitted to Germany thru the Swiss minister as no direct communication is easily possible between governments which have severed diplomatic relations.

Banks Lend Nation Money

Owing to the unusual expenditures necessitated by the international crisis, the Federal Government has been forced to borrow fifty million dollars. Within twenty-four hours the Government had sold fifty millions of ninety-day two per cent Treasury certificates to the Federal Reserve banks. Secretary of the Treasury McAdoo intimated that an additional issue of fifty million dollars of these temporary certificates of indebtedness might be issued before the end of the present fiscal year. The issue of certificates of indebtedness to run not longer than a year and to bear interest at not more than three per cent has been authorized by Congress for any sum up to three hundred million dollars, thus making it possible for the nation to borrow two hundred and fifty million more under the same authorization. In addition, Secretary McAdoo has authority to issue $474,000,000 in bonds for various purposes, including the Panama Canal bonds. The rapidity with which the fifty million dollars was subscribed is regarded as proof of the financial strength of the country and of the usefulness of the Federal Reserve system inaugurated during President Wilson's first administration. In June the returns from the corporation and income taxes, which are expected to be very much larger than in any previous year, will help the Treasury meet its obligations without further recourse to loans unless the country is compelled to cope with war conditions.

Because the Sixty-fourth Congress failed to pass the necessary appropriations, the federal authorities have been unable to pay for army supplies since early in March and contractors have been compelled to grant credit to the War Department. To meet this emergency in part Edward Page, chairman of the New York committee of the Chamber of Commerce of the United States, borrowed a million dollars without interest or security from J. P. Morgan & Co. on behalf of the Quartermaster's Department.

Organizing Congress

Until the special session of the sixty-fifth Congress called for April 2 met to organize it was doubtful what party would control the House of Representatives. The chances favored the Democrats, as Representative Randall, Prohibitionist from California, and three other independent members agreed to support the candidacy of Champ Clark, who has been unanimously renominated for Speaker of the House by the Democratic caucus, and it was not certain that Representative Mann, the Republican leader, could secure the full voting strength of his party. Representative Martin, "protectionist" from Louisiana, refused to join the other independent members in supporting a Democratic organization of the House. Seeing that Republican control of the House of Representatives was improbable, Mr. Mann offered to withdraw from the race and permit the Democrats to reëlect their Speaker on condition that the House should be organized on a non-partizan or bi-partizan basis. Neither party caucus favored the proposal, however, and Mr. Mann withdrew his offer.

Much pressure was brought on Congress to induce it to refrain from declaring a state of war or authorizing any hostile measures toward Germany. The Emergency Peace Federation, which has been acting as an efficient clearing house for all the "militant" pacifist organizations, organized an expedition of ten thousand peace advocates to come to Washington from all parts of the country. The President and the members of Congress were swamped with thousands of letters and telegrams prepared by members or friends of the Emergency Federation. William Jennings Bryan is also lobby-

OUR MONEY MOBILIZATION

The presidents of the twelve Federal land banks assembled in Washington to complete the organization of the Federal Farm Loan Board. From left to right: T. F. Davis, Yazoo City, Mississippi; M. H. Gossett, Dallas, Texas; D. F. Callahan, Kingman, Kansas; Herman Danforth, Washington, Illinois; Walter Howell, Union City, Tennessee; D. P. Hogan, Massena, Iowa; F. J. H. von Elkengen (in foreground), East Palatka, Florida; Leonard G. Robinson, New York City; George H. Stevenson, Bel Alton, Marvland; Burrell G. White, San Francisco, California; E. G. Quamme, Finley, North Dakota; and D. G. O'Shea, Red Lodge, Montana

ing for peace. His appeal to Congress is based on the arbitration treaties which he negotiated as Secretary of State. Altho Germany did not conclude such a treaty with the United States, Mr. Bryan believes that the German Government would consent to arbitrate the submarine issue.

President Rejects Peace Plan The reply of the United States to the proposal of President Carranza of Mexico, who urged that neutral nations place an embargo on exports to belligerents, was made public on March 20. The note shows no resentment at the unexpected and somewhat embarrassing action of the Mexican Government and even praises its altruistic intention. But it points out that the United States had tried some months earlier to bring about a European peace by negotiation without attaining any measure of success. "Instead of the conflict being resolved into a discussion of terms of peace, the struggle, both on land and on sea, has been renewed with intensified vigor and bitterness." The note then mentions the causes which led the United States to sever diplomatic relations with Germany, emphasizing especially the plot to ally Mexico and Japan with Germany against this country. As to the proposed embargo, the note reminds the Mexican Government that the right of American merchants to ship contraband to European nations if they chose to do so was in accordance with international law and had been maintained by the United States in discussing the subject with the Austro-Hungarian Government.

The Higher Cost of Living The Department of Labor announces that the food bill of the average family has grown from $339.30 in 1913 to $425.54 at present. "Despite the average increase of nineteen per cent in wages per hour of labor in the last ten years," says the statement, "and despite a cut in hours worked of four per cent, the rising cost of food has operated to reduce the pay of the American workman about sixteen per cent, expressed in terms of food his dollar will buy." The Department of Labor admits that, on the whole, workers enjoy better conditions than before the Great War since they have more and steadier work. The recent rise in the prices of foodstuffs is laid to war conditions, crop shortage and the withholding of commodities from the market. Discouraging crop reports from the winter wheat fields of the western states have sent up wheat prices in the Chicago market to the highest point reached by any future delivery price since 1864. The farmers are industriously planting seed for a spring crop which will make up for the injury done to the winter crop by the prevailing drouth. Railroads have given shipments of seed wheat the right of way over other freight. The embargo on wheat exports from Argentina makes the European demand for wheat exports from the United States greater

COMPOSITE EQUIPMENT

The inventor of the handy jack-knife—"combines two first-class blades with corkscrew, nail-file and bottle-opener"—might well have helped to plan this motor-car of many uses. In the first place it's a good automobile, and its armor makes it proof against rifle attack. But it's an observation tower, too, collapsible on demand, and it can even be a field wireless station

than ever and will tend to increase prices more than at any previous time during the Great War. Secretary of Agriculture Houston has issued an appeal to the American farmers to test seed in advance of planting to insure against dead seed, to treat with disinfectant dips all seed liable to preventable disease, to prepare especially for planting the "vitally important cereal crops" and to take other precautions against a food shortage which might handicap the nation at a critical time.

Eight Hour Day for Telegraphers The Western Union Telegraph Company announced on March 27 that hereafter an eight hour day would be the rule for all classes of labor to which it could be applied. The change will go into effect on the first of May. It is estimated that over twenty-five thousand operators, plant workingmen, clerks and other employees will hereafter receive the same pay for eight hours work as at present for nine. Overtime will be recompensed at the rate of one-eighth of a day's pay per hour. The Western Union is capitalized at a hundred million dollars and is at present in a position to pay dividends of six per cent, so the directors regarded the present as a favorable time to reduce the hours of labor for employees. There was no strike or threat of a strike to force the change upon the company, but the reduction of hours may be regarded as part of the general movement to establish the eight hour day which won its hardest battle in the case of the railroads.

Latin American Affairs By the election of First Chief Carranza as President of Mexico the de facto government has been solidly established on a legal basis and revolutionary procedure is superseded by the normal course of law. The vote which elected Carranza is said to be the largest ever cast in the history of the republic. Since the Constitutionalist party, supporting Carranza, had control of the electoral machinery no special significance is to be attached to the result of the election, but the fact that it passed off in an orderly manner and that so many people in every part of the country took part in it indicates widespread acquiescence in the new order of things brought about by the revolution. The military basis of the Constitutionalist government is, however, still insecure. Villa is still on the warpath in the states of Durango and Chihuahua, killing Americans and other foreigners, taking towns and defeating small detachments of federal troops. It is rumored and again denied that General Obregon is disloyal to Carranza and is planning a new revolutionary movement. The activities of German residents of Mexico are causing no little disquiet to the American border. There are some fifty thousand Germans in the country and many of them are influential in Mexican politics.

Latin American countries are now carefully considering their attitude toward the European war with particular reference to the possibility of the United States becoming a participant. The Mexican Government has issued a statement promising that it will endeavor to prevent any of the nations of this continent taking part in the war and that it will continue its efforts with other neutral countries to bring about a European peace. Five Latin American governments have accepted a proposal from Ecuador that delegates from North, Central and South America assemble to consider measures for guaranteeing the rights of neutrals. The Cuban Government has defined its position as in harmony with that of the United States and will prevent Germans resident in Cuba from conspiring against the interests of this country.

The Menocal Government and the Cuban revolutionists are fighting in the vicinity of Santiago. Thus far the fortune of battle has been with the national forces. Carlos Mendieta, recently Liberal candidate for Vice-President, has succeeded Gomez as head of the insurgents. Because of the continued devastation of property and the anti-American attitude of some of the rebels, disappointed at the failure of the United States to countenance their cause, American ships were forced to land more marines at Santiago and elsewhere, but these were later withdrawn.

THE HIGH COST OF LIVING

WHAT OUR READERS ARE DOING—AND THINKING—ABOUT IT

THE recent rise in the prices of food and other necessities affects everybody, but not everybody in the same way. The question, then, is not one to be decided by any individual, but should be referred to "the committee of the whole." That is why in the first issue of the new year we asked our readers "What does the high cost of living mean to you?" This brought us an abundance of first-hand information, consisting of personal experiences and opinions, which taken altogether makes a real contribution to the most vital question of the day. On account of the frankness with which our contributors have dealt with their affairs we have thought it best to omit the names from the quotations.

What struck us most on opening the letters was the very large proportion who were well satisfied with the present situation. This shows the danger of forming a conclusion on any public question from what appears spontaneously in print. The dissatisfied are

Illustrations drawn for The Independent by W. C. Morris

THESE WOMEN

They will pay $25 for a feather for their hats and kick on paying 50 cents a pound for butter

vocal; the satisfied are silent. The clamor of complaints that arises whenever any change takes place should never be taken as representing the sentiments of the whole people.

We own two good farms here in Lake Champlain Valley and live in a village. The prices that we receive for our milk, beans, potatoes, eggs, beef, pork—in fact all produce except hay, are such that we can afford to pay high prices for flour, butter, sugar, gasoline, etc. No, we have no kick coming.

Chazy, New York

Lucky folks! All folks who are happy are lucky, tho not all lucky folks are happy.

The high price of farm products and my good crops this year have made me the most money I ever made on the farm, but most farmers had very poor crops this year and did not make so much.

If this condition keeps up for a few years, that is, if most farmers continue to raise poor crops, and I continue to raise good crops, I will get a big price and will be able to send my boys thru high school and maybe thru college.

I am very sorry that from 100 to 500 per cent is tacked on to our products before city people get them on their table, but I am not to blame for this and I don't know how I can help it.

Broomfield, Colorado

No, we don't see how he is to blame or can help it.

I am glad the American farmer is getting a good price for his grain and milk. It is the first time such a thing has happened in half a century. He is the hardest worked citizen under the flag, and, until recently, the poorest paid. His sons have been the staff upon which the nation leaned in former stress, and will be its dependence in future peril.

I would rejoice if the poultryman was realizing fair profits on fresh eggs, but he is not. Boycotts have reduced the price below cost of production.

The temporary high price of a few items of food has not disturbed my economic equilibrium in the least. James J. Hill's famous expression is just as true today as it was when uttered: "It is not the high cost of living that is troubling the people, but the cost of high living."

Sedro-Woolley, Washington

We wish we knew who does get that egg money.

It is my opinion that most all farmers believe in the high cost of living. They believe in shoes selling for $4, $5 and $6 a pair; for this should make cattle worth more. The farmers rejoice when flour is selling at $3 a sack, for they know they will get a better price for their wheat. The farm wives are glad when eggs sell for 50 cents per dozen and butter for 50 cents a pound. It is a mighty poor farmer who doesn't sell more than he buys.

These society women go around wearing $1 hose and kick on paying their butter woman 50 cents per pound for her butter. They will pay $25 for a feather to put on their hat, and organize clubs to reduce the price of eggs. They will go into a cream parlor and pay 15 cents for a soda fountain drink, and object to paying the milkman 8 cents a quart for his milk, that has ten times the food value in it that that soda fountain drink had.

Since the farmer is the one that makes a little money when the food prices are high, and there are more of them than any one else, why not let the "high cost of living" go on.

Weatherford, Oklahoma

Why not?

Another satisfied farmer thinks the high cost of living will prove a blessing.

I am a producer on a small scale. I produce, first for myself and a good sized family. Said growing family is responsible for my present condition. Knowing that I could not always provide for them by earning commissions, wages or profiting by "tips" and "leaks," I took to the soil.

From my twenty acre irrigated ranch of rich valley soil, I first fill my granary and cellar. Hay, corn, spuds, meat, apples and canned fruit are laid by to last a year. What I raise does not command the highest prices, but since the beginning of the war we have always been able to sell anything and at fair prices. I still owe a considerable balance on my land, but find the holder of the mortgage is insistent that "I need not hurry to pay," and interest rates are lowering.

I believe that it is our scorn of toil and so-called hardships, our willingness to wear overalls, our passing up of glittering, cheap pleasures, that brings greater reward. There is nothing like an abundant harvest to dispel worry; nothing like the work of producing it to cure insomnia, appendicitis and other aristocratic ailments.

High cost of living will prove a blessing to the American people if it makes them practical as it did me. You will call the "high cost of living craze" a psychological nightmare if you are a producer.

Hanford, Washington

But a producer in New York State sees the situation from a different viewpoint.

I am doing all I can to meet the issue of the high cost of living by raising all the wheat, rye, oats, corn, potatoes and producing all such products of the farm as eggs, butter, pork, etc., that are possible on two hundred acres.

That the cost of living is too high does not appeal to me. I was taught in the old school of politics under a protective tariff that home industries should be patronized, that the home market should be established for the products of the farm by a tariff that would insure good wages for labor in shops and industries.

Results: Labor attracted to the cities by high prices paid, by the allurements of city life, and the fast manner of living.

The protective tariff abandoned by the very people who have profited most by it, in an effort to make the most of their already attained prosperity, by keeping down the cost of living.

The price of labor should be the key to the situation. Farm labor at the best is worth $2 per day for eight months for a single man. The tenement man receives about the same pay for the same time, but works four months more for house rent and fuel. The worker in a shop now gets two or three times as much as farm labor is worth.

The cost of living is not too high so long as the pay for a day's labor in producing food on a farm is less than the same labor producing manufactured articles, or in the trades, or under average conditions of labor employment.

Canandaigua, New York

And here is an incorrigible optimist!

The shoe does not pinch me so very hard. I do not know just why—perhaps because I live in a small town with a yard full of flowers and fruits and a place for the hammock, and a garden full of weeds and sunshine and delicious corn and peas and other good things to eat; or perhaps because I am a minister's daughter and all my childhood, when I thought of money at all, it was to wonder why the salary was not paid and to know that we must be very, very careful of the little that came. Perhaps because I do not care for so many luxuries and amusements as some, for I do not dance or attend the theater, can enjoy playing Beethoven or Grieg if a good con-

NON-RESISTANCE
"As for the soaring egg—we let it soar"

cert is not available, and find better friendship in Scott or Emerson than at Coney Island. Perhaps because I find a certain pleasure in the fine art of economy, the triumph of mind over circumstances.

As for the soaring egg—we let it soar, cheerfully keeping up our boycott during the winter months, for there are so many other nice things to eat that we really do not miss it.

I am truly sorry that coal is so high, but after all it was pretty hard to shovel so much, and care for the ashes; so we close part of the house during the coldest weather and are lazily comfortable and economical at the same time.

After all ½=6/12. If prices are high, some one is getting more money to spend on comforts. The fraction is larger and it is always more difficult to work with larger numbers. But I am glad that the farmers are gaining wealth and position, and I believe that as a nation we will gain the benefit of it.

Boone, North Carolina

It is the salaried man who is hardest hit by the recent advance in prices, as the following letters show:

My professional salary of $2000 has been increased only 14 per cent in fourteen years. The increased value of my service has been acknowledged, but institutional and municipal economies (of which the consistency is questioned) have denied just compensation, promised and expected for many years. In the meantime I have reared a family. Wife and children deserve better fortune. We have planned with courage and managed with prudence, but the increased cost has overcome us. We have been able to save only a small insurance. We have denied ourselves every luxury and some things usually regarded as necessary; but there is hardly enough money for doctor, dentist and oculist. Thus I fail in duties, and thus health, welfare and happiness are impaired.

The excessive cost of meat must be paid from the cost of breakfast eggs. The excess cost of potatoes to satisfy the children's hunger must be paid from oranges conducive to health. The excess cost of coal to keep the home comfortable must be paid from the cost of service to wash the clothing. The higher cost of necessary clothing must be paid from the cost of books, music, charity and social engagements.

New York City

The recent rise in the prices of the necessities of life has robbed the small salaried man of a possible saving, and a teacher like myself on a $1000 a year salary now finds his ingenuity taxed in stretching this thousand over the yearly cost of food, fuel, shelter and clothing for a family of five. If by cautious spending even a small surplus enables one to keep up insurance and guarantee medical attention to the family, if needed, where is to be had the means to procure periodicals, books, an occasional theater, the convenience of a telephone, a daily newspaper, a needed piece of furniture, lodge dues, church dues, charity, to say nothing of continued training in my chosen profession. Small luxuries, once an occasional treat, must now be tabooed. Our social activities are being limited in proportion to the depreciation in the purchasing power of a dollar. We can't economize in the purchase of good and sufficient food for ourselves and the growing children. We can't economize much in good and respectable clothing, for shabbiness in a teacher is intolerable. We can't economize to much extent in fuel for in cold weather the family must be kept warm enough. So, of necessity, we must economize in other things, things enjoyable, educative and instructive to myself, wife and children. That is where the rise in prices hits me hardest. It robs me and mine of the means of a normal development, which enables us to get the most out of life, and to give the most in return.

Muncie, Indiana

And one college is forced into the dilemma of freezing or starving its students.

The hardest pinch is with our college. Potatoes and flour at more than twice the normal price, coal at four times the normal price and other items varying from 50 to 100 per cent increase, we are facing a peculiar situation. Our income for the year is fixed. We do not care to increase tuitions. The budget was outlined by the board last June. The manufacturer and merchant can meet the situation by an increased output and an increase of the price of their product. A college cannot increase its output and it has no price on its product. It is given as a free gift to the world. We dare not starve our students; we cannot freeze them. How is a college to meet this situation?

Westerville, Ohio

Our readers suggest two ways of meeting the difficulty: one is retrenchment of personal expenses and the other is some sort of governmental action. We quote the former first because this remedy is practical and immediate, while the other is uncertain and remote.

My landlady has given me permission to go in the kitchen, cook my breakfast and pack my dinner bucket early in the morning before she comes down stairs. I eat supper at a restaurant, ordering different victuals from what I cooked at home so as to get the proper daily proportion of proteids, fats and carbohydrates. My first five weeks show I ate forty-seven meals at restaurants, totaling $8.51. The remaining fifty-eight meals cooked by myself cost me $4.02. Room rent $10. Street car fare $3.

Peoria, Illinois

But it couldn't be done in New York, for instance.

A 50 cent pot roast with brown gravy does us a week; the brown gravy is a great asset. Then we rinse the platter and the kettle and behold, a thick vegetable soup appears one day. Cabbage is absent this winter, but onions and potatoes stewed together and a thickened gravy seasoned with butter makes a dish fit for a king. This gives succulent food. A 5 cent sack of onions from the grocery seasons several stews.

Atchison, Kansas

We should like to try that brown gravy!

I am a successful doctor's wife, yet when we meet high taxes, rent, fuel, water, lights, groceries, meats and dry goods for our family of six we find ourselves too near the red unless we cut out milk (at 15 cents a quart), butter (at 55 cents), use meat only once a day and have meat substitutes for breakfast and supper; we also cut out eggs at 55 cents, except one occasionally in made-overs or plain cake or cookies. We put down in brine half a hog, use oleo, use the fireless cooker for beans, rice, oatmeal and tough cuts. Washing and ironing costs 75 cents a dozen, so I use a good boiler, soap, and do my own washing when I come home from the office in the evening, and have the four girls each wash their own stockinette underwear and stockings.

Sapulpa, Oklahoma

That seems a common sense solution, and here is another:

To the working girl this sudden increase in cost of food, clothing and all necessities is a problem, but I believe my solution proves most profitable. How do I solve it—by having fewer of the luxuries of life, such as light shoes, pretty gloves, dainty hats and lingerie; by wearing sensible low heeled shoes and having them half soled. Instead of riding to the office I arise earlier and walk the entire distance when possible. Do I eat less? Indeed I do and a healthier body, happier disposition is the result. As to my amusements I find them in the outdoor sports, skating and tobogganing in the winter, golf and tennis in the summer, gradually taking the place of the movie and the theater; result, again I claim better health and spirits.

This has all taught me economy where otherwise I might not have discovered such possibility in my makeup. I have had real "fun" in this new game and now have $50 to my credit where last year at this date I had but $10. I have learned the secret of real living, including outdoor sports, plain dress and simple food, bringing to me happiness and contentment.

Sioux City, Iowa

Splendid, provided you have enough luxuries to make it "fun" to give up some of them.

We feel greatly the cost of flour and meat. Cornmeal costs one-third less than flour here and we have used it freely enough to lessen noticeably the amount of flour consumed, particularly in brown bread, gems, griddle cakes and scrapple. The latter is one of our meat substitutes. Others are lima beans, pork and beans, concoctions of cheese, codfish, dried beef. We use milk, raisins and cocoa freely. We groan at the cost of shoes, too. There seems

THE HAPPY FARMER
"We should worry"

no remedy in this but to buy a substantial article and take care of it. Purinton's efficiency articles and those on the budget have helped.

Central City, Nebraska

Glad to hear it. That is what they are for.

No, the high cost does not bother us any, while we buy everything we eat, and eat everything we buy, and we eat many things that are higher, we eat as much of as many things as we did. We sure enjoy our food, and we have much variety, too. We—man and wife—live and feel fine on less than—look out now—25 cents a day for the two of us. There is no sense in people eating so much and wasting so much. We eat no flesh of any kind. The idea of people eating until in misery and then taking something for relief! It's unreasonable.

Wilmington, Ohio

In supplying meals for two at 25 cents a day this household is doing twice as well as the New York Department of Health in the recent dietary demonstration.

When sweet milk came up 8 cents a gallon I thought I had better try to see if I could not get buttermilk to drink; as the doctor had told me it would be much better for me. I got it for 15 cents a gallon, delivered twice a week. And altho I have not learned to like it, my clear complexion, clearer vision and bright eyes will keep me drinking it the rest of my life.

My husband never had such good health before, so we have occasion to be glad of the rise in the price of milk.

Adel, Iowa

The late Professor Metchnikoff would rejoice that his lactic elixir of life is helping to solve the economic problem as well as the health problem. Long live *Bacillus acidi lactici!*

That which has imprest me most during the recent increase in the cost of living is the fact that honesty, courtesy and publicity apparently are closely connected. Those articles that come into my home which are widely advertised and the retail prices of which have been standardized and maintained for a number of years either sell at their old prices or have increased less in price than other articles which are not advertised by name and brand and which have not been sold for a standard retail price. This has resulted in making my household a firmer believer in the wisdom of buying advertised goods.

Port Washington, New York

Will our advertisers please take notice of the above.

Potato crop almost a failure here; good farmers did not grow enough for family use and are buying. Hence that tuber sells at famine prices.

Apples very light crop also; one of my friends used to go to a cider mill and get all he wished for nothing; this year he got a barrel of York State apples.

Michigan beans used to sell here for $1.50 per bushel; current year they fetch $4.50. Yield is light.

Cattle used to seek markets; now markets seek cattle. Farmers cannot grow beef on land at present prices; many cattle will not "feed" profitably which makes meat cost more. Cholera has caused death of quite a number of hogs.

Mainly, it is a law of nature that the masses be kept down at the producing point; dealers have discovered that the average family is determined to expend all the earnings and establish prices accordingly.

Again; all papers, including The Independent, are engaged in discrediting farm life. Wits, jesters, asses, seem determined to carry the day by ridicule, falsehood, innuendo.

Your kind just gloat over vast fortunes made in the city; the unwary are caught in the net and lured to destruction.

High priests of all cults do not seem to know that there is any country life anyhow; the bishop, the doctor of various rots, the learned, all have a horror of the countryside unless it be the park or seashore. The door is ever open to the capitalist, the instigator, the exploiter; the latter drive the poor operative in the thills with increasing energy. May their tribe diminish!

THE SALARIED MAN

"We have planned with courage and managed with prudence, but it has overcome us"

Dayton, Ohio

Now that really was the last thing we expected to be scolded about. We publish *The Countryside* for the express purpose of making country life attractive and the editors of The Independent most of whom live outside the city are always trying to induce others to follow their example.

It means that I spend half my time, half my energy and all my spare money trying to show my friends and neighbors that *rent* and taxes, but principally rent, constitute two-thirds of the price of *everything* we buy, and, that the whole increase in the cost of living is more than covered by the increase in *rent* and taxes.

Pittsburgh, Pennsylvania

The single taxer may be depended upon to improve every occasion. We heard a story about that once—but so have you.

So far the high cost of living has worked for us more as a challenge than a menace. We take an honest pride in utilizing by-products and making everything count. Since coal is higher we read up on running a furnace, then experiment "with brains, sir," with at least a fair degree of success. If the price of beefsteak soars we use the small piece left for a casserole next day, while with the bone cut from the steak, the water in which vegetables have been boiled, a few celery leaves and a little potato we concoct a tasty soup.

I should like to have Wall Street restrained from gambling in necessities like corn, wheat and coal. I do not know how this can be accomplished.

St. Albans, Vermont

Neither do we.

REGULATE THE PRICE OF NECESSITIES

For many of our readers it appears that the shoe pinches where we should expect, on the feet.

First we find it increasingly expensive to provide the family with presentable and durable shoes. The prices are higher and higher and the wearing qualities less and less good. As to what we are doing about it—*nothing*. We pay for the best shoes—that is we buy the best we can find.

Akron, Ohio

Unless some breeder can produce a cow with a double hide, like our double flowers, some inventor will have to discover a leather substitute.

They say that artists and laborers received the same daily wages in the past, and their employees had more sense than we have today. I'm glad living is high because it means coming to our senses. I have to buy all I get for I am not a producer—but I'm glad to see the poor workingman getting something he never has had.

Chapel Hill, North Carolina

But is he?

I should like to see some Purintonian system applied to The Independent, in order that it might be produced more cheaply, made more valuable to its readers, and not itself contribute to the high cost of living. Then I might be able to renew my subscription!

Washington, D. C.

We respectfully refer this request to "the man higher up." As soon as the manufacturer reduces the price of paper we will gladly reduce the subscription price of The Independent to our readers. In the meantime aren't we making it more valuable?

1. I want the railroads to be *made* to send all cars to their respective owners, and provide more locomotives *at once*. Then I may get coal.

2. I want inquiry into the question if a minister can buy the necessaries and books and find a lodging on $30 a month. I can't.

3. As my wants are very simple, I live on hominy and a little fish. I seldom taste bread, and eat little beef, and no pork. I am vigorous and healthy. I supply a small country church in a place where the gospel is hardly wanted.

4. My demands would end in a successful breaking up of telephonic and telegraphic fixing of prices. For wherever one goes he finds the price of goods in a town the same. This is intentional.

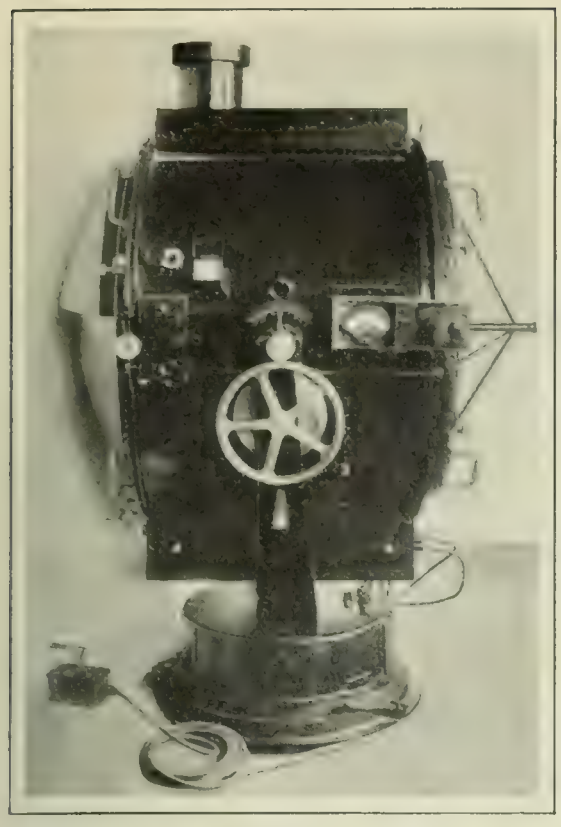
5. All whiskey and other intoxicants should be done away with, except for sacramental or medicinal purposes.

6. Government should regulate the highest price at which food and clothing of a certain quality should be sold.

Knoxville, Tennessee

Or, better yet, eliminate the middleman.

From the distributive system I would remove the profit motive, for it increases the cost of distribution by pushing down the prices paid producers and pushing up the price to consumers. The profit motive in that particular place is anti-social.



Divide the middleman's territory between the producers and consumers. Let them operate the line from producer to consumer and they will make it straight, free and down-grade. For they would have the incentive to make it so, which the present operating interests have not. Let producers learn to market together as farmer producers are fast doing.

To make the wheels of final distribution go round replace the push of the profit maker by the pull of the consumer thru coöperative buying. Already in Great Britain upward of 12,000,000 are annually buying about $1,000,000,000 worth of goods thru their own 2300 stores at a saving of about one-eighth.

Montclair, New Jersey

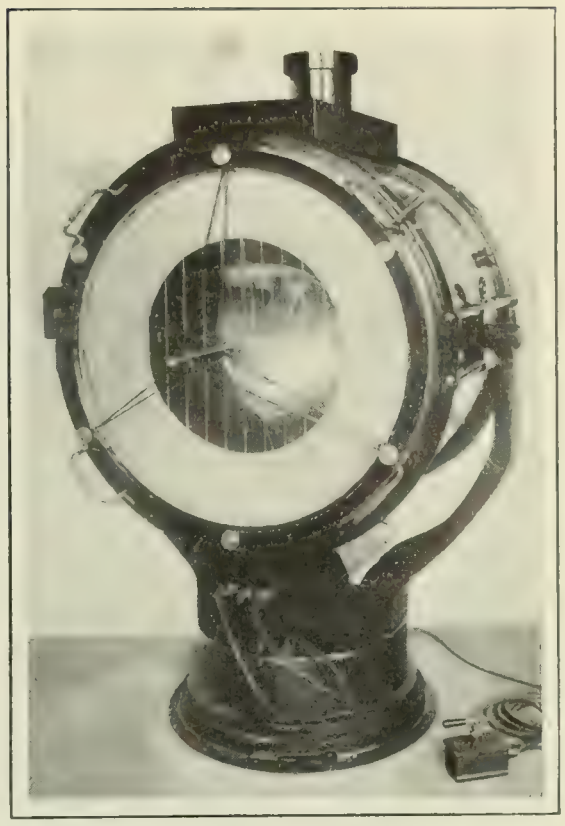
MORE LIGHT ON WAR

BY C. L. EDHOLM

THE SPERRY SEARCHLIGHT, SIDE VIEW
The wheel in the center controls the elevation, and the peep sight just above and to the right enables the operator to watch the arc without being blinded

SO powerful that a newspaper can be read by its light at a distance of thirty miles, the Sperry searchlight is conceded to be without a rival as a projector of brilliant rays. The huge device weighs three tons, stands ten feet high, and its mirror has a diameter of five feet. Mounted on the roof of the Sperry Building in Brooklyn, it was used on election night to flash returns, and in the city of Albany, 150 miles away, the pencil of light could be seen against the sky as it swung back and forth.

Stated in terms of candlepower, the figures may not convey a clear impression, so after stating that the candlepower is more than one and a quarter billion, or 320,000 per square inch, one may add that the beam of this searchlight is as brilliant as the sun at eight o'clock in the morning or four in the afternoon, New York latitude. Sandy Hook Lighthouse is equipt with one of the most powerful beacons along any seacoast, yet this new searchlight is twenty-two times more brilliant, and if its ray were turned upon a ship it would follow and illumine the vessel until it dipped below the horizon. It is for such purposes that a searchlight is intended in navy use, so its comparative efficiency may be stated thus: that the target is illuminated ten times as brilliantly as by an ordinary projector.



In modern warfare an important use of the searchlight is to detect aircraft, therefore the carriage permits this beam to be turned in a circle and at any direction upward to ninety degrees. It is possible for the operator to control it from a distance of fifty feet, enabling him to focus accurately upon any point. This is accomplished by an electrical mechanism which swings the three ton weight accurately and easily upon ball bearings. Efficient illumination at a great distance is due in part to the fact that the rays in the beam are nearly parallel; therefore the light is concentrated upon the target instead of being diffused over surrounding objects. This is the result of producing a crater which more nearly approximates the mathematical point of light than does that in any other lamp.

The heat thrown out by this light is so intense that when focussed sharply it will set paper afire at a distance of 250 feet, while men working in its glare find their skin reddening and peeling—the effects being similar to sunburn, but more painful. This is not surprizing in view of the fact that the temperature of the arc is 9000 degrees Fahrenheit. This is 7000 degrees higher than the melting point of the metal holders of the carbons, and as the holders are only an inch away from this intense heat it is necessary to protect them by a current of cool air. So a motor driven centrifugal blower is employed which forces a current of air thru the electrode or carbon supports and discharges it thru heat-radiating discs that surround the holders. Otherwise such a light could not be operated, as the metal parts would be melted in short order.

Several points of difference account for the extreme brilliance of this type of lamp with its high intensity electric arc. Its effectiveness is due to small electrodes, the special or impregnated carbons used, the manner in which they burn and the large parabolic mirror reflecting the light. The voltage across the arc is about 75. The lamp is operated at such a high temperature that the carbons give off a superheated vapor which burns in a crater of small diameter that is maintained in the positive electrode, thus adding to the beam's intensity. A peep sight furnished with colored glass is used to enable the operator to watch the arc without being blinded by the glare, or he can see an exact reproduction of the arc formed by lenses upon ground glass outside of the lamp. The light is reduced or shut off by means of an iris diaphragm (similar to a type used on high grade cameras) which may be seen in the front view of the searchlight back of the glass.

ELMER A. SPERRY,
Inventor of the searchlight, and also of a ship stabilizer, the gyro-compass, and the first electric arc light

THE GREAT MIRROR
This glare of one and a quarter billion candlepower is as brilliant as afternoon sunlight. The box on the floor provides electric control thirty feet away

The Sperry light is designed for various military and naval purposes, besides those of peace. It locates enemy forces, vessels or air craft, and is useful also in throwing a screen of light, for it is impossible to see *thru* the beam. Thus operations and movements of friendly forces or vessels can be screened from the enemy view by throwing the light across the field from one side.

It is also available for signaling up to one hundred miles, and may be used by field forces when mounted on an armored car. It is in use at present by the navies of the first class European powers.

Elmer A. Sperry, the designer of this important device, is an electrical engineer and scientist, who was appointed a member of the Naval Advisory Board upon nomination of the American Society of Aeronautical Engineers in 1916. He has been the recipient of many honors from foreign nations as well as our own, honors earned by such valuable inventions as the gyrocompass, ship stabilizer, electric coal mining machinery, and (in coöperation with his son Lawrence Sperry) the aeroplane stabilizer. When only nineteen years old, he designed the first electric arc light and dynamo and a few years later, in 1883, he erected on Lake Michigan the highest electric beacon in the world. Mr. Sperry was also one of the first designers of electric street railway cars.

New York City

WHEN BOYS GO CAMPING

BY CHARLES K. TAYLOR

ANY normal, red-blooded boy just naturally takes to the woods, if he gets half a chance. Upon this simple, primitive fact is based the increasing number of summer camps for boys. That the increase is continuous is an amazingly fine thing, but still more amazing are the potential possibilities of these camps—possibilities as yet unsuspected by the vast majority of camps and parents.

The camp has come to fill a very obvious need. In the summer, when children have nothing particular to do, the city is clearly not the most desirable place for them. Besides this, more and more parents are realizing that the typical summer resort, tho it gives fresh air at least, is likely to aid in developing false social concepts, besides giving few opportunities for the varied kinds of physical activity so necessary for a boy's all-around development. For these and other reasons every summer sees a larger number of boys and girls, going "camping."

Let us see what the average camp does for its boys. First of all, it gives them a life in the open air, and, if the boys sleep in tents—as they should—they have the free air at night as well as during the day. The average camp encourages baseball, swimming, boating, and even "hikes." All that it expects to do is to keep the boys well fed, out of mischief, and sufficiently amused, and to send the boys home, at the end of the summer, in good physical condition and brown as berries. And camps that do this much are eminently worth while.

But few camps realize their finest possibilities. Our boys have few opportunities for developing many important characteristics and capacities whose possession is so necessary for happiness and success. The more means an average family has, the more willing and anxious that family is to do things for its children. And so it is that the American boy, the boy of camp-going status, is given very few chances to develop self-reliance, initiative, resourcefulness, persistency.

You well may ask what all this has to do with camps. It has everything to do with them, for in the environment and system of a real camp we can find capacities for developing all the essential characteristics we have mentioned—as well as the self-control, patience and constructive ability that can come so easily thru rational handwork. Not only so, but a camp can make clear to a boy that fine psychological fact—that there is far more pleasure to be found in purposeful endeavor than in pursuing pleasure itself!

Mr. Taylor is a specialist in boys. He likes to play with them, he likes to work with them, and he likes them. But somehow he cannot keep the work and the play separate as most people do. He gets the two things so mixed up that the boys in his camps do not know half the time whether they are working or playing—and they do not care. But they are doing something for themselves anyway, and they like that. They are making a spot of the wilderness habitable, as did their pioneer ancestors. They are experimenting in the construction of civilization. Mr. Taylor sets them at camp-building, but we happen to know that he is more concerned with something else — that is character-building.— THE EDITOR.

THESE BOYS BUILT THEIR OWN MESS-HALL IN A WEEK AND A HALF

THE CAMP MEDLEY

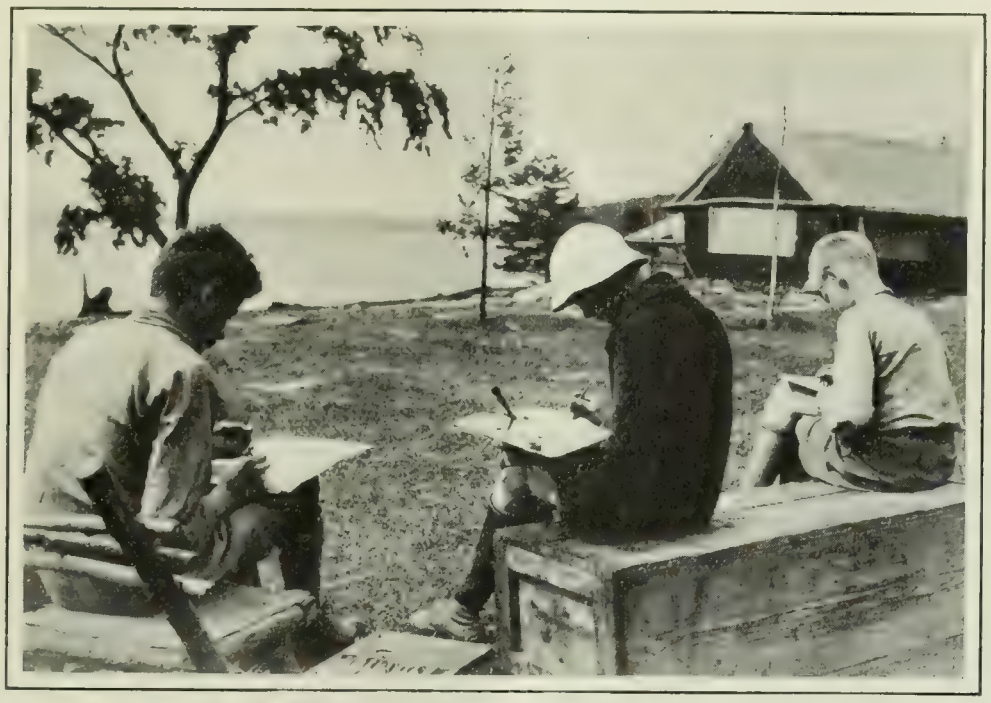
Obviously, if a camp can to any degree accomplish such matters, and at the same time give the boys the entirely desirable "good time" which is so necessary to boyhood, then it may well become an educational factor of the very first importance—using the term "education" in its best and broadest sense. The point of this whole argument is that a camp *can* accomplish these very things. It is not merely a matter for fanciful imagining and philosophical argument! For a number of years an experimental camp has been maintained for the development of this very idea, and a system has been constructed which accomplishes, to a worth-while degree, some of these desirable ends. Let us see how this is done, remembering that what is necessary is to develop self-reliance, resourcefulness, initiative, a pride in "self-help," and an ability to plan and construct and to do things with one's hands.

When the boys arrive in June they find no camp. There is a mess hall, to be sure, and a kitchen, but that is about all. As promptly as possible little groups of four or five are put in charge of caretakers—usually young college men who have been trained for that very purpose — and these "counselors," as they are called, take their groups to different little camp sites, which are scattered along an attractive shore line. At each camp site is found a tent, rolled up, and a pile of boards.

The first thing a group does is to put up its tent. Understand, the counselor does not do it. The boys of the group do it. He may assist, or make suggestions, or stimulate them to compete against a neighboring group — but that is all. When the tent is up, they build a floor under it. Then comes what, for a new boy, is a hard job. Each boy makes for himself a canvas cot—merely a piece of heavy canvas stretched over an oblong frame on legs. He makes the frame and all. If it is a poor job it may fall down with a crash in the middle of the night —and next day he builds another—and learns the value of "clinched" nails. Some parents would think this a very great hardship to impose. But the

odd thing is that ninety-nine boys out of a hundred do not think it a hardship at all, but, rather, a kind of adventure — a "stunt" they call it.

Now all this takes the first day. From then on they may build any tent furniture they please, and the groups differ a great deal, of course. Some make the bare essentials, and some achieve furniture the design and quality of which would astonish their parents.



The same principle is followed in the camp at large. Every new camp structure must be proposed, designed and built by the boys. They take no end of pride in such matters, and each season the camp tries to outdo the work of the preceding summer. That is how the mess hall came into being. In the beginning the camp was given merely a canvas dining tent—the barest possible essential. They stood it for a year or two and then put up a kind of shed, perhaps thirty feet long and twelve wide. This soon became very crowded and uncomfortable, but no suggestions came from the camp staff. So finally, in desperation, the boys decided on a a new mess hall. A fifteen year old boy furnished the plans—he was an "old hand" at such matters—and the camp got to work and finished it in a week and a half—a building seventy by twenty-four feet, shingled, with a kitchen and stone chimney at one end, really a most creditable achievement. Now to do this in a week and a half required steady, persistent work of a most exacting kind. With no stimulus from the staff at all, the lads got at it as soon as it was light enough to see, and kept right on till dark. There was no worry about "eight-hour" days, for it was a group possessing a hereditary capacity for work, and they did work with a persistency and steadiness that would have startled their mothers and dumbfounded their fathers!

It is certain that they took more pride in that job than they did in any sport or game they had that summer. They found, by experience, the lasting pleasure that comes thru purposeful endeavor. Three boys had the same feeling after they built a retaining wall of solid masonry, twenty feet long and seven feet high—to save two trees that were perilously near a crumbling bank. They took more pride in that wall than in any athletic victory.

Organized athletics, to be sure, have their important place, and for developing mental alertness and physical control baseball is about the best all-around game we have. So this camp has a good deal of baseball, and *all* the boys belong to nines. Furthermore, they made their own "diamond," just as they scraped and leveled and rolled their own tennis courts.

THERE IS NOTHING LIKE A LONG, HARD HIKE

THIS CAMP HAS A SKETCH CLUB

In the beginning Sunday chapel was held on the rocks by the shore, but a thirteen-year-old lad made plans for a rustic building along Gothic lines, and in about four days the camp built a most attractive little chapel. Then an artistic genius, using waterproof tracing cloth, colored tissue paper and varnish, made a beautiful window for the chapel which looked for all the world like stained glass. And this portrays the basic idea behind the system. The ideas and actual work are given by the boys, so to an unusual degree they come to feel that it is *their camp.*

Now, of course, all this constructive work is very good fun, once you get at it. But the rub comes in doing things that are not good fun, in doing unpleasant things because they are the things to do. For example, camp sanitation is a most important matter, so there are squads which see that all is clean and orderly. This may not always be an enjoyable job. In fact it is anything but that. But the boys see the reason for it. They are proud of their camp, and they have learned to work. And so there are efficient sanitary squads. Besides this, each morning there is a tent inspection — military fashion.

Then there is wash day. Some of these young lads, from plutocratic homes, are curst with sadly exaggerated "egos." But they all must wash their own stockings and Turkish towels—and the camp has yet to see one case of conceit which survives washing stockings. Also, after you have washed a Turkish towel you realize that cleanliness is a virtue not to be scorned, and that it is easier to keep things reasonably clean than to wash them when they are soiled. The boys do not *like* this job, no indeed. But at any rate they learn to do a mean job with good grace — and that is a rare quality.

The competitive spirit is a natural one, and one that can be used to great effect. By means of it one may accomplish the seemingly difficult with ease. For instance, there is nature study, in which most boys take a very perfunctory interest. But this camp introduces the competitive impulse, with excellent results. Altho nature study is quite optional, many boys are stimulated to take it up.

Then there are photographic contests—in which a boy not only takes pictures, but does all the developing and printing. Nor must we forget the "sketch club," which gives a final exhibition of black-and-white, as well as of color work. As works of art some of these perpetrations are appalling, but thru such work boys gain to an unusual degree an appreciation of the beautiful in nature, for they come to notice color and line as never before.

The whole effect of the process we have described is most encouraging. It not only tends to develop the desired characteristics and capacities, but the boys themselves like it immensely, because it brings out their latent powers. A camp need not fear that the extra cost of such a system would not pay financially, it proves to be an investment of the very best kind and after a summer of such work, systematically and sympathetically carried out, a camp can feel that it has really meant something worth while to its boys, and that because of it they have been better prepared to face the future.

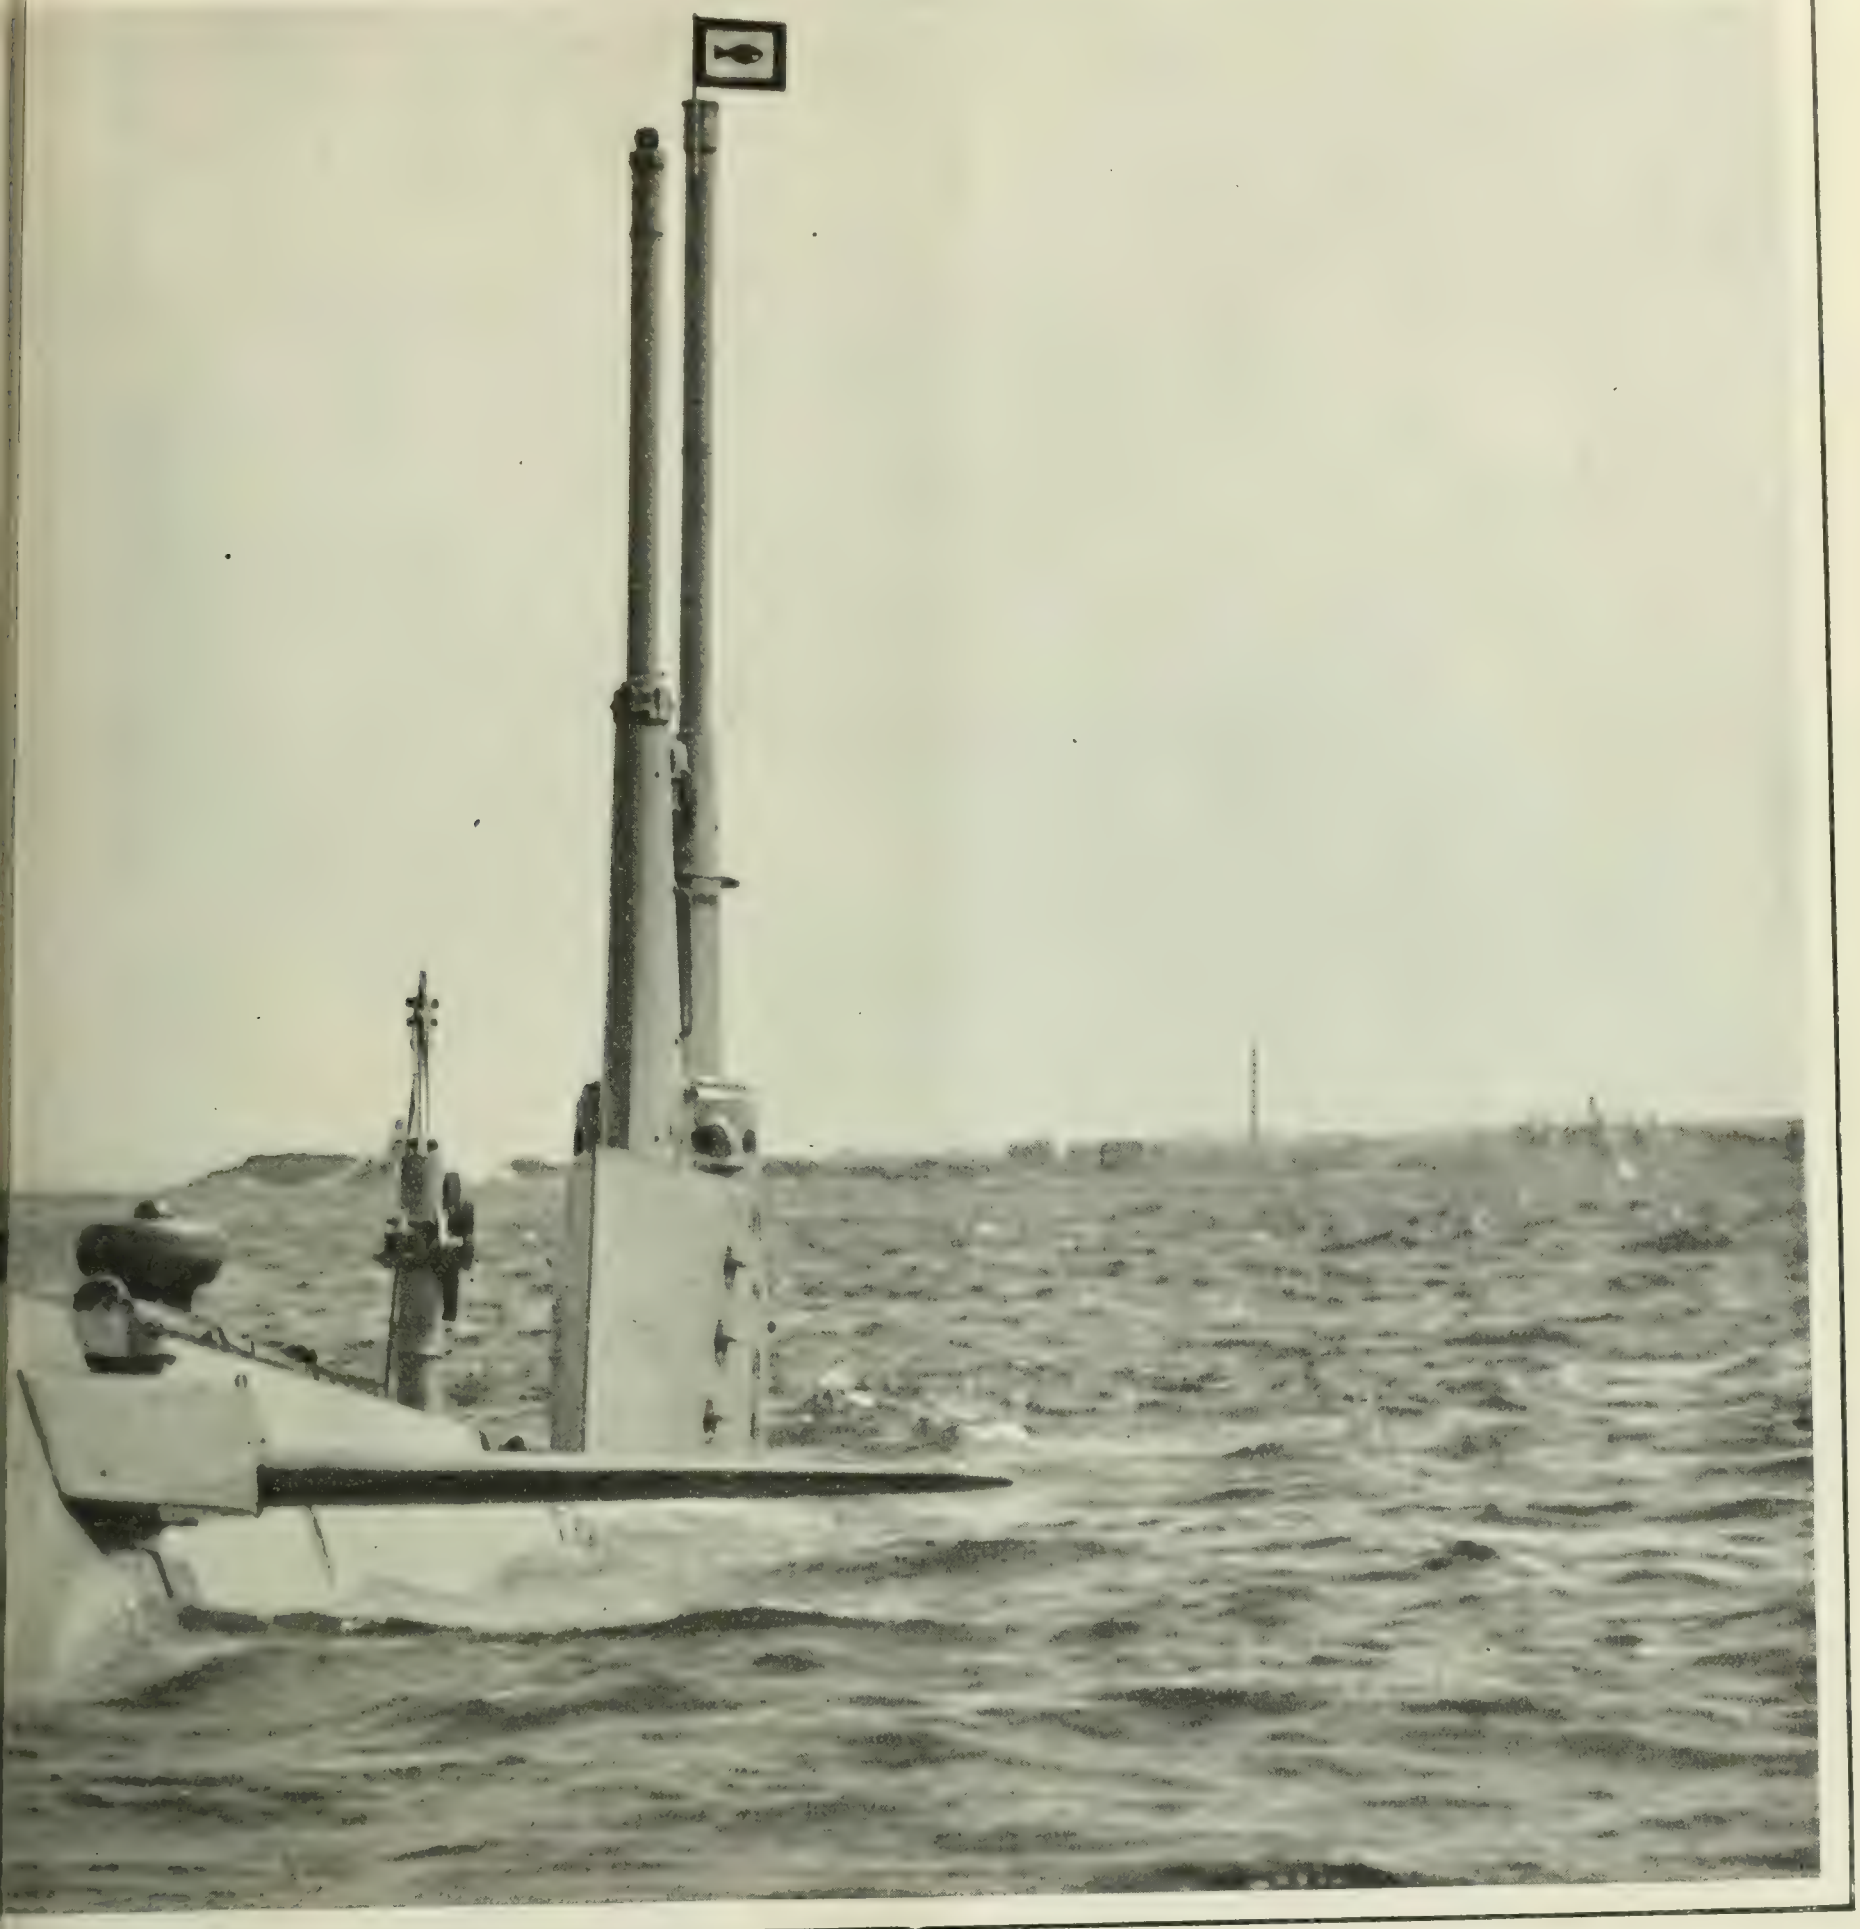
ONE OF OUR OWN S



THE SUBM

BY PA

IF the German fleet, now bottled in the Kiel Canal and in Wilhelmshaven, can defeat, first, all the effective fleets of Europe and Japan, and second, our own battleships, then an attempt at invasion may perhaps be its next move. But it is certainly not necessary now to borrow trouble about "invasion" by Teutonic submarines, especially as exemplified by their "knocking down the tall towers of New York," as a nervous newspaper recently suggested. That sort of bombardment is about as likely as the anticipated attack upon the bathhouses at Nahant by the Spanish fleet, nineteen years ago, which is reported to have caused precipitate retreat of timorous souls to points as far inland as Worcester, Mass. "German U-boats," also, suddenly appearing off Florida playgrounds are the progeny of the "spook" ships of the Spanish war, and merely another name for stray logs and barrels. So long as submarines require at least fifty feet of water in order to dive—and much prefer sixty and over—it is safe to predict that no inducements will make them enter harbors or perv shoals around the coast where the soundings are less.

They will also seduously avoid the channels, bays and s ports wherein thoughtfully disposed mine fields will be await their arrival.

In order to get here, submarines starting from a base Germany have to travel about 4800 miles. Many people thi that they do this under water. They do not, and cannot. T "Deutschland," for instance (now reported tied up to an E lish pier), was submerged for only about ninety miles of t distance, and not longer than for about two hours at a tir

ES—THE NEWEST TYPE

RINE SCARE

ENJAMIN

A submarine is simply an automobile. She has a Diesel oil engine which propels her on the surface and also charges a storage battery, which supplies current to the electric motor by which she is driven when below the surface. When she dives, she shuts off the oil engine and starts the electric motor. How far she can go on the water depends primarily on how much oil she can carry in her tanks. She will not run above water when her tanks are empty, any more than an automobile will run without "gas." She will not run under water any longer than her current supply lasts, and she has storage battery troubles quite as bad as—in fact, worse than—those of the electric automobile, whereof any gasoline car salesman will readily supply full particulars. In fact, one of the great weaknesses of the submarine lies in her propelling machinery.

Above water, submarines can go long distances. Large ones have been planned 250 feet in length, of 1200 tons displacement, with a speed of 20 knots per hour above and of 14 knots per hour below the surface, and an expected radius of action of 8000 miles. Whether they can do better than five per cent of this distance at the submerged speed—or, say, about 30 hours' total submersion—without replenishment of power is questionable. At all events, any submarine now known which has to cross the Atlantic before reaching her field of action must have extraneous means for renewing her fuel supply and for making repairs. That is, she must have a "mother ship," or a shore base within easy reach. Mother ships, usually surface steam vessels, are readily found and sunk, and we may be very certain that the United States Navy is seeing to it that

no German bases are being established on the Atlantic seaboard, even in Mexico. A submarine off the coast and 4800 miles from home and without available source of food and fuel is not much to be feared. The best she can do to protract her visit and give her people a rest from the dreadful noise of her machinery, the heat and the smells of her interior, and nerve-racking ever-present terror of destruction, is to find a place where the water is shallow, dive to the bottom and "go to sleep," in which condition she is not formidable.

Meanwhile consider what can be done to her while she remains our unwelcome guest, wallowing around in the ocean outside the ten-fathom depth. Imagine an existence spent in a swarm of murderous hornets, for every mile of the coast will be soon closely patrolled by legions of the speediest motor boats, each with a gun, little it is true, but quite sufficient to sink the intruder with a single shot the instant she shows above water. We have been building hundreds of these craft and sending them to England. We are already at work on them for ourselves, and they are supplemented by everything available that can carry a small gun, from menhaden fishing boats to the fastest private motor yachts patriotically offered by their owners. The new motor boats are of wood and very light, and just large enough safely to keep the sea. The submarine can not torpedo them, because she can not hit anything which is moving at a speed of 40 or 50 miles an hour. She can not torpedo one of them standing still, for the draft of water of the boat is far less than the depth at which a torpedo can run with any accuracy of aim, and, therefore, the torpedo will simply go under her. Besides, only a limited number of torpedoes can be carried on a submarine, and no more can be got without mother ship or base at hand. Moreover, it does not pay to sink a little boat with a missile which costs almost as much as the boat itself. Of course, all the hornets are in communication—by wireless, if need be. If one of them spies a periscope out of hitting distance, the direction of travel is noted and the next hornet duly warned, and sooner or later another killing is effected. England is reported to have some five thousand boats of all sorts engaged in this business — and her sporting press is asserting that big game hunters are finding more real thrills in "potting submarines" from steam trawlers than in shooting tigers from elephants' backs in India.

It is by no means easy for a submarine safely to cross the Atlantic in full view, without being seen by the cruisers and converted fast merchant ships which are on the constant watch. To meet this difficulty, some people have suggested that an innocent-looking tramp steamer flying a neutral flag might bring over several small submarines on her decks and launch them at appropriate places. That resembles the alleged "secret" which one of the "wilful" senators is charged with revealing when he talked about our sending motor boats in the same way into the German danger zone to help England, besides being reminiscent of Mr. Henry Ford's proposed submarine "jitney." As to these small fry, it may be sufficient to say that France, some twelve years ago, built a lot of them of only 40 tons' displacement, known as the "Guèpe class," and found them entirely too weak, enormously expensive in upkeep, useless even in a moderately smooth sea, unbearable to live in and impossible to launch safely in choppy waves. None the less, twenty more were built, called the "Naiade class," and discarded for about the same reasons after trials extending over some six or seven years. Then M. Pelletan—who, as minister, worked such stupendous havoc in the French Navy—saw a congenial opportunity to do some more harm, and proposed to construct a perfect cloud of them, and, what was worse, make every battleship clutter her decks with them and get them overboard somehow in the middle of a fight. Then we came along with our "Professor Parker," hardly two years ago, who exploited his infant submarines with illustrations in newspapers which did not know any better. And after that the "jitney"—and "the rest," let us hope, "is silence."

THE submarine, being a mechanical fish, is just as catchable in nets as a shad. Great Britain has been using such nets with notable success. Sometimes they are of chain, sometimes of wire, sometimes of wrought iron frames linked together — with meshes from 10 to 15 feet square. They make the lane across Dover Straits, thru which millions of men and millions of tons of munitions have been safely ferried. They are laid across roadstead and harbor entrances, and in all sorts of places thruout the "danger zone." We are already establishing them. The submarine that gets caught in them usually remains. Off the coast of Britain one may see long strings of floats—with the fast motor boats running constantly up and down the lines. If a float disappears, the first boat noting the fact circles around the spot, with her gun trained and ready. If the submarine comes up, she is instantly sunk. If not, because entangled, the watcher grimly waits five days to make certain that no life remains, and then tells a destroyer which raises the victim and tows her into port. But even more dramatic is submarine catching by a couple of motor boats, a net and an aeroplane working together. The aeroplane assumes the rôle of hawk, and sees the submerged submarine as a hawk sees a fish, or else if the U-boat be too deeply submerged, recognizes the line of regular waves which the latter always makes on the surface. A puff of black smoke trailing from the aeroplane or a wireless signal warns the boats who rush ahead of the submarine and spread the net across her coming track. The victim's captain, seeing nothing, steering by compass, goes blindly on, only to find suddenly that something is wrong. The bow of his boat wants to go down, her rudders refuse to obey the helm; her screws may stop turning. He does not know what the matter is, down there in the dark. He may, shudderingly, suspect the great net in which he is enmeshed. If he cannot move, he knows that his buoyancy is only due to what air there is in his air tanks. He must go up or else go down and stay there. Human nature prevails, and he goes up for daylight, and then the shots ring out. And after that—nothing but some bubbles and a long slick of oil on the restless sea.

Last summer the British Admiralty said that 127 German U-boats had been netted — the number since then is not announced.

There seems to be some apprehension lest our coastwise commerce be seriously menaced by German submarines. Torpedo attacks on steamers succeed best when delivered from the submarine in ambush, and gun-fire attacks when the victim is unarmed and slower than the assailant. It is reported from the British Admiralty that the very large majority of surface attacks on armed merchant vessels have failed. The actual figures show that unarmed merchantmen have escaped in but twenty-four per cent of the gun-fire attacks, while armed merchantmen have escaped in the ratio of seventy per cent.

The surface ship, in many respects, has a natural advantage over the submarine, not only because she can carry bigger guns, but because her spar-deck being much higher out of water than the submarine periscope, a greater range of vision is possible, so that the U-boat may find herself sunk by an enemy which she cannot see, but which can see her. Recently steamers traversing the danger zones have completely screened themselves from submarines by the production of immense quantities of heavy black smoke.

A submarine on the surface is a much less steady gun platform than the deck of a steamer, and hence guns on the latter can be more accurately aimed. A six-pounder quick-fire gun can deliver twenty-two aimed shots per minute, which will penetrate the thin hull of a submarine over two miles distant as easily as if it were of pasteboard. Larger projectiles like four and six-inch shells burst into many pieces, any one of which may end a U-boat.

Meanwhile, the inventors are not idle. After the position and direction of movement of a submarine are known, the chances of her destruction are great. It is already possible to make a submarine entering or leaving a channel or roadway signal automatically her course and speed to a watching vessel in ample time to enable the latter to prepare for her. It is but a step beyond to cause a U-boat to reveal her own proximity to a ship on the open sea.

So good people who fear that we may overlook the provision of a suitable reception committee for the Kaiser's submerged missionaries may take heart of grace and rest assured that there is no present reason for shivering over what they may be able to do.

Who's who in our army? A general shifting of military authority "to facilitate decentralization of command" has been ordered by the War Department to take effect May 1st. Its most surprizing result is the transfer of Major-General Leonard Wood (center photograph) from his command of the Eastern Department with headquarters at Governor's Island, to a subdivision of it, the Southeastern Department, with headquarters at Charleston, South Carolina. His former command has been divided into three departments: the Eastern with present headquarters, to be occupied by Major-General J. Franklin Bell, whose photograph is published below; and the Northeastern, with headquarters at Boston, under Brigadier-General Clarence Edwards (photograph above)

EIGHT GREAT SHORT STORIES

From American Literature

With Introductions by FREDERICK HOUK LAW

THE GIFT OF THE MAGI

BY O. HENRY

OF all recent American short story writers none is more popular than O. Henry. At the age of forty, when he gained his public, he had but eight years more to live, but he made those last eight years a triumph of success. And altho he wrote so rapidly that his powers of production astonished every one, he could scarcely produce stories rapidly enough. The secrets of his great success lay in a wide observation of men, women and books; freedom from all literary conventions; humor and sympatny, and real genius in the story-telling art.

The years before O. Henry became successful were really aids to success, for he was unconsciously gathering material from which to draw lavishly in his last few years of work. In actual life he was William Sidney Porter: "O. Henry" is a pseudonym chosen because he was attracted by the name "Henry" seen in a New Orleans newspaper, and he thought the letter "O" easy to write. O. Henry was born in Greenboro, North Carolina, in 1862, but he lived as citizen of a wide world, seeing life in Central America and Texas, thru the great West, and in every part of "Little-Old-Bagdad-on-the-Hudson." Like many other writers he had no particular education except that gained in "the school of hard knocks and experience." He was clerk in a drug store; ranchman in Texas; employee in a bank; editor of a humorous paper; reporter; adventurer in Central America; literary worker in New Orleans and finally in New York—and everywhere open eyed for life. Without doubt his death at forty-eight was the result of working at high pressure, but in his forty-eight years he lived longer than most men, and he wrote more than ten volumes of short stories that are still "best sellers."

When some one asked O. Henry how to write a short story he said: "Please yourself. There is no second rule." And please himself he did—using slang, coining words, violating the rules of sentence structure, violating the rules of paragraphing; writing with unusual dashes, parentheses, exclamation points and capital letters; making false allusions intentionally; breaking into his stories with side remarks; mixing the serious and the burlesque—but always so cleverly, so surprizingly, with such abandon of reckless, carefree ability that the reader knew O. Henry was a story-teller born to his art.

In "The Gift of the Magi" O. Henry has used the simple, partly humorous and partly serious events of ordinary life, and has constructed a single situation with a single effect. Without character analysis he has made character illuminate the entire story. As in all O. Henry's stories the most notable effect is surprize: both characters, in sacrificing their dearest treasures, at the same time unknowingly give up the possibility of enjoying each other's gifts. The higher surprize for the reader is that of being led unsuspectingly and irresistibly to the conclusion—toward which every word has led from the beginning—that self-sacrifice is the highest evidence of love. Written in a free and easy style that makes for originality and personality; quick, vivid and sympathetic; with an application that leaves the reader with a sense of gain, "The Gift of the Magi," told in common language, illustrates a unique and artistic type of the short story, founded partly on French models, but springing more truly from the virile life and thought of America.

O. HENRY

ONE dollar and eighty-seven cents. That was all. And sixty cents of it was in pennies. Pennies saved one and two at a time by bulldozing the grocer and the vegetable man and the butcher until one's cheeks burned with the silent imputation of parsimony that such action involved. Three times Della counted it. One dollar and eighty-seven cents. And the next day would be Christmas.

There was clearly nothing to do but flop down on the shabby little couch and howl. So Della did it. Which instigates the moral reflection that life is made up of sobs, sniffles, and smiles, with sniffles predominating. While the mistress of the home is gradually subsiding from the first stage to the second, take a look at the home. A furnished flat at $8 per week. It did not exactly beggar description, but it certainly had that word on the lookout for the mendicancy squad.

In the vestibule below was a letter-box into which no letter would go, and an electric button from which no mortal finger could coax a ring. Also appertaining thereunto was a card bearing the name "Mr. James Dillingham Young."

The "Dillingham" had been flung to the breeze during a former period of prosperity when its possessor was being paid $30 per week. Now, when the income was shrunk to $20, the letters of "Dillingham" looked blurred, as tho they were thinking seriously of contracting to a modest and unassuming D. But whenever Mr. James Dillingham Young came home and reached his flat above he was called "Jim" and greatly hugged by Mrs. James Dillingham Young, already introduced to you as Della. Which is all very good.

Della finished her cry and attended her cheeks with the powder rag. She stood by the window and looked out dully at a gray

(Copyright, Doubleday, Page and Company)

cat walking a gray fence in a gray backyard. Tomorrow would be Christmas Day, and she had only $1.87 with which to buy Jim a present. She had been saving every penny she could for months, with this result. Twenty dollars a week doesn't go far. Expenses had been greater than she had calculated. They always are. Only $1.87 to buy a present for Jim. Her Jim. Many a happy hour she had spent planning for something nice for him. Something fine and rare and sterling—something just a little bit near to being worthy of the honor of being owned by Jim.

There was a pier-glass between the windows of the room. Perhaps you have seen a pier-glass in an $8 flat. A very thin and very agile person may, by observing his reflection in a rapid sequence of longitudinal strips, obtain a fairly accurate conception of his looks. Della, being slender, had mastered the art.

Suddenly she whirled from the window and stood before the glass. Her eyes were shining brilliantly, but her face had lost its color within twenty seconds. Rapidly she pulled down her hair and let it fall to its full length.

Now, there were two possessions of the James Dillingham Youngs in which they both took a mighty pride. One was Jim's gold watch that had been his father's and his grandfather's. The other was Della's hair. Had the Queen of Sheba lived in the flat across the airshaft, Della would have let her hair hang out the window some day to dry just to depreciate Her Majesty's jewels and gifts. Had King Solomon been the janitor, with all his treasures piled up in the basement, Jim would have pulled out his watch every time he passed just to see him pluck at his beard from envy.

So now Della's beautiful hair fell about her rippling and shining like a cascade of brown waters. It reached below her knee and made itself almost a garment for her. And then she did it up again nervously and quickly. Once she faltered for a minute and stood still while a tear or two splashed on the worn red carpet.

On went her old brown jacket; on went her old brown hat. With a whirl of skirts and with the brilliant sparkle still in her eyes, she fluttered out the door and down the stairs to the street.

Where she stopped the sign read: "Mme. Sofronie. Hair Goods of All Kinds." One flight up Della ran, and collected herself, panting. Madame, large, too white, chilly, hardly looked the "Sofronie."

"Will you buy my hair," asked Della.

"I buy hair," said Madame. "Take yer hat off and let's have a sight at the looks of it."

Down rippled the brown cascade.

"Twenty dollars," said Madame, lifting the mass with a practised hand.

"Give it to me quick," said Della.

Oh, and the next two hours tripped by on rosy wings. Forget the hashed metaphor. She was ransacking the stores for Jim's present.

She found it at last. It surely had been made for Jim and no one else. There was no other like it in any of the stores, and she had turned all of them inside out. It was a platinum fob chain, simple and chased in design, properly proclaiming its value by substance alone and not by meretricious ornamentation—as all good things should do. It was even worthy of The Watch. As soon as she saw it she knew that it must be Jim's. It was like him. Quietness and value—the description applied to both. Twenty-one dollars they took from her for it, and she hurried home with the 87 cents. With that chain on his watch Jim might be properly anxious about the time in any company. Grand as the watch was, he sometimes looked at it on the sly on account of the old leather strap he used in place of a chain.

When Della reached home her intoxication gave way a little to prudence and reason. She got out her curling irons and lighted the gas and went to work repairing the ravages made by generosity added to love. Which is always a tremendous task, dear friends—a mammoth task.

Within forty minutes her head was cov-

A May-Time Breakfast

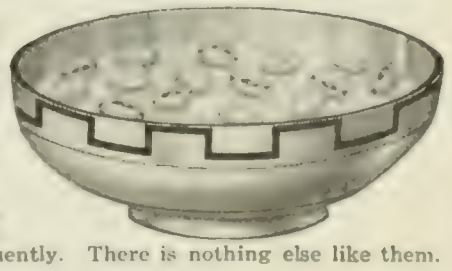
Make It a Reality

If an artist painted a May-time breakfast, the center dish would be berries.

But not berries alone. The berry dish is twice as dainty mixed with airy Puffed Grains.

Add sugar and cream to that mixture, and you have the finest dish in the world.

Flaky, Toasted Bubbles



These are whole grains of wheat and rice, puffed by steam explosions. Prof. A. P. Anderson invented the process to break up every food cell.

A fearful heat is applied for an hour, which gives a nut-like flavor. Then the grains are shot from guns. Every granule is exploded. And the grains come out like bubbles, puffed to eight times normal size.

The object is easy digestion. But the result is a food confection. Never was anything half so enticing made from these grains before.

Puffed Wheat **Puffed Rice**
and Corn Puffs
Each 15c Except in Far West

May-Time Suppers

For luncheons and suppers millions of people serve them in bowls of milk. They form airy morsels, thin and flaky, with a toasted nut-like flavor.

They supply whole-grain foods, with their minerals and vitamines, of which few get enough. And in a form where every atom feeds.

In this form they do not tax the stomach. So they are mid-day foods for brain-workers, and bedtime foods for children. Serve them more frequently. There is nothing else like them. Keep all three kinds on hand.

From the first shot

of the Great War, The Independent has marched squarely abreast with its stupendous events, every number throbbing with live news, flashing out the swift changing drama of current history and ringing with messages of the hour.

From a week to a month in advance of other periodicals with its account, discussion and picture treatment of outstanding events of the world conflict, The Independent is recognized as having fair claim to the now familiar appellation, "the most satisfactory war journal in America."

And now—

With war at our own door, The Independent presents in part its plan for prompt and vigorous treatment of events as they come—in editorial, picture, news record, expert interpretation, field correspondence and articles from those high in authority.

Newton D. Baker

Secretary of War, will write for The Independent on the problems of the United States Army.

W. F. Gifford

Director of the Council of National Defense, will write for The Independent several articles on the Industrial Mobilization of the United States.

Park Benjamin

the famous authority on naval strategy, will again act as the Naval Adviser of The Independent following the fortunes of the United States on the high seas.

The Military Expert

of The Independent will follow closely the military activities of the United States, interpreting the problems of mobilization, equipment, training, defense preparation and field movements of the army.

Henry Woodhouse

Governor of the Aero Club of America and Editor of "Flying," will act as The Independent's expert on Aeronautics.

Carl W. Ackerman

the well-known war correspondent who has spent the last two years in Berlin and who returned to the United States with Ambassador Gerard's party, will write for The Independent of his first hand impressions and experiences in Germany. Two articles by him will be "What the Kaiser Expects of German-Americans in the United States" and "Von Hindenburg: A Character Sketch."

A Soldier at the Front

will tell a vivid story in The Independent entitled "Impressions When I Was Wounded," translated by Harry Kurz.

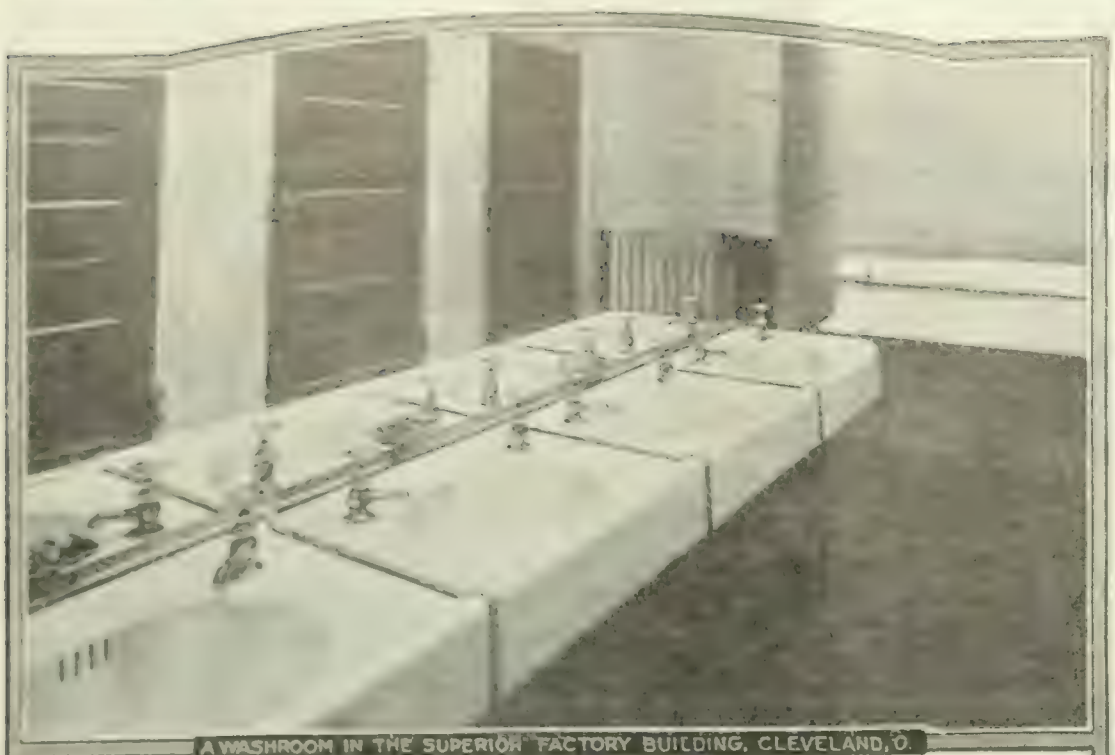
William Howard Taft

Former President of the United States, will write for The Independent on World Federation and the Enforcement of Peace.

George W. Perkins

Formerly of J. P. Morgan & Co., will write for The Independent on Trading Among the Nations.

Robert E. Peary



Rear Admiral, United States Navy, and discoverer of the North Pole, will write for The Independent on "The Remade Map."

The Independent's Story of the Great War is of new interest to the men and women of America, who must sharpen their vision, coördinate the daily news and think clearly on the new problems of the hour.

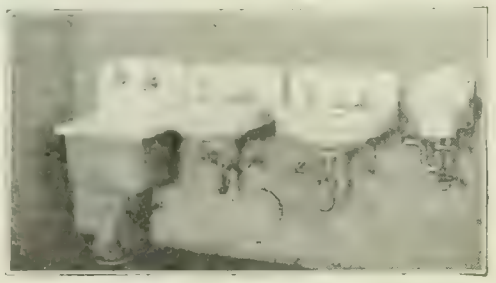
HARPER'S WEEKLY

The Swiftest Periodical News and Picture Service in America



A WASHROOM IN THE SUPERIOR FACTORY BUILDING, CLEVELAND, O.

"Standard" Fixtures Make It Neat, Sightly, Sanitary

Your factory sanitation problem is *solved* when you take advantage of "Standard" service and decide upon a "Standard" installation.

No part of your factory equipment can be considered as of greater importance than the fixtures upon which plumbing conditions depend. Sanitary plumbing helps to measure the happiness, comfort and health of your employees—therefore it counts for much in measuring their *powers of production*—their general efficiency.

Get our free book on Factory Sanitation. Consult with one of our service men. And see "Standard" fixtures at any showroom listed below.

Some of the "Standard" Equipment owned by Richman Bros., Cleveland, Ohio

"Standard" Plumbing Fixtures for the Home

represent the complete, up-to-date line for Bathroom, Kitchen and Laundry. Their supremacy is the result of experience, service and quality. Talk to your plumber about "Standard". Insist upon this proved, time-tried brand. Look for the Green and Gold label. If interested in plumbing fixtures for domestic use, write for free copy of "Standard" Plumbing Fixtures for the Home," also new Sink booklet.

ever with tiny, close-lying curls that made her look wonderfully like a truant schoolboy. She looked at her reflection in the mirror long, carefully, and critically.

"If Jim doesn't kill me," she said to herself, "before he takes a second look at me, he'll say I look like a Coney Island chorus girl. But what could I do—oh! what could I do with $1.87?"

At 7 o'clock the coffee was made and the frying-pan was on the back of the stove hot and ready to cook the chops.

Jim was never late. Della doubled the fob chain in her hand and sat on the corner of the table near the door that he always entered. Then she heard his step on the stairway down on the first flight, and she turned white for just a moment. She had a habit of saying little silent prayers about the simplest everyday things, and now she whispered: "Please, God, make him think I am still pretty."

The door opened and Jim stepped in and closed it. He looked thin and very serious. Poor fellow, he was only twenty-two—and to be burdened with a family! He needed a new overcoat and he was without gloves.

Jim stopped inside the door, as immovable as a setter at the scent of quail. His eyes were fixed upon Della, and there was an expression in them that she could not read, and it terrified her. It was not anger, nor surprize, nor disapproval, nor horror, nor any of the sentiments that she had been prepared for. He simply stared at her fixedly with that peculiar expression on his face.

Della wriggled off the table and went for him.

"Jim, darling," she cried, "don't look at me that way. I had my hair cut off and sold it because I couldn't live thru Christmas without giving you a present. It'll grow out again—you won't mind, will you? I just had to do it. My hair grows awfully fast. Say 'Merry Christmas,' Jim, and let's be happy. You don't know what a nice—what a beautiful, nice gift I've got for you."

"You've cut off your hair?" asked Jim, laboriously, as if he had not arrived at that patent fact yet even after the hardest mental labor.

"Cut it off and sold it," said Della. "Don't you like me just as well, anyhow? I'm me without my hair, ain't I?"

Jim looked about the room curiously.

"You say your hair is gone?" he said, with an air almost of idiocy.

"You needn't look for it," said Della. "It's sold, I tell you—sold and gone, too. It's Christmas Eve, boy. Be good to me, for it went for you. Maybe the hairs of my head were numbered," she went on with a sudden serious sweetness, "but nobody could ever count my love for you. Shall I put the chops on, Jim?"

Out of his trance Jim seemed quickly to wake. He enfolded his Della. For ten seconds let us regard with discreet scrutiny some inconsequential object in the other direction. Eight dollars a week or a million a year—what is the difference? A mathematician or a wit would give you the wrong answer. The magi brought valuable gifts, but that was not among them. This dark assertion will be illuminated later on.

Jim drew a package from his overcoat pocket and threw it upon the table.

"Don't make any mistake, Dell," he said, "about me. I don't think there's anything in the way of a haircut or a shave or a shampoo that could make me like my girl any less. But if you'll unwrap that package you may see why you had me going a while at first."

White fingers and nimble tore at the string and paper. And then an ecstatic scream of joy; and then, alas! a quick feminine change to hysterical tears and wails, necessitating the immediate employment of all the comforting powers of the lord of the flat.

For there lay The Combs—the set of combs, side and back, that Della had worshipped for long in a Broadway window. Beautiful combs, pure tortoise shell, with jeweled rims—just the shade to wear in the beautiful vanished hair. They were expensive combs, she knew, and her heart had simply craved and yearned over them with-

out the least hope of possession. And now, they were hers, but the tresses that should have adorned the coveted adornments were gone.

But she hugged them to her bosom, and at length she was able to look up with dim eyes and a smile and say: "My hair grows so fast, Jim!"

And then Della leaped up like a little singed cat and cried, "Oh, oh!"

Jim had not yet seen his beautiful present. She held it out to him eagerly upon her open palm. The dull precious metal seemed to flash with a reflection of her bright and ardent spirit.

"Isn't it a dandy, Jim? I hunted all over town to find it. You'll have to look at the time a hundred times a day now. Give me your watch. I want to see how it looks on it."

Instead of obeying, Jim tumbled down on the couch and put his hands under the back of his head and smiled.

"Dell," said he, "let's put our Christmas presents away and keep 'em a while. They're too nice to use just at present. I sold the watch to get the money to buy your combs. And now suppose you put the chops on."

The magi, as you know, were wise men—wonderfully wise men—who brought gifts to the Babe in the manger. They invented the art of giving Christmas presents. Being wise, their gifts were no doubt wise ones, possibly bearing the privilege of exchange in case of duplication. And here I have lamely related to you the uneventful chronicle of two foolish children in a flat who most unwisely sacrificed for each other the greatest treasures of their house. But in a last word to the wise of these days let it be said that of all who give gifts these two were the wisest. Of all who give and receive gifts, such as they are wisest. Everywhere they are the wisest. They are the magi.

PEBBLES

The ex-King of Portugal is hard at work on a book. Manual labor!—*Saturday Night.*

Son—Pa, what do the Head Hunters do with the heads after they get them?

Pa—Make noodle soup of them, I guess. Don't bother me again.—*Tiger.*

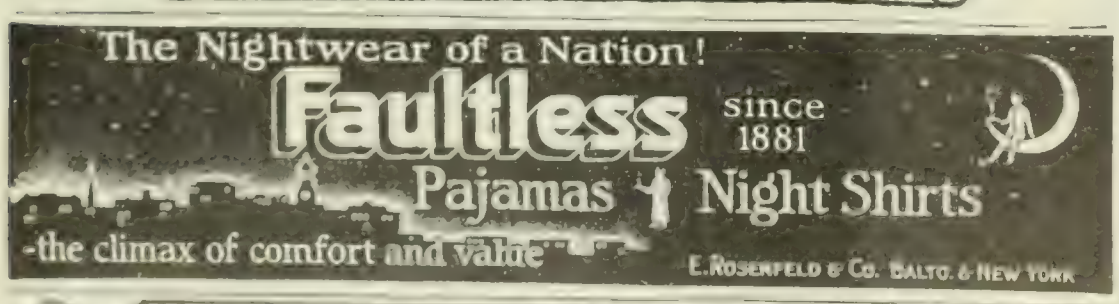
Nujol for Constipation

How Do You Expect *to* "Work Like a Horse"

—yet treat yourself as an intelligent farmer would scorn to treat his plow-horse? Your body demands careful attention, like any other finely adjusted piece of machinery. It responds just as readily to good treatment and suffers just as acutely from neglect.

Neglect of the bowel function and the habitual use of laxative pills and waters frequently result in chronic constipation. Drug "remedies" for constipation whip the bowels into action until eventually the system comes to demand the spur of a cathartic before it will work at all. For this reason physicians everywhere are recommending Nujol—the internal lubricant. Nujol, unlike physics or drugs, acts mechanically by keeping the intestinal contents soft and so facilitating normal movements.

Nujol being a lubricant, does not gripe or upset the system. It is tasteless, and easy to take.



The Standard Oil Company (New Jersey) has used its world-wide resources in producing Nujol and its reputation is behind the product.

Nujol is the only remedy for constipation we manufacture. The genuine sold only in pint bottles bearing Nujol trade-mark. All bottles filled at our Nujol plant, absolutely modern and sanitary.

STANDARD OIL COMPANY

MR. PURINTON'S EFFICIENCY QUESTION BOX

413. Mr. S. J. H., Washington. "Your gospel seems to include health of the whole body and mind. You seem to imply that ill-health can always be eradicated. I am growing deaf, and medical aid has not helped. (a) What would you suggest? (b) Express your opinion on thought cures."

(a) Don't despair because a general medical practitioner has not helped. You need a first-class ear, nose and throat specialist, one connected with an approved hospital in a large city. Write Editor, *American Medicine*, New York, for name of a good hospital treating cases like yours, and have an expert examination. You probably need not become deaf; but if you should, you can likely hear by some such mechanical device as the Mears Ear Phone, the Acousticon, the Otophone, or other contrivance. (Look up advertisements in popular magazines.)

(b) We believe in rational metaphysics, when properly supplemented by natural food, water, sunlight, air, sleep, clothing, exercise, work, play, service. We do *not* believe in the wild claims and one-sided practises of those metaphysical "healers" who despise all things material except your bank-book. Write Efficiency Publishing Company, Woolworth Building, New York, for names of books on psychotherapy.

---

414. Miss A. W., California. "I find your department very beneficial, and desire further aid. I am just entering the business world. What books will help me to become an efficient business woman, particularly in my stenographic duties?"

Eleanor Gilbert's "The Ambitious Woman in Business" ($1.62 by mail), and Aurora Reed's "The Woman's Manual" ($1 by mail), would be of general assistance. For improved technical knowledge, the "Business Correspondence Library" (4 volumes, price $8), would serve well. A small publication is the "I. C. S. Handbook for Stenographers" (50 cents). These books can all be had from the Efficiency Publishing Company, Woolworth Building, New York.

---

415. Mr. E. C. M., Oklahoma. "Please tell me (a) what opportunities a course in geology would open to me, and (b) whether I could learn it by a home study course. Am twenty-five, with high school education; others are depending on me."

(a) Very few, except in a mining region, where you might become successful in locating mines, gas or oil wells. Write for details of the work of Mines Company of America, 111 Broadway; also of Minerals and Metals Company of America, 79 Wall street; also Metallurgical Company of America, 61 Broadway; also of *Metallurgical and Chemical Engineering*, 239 West Thirty-ninth street, all of New York.

(b) Regular correspondence schools do not give courses in geology. Write the U. S. Department of Agriculture, Washington, D. C., for the best way to become an expert on soils. You might easily connect with an agricultural experiment station of a nearby college or State University, and work toward a place in the extension department. The scientific farm, as a laboratory of applied geology, seems to us the most feasible opportunity ahead of your ambition.

---

416. Mr. W. G. M., Idaho. "You say: No wool next the skin. Sylvanus Stall, D.D., says: Wear woolen underwear the year around. (a) Who is right? (b) Are alcoholic drinks, tobaccos, coffee and tea injurious to the nerves, from your standpoint?"

(a) When Dr. Stall wrote his books, the fallacy of wool undergarments had not been recognized generally, even by physicians. But the consensus of modern opinion among authorities, based on long experiment, holds that "flannels" should never be worn except on medical advice. Reasons: Wool next the skin shuts out the air and lowers vitality; retains perspiration and increases liability to colds, coughs and other ailments of defective excretion; saps energy by forcing one to carry needless weight of clothing;

causes irritation and discomfort by "scratchy" feeling of wool; makes the body too warm in heated houses — change of clothing for cool weather should specify only outer garments heavier, as indoor temperature is high enough in cold seasons of the year.

(b) Yes—from any reasonable standpoint. For the nerves merely, alcohol is probably worst, coffee next harmful, tobacco next, and tea the least. If desired, we will name books presenting facts.

---

417. Miss E. C., Wyoming. "Where can I find description (a) of the new device for taking dictation in phonetic English characters; also (b) of the new method of fingering the typewriter? Both were mentioned in your article on Office Efficiency."

(a) Write the Stenotype Company, 220 West Forty-second street, New York. Also refer to late Question Box answer to query of Mr. A. W. G., New Hampshire.

(b) Write Tulloss School of Typewriting, 3810 College Hill, Springfield, Ohio.

---

418. Mr. F. F., Rhode Island. "I am an experienced file clerk, with good knowledge of business life, and ambition to hold responsible place in traffic management. (a) Is it possible for me to qualify thru study of a mail course, without having had experience in traffic lines? (b) Which mail course is better — that of American Commerce Association, or that of LaSalle Extension University, both Chicago?"

(a) We think you would have a 100 per cent better chance if you took a minor job with a big railroad, and worked and studied together, on traffic problems. Why not get influential introduction to local railway official (confidentially, of course) and obtain expert advice on the ground.

(b) We can never, either in print or by mail, declare one product or institution better than another, as we can not possibly know the exact situation of our readers from a distance, and each must finally judge for himself. Put your query to Editor, *Railroad Man's Magazine*, 8 West Fortieth street, or Editor, *Railway Engineering*, 50 Church street, or Editor, *Railway Age Gazette*, Woolworth Building, all New York.

---

419. Miss L. A., California. "Kindly advise me as to the best method of studying to be a Character Analyst and Vocational Adviser. I am a high school graduate, with five years' experience in a newspaper office, as chief clerk and bookkeeper."

We question the wisdom of your purpose. The demand for vocational counsellors has not grown sufficiently to make the profession of great service or financial stability. The methods of vocational guidance have not been standardized, or even authenticated fully enough to warrant general usage. Character analysts widely disagree among themselves; each probably has a portion of truth, but no one whom we can mention is able to instruct you for a complete, scientific application of the many principles involved.

For detailed opinion, write Professor Benjamin Gruenberg, Secretary Vocational Guidance Association, at Julia Richman High School, New York; also Meyer Bloomfield, Director Boston Vocation Bureau, Beacon street, Boston. And ask the U. S. Commissioner of Education, Washington, D. C., for list of high schools where vocational advisers are employed—then consult a few of these individuals on training for their line of work.

---

420. Troubled Girl from New York. "I am a high school senior; can't decide on a life work. Should rather like nursing, but my parents object; they imply that, being a girl, I shall marry, so need not work for a living, nor worry about a vocation. I love children—what could I do among them, to bring financial and mental returns?"

You are enterprizing and resourceful, so we advise you to obtain literature from the following people, on their different work for children —then build your own future in the place of your choice: American Institute of Child Life, Philadelphia; Chicago School of Civics and Philanthropy, 2559 South Michigan avenue, Chicago; *Mother's Magazine*, Elgin, Illinois; *Something To Do*, Bennett Publishing Company, Boston; Camp Fire Girls of America, 461 Fourth avenue; House of Childhood, 225 Fifth avenue; Child Welfare Committee, 30 East Forty-second street; Children's Aid Society, 105 East Twenty-second street; Grolier Society, 2 West Forty-fifth street, all of New York.

What to Eat If Too Stout or Too Thin

BY R. W. LOCKWOOD

WITHOUT doubt, few people are satisfied with their present weight. The stout starve themselves, the thin stuff themselves, in their efforts to gain or lose a few pounds, as the case may be. Almost every day we receive letters from discouraged and disheartened people who have been through the "starving or stuffing" performance several times, asking if there is anything they can do to regulate their weight.

As most people suspect, the reason they are too stout or too thin is traceable, in most cases, to the foods they eat. But, contrary to the generally accepted opinion, weight is not due so much to the amount of food we consume as it is to the combinations of food we take into our stomachs.

For example, certain foods when eaten alone are perfectly all right for those who are inclined to be stout, yet when combined with other foods, which are also all right when eaten separately, must inevitably increase weight; and the opposite condition prevails in food combinations eaten by people who are too thin—it is the combinations of food they eat that keep them under their normal weight.

The effect of various food combinations on our weight was first brought to the attention of the public by Eugene Christian, who is perhaps the greatest food specialist in the country. Time and again, his directions have enabled people to gain or lose as much weight as they desired, without the use of drugs, medicine, exercise, special bathing, or in fact anything except his scientific combinations of good every-day foods.

In a recent talk with Eugene Christian he told me of several interesting cases which had come under his care. One was that of a lady prominent in Woman Suffrage work in New York City, who was very much over-weight when she went to him. Without drugs, or medicine, or exercise, but simply by learning how to combine her foods correctly, she lost 37 pounds in a few weeks and her health was vastly improved. I saw a letter she had written him afterward in which she said:

"When I came under your treatment, I weighed one hundred and ninety-seven pounds, was hardly able to walk, and was subject to most serious heart attacks upon the slightest exertion. And now I am so well, so strong, that my family and friends maintain that it is a miracle which has restored me to strength and vigor of life—certainly in my case the cure is more remarkable because of my sixty-seven years."

Another was a well-known minister who was about twenty-five pounds under-weight, anæmic, nervous, had superacidity, and could not assimilate his food. He had gradually declined for two years, although treated by one of New York's leading physicians. Three months after he had placed himself under Eugene Christian's care, he preached the first sermon he had been able to preach in nearly two years. This was over three years ago.

He has gained back every one of the twenty-five pounds he needed, and since has not missed a day from his arduous clerical work. His strength and vitality have steadily increased, and he is to-day healthy and athletic.

Another case which sticks in my mind is that of a Canadian gentleman who one year ago was 30 pounds below his normal weight. He possessed an unnatural appetite for all kinds of foods, especially sweets, and to satisfy this appetite constantly overate, taxing his organs of digestion and elimination beyond all their powers.

Notwithstanding the surplus amount of food which he ate, he could not gain the flesh which he so badly needed. The food simply turned sour in his stomach, passed on, and lay in his intestine, where it fermented and decayed. Constipation naturally followed, and the fermenting food-mass formed poisons which were absorbed into his blood. The result of this food-poisoning showed itself in a sallow complexion and rheumatism which was so bad in his feet that he could hardly get down the stairs.

Now, after only six months of eating the right combinations of food, he is feeling like a new man. He has taken on 30 pounds in weight, his stomach acidity and rheumatism are entirely gone, and his complexion has regained its former fresh and healthy look.

These are only a few of the many hundreds of cases which have come under Eugene Christian's care. But perhaps more important than the relation of correct food combinations to our weight is their relation to our general health, for it is a well-known fact that over 90% of all sickness originates in the stomach. Thus constipation, acidity, fermentation, headaches, lassitude, weakness, and the many serious ills which result, are almost invariably caused by eating wrong food combinations.

But just as wrong eating is the cause of so many common illnesses, so will correct eating re-create and maintain both bodily vigor and mental energy. And by right eating I do not mean freak foods—I mean just good every-day foods properly combined. In fact, to eat correctly, it is not at all necessary to upset your table.

The word "diet" is one which to many people has an unpleasant sound—it makes us think of giving up all the things we like for those we have no taste for. But Eugene Christian's method is entirely different—instead of asking you to give up the things you enjoy, he suggests meals which are twice as enjoyable as those to which you have been accustomed.

To Eugene Christian's New York office come men and women for treatment who have tried most everything else, and rarely are they disappointed in the outcome. Some of the results he has attained read like fairy tales. I know of a number of instances where his rich patrons have been so grateful for their restoration to health and energy that they have sent him checks for $500 or $1,000 in addition to the amount of the bill when paying him.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a series of little lessons telling exactly what and how to eat in order to overcome the different conditions due to wrong eating.

These lessons (there are 24 of them) contain actual menus for breakfast, luncheon, and dinner, covering all conditions of health and sickness, from infancy to old age, for all occupations, climates, and seasons. They include corrective menus for stomach acidity, fermentation, constipation, and the host of diseases which follow when these "warnings" are neglected. They also tell you how to select and combine your food at meals in order to reach your normal weight, whether it be under or over what you now weigh.

With these lessons at hand it is just as though you were in personal contact with the great food specialist, every point is so thoroughly covered and clearly explained. You can start eating the very things that will remove the causes of your disease the day you receive the lessons, and it is quite possible you will secure some results from the very first meal.

If you would like to examine these 24 Little Lessons in Corrective Eating simply write the Corrective Eating Society, Inc., Dept. 44, 450 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial, with the understanding that you will either remit $3.00, the small fee asked, or return them.

Merely tear out and mail this form instead of writing a letter. It is a copy of the official blank adopted by the Society and will be honored at once.

CORRECTIVE EATING SOCIETY, INC., Dept. 44, 450 Fourth Ave., New York City

You may mail me the 24 Lessons in Corrective Eating. 5 days after I receive them, I will either send you $3.00 (full payment) or remail them to you.

The New Books

YEATS AT HIS BEST

Yeats is first of all a lyric poet, however notable his work may be as critic, essayist and dramatist, and when he wrote the poems in this his latest volume he donned his singing robes. *Responsibilities*, now just published in America, appeared first in England in 1914. The American edition contains also selections from "The Golden Helmet," originally published in 1908. Here in many of the lyrics Yeats is at his best, rivaling the high quality of what was most memorable in his *Poems* of 1895. To be sure, he is now and again the mystic and occultist, busy with a sterile and unintelligible symbolism, but it is not this phase of the man that dominates the present volume. These poems are particularly stimulating and refreshing where they draw material from the author's sustained fight for his ideals in the midst of a society venomously hostile to estheticism and intellectual freedom. After all is said and done, Yeats is the most representative figure of the Irish literary revival. Those who can enjoy verses that lift every theme they touch to the higher levels of poetry will delight in this volume.

Responsibilities, by William Butler Yeats. The Macmillan Company. $1.25.

REAL LITTLE GIRLS

Light reading is of two kinds, the meretricious, which deals flippantly or sentimentally with serious problems; the desirable, which is true to human experience in its happy and normal moods and phases. *The Middle Pasture*, by Mathilde Bilbro, is light reading of the better kind. The story of two families of Crawfords living in Pine Grove, Ala., of their characters, their quarrels, their friends and their big mystery is entertainingly told by one of them, Beatrice, aged thirteen. The author maintains the child's personality and psychology admirably, without overdoing it and without depriving her of the very active intelligence which children have, and which most grown-up people deny them when they write about them or talk in front of them. This book is a good story about decent, lovable human beings told with directness and simplicity.

Another book which is justified by the presentation of one fresh and memorable personality is Keble Howard's badly named new novel, *The Gay Life*. Certainly his heroine, Jilly Nipchin, is a person whose acquaintance we are glad to make. A piquant little person is Jilly, "the great English comedienne," honest and wholesome, a good "pal," shrewd and determined in mak-

ing her own way, tender and pitiful in helping others who are less fortunate, a sincere, stubborn little fighter against all that is shoddy and insincere and devitalized in her world, and yet, withal, a very feminine little sweetheart of "the world's greatest equilibrist."

The Middle Pasture, by Mathilde Bilbro. Boston. Small, Maynard & Co. $1.25. *The Gay Life*, by Keble Howard. John Lane Company. $1.30.

LEADER OF A RACE

In *Booker T. Washington, Builder of a Civilization*, Emmett J. Scott, Washington's secretary for eighteen years, and Lyman Beecher Stowe, grandson of the writer of "Uncle Tom's Cabin," tell a grandly heroic story. The great and simple man stands lifelike before us—as romantic a figure as ever sacrificed himself early to the life he loved and to a work set to the highest imaginings. Washington had imagination enough to grasp and understand the unattainable, and to tackle his several-men's-job single handed. He was a task master, setting himself the stiffest stint, to himself a veritable slave-driver, whipped by his own ideals, and lashing his own tired body unmercifully.

"Something singing," there was in this hard-headed, money raising, nineteenth century colored boy and man! And this book, as solid as the soil, is also by the nature of its subject, epical. The political influence of Dr. Washington, the unusual philosophy with which he met his enemies' thrusts and the basenesses of violent race prejudice, his contribution not yet measured, to education, to society—thru these we see, one after another, the farmer, the educator, the lover of beauty (with insistent demand for ferns or flowers at every Tuskeegee dining-table), the psychologist (who saw in the toothbrush the most potent single instrument of civilization), and the man himself, modest in dress and mode, an almost perfect combination of keen senses, quick common-sense, clear reason, and great heart.

Booker T. Washington, Builder of a Civilization, by Emmett J. Scott and Lyman Beecher Stowe. Doubleday, Page & Co. $2.

WHERE GERMANY LEADS

Coöperation in business and in government is the text of *America and the New Epoch*, by Charles P. Steinmetz. One result of the war, he argues, is certainly to be the adoption of the cooperative methods in manufacture and business that have made Germany, economically, so great a country. Against these, we, with our individualistic methods, will not be able to compete, and unless we learn the new way we must go under commercially which means also nationally.

Mr. Steinmetz analyzes the monarchical method of achieving this change, as witness Germany, and the slower, but, he believes, surer method of a democracy. He deals broadly with the causes of the hold here of the individualistic theory, and his propositions and examples will rouse thought on a matter of grave moment. But one pauses to question the meaning of the statement that to the southern states

Standards of Service

In rural communities clusters of mail delivery boxes at the crossroads evidence Uncle Sam's postal service. Here the neighbors trudge from their homes—perhaps a few yards, perhaps a quarter mile or so—for their mail.

Comprehensive as is the government postal system, still the service rendered by its mail carriers is necessarily restricted, as the country dweller knows.

Long before rural delivery was established the Bell System began to link up the farmhouse with the neighboring towns and villages. One-fourth of the 10,000,000 telephones in the Bell System are rural. They reach more places than there are post offices. Along the highways and private lanes the telephone poles lead straight up to the farmer's door.

He need not stir from the cheerful hearth ablaze in winter, nor grope along dark roads at night for friendly news or aid in time of trouble. Right in the heart of his home is his telephone. It is the American farmer's key to the outside world, and in no other country is it found.

The Penalty of Corns

No need now to waste time soaking your feet so often. Nor run the risk of paring.

BLUE-JAY plasters have ended millions of corns. This very night thousands of people will say goodbye to painful corns forever. Touchy corns are needless, even foolish

Blue-jay brings instant relief. And in 48 hours the average corn is gone. Only a few stubborn ones require a second or third treatment.

A Blue-jay plaster, with its healing wax, is applied in a jiffy. No soreness, no inconvenience. The pain is not temporarily eased, as with paring. There is no danger, as with harsh liquids. Decide to join the happy crowd tonight which has won freedom the Blue-jay way.

American and the New Learning, by C. P. Steinmetz. Harper & Brothers, $1.

A HISTORY OF THE GREAT WAR

Ten volumes of Collier's *The Story of the Great War* are now to hand, bringing events up to the beginning of the third year. As a whole, considering the rapid succession of these events, with much that is still obscured thru lack of positive information, it is a remarkable achievement in book publishing. Many of the contributions should become standard references. Such names as Major General Wood, Rear Admiral Knight and Frederick Palmer speak for the value of their contributions. But there are others unsigned worthy of special mention. Thus, Diplomatic State Papers displays skilful compilation; the Invasion of Belgium is an unpartizan military view of those much debated operations; the German Campaigns in Russia are well handled, while the Balkan part reveals a strong personal intimacy with that field, enlightening us on the Russian intrigues against Stambuloff, a main cause why Bulgaria joined the Teutonic powers. The Campaigns in Africa are up to high standard. The work is under the able chief direction of Francis J. Reynolds, former reference librarian of Congress.

The Story of the Great War. P. F. Collier & Son. Cloth, $24. Leather, $33.

IN A DUTCH VILLAGE

The tragedy of an ostracized girl, suffering for her father's sin, at the hands of her neighbors in a Pennsylvania Dutch village, the extreme of unkindness is the theme of Mrs. Martin's new novel: *Those Fitzenburgers*. The author knows her Dutchman with his narrowness, prejudice, and obstinacy in clinging to a pre-conceived opinion and, also, his honesty, industry and native ability. Out of the little, cramped village two people rise to distinction, ambition and a touch of genius, making them "different" from their neighbors. The dialect is true to type, and the story holds the reader's interest to the end.

Those Fitzenburgers, by Helen R. Martin. Doubleday, Page & Co. $1.35.

ESSAYS IN LITERATURE

Lillian H. Tryon is surely a round peg in a round hole. She loves house and housekeeping and village life, and chats of them comfortably so that the readers of *Speaking of Home* feel the charm of serene days and tasks near to the essentials of living. (Houghton, Mifflin Company, $1.)

F. J. Foakes-Jackson in his Lowell Lectures, studies *Social Life in England, 1750-1850*, as shown by Crabbe, Dickens, Thackeray, Trollope and others. All the papers are interesting, that on Crabbe perhaps having the most critical value. (The Macmillan Company, $1.50.)

Stephen Leacock tilts ever gaily but with no capped or careless spear. Peace, War, Politics, the Movies, Motor Cars, Russian Fiction, all are pinked in *Further Foolishness*, and in a graver manner there

CAMP

CAMP PENN

Valcour Island, Lake Champlain, N. Y.

Charles K. Taylor, Director
420 W. 116th Street, New York City

FIRST, Camp Penn is a REAL camp, and not a school.

SECOND, that means our activities are real camp activities and not merely school sports!

THIRD, our system works to bring out the best in every boy, to develop his resourcefulness, initiative, and capacity for doing for himself.

FOURTH, boys really enjoy a purposeful summer more than any other kind. 92 percent of last year's boys return this year, and we have enlarged our capacity for this summer.

FIFTH, we have a moderate amount of military exercises, thoroughly given.

SIXTH, we tell it all much better in our booklet. May we send you one?

is a discussion of humor as Mr. Leacock defines it. (John Lane Company, $1.25.)

Really *Stevenson, How to Know Him*, is unfairly named! Tho this generation may need to be taught how to know Carlyle and Defoe, it can still enjoy Tusitila without footnotes, and Professor Rice has written a pleasant critical and biographical essay that should not be judged by its title. (Indianapolis: Bobbs-Merrill Company, $1.25.)

Out of a vast wealth of information about Daniel Defoe, gathered during years of research, Professor Trent graphically presents in *Defoe, How to Know Him*, the best established facts about the life of this puzzling Proteus. The extracts from Defoe are eminently characteristic and yet give one a potent feeling of his moderness. (Indianapolis: Bobbs-Merrill Company, $1.25.)

In Max Eastman's *Journalism Versus Art*, the papers on magazine writing and lazy verse are but witty remark and schoolboyish platitude and superstition. The others, on magazine art and English spelling, over-expressive of radical opinion, under-expressive of what those opinions clearly mean and marred by a quite shameless preciosity of style and half-way philosophizing, are still healthily stimulating. (Alfred A. Knopf, $1.)

NEW FICTION

Oh, Mary, Be Careful! by George Weston. A superficially pleasant and innocuous story about a girl whose rich aunt has warned her against the lords of creation—in vain. A literary bonbon. (Philadelphia: J. B. Lippincott Company, $1.)

Philosophy, by Henrie Waste, is said to be an "autobiographical fragment." It is a rather dull and prosy narrative of the adventures of a young American woman working for the doctor's degree at a German university, and of her love affair with a fellow student. (Longmans, Green & Co., $1.25.)

Wildfire, by Zane Grey, will add nothing to the author's reputation. It lacks the atmosphere of his early novels and falls short of their restrained power. It is a shallow and sensational story about men's love for horses, about a girl's strange adventures with desirable and undesirable suitors. (Harper & Brothers, $1.35.)

Our Next-Door Neighbors, by Bell K. Maniates, is an entertaining account of a childless young couple who find their fulfillment in caring for the five young Polydores, Ptolemy, Pythagoras, Emerald, Demetrius and Diogenes, the neglected, rambunctious, but engaging children of a writer and a scientist. (Boston: Little, Brown & Co., $1.35.)

In his *Twilight in Italy*, D. H. Lawrence paints, in all the colors of the artist's palette, Switzerland, Northern Italy, the Alps. We see a poet's visionings of innumerable crossroad crucifixes, of lemon gardens against Italian skies, and we are refreshed with some genuine people, not yet crunched under War and Industry and National Efficiency. (B. W. Huebsch, $1.50.)

Dubliners consists of fifteen short stories and (so to speak) genre pictures of Dublin's homes, barrooms, shops and streets. About ten sketches succeed sufficiently to make James Joyce a "discovery." Frank and honest and sympathetic, here blends the poet with the naturalist! He does not forget that even in such harsh life, lives ever a little of the beautiful. (B. W. Huebsch, $1.50.)

Security, by Ivor Brown, is a slow but sure English novel, showing in turn the security in the life of a teacher in King's College, Oxford; the security in soon backsliding from any meddling in labor movements, literature or any other such theoretic career; the security in a "proper" marriage. Fisher, the social agitator, choosing oblivion over security, is the only one who goes ahead. (G. H. Doran Company, $1.15.)

MAZDA

"Not the name of a thing, but the mark of a service"

Instead of one manufacturer's spasmodic development of his product, MAZDA Service substitutes a systematic, all-inclusive, study of incandescent electric lamps for several manufacturers

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

$2,000,000

First Mortgage 6% Serial Bonds

(Safeguarded Under the Straus Plan)

Secured by

Huntington, Green and Maryland Hotels

Pasadena, Cal.

(Owned and Operated by California Hotel Co.)

Dated March 15th, 1917. Interest Coupons due May 1st and November 1st
Principal and Interest Payable at the Offices of S. W. Straus & Co., Inc.
Denominations $5,000, $1,000 and $500. Trustee, Mr. S. W. Straus.

SECURITY—The land and buildings comprising the Huntington, Green and Maryland Hotels, Pasadena, California. These three hotels are owned and operated by the California Hotel Co. and form one of the most firmly established, most popular, and most profitable hotel properties in the United States, known all over the country.

LOCATION—Pasadena is one of the nation's garden spots and a mecca for thousands of visitors to California each year, assuring constant patronage of these hotels.

VALUATION—Our valuation of the property, based on appraisals by several banks and conservative real estate experts, is $4,287,000, more than double the amount of the bonds.

EARNINGS—Based on past profits, we estimate the annual net earnings of the three hotels on a conservative basis at $415,000, nearly four times the greatest annual interest charge.

SERIAL MATURITIES—The bonds mature in annual serial installments in one to ten years.

MONTHLY PAYMENTS—The issuing corporation must deposit each month one-twelfth of the current year's interest charge, to pay the semi-annual coupons. On February, March and April 1st, it must deposit one-third of the year's serial principal requirement. Thus a sinking fund is maintained to assure prompt payment of both principal and interest.

FEDERAL INCOME TAX—The mortgagor covenants to pay the normal federal income tax.

We offer the bonds with our unqualified recommendation as a thoroughly safeguarded investment for the funds of institutions and individuals. Orders may be telegraphed or cabled at our expense.

The Market Place

THE MARKET FOR STOCKS

In the week that ended on March 24 there were three million-share days on the New York Stock Exchange, but the quantity of business has since been reduced. This activity, which was not accompanied by weakness, was due to events which showed that war, in all probability, could not be averted. Railroad shares were not unfavorably affected by the Supreme Court's decision upholding the Adamson act. The threatened strike had been averted, and many expected that the Commission would permit an increase of freight rates as compensation for the addition, estimated at $50,000,000 or more, to the cost of operation. They were encouraged by the opinion of Secretary Lane, exprest on the day when the decision was announced, that the Commission would take this course. It was recalled that Mr. Lane, as a member of the Commission, some years ago wrote a memorable decision against the railroads when they asked for higher rates. Applications for an increase have now been sent to the Commission by many companies. Even if the Commission is inclined to grant these petitions, there must be delay, for the act provided that there should be an inquiry as to the cost of the changes. This inquiry must cover a period of at least six months after January 1, and the report cannot be submitted before June 1.

At the beginning of the week that followed, on the 26th, the market was a narrow one, 841,000 shares, and there was a decided reaction. The average decline for fifty representative stocks was about 1½ points. More than one-fifth of the business was in Steel shares, whose net loss was 2⅜. Some were saying that if the United States should take part in the war, the profits of the war industrial companies would be cut down by reduction of their prices on Government orders and, possibly, by taxes on their gains. They pointed to the agreement of the leading copper companies to sell 45,510,000 pounds to the Government at 16 2/3 cents, which is less than half of the current price of the metal. In following days there was comparative inactivity. On the 27th the net changes were very small; Steel's gain of ¼ fairly represented them. An upward movement was seen on the 28th, when only 532,000 shares were sold. On the 29th there was a gradual decline, but

as a rule the losses were merely fractional. Several railroad reports for February were published, a majority of them showing comparative reductions of earnings, both gross and net. On the 30th (496,000 shares) there was but little change. Traders were waiting for the President's message to the new Congress.

Some of the railroad shares advanced on the Commission's favorable response to the application of Eastern lines for permission to make higher rates on coal and coke. The reasoning was that this might foreshadow similar action concerning the general rate increase which is desired. The Pennsylvania road has sold $60,000,000 of 4½ per cent bonds, which are offered to the public at 97½. Some time ago there was uneasiness about the New Haven company's $43,000,000 of one-year notes maturing May 1. Rumors concerning these obligations affected the price of the stock. There is no longer any fear of default, for the company has completed negotiations with a group of leading banks for a new issue of $45,000,000 in notes, with a term of one year. These, at 5 per cent, will be used to retire the $43,000,000, whose rate is 4½, and the company hopes to get authority in Connecticut and Massachusetts for refunding the new issue in long-term bonds. This transaction followed a careful inquiry by the bankers as to the company's condition.

THE FOOD SUPPLY

Higher prices for wheat and corn give emphasis to the appeals addrest by the Department of Agriculture and the press to farmers, urging them to increase the foodstuff acreage. Wheat was sold in Chicago on March 29 at $1.98⅞ a bushel, and corn at $1.19. Last fall there was a small addition to acreage in the winter wheat states, as only 640,000,000 bushels had been harvested, after the record-breaking crop of 1,026,000,000. But the promise of the addition has come to nothing, owing to winter-killing losses in Nebraska, Kansas and elsewhere. On the 28th ult., at a meeting in Omaha of 200 farmers, bankers, college professors and experts in agriculture, a committee was appointed which will supply to farmers in that state enough wheat to use in sowing again where seed has been killed. It was reported that 75 per cent of the acreage in the southern part of Nebraska had been so injured that the farmers were plowing it and sowing oats or barley because they could not get seed wheat. The crop of winter wheat will probably be less than last year's. It is not yet known what the acreage in spring wheat states will be.

The market has been affected not only by the proof of winter-killing, but also by reports from other countries. In Argentina, on the 27th ult., the Government forbade the exportation of wheat. Dispatches from Chile to officers of the Canadian Government say that there is much suffering in Argentina on account of crop failure, which

Where the World Must Get Its Sugar

THIS book presents intelligently the story of sugar *today*—and the story of the wonderful opportunity open for American capital. Until the edition is exhausted, a copy will be sent on request.

G. D. MILNE, Treasurer.

WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY

A quarterly dividend of 1¾% (87½ cents per share) on the PREFERRED stock of this Company will be paid April 16, 1917.

A dividend of 1¾% (87½ cents per share) on the COMMON STOCK of this Company for the quarter ending March 31, 1917, will be paid April 30, 1917.

Both dividends are payable to stockholders of record as of April 5, 1917. H. D. SHUTE, Treasurer.

New York, March 28, 1917.

WELLS FARGO & COMPANY

QUARTERLY DIVIDEND

A quarterly dividend of $1.50 per share upon the capital stock of this Company has been declared payable April 20th, 1917, to stockholders of record at the close of business, April 9th, 1917. The Transfer Books will close at the close of business April 9th, 1917, and be reopened on April 21st, 1917. Checks will be mailed.

C. H. GARDINER, Secretary.

New York, March 22, 1917.

was caused by bad weather and the ravages of locusts. In some parts of the country there was no harvest and cattle are starving. Argentina's wheat surplus in past years has been one of Europe's sources of supply. Every day there is news about the effect of grain crop shortage in Europe. Much of Russia's surplus has rotted, and there is no outlet for any part of it that could be spared. It was recently estimated by the French Government that France this year would have 180,000,000 bushels and would need 317,000,000; also that all the Entente Allies, Russia excepted, would need 560,000,000 bushels in addition to their own crops, while the exporting countries could sell to them only 360,000,000. So far as can now be foreseen, the European yield this year will be about 75 per cent of the normal quantity. At the present rate of export shipment all that we can spare will be sold before the new crop comes.

The Department of Agriculture at Washington and the similar departments of several states are striving to convince farmers that they should make their food crops as large as possible. Citizens who have only small plots of ground that can be cultivated are asked to make them yield something. In Brooklyn prizes are offered for the best gardens made by children in rear yards, and in the parks there are model gardens for their guidance. Some gains in vegetable acreage are reported. Last year in countries producing about half of the world's potatoes the crop was cut down from 3,168,000,000 to 1,753,000,000 bushels, and the reduction in the United States was from 359,000,000 to 285,000,000. Consequently, the price of two years ago has been multiplied by five. In six of our southern states this year there is a potato acreage increase of 17 per cent. Plans for larger additions have been made in Massachusetts and several other northern states. Thruout the year a large part of the world will be in need of food supplies. Those who have arable land in this country should not fail to make it fruitful. Prices will give them a satisfactory profit.

STEEL

In the steel industry the old story of rising prices is told again every week. The average for eight leading products is now $86 a ton, against $52.50 a year ago. An overwhelming demand for ship plates has caused sales to be made at 8 cents a pound, or four times the normal rate, and 10 cents may soon be reached.

Our Government will need 500,000 tons of steel in the coming six months, and altho the manufacturers are sold ahead for more than a year they will give the Washington orders preference, and deliveries to other buyers here and abroad will be delayed. But our Government's needs are said to be only 3 per cent of the industry's annual capacity. Foreign orders for hundreds of thousands of tons of ship plates cannot be taken now. The price has been increased three times in twenty days.

Insurance

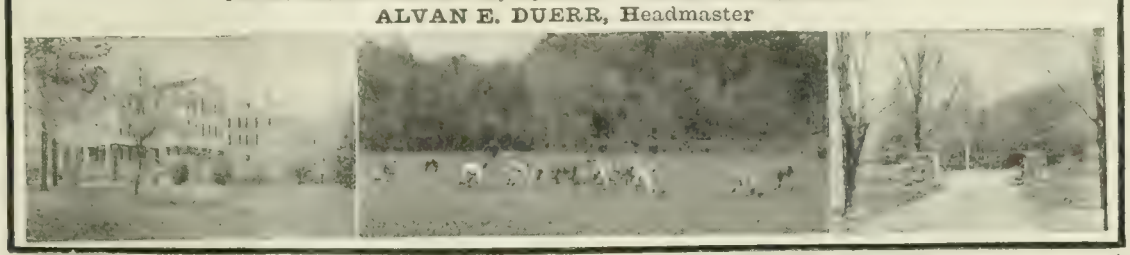
Conducted by

W. E. UNDERWOOD

W. H. B., Dixon, Ill.—The New York Life Insurance Company is a pure mutual and its trustees are elected by the policyholders, the officers chosen by the trustees. Your opportunity to exercise the voting privilege in selecting trustees for the company exceed those you possess as a citizen. In the latter case you must in person deposit your ballot; but in the former you may, if unable to attend at the polls, appoint a representative who, at the election, which must be held in New York, will vote as you direct. As you intimate, the plan does not promote the free and frequent participation of policyholders generally in choosing trustees of mutual companies, but this is due more to the indifference of policyholders than to any particular weakness in the scheme. The plan possesses one great advantage. The policyholders have it in their power—however little they exercise that power under ordinary conditions—to remove an incompetent or dishonest management whenever that becomes desirable or necessary. I admit that to organize a movement for that purpose would be difficult and involve some expense, but a call on the state insurance departments, demanding that facilities for a general election participated in by all policyholders be provided would result successfully. To conclude, every policyholder, member of a mutual company, may vote if he chooses to do so.

S. P. McC., Redwood City, Cal.—As to whether a life insurance company, dependent for its new business wholly on the voluntary application for it by the public stimulated by advertising, has a future is perhaps a matter of opinion. As it seems to me, using my knowledge as a solicitor and remembering how difficult it is to induce men to insure, the future of a company employing no agents is not brilliant. By that I do not mean to say it will fail; it can be just as safe; but its progress will be slow. It should be more economical, but the net cost in the Postal does not seem to indicate that it is. Men generally should voluntarily seek insurance on their lives. But they will not. They should be insured; it is to their interest and that of society; therefore the companies go after them. That work adds to the cost. Insurance is not the only business which must employ middlemen in its relations with the public. We seem disinclined to buy anything direct.

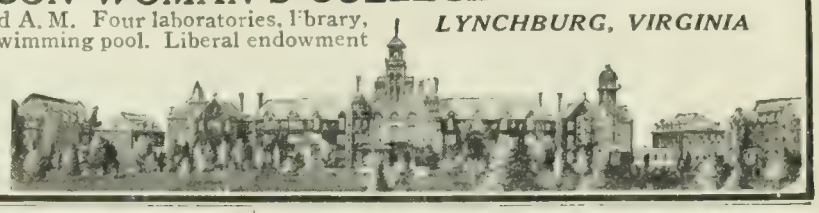
A. P. R., Akron, Ohio.—The Ohio National Life Insurance Company is seven years old, has a capital of $446,730, assets at the beginning of 1916 of $1,065,860, net surplus of $211,-161, is managed by capable men and is a good average, non-participating company. That form of policy which is payable to the beneficiary in annual instalments, instead of a lump sum, is the best provision that can be made in most cases. It insures against the bad judgment or extravagance of beneficiaries. A man of thirty-five with an income of $1800 and four dependents should carry a total of $10,000 of Ordinary Life, which, if desired, can be made payable in annual instalments.



O. B. L., Stittville, N. Y.—If by the "Modern Woodman Life Insurance Co.," you mean to indicate the fraternal order known as the Modern Woodmen of America, I cannot encourage you to seek life insurance in it. As between Ordinary and 20-payment life, at age 36, if you can afford the higher premium, I would advise the 20-payment for that definitely marks the period during which the burden is to be borne. The double indemnity disability policy of the Equitable is an excellent contract.

M. R., Oil City, Pa.—The North American Accident Insurance Company is an Illinois corporation with principal offices in the Rookery Building, Chicago. The New York office you mention is a branch. The company is financially sound, well managed and pays its claims properly.

SCHOOLS AND COLLEGES



THE STONE SCHOOL
Cornwall-on-Hudson, Box 5, New York
FIFTIETH YEAR
A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and ample out-of-door life.
WORK: Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every six boys.
ATHLETICS: Two fields with excellent facilities for all sports, under supervision: hiking, woods life.
You are invited to come and see for yourself. Catalog sent on application.
ALVAN E. DUERR, Headmaster

RANDOLPH-MACON WOMAN'S COLLEGE
LYNCHBURG, VIRGINIA

Offers courses for A. B. and A. M. Four laboratories, library, observatory, gymnasium, swimming pool. Liberal endowment makes possible very moderate charges. Officers and instructors, 60. Students from 35 states and countries. Address
WILLIAM A. WEBB, Pres., Box 46

Russell Sage College of Practical Arts
Founded by Mrs. Russell Sage in connection with Emma Willard School

Designed for the vocational and professional training of women. Secretarial Work, Household Economics and Industrial Arts. Special students admitted. Address Secretary,
Russell Sage College of Practical Arts, Troy, N. Y.

HARTFORD THEOLOGICAL SEMINARY
Scientific methods with practical training for the ministry. Large faculty and library.

Graduate fellowships, both foreign and resident. Open to college graduates of all churches.
Associated with **Hartford School of Religious Pedagogy**
Training Sunday School and other lay workers.
Kennedy School of Missions, fitting for foreign service
Address **M. W. JACOBUS, Dean of Seminary**
Hartford, Conn.

Martha Washington Seminary
FOR YOUNG WOMEN

In finest residential section of National Capital. Two years' course for High School graduates, general and special courses. Domestic Science. Outdoor sports.
Edward W. Thompson, Principal, 1601 Conn. Ave., Washington, D. C.

STUART HALL
STAUNTON, VIRGINIA. Formerly Virginia Female Institute. Founded 1843. Diocesan School for Girls in the Virginia Mountains. General and Preparatory Courses. Music, Art and Expression Departments. Entirely new equipment, including pianos. Gymnastics and field sports. JANE COLSTON HOWARD, A.B., (Bryn Mawr), Principal.

DEAN ACADEMY
FRANKLIN, MASS. 51st YEAR

Young men and young women find here a homelike atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, $300—$350 per year. Special course in Domestic Science.

INSTRUCTORS
About fifty per cent more teachers have ordered quantities of The Independent for Class Room use this year as compared with the same period last year. You will find your English and History work much easier and more interesting by adopting our plan.
THE INDEPENDENT, 119 W. 40th St., New York

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOOK LAW, PH.D.

CHAIRMAN OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

The Gift of the Magi. By O. Henry.

1. From what sources did O. Henry draw material for his stories? From what sources should you draw material for your school compositions?
2. What was O. Henry's method of short story writing? How much of his method can you apply to your own writing?
3. In what ways was O. Henry's method like that of Stockton? Like that of Bret Harte?
4. In what ways does O. Henry's work differ from that of Irving? From that of Hawthorne? Tell which method you prefer. Give your reasons.
5. How did O. Henry obtain his pseudonym? Explain the following pseudonyms: "The Author of Waverley," "George Eliot," "Boz," "Mark Twain."
6. Give your reasons for liking or disliking the abrupt beginning of "The Gift of the Magi." What are the advantages, and what are the disadvantages, of such a beginning?
7. Show in what way the story develops to a surprizing double climax? What is the advantage of doubling the climax? Is the value of the climax more largely in its surprize or in the thought that it presents?
8. What thought does "The Gift of the Magi" leave with the reader?
9. Explain the words: "The Gift of the Magi." Explain the last three sentences of the story.
10. Write a story of school life. Use the everyday language of boys and girls. Make the story rise to surprizing climax. Give it a somewhat humorous effect. Make it point to a worthy thought.

SECTION II. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words prominent in the news of the week: statute; policy; enunciated; formidable; autocratic; deposed; embargo; emergency; sequestration; crisis.

SECTION III. GRAMMAR.

1. Give the syntax of the infinitives, the participles, and the subordinate clauses in the first editorial article.
2. Point out unusually effective grammatical usages in the advertisements. Show how other expressions having the same meanings, and equally correct, would not have been as effective.

SECTION IV. COMPOSITION.

When Boys Go Camping. By Charles K. Taylor.

1. In accordance with what plan has the author written this article?
2. Write an article on the same subject, presenting it from a boy's point of view.

The Submarine Scare. By Park Benjamin.

1. Show how the author makes use of detail in order to make the article effective.
2. Point out passages that give emphasis because of vivid presentation.
3. Point out striking similes. What do they add to the worth of the article?
4. Point out adjectives and adverbs that are particularly effective.

More Light on War. By C. L. Edholm.

1. In what ways does the title of the article fulfil the requisites of a good title.
2. How has this technical article been made interesting for non-technical readers? How has it been made clear?

Editorial Articles.

1. Write an argument based on "Impossible and Immoral."
2. Write an exposition on "A democracy is always more efficient in the long run than any other type of government."
3. Write an argument based on "Too Much History."

The Story of the Week.

1. Write a short explanation of some of the important matters, not connected with war, that are now demanding public attention.
2. Write an argument on one of the following subjects: "Ireland should have home rule"; "England should grant woman suffrage."
3. Write a clear exposition of the present military situation of the United States.
4. Write a clear exposition in which you show what has been gained by the Russian Revolution.
5. Write a clear explanation of the military situation in Asia Minor.
6. Write an editorial article based on the recent speech of the German Chancellor.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. The United States and the Great War—"Impossible and Immoral," "Efficient Democracy," "Old Treaties Invalid," "Making an Army," "On the Brink of War."

1. What, in general, are the provisions of the thirty treaties drawn up by Bryan? Have we any such treaty with Germany? Why would it be impossible to settle our present difficulties with Germany in the way which is provided for by these treaties?
2. ". . . the Great War is fundamentally a conflict between humanity and barbarism," etc. What are the proofs of this statement?
3. Discuss the relative chances for efficient living in an autocracy and in a democracy.
4. Explain Secretary Lansing's attitude toward the Prussian treaties.

II. Congress and the President—"Organizing Congress," "Making an Army," "Banks Lend Nation Money."

1. Describe the steps, including the elections, which led up to the meeting of Congress on Monday, April 2.
2. What is the program of legislation which the President is recommending to Congress? Under what clauses of the Constitution is the President authorized to make such recommendations and Congress authorized to carry them out?
3. "Until the special session . . . met to organize it was doubtful what party would control the House of Representatives." Explain the system of party organization which exists in our Congress. Why has the problem of organization been especially difficult just at this time?
4. Besides the questions incident to our relations to Germany, what subjects will the present Congress probably consider?
5. Why did the Sixty-fourth Congress fail to pass the necessary appropriations for the army and for other Government activities?

III. Internal Problems in Great Britain—"The Ghost of Home Rule Arises," "For Woman Suffrage in England."

1. Besides the two subjects discussed in these news items can you think of any other social or political problems with which Great Britain was struggling before the beginning of the Great War?
2. Review the history of the relations of Great Britain to Ireland previous to 1800. From 1800 to the present time.
3. What is the Home Rule statute referred to in the discussion? Why has the statute not been put into effect?
4. What relation has the present discussion to the Irish revolt of last May?
5. Study the history of the electoral reform in England during the past hundred years, especially the Reform Bills of 1832, 1867 and 1884-1885. What changes in the suffrage are under consideration just at present?
6. What social and economic conditions have led the political leaders of England to change their attitude toward woman's suffrage?

IV. Germany's Present Position—"The Chancellor's Speech," "The Anglo-French Advance."

1. Discuss the present military situation as far as it affects Germany's chances for success in the war. Will the Russian Revolution make things easier or more difficult for the German government?
2. Discuss the present naval situation from the same point of view. Will the entrance of the United States into the war affect Germany's chances of success?
3. How does the German Chancellor justify his present submarine policy, especially as far as the United States is concerned?
4. What is his announced attitude toward the Russian Revolution? Do you think his statement in this matter is altogether sincere?

V. The War in Turkey—"At the Gates of Gaza."

1. ". . . the desert of Sinai which has for four thousand years formed the military barrier between Asia and Africa." Justify this statement by historical evidence.
2. Under what circumstances did the Turks gain control of Palestine? Why are the British endeavoring to dislodge them now?
3. The Suez Canal and the Bosporus are the two gateways to the East. What relation has this fact to the events of the present war?
4. What are the British and the Russians fighting for in the valley of the Tigris River?

THIS soap *really* protects the skin

Busy, intelligent men and women know what an asset—and comfort—a clear, healthy skin is. But they are too much absorbed in important affairs to give much time and thought to the matter, and the result is often unpleasant. If they adopt Resinol Soap for the toilet and bath, however, they find their skins cared for automatically.

Resinol Soap has an unusually cleansing lather, a mild, refreshing odor, and just enough of the soothing, healing Resinol medication to relieve clogged, irritated pores and to give the skin that healthy, "outdoor" look which goes with a clear eye and a clear brain.

Resinol Soap is not the "Fountain of Youth," but its regular use will greatly help to preserve the delicate texture and coloring of a woman's complexion far beyond the time when most lose them.

Yet Resinol Soap costs but twenty-five cents, just enough to insure the utmost refinement in manufacture, the utmost satisfaction in use. Excellent for the hair, and for a baby's easily irritated skin. Sold by all druggists and dealers in toilet goods. For a generous trial-size cake free, write to Dept. 26A Resinol Chemical Co., Baltimore, Md.

THE BEST THING

What Is the Best Thing in Your House?—Some time ago The Countryside asked that important question. Hundreds of readers of The Independent and The Countryside answered it; people from Great Barrington and Los Angeles and Palm Beach and lots of cities in between. Those answers were illuminating and interesting and entertaining. The prize winning letters and pictures, together with a number of others which very nearly won the prizes, are published in the April number of The Countryside. Unfortunately, however, everybody didn't win. Those thoughtful people who sent stamped addrest envelopes with their contributions have already had the pictures of their best things returned to them. The other photographs and letters have not been destroyed—yet. If you want your contribution returned to you, send a stamped addrest envelope at once to The Countryside, 119 West Fortieth street, New York.

REMARKABLE REMARKS

REV. BOUCK WHITE—Life is a vale of trouble.

KING CONSTANTINE—No man delivers the Greeks.

CARDINAL O'CONNELL—Was Belgium really neutral?

FRANCIS NIELSON—We are living in a squint-brain age.

SENATOR LODGE—The worst of all wars is a feeble war.

ROSE PASTOR STOKES—I would fight or serve if called upon.

MARY PICKFORD—How privileged I am to win so many friends.

SENATOR WILLIAMS—Wall Street did not sink the "Lusitania."

SECRETARY DANIELS—Public opinion, I've found, is king in America.

JOHN D. ROCKEFELLER, JR.—I've got the best father anybody ever had.

SENATOR NORRIS—We are about to put the dollar sign on the American flag.

BILLY SUNDAY—God tells America to wipe Mexico off the face of the earth.

THEODORE ROOSEVELT—We owe our shameful safety to the British fleet.

JUDGE HIRAM M. STEELE—Our President never strikes until the iron is cold.

MORRIS HILLQUIT—I prefer that neither the United States nor Germany should be defeated.

SENATOR LA FOLLETTE—We have wallowed in the mire at the feet of Great Britain and submitted to her dictation.

W. H. TAFT—I hope and pray that the pressure on Germany may finally topple the Kaiser's dynasty over.

REV. JOHN HAYNES HOLMES—Other clergymen may pray to God for victory of our arms. I will not.

HENRY REUTERDAHL—Every editor who fails to assist the army and navy by hiding their activities at this time ought to be hanged.

PHILIP SCHEIDEMANN, Member of the Reichstag—For Germany it would be as great a misfortune to acquire a province as to lose one.

LORD NORTHCLIFFE—If the people of the United States determine to send an army force to Europe the Hohenzollerns will get the surprize of their lives.

BARON SAKATANI—A League should be formed including Great Britain, the United States, France, Italy and Japan guaranteeing the peace of the world.

LORD BRYCE—Never has a better blow been struck for democratic freedom than that which America is now dealing to the last of the despotisms of Europe.

PRES. ARTHUR T. HADLEY—The possibility of an attack upon the heart of our country via Mexico and Texas is no longer an alarmist's dream, but a serious menace.

EMPEROR WILLIAM—Before God and humanity I declare that on the governments of our enemies alone falls the heavy responsibility for all the further terrible sacrifices.

ASSISTANT SECRETARY FRANKLIN ROOSEVELT—The one thing that is needed more than any other is a greater and more intelligent interest in the many-sided life of the naval academy.

SIR SAM HUGHES—It is foolish to talk about the United States making preparations for defense. That is not the way to put it. Who is going to attack the United States and how? Certainly not Germany.

REAR ADMIRAL FISKE—Any one of the trained European or Asiatic armies would have in war as much advantage over us as our forefathers armed with guns had over the North American Indians armed with bows and arrows.

GEORGE BERNARD SHAW—When war overtakes you, you must fight and fight to win, whether you are the aggressor or the aggrieved, whether you loathe war as the kingdom of hell on earth or regard it as the nursery of all the virtues.

THE NEW PLAYS

Shure, there's a bit o' the brogue in ivery line and a bit o' the blarney in ivery song of *Eileen*, a tuneful comedy of ould Ireland. (Shubert Theater.)

The Case of Lady Camber. English melodrama, excellently acted, particularly by Mary Boland and Lyn Harding. The interest is well-sustained thruout. (Lyceum Theater.)

Pals First. A novel dramatized, and drest up in all the good old tricks of the trade. But in spite of its obvious "surprizes" it's genuinely entertaining and excellently acted by William Courtenay and Thomas Wise. (Fulton Theater.)

A play without a plot. But its forceful recruiting propaganda, enlivened by entertaining pictures of war's lighter phases, make *Out There* well worth seeing, especially when Laurette Taylor holds the stage. (Globe Theater.)

Probably the most interesting play this season—don't miss *Plots and Playwrights!* The Washington Square Players present two other plays worth seeing, too—*A Poor Fool*, by Hermann Bahr, and *Sganarelle*, by Molière, both translated. (Comedy Theater.)

In *The Brat* a novelist in search of material for his next book picks a brat of the female species out of the night court and brings her home to his mother and brother to look after. Fine character acting of Maude Fulton as the Brat and all round excellent comedy. (Harris Theater.)

Compare—under the lens! Let the power glass prove the *absolute fidelity* of mimeograph duplicating. You'll find original typewritten sheet and mimeographed copy are twins to the last dot! And the process is surpassingly fast, simple, economical. You dictate a letter, rule a blank or draw a sketch—and have fifty *right* copies in a jiffy—fifty hundred in an hour! That's why the mimeograph is the most used duplicator. Get acquainted with it—then compare with the methods that require type and cuts. Our new booklet "E" suggests forty mighty interesting ways to cut expense, make more sales, and speed up collections. Get it—today! A. B. Dick Company, Chicago—and New York.

"THE RIGHT IS MORE PRECIOUS THAN PEACE"

THE SPEECH OF MONDAY EVENING, APRIL 2, IN WHICH PRESIDENT WILSON ADVISED THE CONGRESS TO DECLARE WAR AGAINST GERMANY

THE UNITED STATES "FALLS IN"

THE first and the greatest republic in the world enters the Great War to take its part in making the whole world safe, free and law-abiding. We have concurred in the verdict of civilization: this is a clear-cut conflict between righteous liberty and satanic absolutism.

Never has a declaration of war been so impressive. Never has it been so overwhelmingly the calm decision of a mighty people. For two and a half years we have withheld governmental judgment upon the fundamental issues. We have endured insolence, piracy and murder, unwilling to act ignobly, in vengeance. Not even to the growing menace to our own national safety have we paid heed. But conscience has not been dead, and under its lashings the entire republic of more than one hundred million souls has now become convinced, as some of our people from the beginning have been convinced and tirelessly have urged upon our fellow men, that a simple question of right and wrong has once for all to be answered. Therefore we answer. As one man this mighty republic has responded to the call, and has cast the die.

Never has a nation gone into war so disinterestedly or with hands more clean. We ask nothing, we stand ready to give all. We cherish no hate. We scorn revenge. For the German people we cherish the hope that thru moral regeneration and intellectual clarification they shall become worthy and competent to take their place and play their part among the great democracies of continental Europe. We have but one purpose—to kill and to crush beyond all possibility of resurrection the monstrous infamy of blasphemous absolutism. Coöperating with the Entente Allies, we dedicate our resources and ourselves to the glorious work, precisely defined by President Wilson, of making this world a safe place for free men to live in.

A free and law-abiding world: that is the end, and it will be achieved. Of the causes of the war we no longer entertain a doubt. In its purposes no people will henceforth be more profoundly concerned. Not hastily, but after full and fair review of all the evidence in the case, we are satisfied that the war was painstakingly planned and deliberately begun by a dynasty and a military caste with intent to destroy democratic institutions, and to establish despotism thruout the earth. The attempt was made too late. The Czar has fallen. The Kaiser and the Hohenzollern house, the Austrian Emperor and the Hapsburg house will fall.

By our participation in the war its days will be shortened, its slaughter and its devastation will be lessened. It is a work of mercy no less than of righteousness that we undertake. We shall help to make it a war of victory. No peace is thinkable now on any other basis than that of unconditional surrender by an Imperial Government which has brought upon mankind unforgivable wrongs, and whose existence can no longer be tolerated. Peace, when it comes, must be the peace that has in it the seed and the promise of life; a peace for the healing of the nations, and not another armed truce. It must be the peace of a free and law-abiding world. With clear minds, with courage, and at whatever cost we, the American people, now "fall in," and touching elbows at last with all the free and law-abiding men of the civilized world, we go forward gladly to that victory.

EVERYMAN'S WAR

AT this moment of entrance into its terrible and glorious adventure—terrible as all strife is terrible, glorious because we fight as champions of democracy and human rights—the nation needs every man and every woman in it. Every man and woman in the land owes to the nation here and now not only allegiance and loyalty, but service. The obligation of service in such a national crisis is universal, it is unescapable. It may be evaded, it cannot be ignored.

There are two main direct contributions that citizens can make to the prosecution of the war. They are fighting power and money. Men can enlist in the army and navy, and they can pay taxes. Both are solemn obligations; no one who is able to assume either obligation should be free from it. No one should be compelled, no one should be permitted, to decide for himself whether and to what degree either obligation is his. The Government should decide the matter for him; his part should be merely to accept the decision, willingly and cheerfully.

This means conscription—an unpalatable word, it is true, but wartime is no time to sugar-coat things or to evade realities. It means conscription of men and conscription of money. The Government should determine how many men are needed, and when, and how; it should pick out those who are best fitted to do what is demanded of them and are best able to go. Those men it should summon to take their places in the ranks and go forth to fulfill their obligation to the nation of which they are citizens. The selection must be made intelligently, with due regard to all the work that must be carried on uninterruptedly and efficiently, behind the lines. But there should be no dependence upon voluntary enlistment—a system which is inequitable, ineffective and crude.

So too with money. The Government should determine, with whatever of wisdom and foresight it possesses, how much money is needed and how and when. It should then summon that money from those who can and should contribute it. All should contribute something, but those best able to assume the burden should give most. The method employed in the income tax and inheritance taxes should be adopted; surtaxes, steadily increasing in rate as the amount of income increases, upon the wealth of the more prosperous should be put in force.

Additions to the national debt are inevitable for any country at war. But the more the expenses of the war can be taken care of by taxation the better. We should not pass on to posterity any larger burden than we must.

Universal service then must be our national watchword as we prosecute this righteous war; service wherever we are needed, with body and mind and resources and all. Our Government, the representative and leader of all, should determine what service we are to render and when.

THE ALIEN WITHIN OUR GATES

WE are at war with Germany. But that is no reason why we should mistreat or insult individual Germans who live among us. Our own self-respect should make us deal kindly with them. Our own sense of decency should make us forbear to abuse them.

We fight for humanity; let us be humane. We battle to uphold the rights of man; it behooves us to respect the rights of others.

There are Americans in Germany. If they should be maltreated, our blood would boil. Let us give no such cause for righteous anger to the German people.

PURE REASON

IN his essay, Perpetual Peace, published in 1795, Emmanuel Kant declared that we can never have universal peace until the world is politically organized and it will never be possible to organize the world politically until the people, not the kings, rule. And he added that the peoples of the earth must cultivate and attain the spirit of hospitality and good will toward all races and nations.

In his address to Congress last week Woodrow Wilson declared that our object in entering the war is "to vindicate the principles of peace and justice in the life of the world as against selfish and autocratic power and to set up amongst the really free and self-governed peoples of the world such a concert of purpose and of action as will henceforth insure the observance of these principles." And he added that "we have no quarrel with the German people . . . and shall desire nothing so much as the early reëstablishment of intimate relations of mutual advantage between us—however hard it may be for them for the time being, to believe that this is spoken from our hearts."

Thus world organization, universal democracy and mutual good-will pronounced by the greatest of modern philosophers as constituting the three fundamental essentials to a perpetual peace, become the watchwords of the United States as we enter the Great War.

THE DIVINE WILL TO EQUITY

SOCIETY, worthy of the name, is ever secretly shaping around it a temple within which all the natural weaknesses and limitations of the dwellers shall be, not exploited and emphasized, but to the utmost leveled away and minimized. It is ever secretly providing for itself a roof under which there shall be the fullest and fairest play for all human energies, however unequal.

The destinies of mankind are seen to be guided, very slowly, by something more coherent than political opportunity; shaped steadily in a given direction toward the completion of that temple of justice. There is no other way of explaining the growth of man from the cave-dweller to his present case. And this slow spiritual shaping towards Equity proceeds in spite of the workings of the twin bodily agents, force and expediency. Social and political growth is, in fact, a process of evolution, controlled, directed, spiritualized by the supreme principle of Equity.

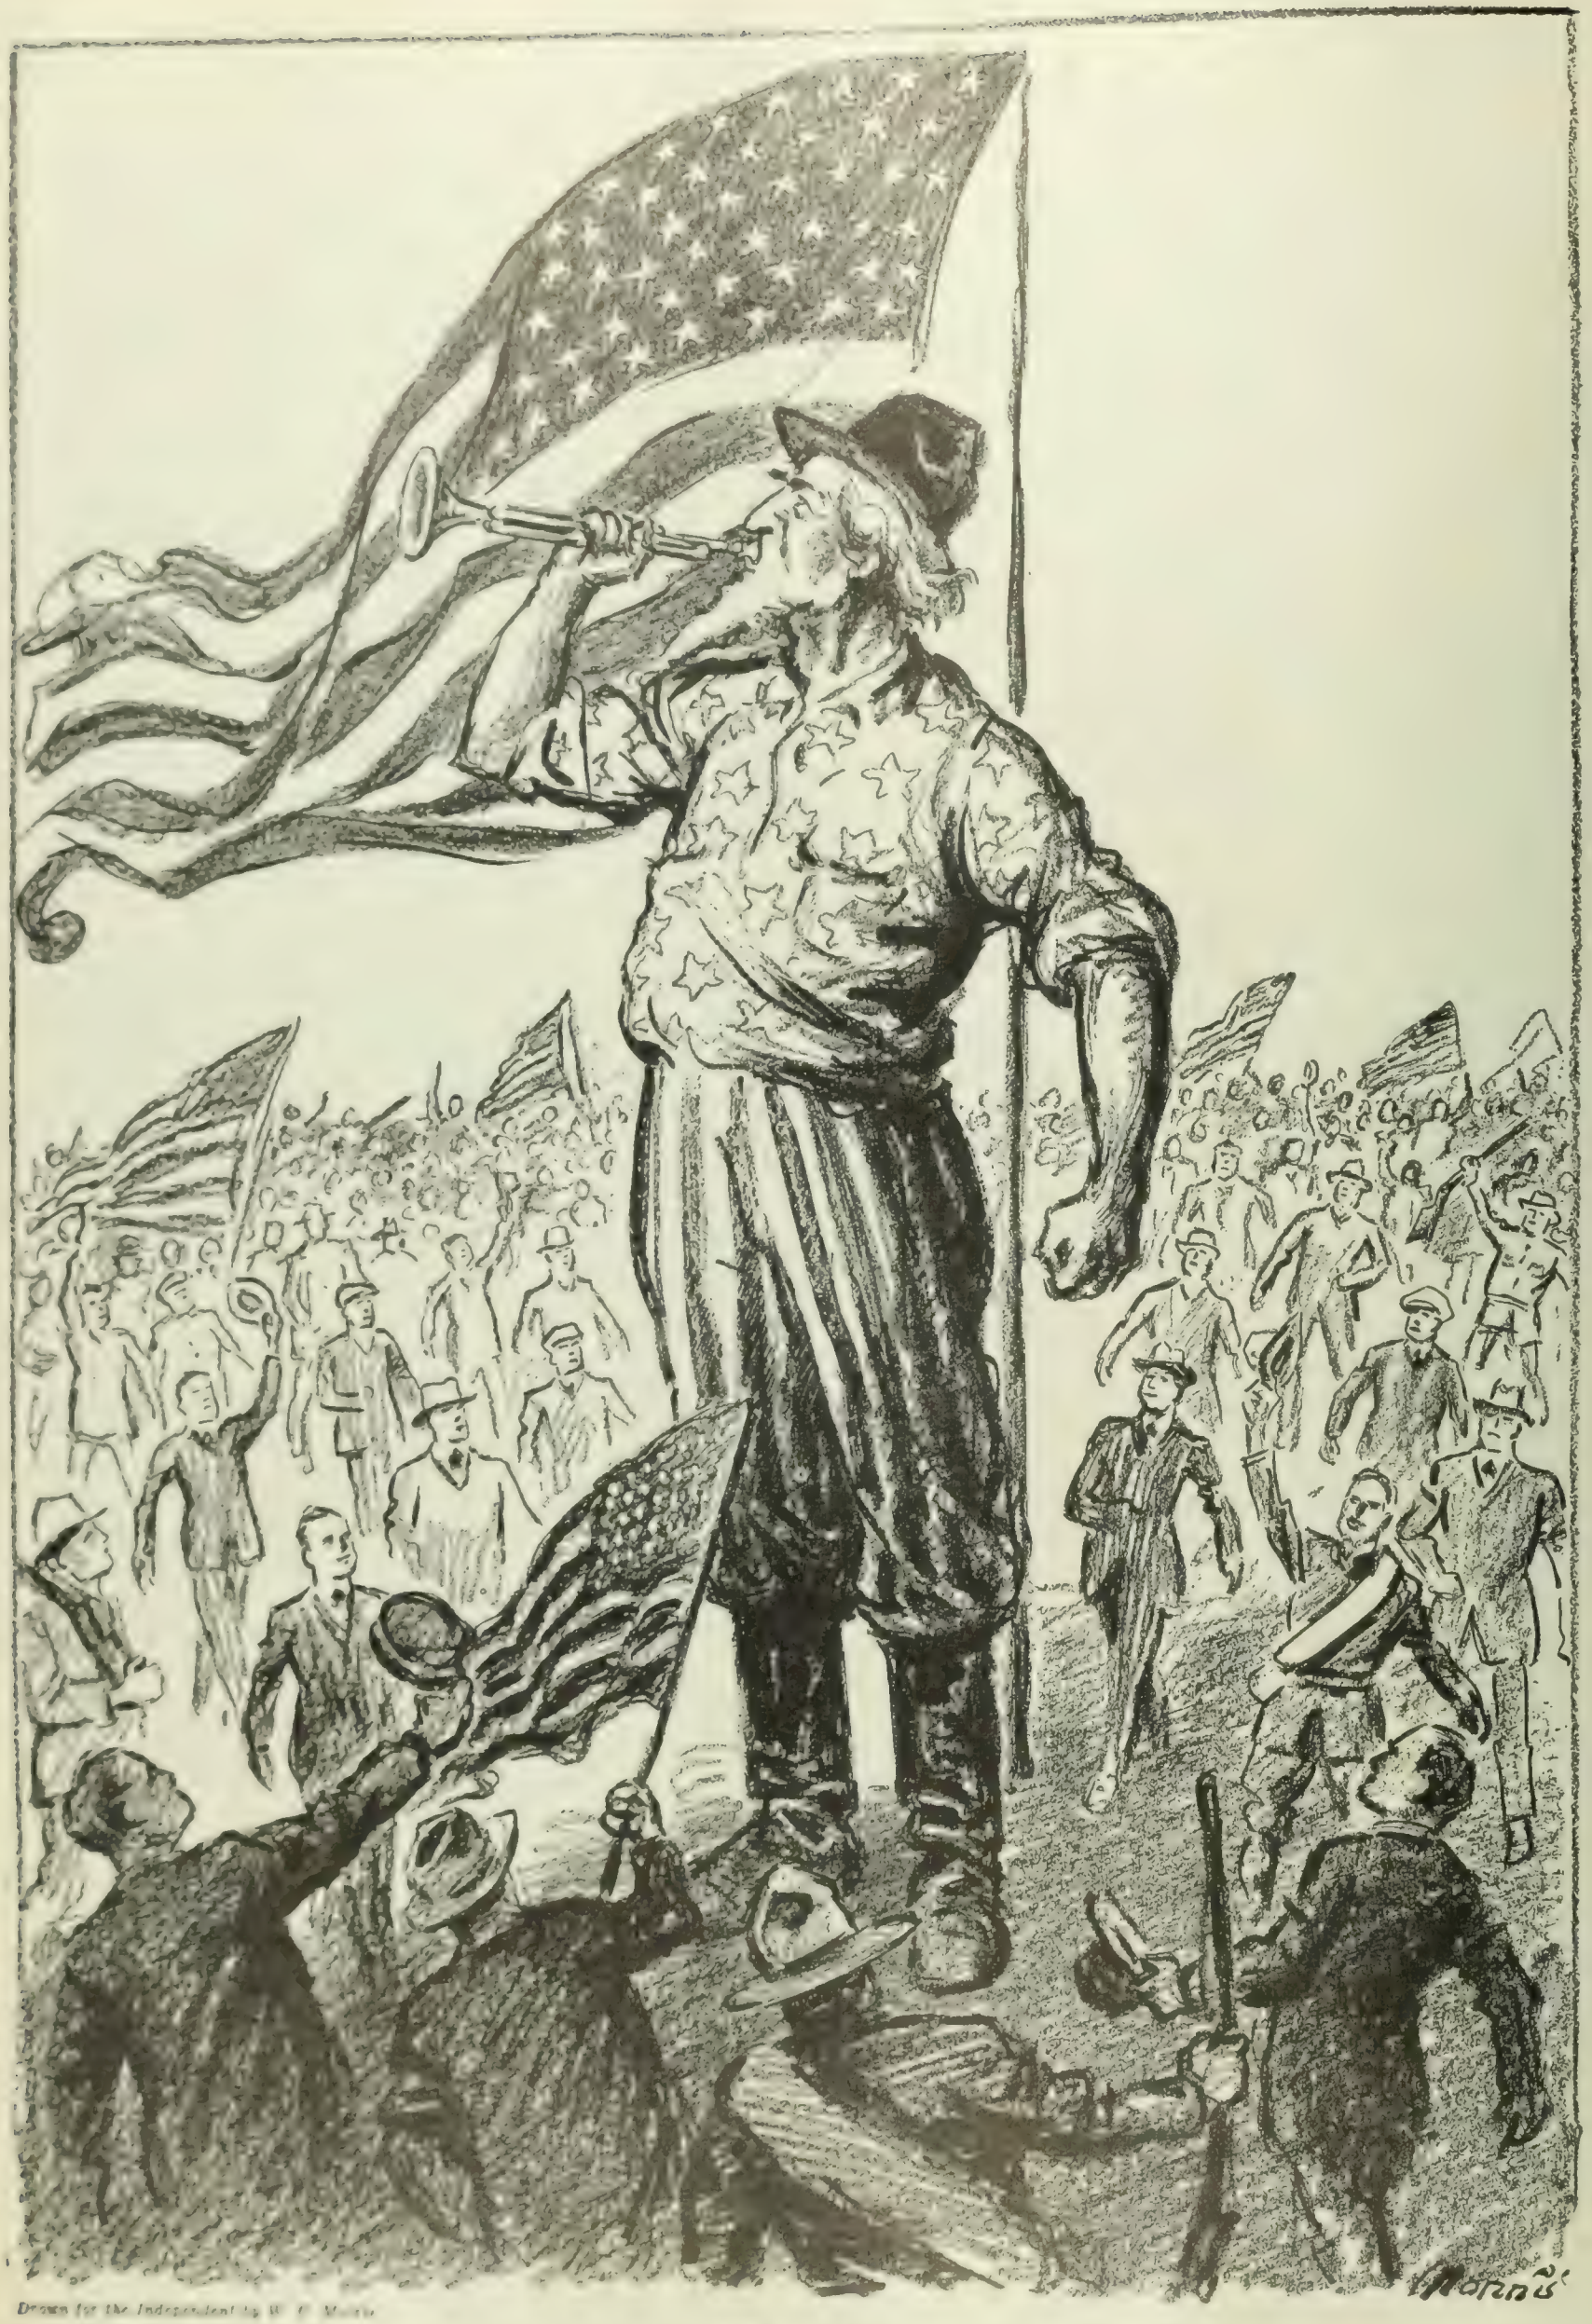
This is to state no crazy creed, that because equality is mathematically admirable, equality should at all times and in all places forthwith obtain. Equality, balance, is a dream, the greatest of all visions, the beloved star—ever to be worshiped, never quite reached.

John Galsworthy is a writer set off from the mob of his contemporaries by a wonderful clarity of spiritual vision. He is a prophet, for is it not the true test of the prophetic gift that the utterances of its possessor shall be better apprehended of the people in after years than when they are given voice? The prophet's deprivation of honor is less a matter of geography and popular invidiousness than of time and his own far visionedness.

The words we have set down above were written when the Great War was still but a bogy to scare the naughty children with and the Russian people were still the creatures of a despotic bureaucracy. But to read them now is to see a clear shaft of light sweeping across the face of the events of today.

The Russian people have dreamed the dream, have seen that greatest of all visions, have worshiped that beloved star, and the world stands in sympathetic awe before the spectacle of the Russian Republic springing full formed into life.

But the German nation, hearkening unto false prophets, has wilfully rejected the dream, denied the vision and turned its eyes from that glowing star of Equity to the beckoning fool's fire of Power. And the sane peoples of the world feel throbbing pity for that blinded nation, with its mad choice of the Will to Power, and bitter loathing for its contemptuous rejection of the divine Will to Equity.



LOOK AHEAD

WHEN Kitchener said at the beginning of the war that England must make ready for three years of fighting, not many took him seriously. But they do now. Let us learn by their experience. "Three years or the war" is a good old American slogan.

SAVING CHRISTIANITY

THE last of the great Christian nations has at length entered the war. Christian people are not only asking how our national support will affect the outcome of the European struggle, but are anxiously concerned about the effects of our action upon Christianity itself.

If the Christian faith is to stand the strain of this world crisis and weather the gales of passion which must buffet the church in the coming days, if Christianity is not to be crushed in the general crash of falling systems, then Christian believers must exert all their power toward saving the remnants of organized faith and hope. The church must not become a mere "drummer outside the recruiting office." The moral issues of the struggle must be analyzed and Christian discrimination applied. Reason must be prest into the place of passion. Christian leaders must emphasize the universal elements of religion, and keep internationalism beside patriotism as the inspiration to sacrifice. The church must do more than bring to the dead and dying the peace of God and minister comfort in the homes of the bereaved. The spirit of universal brotherhood must not be allowed to die. The ministry of human, social reconciliation must not become an empty name. Forgiveness of one's enemies must receive more effective recognition in group as well as individual conduct. Christian leaders must resist the subtle temptation to reduce the God of universal justice, righteousness and good-will, the Eternal Father of all men, to the God of a nation, a people, a party, or a clan. We must strongly oppose this reversion to that worship of a tribal God which we have witnessed across the sea and have justly scorned because of its assumptions and its blasphemy.

Drawn for the Independent by W. C. Morris

THE CALL

As Lincoln said, we must be more concerned about being on God's side than securing His help on our side.

Above all, the world awaits a larger conception of Christian truth, comparable to the needs of humanity in this time of disaster and distress. In the desperate confusion of our time we need the application of some larger faith that will do for Christianity what the old Hebrew prophets did for their religion. In the presence of the military power of the ancient Assyrians (the German system of antiquity), those seers of Israel proclaimed the fundamental conception of justice in the character of God, and social righteousness as a constituent element of a stable national life. Today in the presence of Prussianism, we need a proclamation of that larger Christian truth that will stay the ravages of imperial lust and competitive struggle, and win the world to international unity when the storm of war is past. This will save Christianity and start the redemption of the race on a firmer basis.

PROHIBITION NOW

DRINK does not make good fighters. It does not turn out good work. Its manufacture uses up good foodstuffs. A nation at war has no use for drink. Russia learned it, France learned it, England learned it. Shall we learn it first—or last?

THE GERMAN SHIPS

THE United States of America has from time immemorial championed above all nations the inviolability of private property from capture and confiscation during war. At the Second Hague Conference the chairman of the American delegation, Mr. Joseph H. Choate, in behalf of the United States, made a lofty plea for this great reform in the practise of war.

Last week all the German privately owned ships that have sought safety in our ports since the war began were seized by the United States Government. If the ships are now to be used by our Government during the war the owners ought to be paid, just as any citizen or noncombatant enemy is paid when his horse or automobile is requisitioned. But, whether used or not, the ships should be returned to their original owners after the war is over or else fully compensated for. In view of its historic stand the United States can do no less than this.

AS OTHERS SEE US

IN the discussion of the last few weeks it appears that some of those who opposed a declaration of war were laboring under a delusion which should be promptly dispelled, as it would be likely to make trouble for us in the future. This delusion is the idea that England, feeling herself on the verge of defeat, has inveigled the United States to come to her rescue and save her from otherwise inevitable ruin. Now this is quite contrary to the way it is looked upon from the other side of the Atlantic. Two years ago or one year ago or even six months ago, when the German wave was at its hight, the Allies would have been grateful for American aid. Now, however, when England has got her four million into action and Germany is believed to be on her last legs, when the Germans are losing ground rapidly in France and the Turks are being overwhelmed in Asia, American intervention will be regarded by many as unnecessary and by some as undesirable. We may expect to be accused of leaving to others the burden and heat of the conflict and then coming in when victory was certain to get a share of the spoils. The following fragmentary quotations from the latest, March, number of the *National Review* will suffice to show how one section of British opinion looks at it:

> We still cling to the hope that America will stay out and make dollars, leaving European civilization to work out its own salvation, with aid of Japan. . . . If she stays out of the war she can be kept out of the peace, while if she comes into the war she will have some say in the peace. This would greatly complicate the position of the Allies. . . . America is even more unready for war than we were and would be a heavy military handicap on us should Germany ultimately compel her to fight.

If then Uncle Sam is tempted to look upon himself as a knight errant coming to the rescue of the distrest damsel Europa, about to be devoured by the dragon Fafner, he is likely to meet with a painful disappointment.

SEND THE AMERICAN FLAG OVERSEAS

IT will take us a long time to raise and train a great army. Perhaps the war will be over before that is done. Probably the greatest contribution we will make to the downfall of the German cause lies in other directions.

But it should not take long to have an army corps, two army corps, a hundred thousand men, ready to be put into the trenches alongside the French and the British and the Belgians.

The sight of the American flag on the firing line "somewhere in France" would be tremendously heartening to the soldiers of our Allies. It would dramatize for the soldiers of our enemy the entrance of a new and mighty force into the conflict against them.

We must be practical in this great enterprise that we have entered upon. But let us not forget the value and power of sentiment as well.

The American flag should be planted on the western front without delay.

'WHAN CAN I DO?

THIS is the question that instinctively rises in the mind of every loyal American. The declaration of war against Germany calls into national service not merely 500,000 able-bodied young men, but 113,000,000 men, women and children of all ages. No one is so weak or so humble that he cannot find something to do in the present crisis. Modern war is the united effort of a whole people. In the olden time when a soldier was once equipt and sent forth to war there was nothing for the home folks to do but to pray for him. An army lived on the land it was invading or defending. Nowadays some ununiformed man at home may be just as important as a general at the front, and a woman in a munition factory may contribute as much to victory as a soldier in the trenches. Americans are, we believe, a match for any people in personal courage and individual initiative. But we must confess that in discipline and coördinated effort we have never yet shown ourselves the equal of our enemies, the Germans.

Fortunately we have the experience of other nations for the last thirty-three months to guide us. Conditions in Great Britain, and especially in Canada, Australia and New Zealand, before the war were very much like those in the United States now, and we should be able to start in at the point they have now reached. At least we ought to be able to avoid their costly mistakes.

One of their mistakes was in allowing men to volunteer for military service who were more needed at home. The consequence was that the output of mines and factories fell off until the skilled men at the front could be brought back—and some of them could not be brought back. Every man owes to his country the highest type of service he can render, and if he wilfully turns aside from what he can do best to do what many others can do as well he is to that extent a shirker. Our greatest need will be for officers and here as in England the colleges will be the chief source of supply. Fortunately the Morrill act, which founded an agricultural college in every state, was past in war time and contained a requirement for military training, so we have some thirty thousand graduates who are in part prepared to serve as officers. But there are others who will have to be thoroly trained before they can be trusted with the safety of hundreds and thousands. So, too, must the men be thoroly trained before they are sent into action. The British Government, tho it needs men now more than ever, is putting them thru a longer period of preparation. This is no time for "playing soldier." We want no superfluous drilling with broomstick guns. It does not matter much whether the men know the meaning of "Shoulder arms!" and "Parade rest!" but they must have experience in ditch digging and barbed wire fencing.

We want no silly girls running around the streets sticking white feathers on every man they meet who is not in uniform or wearing a service badge. The English press now deplores this fad of the early days of the war, as it did more harm than good. It is true that the question of enlisting cannot always be left to the individual concerned, for some men are afflicted with cowardice and more with megalomania, but a casual stranger cannot determine such a question of personal duty and serviceability. Nor must the women waste their time in knitting useless scarfs and impossible stockings. This is a woman's war in a truer sense than if we had a corps of Amazons. In Great Britain there are now a million women doing war work for the Government, and it is encouraging to learn that they are in many cases healthier and happier than when they were idle or less systematically occupied. It has been found possible to arrange machinery and hours so as to carry on the heaviest industries without undue fatigue or overstrain. There will be plenty of volunteers for the Red Cross, but the women should realize that when any one of them or any two of them can take a man's place at any job they are serving their country just as much as if they were in a hospital.

Besides personal service we all of us contribute to the expense of the war by taking part in the necessary loans to our Government and our allies. In England employers have subscribed for shares for such of their employees as want them, to be paid for in installments out of their wages. Many establishments also continue the wages or provide for the dependents of their employees who volunteer.

Young men should be encouraged to marry before going to the front. Of course we are not advocating forced, rash or loveless marriages, but in serious times like this what was carelessly regarded as a matter of caprice or personal convenience should be recognized for what it really is, a duty to family, country and race which no one has a right without good reason to postpone or evade. The group of patriots and statesmen who led the uplift movement in our national life beginning in the nineties was largely composed, as a biographical dictionary will show, of the sons of the heroic "war brides" of the sixties. The country will need more of that type of citizens.

It is foolish to talk of "business as usual." But "pleasure as usual" is worse. We should all of us at once volunteer for national service by going on a war basis of personal expenditure. This means cutting off all extravagances. It does not mean the renunciation of all the means of enjoyment. We are not going into sackcloth and ashes, no matter what happens. As Mark Tapley said to himself:

> Things is looking about as bad as they *can* look, young man. You'll not have another such opportunity for showing your jolly disposition, my fine fellow, as long as you live. And therefore, Tapley, now's your time to come out strong or never!

The French made a mistake when under the first shock of the invasion they closed their pianos for the war. Music is never needed more than in such a time as this. War was the mother of music. Nor should we, as some advise, close the movies, tho some of us might well curtail our expenditures on them. The motion picture theater, since it can be run by women and noncombatants and gives enjoyment to large numbers at small cost, is especially adapted for wartime. But if we should all take the temperance pledge for the war we should save enough money, directly or indirectly, to keep up our new army and navy.

In our expenditures on pleasures as on anything else we should simply see to it that we do not get cheated, that all our pastimes are worth what we pay for them in time, money and vitality, in short, that they are recreations and not dissipations. In particular, we should avoid imported luxuries, for in the scarcity of shipping, every pound of these consumed means one pound less of food for the famished people of Europe. The British Government has prohibited the importation of luxuries altogether and we have the same reason tho not the same need for it.

Above all, what each one of us should do is to keep a level head. We are, it must be acknowledged, an excitable people, liable to stampedes. We have not, as some say, been stampeded into the war. We have been slow to make up our minds. We have listened to the arguments on both sides. We know what a horrible thing war is. We have gone into it with open eyes and a determined spirit. But this is a long-winded war. It takes cool courage and common sense. We must think straight if we are to shoot straight. We must do what is for some of us the hardest thing in the world to do, keep calm in the midst of alarms and not allow our eyes to be blinded by passion.

THE STORY OF THE WEEK

War Plans Mapped Out The War Department has prepared an army organization system which, if carried into effect, would place the United States in the front rank of military powers. The first step will be the expansion of the regular army to full war strength and the drafting into federal service of the entire National Guard for the duration of the war. An additional force of half a million will then be raised as soon as possible, giving a total effective force of practically a million men. This force will be increased while the war lasts by successive increments of about half a million each. In order to raise the required armies the Government will resort to a "selective draft" of men between nineteen and twenty-five years of age. The feature of the plan providing for compulsory military service will no doubt encounter much opposition in Congress, but there is little question that the President can count upon the support of a majority in both Houses for any military legislation that he may ask.

The President, in announcing the declaration of war by vote of Congress, proclaimed restrictions by executive order upon any activities of alien enemies resident in the United States which might tend to hamper the army or navy. In support of the President's proclamation, officials of many states and cities issued drastic warnings threatening spies and conspirators with the terrors of the law.

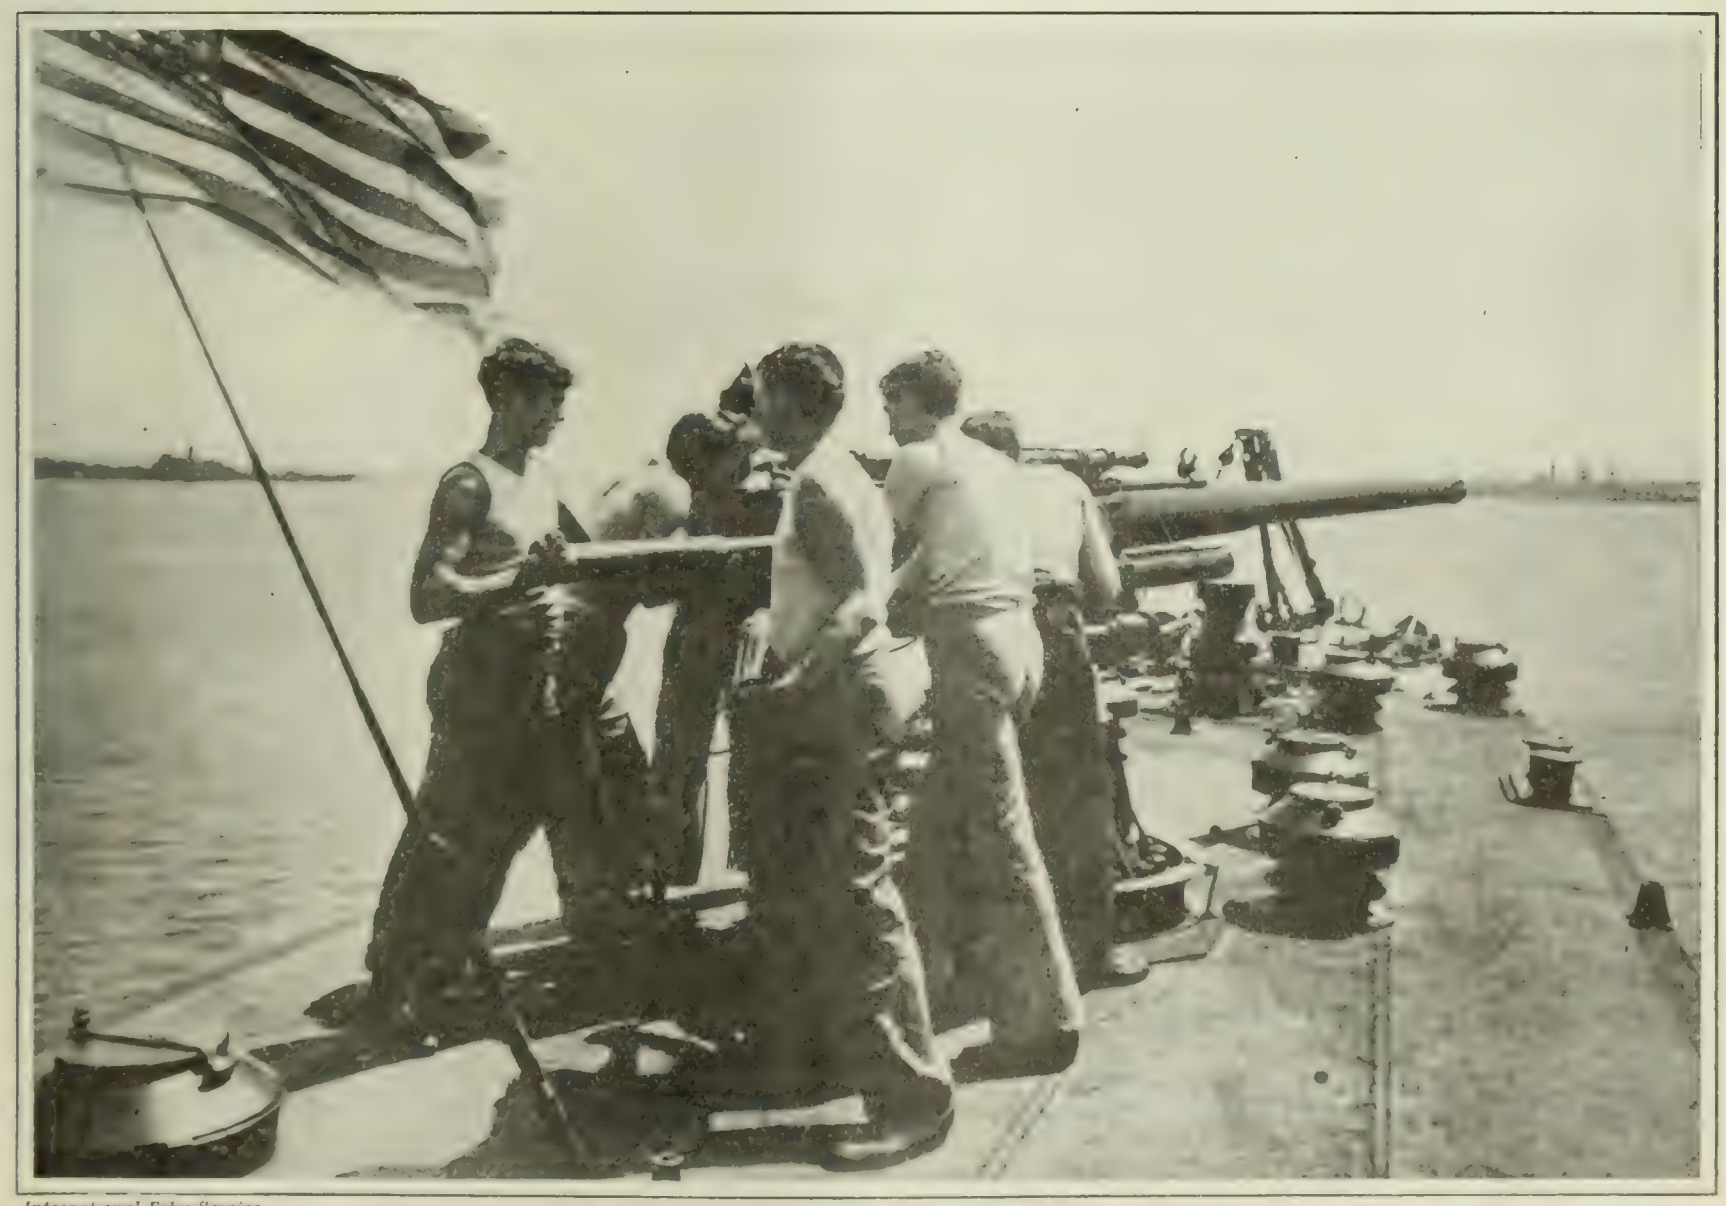
THE GREAT WAR

April 2—President Wilson addresses Sixty-fifth Congress advising declaration of war against Germany. American steamship "Aztec" sunk.

April 3—Belgian relief ship "Trevier" torpedoed without warning. Germans attack Russians on Stokhod River.

April 4—Declaration of war passes Senate by 82 to 6. American steamship "Missourian" sunk without warning near Italy.

April 5—British and Russians join forces in Mesopotamia. British and Germans lose a hundred airplanes in two days.

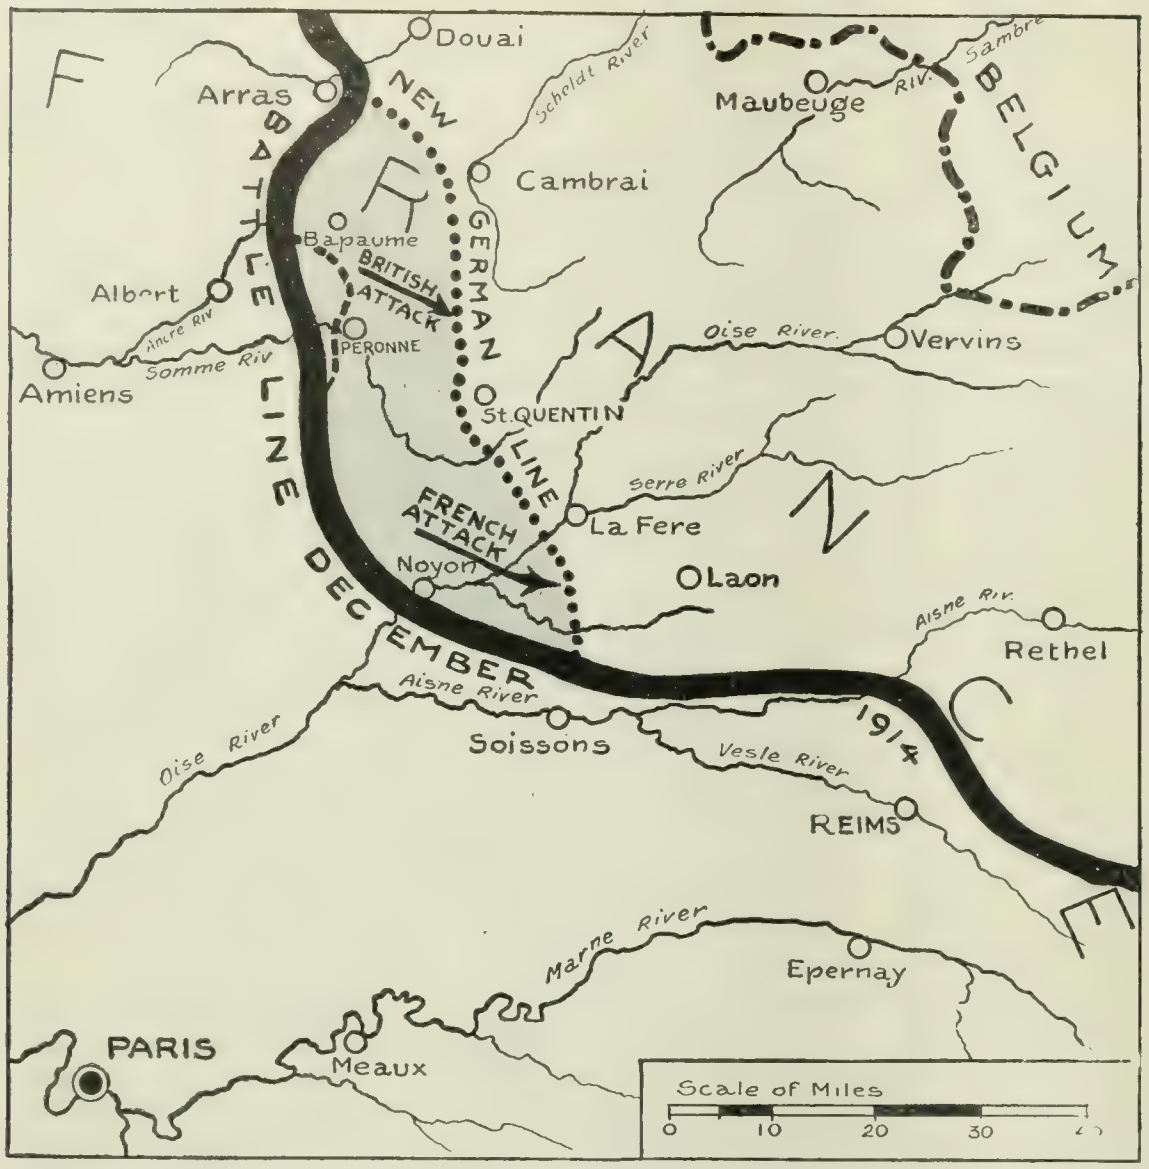


April 6—House passes declaration of war by 373 to 50. German vessels in American ports seized.

April 7—Cuba and Panama declare their support of United States. German cruiser in Guam blown up.

April 8—Numerous arrests of suspected Germans in United States. Austria-Hungary breaks off relations with United States.

Paying for It The Government is planning a bond issue of about five billion dollars; equal to five times the war indemnity exacted from France after the Franco-Prussian War in 1871. Two billion dollars will probably be loaned to the Entente Allies. Approximately three and one-half billion dollars will be required to finance the extraordinary expansion of the military and naval forces of the United States now projected to prosecute the war. Of this, nearly three billion dollars will be needed for the army alone. The forthcoming bond issue is to be placed before the public in small denominations at 3 or 3½ per cent interest. This will be supplemented by new and increased federal taxes, but the exact nature of the system of taxation to be adopted has not as yet been announced.



Cuba Enters the War Another republic has been added to the long list of nations allied against the monarchies of Central Europe. On April 7, President Menocal signed a joint resolution passed by the Senate and House of Representatives declaring war with Germany. In strik-

International Film Service

"WARS ARE FOR YOUTH TO WAGE"

Our first line of defense must be the guns of the navy manned by crews like this at target practice on one of the United States destroyers

THE ATTACK ON THE HINDENBURG LINE

The Germans withdrew in March from the positions on the Aisne and Somme, which they had occupied for more than two years, and established themselves in a new line some twenty miles to the west. The French are attacking south of St. Quentin and the British north of this point

ing contrast with the prolonged debates and divided vote in the American Congress was the action of the Cuban Congress, which voted for war unanimously and almost without discussion. The initiative came from President Menocal, who addrest a message to Congress on April 6 urging that Cuba support the action taken by the United States because of the many ties of gratitude which bound the little republic to its larger neighbor. He referred also to the danger of German submarine warfare to all neutral nations, Cuba among them, and the necessity of "revindicating the right to navigate and engage in commerce freely." In consequence of the declaration of war the Cuban Government seized several German vessels in Havana harbor. It is reported that a small army of Cuban volunteers may be organized and sent to Europe under American leaders, but, whether this is done or not, the action of Cuba is important since it closes Cuban ports to German ships and enables the American fleet to use them as naval bases.

The Republic of Panama has promised to safeguard the Canal from conspiracies and plots. In the case of Panama as in that of Cuba the decisive factor determining the attitude of the nation was probably the influence and example of the United States. Several other Latin-American republics are hesitating on the verge of war. Popular feeling in Brazil is running so strongly in favor of the Entente Allies that the Government will probably be forced to take action against Germany. In addition to their sympathy with Portugal, France and the United States, the Brazilians are stirred by the death of several of their fellow-countrymen on the torpedoed steamer "Parana." Should Brazil enter the war other republics may follow suit.

The Attack on St. Quentin

It is questionable if St. Quentin actually forms part of the so-called "Hindenburg line," where it is supposed that the Germans will make a stand, but at any rate this ancient stronghold is still being defended and the British and French are held in check until it can be reduced. This, however, ought not to take long since the British on the north and the French on the south have both advanced beyond it and now have it more than half encircled at a distance of from one to three miles. St. Quentin was a Roman fortress and has played an important part in the wars of France ever since. The French defeated the English and Spanish here in 1557 and here the Prussians defeated the French in 1871.

In order to find out where the new German lines are located the Allies are sending out flocks of airplanes, and there has been more aerial battles than ever before in the history of the world. The losses, too, have been unprecedentedly heavy. In two days the Germans claim to have brought down forty-four British and French machines, and the British claim to have brought down forty-six German airplanes and ten balloons. Over 1700 photographs were taken by the British airmen of the land behind the German lines. Besides reconnoitering, the airplanes are being used in bombarding the depots, airdromes and railways of the enemy. Over eight tons of bombs were dropt on such points by the British airmen on April 5 and 6.

Democratic Movement in Germany

The revolution in Russia and the declaration of President Wilson declaring war upon the Hohenzollerns rather than upon the German people would naturally be expected to have an influence upon German opinion and there is some evidence that such is the case. Before the overthrow of the Czar was generally known in Germany Chancellor von Bethmann-Hollweg appeared unexpectedly in the Prussian Diet and made a passionate speech in favor of electoral reform, declaring "a curse on the statesman who fails to understand his own age or lets slip his opportunity." Later in the Reichstag he exprest doubt as to whether such important changes ought to be considered in wartime, but the Reichstag took up the matter and by a vote of 227 to 33 authorized a committee to examine constitutional questions. The Emperor then made public an order to the Chancellor in which he definitely pledges reforms after the war. The significant passages are as follows:

> It falls to you as the responsible Chancellor of the German Empire and First Minister of my Government in Prussia to assist in obtaining the fulfillment of the demands of this hour by right means and at the right time, and in this spirit shape our political life in order to make room for the free and joyful coöperation of all the members of our people.
>
> In this endeavor, while holding a just balance between the people and the monarchy to serve the welfare of the whole, I am resolved to begin building up our internal political, economic and social life as soon as the war situation permits.
>
> While millions of our fellow countrymen are in the field, the conflict of opinions behind the front, which is unavoidable, in such a far-reaching change of constitution must be postponed in the highest interests of the Fatherland until the time of the home-coming of our warriors and when they themselves are able to join in the counsel and the voting on the progress of the new order.

It is doubtful whether this vague promise of unspecified reforms after the war will satisfy the popular demand for immediate and substantial concessions from the ruling classes.

In reply to a statement made by the leader of the Socialists in the Reichstag that the Socialists in the Russian Government would be disposed to make peace the Socialist Minister of Justice, Mr. Kerenski, says that if the German people would follow the example of the Russians and dethrone their emperor it would be easy to make peace. This declaration will undoubtedly become known to the German people and may produce startling results.

The President Speaks for War

On Monday, April 2, President Wilson addrest the Senate and the House of Representatives assembled in joint session to hear the most important American state paper since the Civil War. The Independent published the full text of the address in its issue of April 7. The President reviewed the history of the recent German submarine campaign against merchant ships and characterized it as "a war against all nations." He pointed out that armed neutrality had proved to be an inadequate method of meeting the submarine menace and requested that "the Congress declare the recent course of the Imperial German Government to be in fact nothing less than war against the Government and people of the United States." He urged as practical measures of resistance to Germany's aggressions an alliance with the present enemies of Germany, the extension of liberal financial credits to the Entente Allies, the raising of an army of five hundred thousand men in addition to the standing army and the national guard, the introduction into our military system of the principle of universal military service and the provision of the needed war revenues so far as possible by taxation rather than by borrowing. Then with passionate and stirring eloquence the President drew a picture of the Government of modern Germany as the one remaining stronghold of autocracy opposed to the free nations of all the world, including a regenerated Russia now "a fit partner for a league of honor."

The press of the country received the President's communication with almost unanimous approval and even periodicals printed in the German language hardly ventured a word of criticism. It is not too much to say that on no previous occasion did President Wilson find such general support and so little opposition. The press of Latin American countries was more divided in sentiment. In Brazil and in other republics which were more or less pro-Ally in attitude the President's speech was greeted with a chorus of approval, but some newspapers in Argentina and elsewhere pointed out that the entry of the United States into a European war made the position of the remaining neutral nations less secure than ever and portended the passing of the Monroe Doctrine or perhaps a dangerous increase in the military power of the United States. Only in Mexico, however, was there any danger that the action of the United States would provoke an anti-American movement.

The Decision of the Senate

By a vote of eighty-two to six the United States Senate has agreed to the joint resolution recognizing the existence of a state of war with Germany and authorizing the President to use the entire military and naval forces of the country to prosecute the war. The decision came on Wednesday night after a full day's debate. Originally the debate had been planned for Tuesday, April 3, but the purpose of the majority was frustrated by the individual objection of Senator La Follette of Wisconsin, who had been the leader of the filibuster against the armed neutrality bill in the Sixty-fourth Congress and who once more took upon himself the command of the pacifist minority in the Senate. On the next day the Senate again convened with the war resolution in its place on the calendar as the sole business for the day, determined to remain in continuous session until debate was exhausted and a vote was reached.

Few of the friends of the resolution made long speeches, since it was to their interest to get the vote recorded without undue delay. Senator Lodge was the chief spokesman of the majority and his speech was devoted rather to emphasizing the necessity of conducting the war with vigor than to a justification of our entrance into it. He advocated especially the seizure of German ships now in American ports. Senator Williams of Mississippi answered Senator La Follette in one of the most vigorous speeches of the whole debate. Several other Senators, including some who have been associated with the pacifist group on previous occasions, justified their votes for war. But the greater part of the time was occupied by anti-war speeches. Not all of these were by the six who voted against the resolution; Senator McCumber, for example, attempted to secure an amendment which would delay the actual beginning of war until the next "overt act" occurred, but when his amendment failed he did not oppose the declaration of war. Senator Kirby and Senator Cummins stated that they were still unconvinced of the necessity for war but that they would not venture to oppose the evident will of the majority at such a critical time.

The impenitent six who held out to the last were La Follette of Wisconsin, Gronna of North Dakota, and Norris of Nebraska, Republicans; Stone of Missouri, Vardaman of Mississippi, and Lane of Oregon, Democrats. Senator La Follette and Senator Norris made particularly violent attacks upon the war propaganda which, in their opinion, was largely manufactured by the financial interests of the country to safeguard their European loans. La Follette surprized the Senate by devoting a great part of his time to a defense of the German Government and to a diatribe against Great Britain. He insisted that the United States had as much reason to go to war against England as it had to fight Germany, and declared that if the voice of the country could be heard it would be overwhelmingly against participation in the war.

The Decision of the House

The House of Representatives did not get an opportunity to vote on the war resolution until three o'clock on the morning of Friday, April 6. The debate in the House was longer and more spirited than the debate in the Senate and the vote was less one-sided. Fifty Representatives opposed the war with Germany and among the number were such prominent leaders as Representative Kitchin of North Carolina, the floor leader of the Democratic party in the House, and Representative Cooper of Wisconsin, ranking Republican member of the Committee on Foreign Affairs. But the vote of the 373 members of the House who approved the war resolution is sufficient proof that President Wilson has behind him the overwhelming majority of both parties in Congress.

The debate was delayed by the necessity of organizing the House of Repre-

TRYING OUT A MOBILIZATION OF BOY SCOUTS

Before war with Germany was declared the authorities in New York City decided to test the wartime efficiency of the Boy Scouts by a hurry call at night for mobilization. No one knew what it meant, but nearly every boy reported for orders and faced the camera bravely on the City Hall steps

sentatives and settling the vext question of party predominance. On Monday Speaker Champ Clark was reelected by 217 votes to 205. None of the independent members supported the Republican nominee, Representative Mann, and several Republicans bolted the choice of the party caucus and voted for candidates of their own selection. The loss of the Speakership carried with it the loss of minor officers of the House and the control of the important committees and put the Democratic party in power for the next two years, charged with sole responsibility for the conduct of national affairs.

After the task of organization was completed, the House devoted its attention to repassing the principal appropriation bills which failed to secure a final vote in the Senate during the Sixty-fourth Congress. The resolution for war with Germany was, in the meantime, favorably reported by the Foreign Affairs Committee with only two dissenting votes. On Thursday morning general debate began in the House of Representatives and continued without cessation for seventeen hours. No attempt was made to hurry a vote and every opponent of war was given a chance to present his view of the issue. A feature of the session was the large number of brief statements by Representatives who wished to put their opinions on record without exceeding the five minute limit. Party lines disappeared entirely, and while the number of Republicans among the minority who voted against the war resolution was larger than the number of Democrats this was due entirely to the vote of the members from a few states where anti-war sentiment is still strong. Nine of the eleven Wisconsin Representatives, for example, voted against entering the war. Among those in opposition were the only Socialist member, Meyer London of New York, and the only woman member, Miss Jeanette Rankin of Montana.

German Ships Seized Immediately after Congress had voted for war with Germany Federal officials, acting under orders from Washington, took possession of the German vessels now in American harbors and expelled and interned the crews. These ships are private property of German owners and so not liable to confiscation, but they are liable to seizure for the use of the Government during the war. It was feared that if the ships were left undisturbed the crews would wreck them to prevent their utilization by this country. No resistance was encountered and most of the ships were found to be in good condition. In some instances the engines had been injured by the removal of important parts. The machinery was also rendered useless by hacking off the bolt heads so as to destroy the holding power of the bolts. By drilling out the bolts and putting in new ones this injury could probably be repaired in a few weeks. All of the ships will have to be dry docked in order to be made seaworthy.

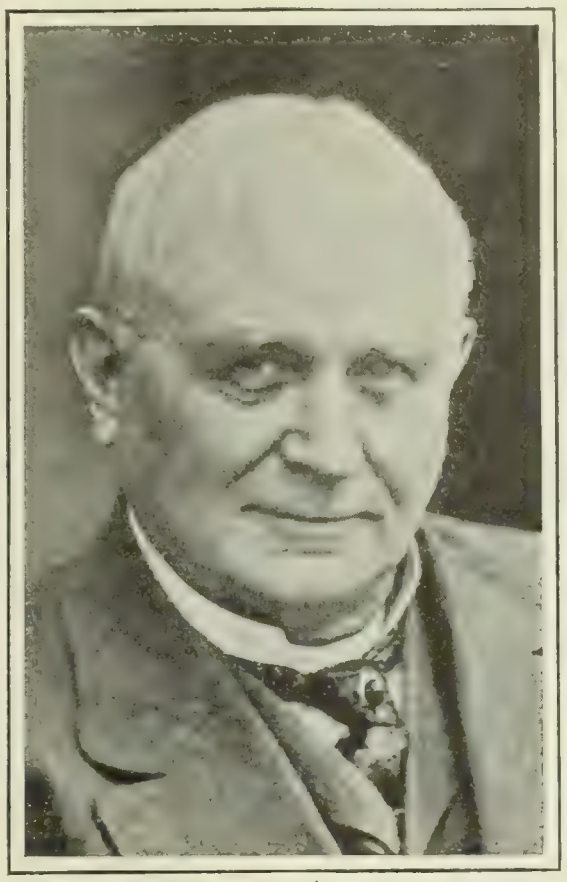
THE LADY OF THE HOUSE

"I want to stand by my country, but I cannot vote for war. I vote No"—Miss Rankin's first word in Congress was against the declaration of war with Germany

By far the largest tonnage was stationed in the port of New York, where several transatlantic liners took refuge at the beginning of the Great War; the mighty "Vaterland" heading the list with over 54,000 tons. From the New York ships 1500 officers and men were taken to Ellis Island, which was fitted up as a temporary internment camp. Six liners were seized in the port of Boston. The total present value of these ships is rated at more than twenty million dollars and their total tonnage amounts to 629,000 gross, a tonnage that could not be built in American shipyards in less than a year. Ships were taken over by the authorities in many American ports, including Honolulu, Manila, Baltimore, New London, Philadelphia, New Orleans, San Francisco, and more than a dozen others.

Railroad Rate Questions The Interstate Commerce Commission has decided to permit increased rates on coal and coke requested by certain lines in the eastern states as part of general advances in freight rates. The increased coal rates apply particularly between Pennsylvania and West Virginia coal fields and tidewater. Similar increases have been granted for several classes of freight in many parts of the country, such as a 5 per cent increase on all freight moving east and west by rail or ship lines over the Great Lakes and a revision of rates on fruits and vegetables from the southern states. These changes have alarmed shippers, and fourteen national organizations issued a call for a general conference of commercial and manufacturing interests to be held in Chicago on April 13 to protect the interests of the shipping public. The case for the railroads is the recent advance in operating expenses due mainly to increased wages under the Adamson law. Total operating revenues thruout the country increased by forty million dollars from January, 1916, to January, 1917, but more than three-fourths of this increase was offset by increase in operating expenses, and the revenues of



the eastern lines increased less rapidly than their expenses.

The railroads of the United States, acting thru the American Railway Association have arranged to put at the service of the Government all facilities which may be needed for national defense. Committees of railroad officers have completed plans for working the railroads of the nation as practically one system whenever the Government may advise them that their service is required. The responsibility for details of transportation will rest entirely with the railroad managers and not, as in other countries at war, with public officials chosen to superintend the work.

Goethals Gets New Job General George W. Goethals of Panama Canal fame has been selected by Governor Edge of New Jersey as advisory engineer on the construction of the new fifteen million dollar highway system of that state. The new highway commission met the general at an organization meeting on March 30 and later in the day he addressed a joint session of the legislature.

In the agreement between General Goethals and the state authorities a clause was inserted permitting leave of absence without salary if the general were called into the federal service by the international crisis. Some residents of New Jersey are dissatisfied with the state highway project and claim that the road tax statute under which it will be carried on is unconstitutional. The courts may have to determine this question.

Bible for Literacy Test A curious witness to the universality of the Bible is afforded by the action of the Bureau of Immigration in selecting it as the source of test sentences in various languages by which immigrants may prove their ability to read. On investigation the immigration officials found that they could select test sentences from the Bible in more than a hundred languages and dialects commonly used by immigrants to this country. The Department of Labor points out that in every language "the translating was done by men whose purpose it was to put the Bible into such simple and idiomatic expressions . . . as would make it possible for the common people of foreign countries to grasp the meaning readily and thoroly." The new immigration law, which includes the literacy test, becomes effective on the first of May and has caused an increased immigration from certain countries, particularly Portugal, in order to take advantage of the remaining weeks before the law comes into operation.

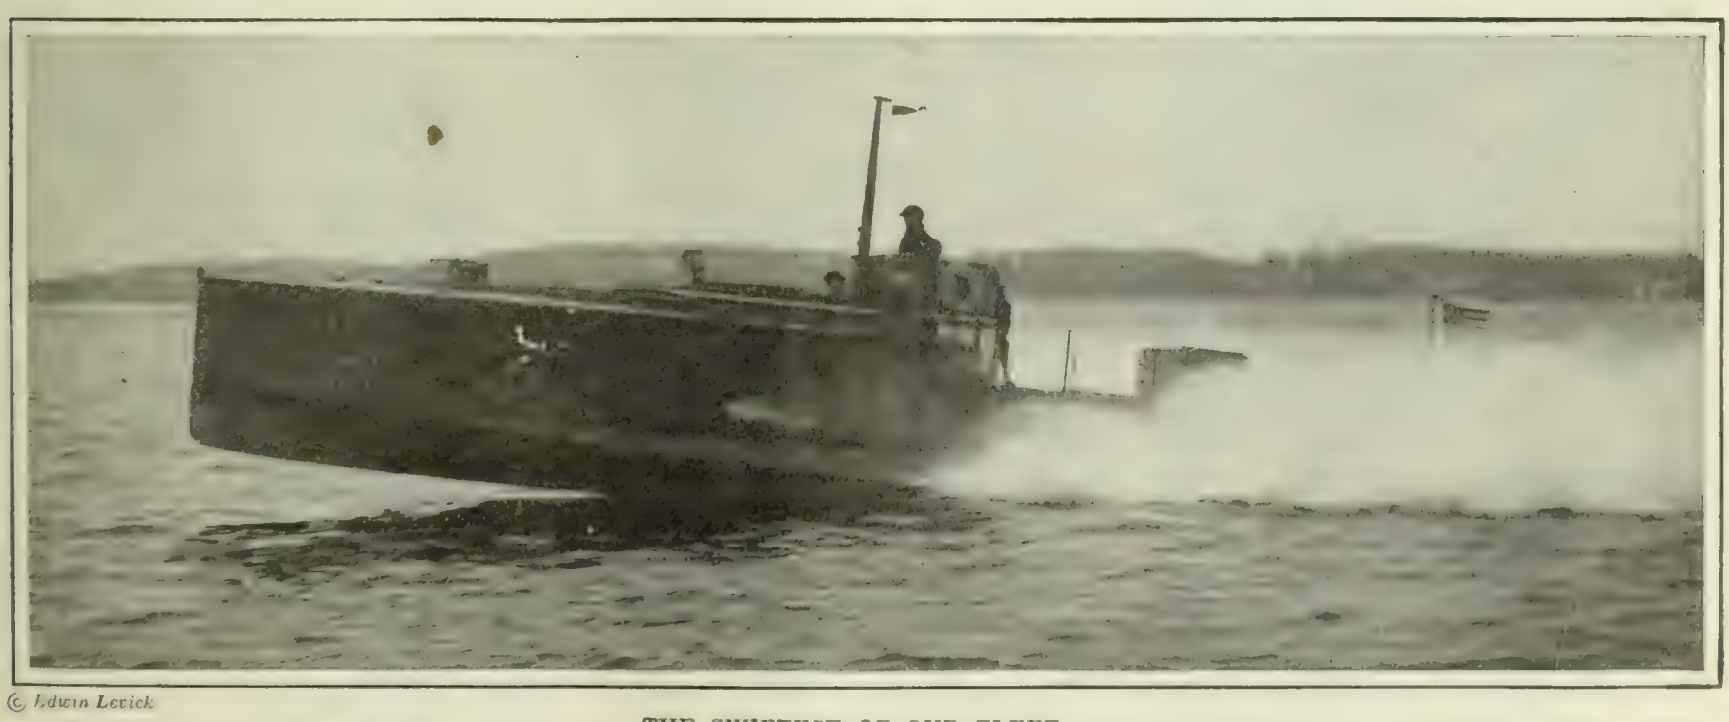
SPEAKER CHAMP CLARK, REELECTED



In spite of the close division of votes in the House the Republican candidacy of James R. Mann failed to deprive Champ Clark of his fourth term as Speaker of the House of Representatives. He was reëlected by a vote of 217 to 205

U-Boat Victims It seems from the inadequate data available that the destruction of shipping by the German submarines was greater in the month of March than in the month of February. It was evidently much greater in the latter half of March than in the former. The British Admiralty reports British merchant vessels sunk by mines or submarines during the five weeks ending April 1 as 164. Of these 80 were of 1600 tons or over. The Norwegian Government reports the loss of 41 Norwegian vessels of 63,084 gross tonnage in February and 64 vessels of 103,238 tonnage in March. The Norwegian losses also include 14 persons killed and 22 missing in February and 46 persons killed and 100 missing in March. No general reports are made by France, Belgium and other countries, but the total losses must be considerably more than the 189 vessels of all flags known to have been sunk in February.

The first of the armed American merchantmen to fall victim to the U-boat was the "Aztec," which was torpedoed off the coast of France near Brest at nine o'clock on the evening of April 1. She was carrying foodstuffs and other supplies valued at more than half a million dollars. She was armed with two five-inch guns; one forward and one aft, manned by a gun crew of twelve American bluejackets from the naval yacht "Dolphin" in charge of Lieutenant Gresham. In the ship's crew of 39 there were 17 Americans. All of the gun crew are reported saved.

Two more Belgian relief steamships loaded with food from America have been sunk. The first, the "Trevier," was torpedoed without warning and twenty-seven of the crew wounded, some of them by gunfire while getting into the boats. The other, the "Felstein," was sunk by a mine while approaching Rotterdam.

The British transport "Canadian," carrying 1200 horses from Boston to Liverpool, was sunk without warning off the Skelligs. There were 56 Americans on board but all were saved.

THE SWIFTEST OF OUR FLEET

Forty-two miles an hour is the speed of this new submarine chaser. It cut thru the water so fast in its tests outside New York harbor that one of our aeroplanes took it for a submarine just submerging and gave chase

Liberalizing Russia

The Provisional Government is declaring new and radical reforms daily, yet there is no reason to think that it is going too fast, for it appears to be supported by all classes of people and the army. The death penalty has been abolished. Woman suffrage has been established. All laws limiting the rights of Russian citizens because of their religious beliefs have been repealed. The restrictions imposed upon the Jews have been removed. The Poles have been promised freedom to determine their own form of government. The proclamation to the Poles denounces the attempt of the Central Powers to induce them to fight on that side and says:

> They wished at this price to buy the blood of a race which never fought for the maintenance of depotism. Nor will the Polish army go into battle now for the cause of the oppression of liberty and the dismemberment of its country under the leadership of its hereditary enemy.
>
> Polish brothers, for you also the hour of great decisions has struck. Free Russia calls you to her ranks in the fight for the liberty of the people.
>
> Bound to Russia by a free military union, adds the proclamation, the Polish state will be a solid rampart against the pressure of the Central Powers against the Slav nation.
>
> May the ancient appeal of the glorious precursors of your liberation be preached with new and irresistible strength. Forward, side by side and hand in hand for the fight.

The martyrs of the revolution, 180 in number, were given a state funeral in Petrograd and buried together in the Field of Mars. The procession was composed of soldiers and well organized brigades of peasants, workingmen, college girls, servants and other civilians of all sorts. As each coffin, draped in the red flag, was lowered into the grave the fortress of St. Peter and St. Paul, where the officials and courtiers of the old regime are now confined, fired salutes from its big guns.

There is no sign yet of a general German offensive against Russia, but an attack was made against the Russian lines on Stokhod River, northeast of Kovel. By heavy artillery fire and thirteen successive waves of poisonous gas, the Germans succeeded in taking the Russian trenches.

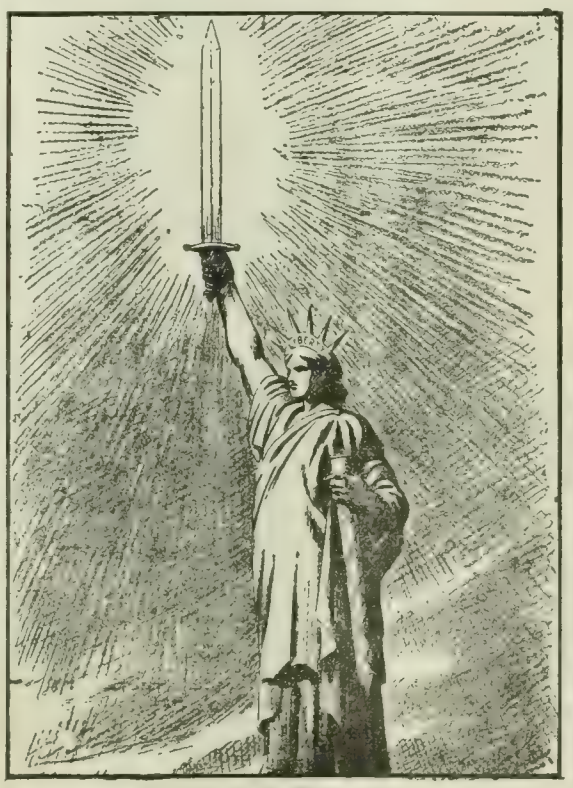
British and Russians Join in Turkey

The Russian forces which came down from the Caspian Sea and the British forces which came up from the Persian Gulf have come into contact. The Russians reached Khanikin on the Persian border just about the time the British reached Bagdad and both parties sent out cavalry to break a way thru the eighty miles of enemy country separating these two cities. The two expeditions met probably near Kizil Robat, the last Turkish town on the road leading from Bagdad to Kermanshah.

This conjunction of forces means that any Turkish troops remaining in Persia are completely cut off from their country for the Russo-British line now extends unbroken between the Caspian Sea and the Persian Gulf, a distance of some five hundred miles. The Russians have control of the northern part of Persia and the British of the southern part in accordance with the "spheres of influence" delineated in the Anglo-Russian treaty of 1907. Probably we may regard the partition of Persia on these lines as permanent, for it is not likely that either Russia or Great Britain will ever relinquish control of the territory they now occupy.



The Russian armies in eastern Turkey have hitherto been impeded by the fact that all their supplies had to be transported from the Caucasus over several hundred miles of mountainous country without railroads. Since Russia has been short of supplies of all sorts it is no wonder that the Grand Duke Nicholas has not been able to make more rapid headway in the conquest of Armenia. But now the Russians in this field can receive abundant supplies from the outside world all the way by water up the Tigris to the very front. General Maude continues his pursuit of the disorganized Turkish forces and the British troops have now gone up the Tigris some forty miles beyond Bagdad and have also established themselves on the Euphrates, west of Bagdad.

The Palestine campaign is going as well as the Mesopotamian. In the battle of Gaza the British captured 950 prisoners and inflicted 8000 casualties on the enemy. The total killed on the British side was less than 400.

"NO INVENTION HAS MORE PROFOUNDLY MODIFIED THE ART OF WAR THAN THE MACHINE GUN"

MAKING READY THE ARMY

BY NEWTON D. BAKER

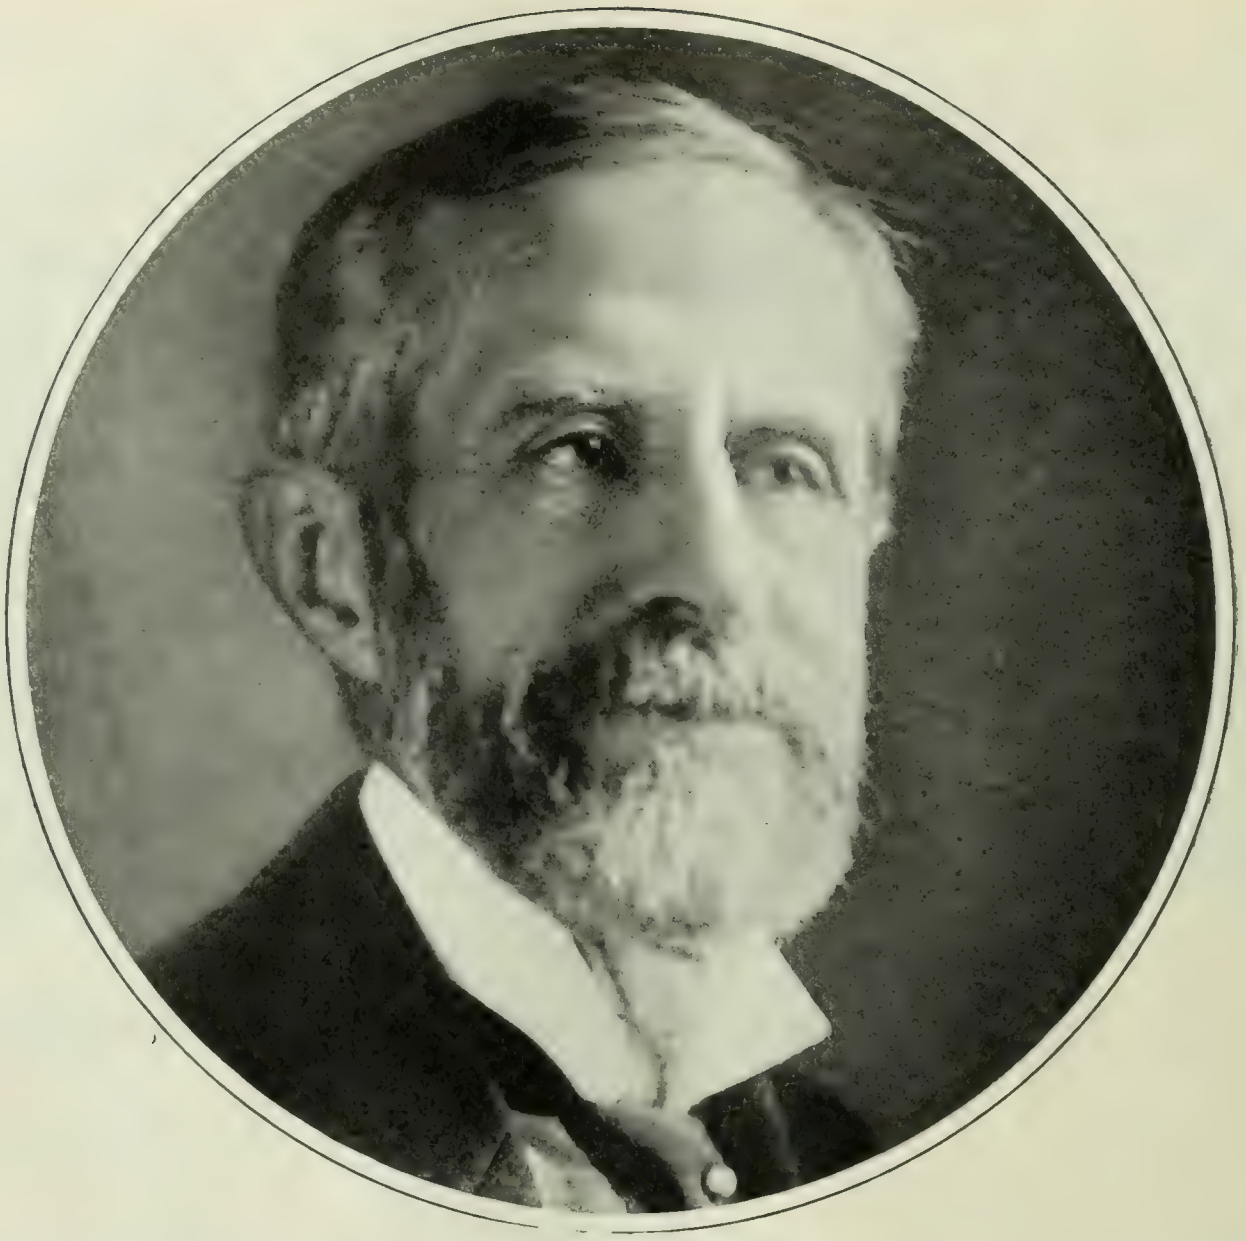
SECRETARY OF WAR

THE War Department, like every other branch of the Government, is busy with preparation. Our every effort is being devoted to putting our national strength into a state of efficiency. All that may be said now of the War Department is that it is pressing ahead all purchases that will be needed to equip an army.

I am having all bills which were introduced in the last Congress with the approval of the War Department, and which failed of enactment, collected for reconsolidation, so that when Congress is ready we will have a complete budget of legislation for submission. The people may rest satisfied that the War Department will have all legislation that the needs of the situation demand ready for presentation.

During the time that Congress has not been in session, we have made all necessary and possible arrangements with regard to supplies. Contracts covering ordinary supplies have been let in an expansible form to cover any emergency that might arise.

With regard to ordnance, conditions are somewhat different. There we are dealing with manufacturing operations covering a very long period of time and affecting very large sums of money. We are prepared, however, to let very large contracts. Of the well-established types of ordnance there is scarcely any arm of which we have as many as the War Department has, from time to time, been recommending as necessary. Many new and larger types have been recently approved, and a number of them are now under process of manufacture by the Bethlehem Steel Company. I cannot discuss sizes, but I will say that the department has anticipated Congress to the extent of entering upon a new heavy ordnance problem.



Perhaps no invention has more profoundly modified the art of war than the machine gun. In the European war this arm has been brought into very great prominence, altho it had, however, been developed to a serviceable state at the time of the Spanish-American war. From time to time tests have been made by the War Department to determine the relative serviceableness and efficiency of various machine guns. These tests have been attended by considerable controversy and the claims of different types of machine guns have been urged upon the public attention by widespread newspaper attention. A board was therefore created, after a congressional appropriation of $12,000,000 for machine guns, made up in part of officers and in part civilians, all of whom were selected so as to avoid any suggestion of prejudice on their part growing out of previous controversies and tests. A preliminary report has been made by this board, selecting the Vickers-Maxim type for heavy machine guns, recommending the purchase of a large supply of them, and fixing a date in May at which time tests to determine the relative excellence of various types of light machine guns are to be made.

The nature of military operations plainly dictates that our army should be supplied in some proportion with guns of a heavy and of a light type for defensive operations. From fixed points the heavier type is doubtless the more reliable, but in rapid charging and field operations and in aeroplane work the mobility of the arm is an important consideration. It is, therefore, highly important that the army should be supplied with an adequate number of both types of arm. The recommendations of the board already made recognize the wisdom of this course, and its conclusions when finally reached will no doubt be accepted as authoritative, altho this is the field of most rapid advance in the perfection of arms, and the department will welcome each improvement and seek to avail itself of the progress made so that our equipment can be of the most modern and effective kind.

Rifle factories, which could easily change their mode of manufacture so as to be suitable for our guns, are available in connection with any required supply for actual use and wastage. The country is in a better position to get an adequate supply than it has ever been in its history. Of course, the coördination of all the private industrial plants in the country is a matter for the Council for National Defense and not for the individual departments.

Needless to say, at a time like this the dissemination of news pertaining to the military branch must, to some extent, be curtailed, but this is being done with as little inconvenience to the press as possible. The Navy Department entered into an arrangement with the newspapers which, in effect, caused the press to accept as a voluntary obligation, in the absence of any statute on the subject, certain definitions of permissible or desirable news. I am certain that the desire of the War Department is to aid the press to get all military information consistent with the interests of the Government.

Washington, D. C.

LORD ABERDEEN

BROTHERS IN ARMS

A MESSAGE FROM THE MARQUESS OF ABERDEEN AND TEMAIR

FORMER GOVERNOR-GENERAL OF CANADA AND FORMER LORD-LIEUTENANT OF IRELAND

The following message to the American people from the former Governor-General of Canada and Lord-Lieutenant of Ireland, written in response to our invitation, expresses with gratifying warmth the full measure of appreciation with which the British people extend their welcome to us as we enter the Great War. Lord and Lady Aberdeen are in this country on behalf of urgently needed philanthropic and social work in Ireland (especially on behalf of young children), the very existence of which had been jeopardized thru the inevitable effects of the war. They have also rendered an admirable service, both to their own nation and to ours, in stimulating the growth of understanding and sympathy between the two peoples.—THE EDITOR.

UNDOUBTEDLY the noble address of President Wilson will take its place among the memorable utterances that are permanently recorded in the history of the world. And among the many features and phases which make this great message valuable, not only to the people of this country, but to other nations, is its impressive recognition of the far-reaching solemnity of the decision which has been arrived at.

Patriotic fervor is good, but it should not be allowed to interfere with a profound realization of the tremendous responsibility of a resort to the arbitrament of war, justifiable only after every other resource has been tried, for the vindication of injured rights.

As to the effect of the announcement upon the Allies, it will be and already is acclaimed with thankfulness and rejoicing.

They have known all along that the great majority of the people of the United States have been with them in heartfelt and convinced good-will; and they have observed, and deeply appreciated, the practical tokens of this sentiment which have ceaselessly flowed toward them. But now they will have the people of this country not only as companions in sympathy, but also brothers in arms. And this active and literal fellowship in the strengthening of democratic freedom and international friendship will exercize a profound mutual influence, not only during the remaining period of the war, but, it may safely be predicted, for all time to come.

But all this would not give ground for such deep satisfaction if the Allies were engaged in a war of aggression, or even, primarily, of physical defense (tho this element is, of course, included); but the present mighty effort is, in very truth, of the nature of a crusade.

Surely this is the just and deserved designation—a crusade against the dark and sinister force which has profaned the sanctuary of honor.

We have in view not only the pitiless work of the submarine campaign, for we cannot and must not dismiss from our minds the fact that the German military government has been solemnly arraigned at the bar of the civilized world concerning the authenticated evidence at various places in Belgium and France (without any conceivable extenuation on the plea of military necessity), of the outraging of innocence and virtue. And so far as can be ascertained, there has been no serious attempt to discover and to punish the perpetrators of this dreadful crime.

The system under which these horrors have developed is that by which the German people have been enthralled; but now, surely, their emancipation is at hand. There may, and, alas, it seems that there must, yet be tribulation; but it will be a tribulation to which the historian will be able retrospectively to apply the ancient and divinely uttered prediction and exhortation:

"And when these things begin to come to pass, then look up, and lift up your heads, for your redemption draweth nigh."

BACK OF THE BRAWN, THE BRAIN

BY FRANK A. SCOTT

CHAIRMAN OF THE MUNITIONS STANDARDS BOARD

"IN America," says H. P. Davidson, of the J. P. Mogan Company, which has handled the purchase of British munitions here, "the manufacturers on the whole who have made munitions for the British Government have lost money."

Why?

For one thing because of the lack of standardization. That meant rejections, loss of time, loss of labor, confusion, uncertainty, waste.

Standardization, every manufacturer knows, is one of the essentials of quick production. There are manufacturers who have doubled, even trebled the production of their plants by methods of standardization. The American company that built 550 submarine chasers for the British Navy in just 550 days was able to do so because every article used in those boats was standardized.

Those familiar with the early days of the production of munitions for the allied governments in the present war know that in some instances concerns, for lack of proper specifications, had to turn out their product from samples and without drawings. The establishment of correct blue prints and specifications to make such a condition impossible in the United States is one reason for the Munitions Standards Board which has just been created by the Secretary of War by authority of the Army Appropriations Act of August 29, 1916. The men who form this committee have learned a great many things about the production of munitions and special equipment from having been interested in their manufacture since the beginning of the war in Europe. They are especially qualified to establish such fundamentally vital things as correct specifications and drawings for immediate use, because they have been actively engaged, in their respective fields, in the supervision of such work. The men who make up the Munitions Standards Board are: Frank A. Scott, manufacturer of automatic machinery and optical instruments; W. H. Vandervoort, builder of special machine tools; E. A. Deeds, owner of engineering laboratories; Frank Pratt, manufacturer of electric products; Samuel Vauclain, maker of locomotives, rifles, munitions; John E. Otterson, manufacturer of rifles.

The nomination of this excellent group of Americans, who are all serving without any compensation, comes in great measure, of course, from the growing realization, even on the part of the layman, that war is now a business proposition and that battles are won not only by fighting men but by fighting industries. As Howard Coffin has said, "In modern warfare the blood of the soldiers must be mingled three parts with the sweat of the man in the mills." There is coming the realization that preparedness is no longer a glorious melodramatic thing of vast bodies of uniformed men and waving flags, but rather an organization and coördination of the sources from which these things spring.

TO go from the abstract to the concrete, it has been said by qualified authorities that if we can measure an article, we can make it. To meet the demand of the present age we must have progressive manufacturing where each man has only a small part of the work, and that part must be done by an ordinary workman. All this calls for a more definite method of measurement than that formerly used. In other days we wanted only one piece, now we want thousands of pieces all alike—each one an exact duplicate of the other. If organization is carried out along this line in all necessary channels, we can start a large number of factories making war materials that will be one hundred per cent good, at the same time standardizing the cost of production. Improperly designed gages with improper tolerance have cost the manufacturers in this country, as well as the Allies, many millions of dollars.

The Government should have, first of all, its blue prints prepared with the proper tolerance perfected by tests and careful practise. The sequence of operations and the time taken to do the work should also be perfected and put in printed form with the necessary cuts showing the set up, as well as the best way to handle the work, both in operation and gaging of same. This would enable all factories to standardize their productions.

The Munitions Standards Board is, of course, fully aware how efficiently the technical work of the government bureaus has been and is performed. On this side probably the chief service which the Board can render to the Government is to suggest ways and means of adapting peace time standards to war time conditions.

Also, thru the activities of the Board, there may be drawn into the military departments of the Government the experience which has been developed thru two and one-half years of making war materials for foreign governments. Previous to the creation of this Board there seemed to be no duly constituted channel thru which this could be brought about. This is particularly true since war has ceased to be a profession to the successful conduct of which military men alone are called. Modern war enlists every science, industry and special knowledge of the nation.

It should be borne strongly in mind that the work of the Board is as vital for peace as for war. It is essential that manufacturers should have such information as will enable them to fit themselves for proper production in an emergency—and proper production means quantity production.

In many ways the work stretching before the Munitions Standards Board is of great, immediate and potential value to the people, to the Government of the United States and to the maintenance of their armed forces.

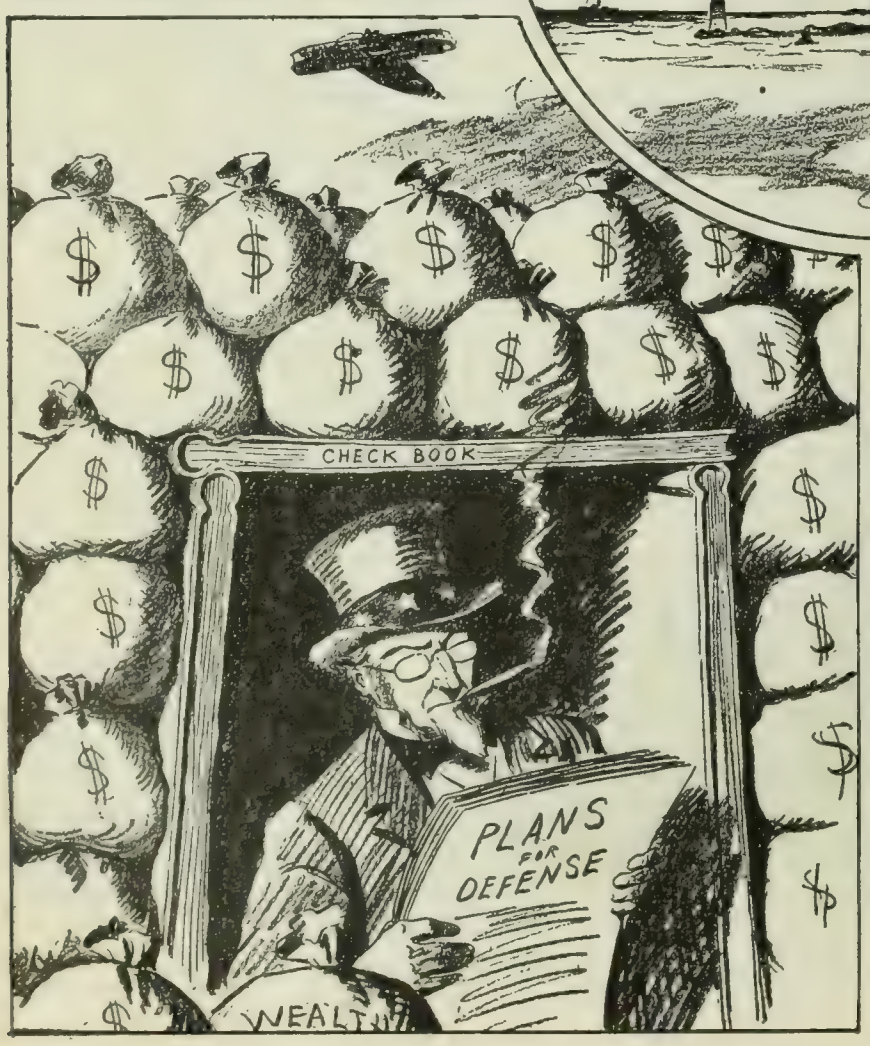
ONE OF THE BIG GUNS THAT GUARD OUR COAST



CARTOON COMMENT

AS WE GO TO WAR

"And I always thought until now it was a man!" *London Opinion* congratulates Uncle Sam's "Awakening." "First Aid" (at the right) drawn by Rollin Kirby for the *New York World* points out the action that must follow our awakening. And it's "Not Bomb Proof," says Nelson Harding, in the *Brooklyn Daily Eagle*, as he pictures Uncle Sam (below) relying on dollar defense. Ding, in *New York Tribune* (above), rebukes our unreadiness in "Putting the Cart Before the Horse." But the *New York World* suggests that we have a fair-sized navy "Waiting for Orders."

HISTORY IN THE MAKING

BY DONALD WILHELM

AUTHOR OF "A WARTIME MIRACLE AT EDDYSTONE"

WASHINGTON—the city of the nation as business-man employer, therefore often called the unpatriotic city—became on Monday night, the 2nd of April, the Imperial City, to which, as to a shrine, will come pilgrims from all our eleven allies—perhaps, some time, from all the nations of this earth.

In Washington there never was a night like that Monday night.

On Capitol Hill, in the House—a small chamber all inadequate for events so vast as those impending—were gathered the Congressmen; the Senators, even La Follette, arrogant, wilful; Stone, evasive; long-haired Vardaman and the rest of the twelve "wilful few." There on the floor, too, taking advantage of an ancient privilege, were representatives of some of our allies—vivacious Jusserand of France, phlegmatic Sir Cecil Spring-Rice; the Belgian Minister; Senor Calderon, the Bolivian Minister; others from South America, and at the last, arriving in time to hear mention of his country, Ignacio Bonillas, the newly named Mexican Ambassador. In the room, too, were the judges of the Supreme Court and the members of the Cabinet. All were anticipating the President and his decision for war.

War was in the air, within the Capitol and in the great crowd controlled by the cavalry outside, yet by all the signs that tell of what is in the hearts of men and women

"God's in his heaven;
All's right with the world."

There never was an evening so beautiful. The breezes from afar came and met and breathed their benediction. The sky was so majestically clear that the very clouds seemed nearer. A star—just one, as if the heavens had shut up their luster that the Capitol might shine the more—hung bright in the west. The elms all about the Capitol had leafed a little. The grass had turned green. There were yellow bushes blooming all about the twin fountains where the thousands waited. Yet there was war in the air!—the horses of the cavalry champed and waited impatiently for it!

Up aloft, for the second time only, the Capitol dome was bathed with beautiful light that seemed to exalt it somehow—seemed to lift it higher toward the sky; yet higher still, in the little cloistered tabernacle at its highest point glowed the brightest light of all, guarded by statue and flag above it, guarded by four flags about it—pointing to north and to south and to east and to west. Then, at last, three automobiles streaked swiftly across the Plaza before the long line of cavalry standing at attention and darted under the steps to the House.

It is hard to analyze the strange spell of this President who has taken his place with the great men of all the world.

He speaks skilfully—ever since he was a boy, and in Princeton particularly, he has studied zealously to learn to speak well; yet he never "orates." He is direct and expeditious,—a lithe, alert and busy-appearing man; yet always somehow he seems aloof. The great crowd hesitated thus this fateful night after his arrival to cheer him, but at the last only two persons in all that vast assemblage were not cheering. They were two women in the Executive Gallery: Mrs. Wilson and the President's daughter, Margaret. Very silently they watched the grave, pale figure at the desk of the House clerk below as he enunciated in low, resonant tones the words of a nation's masterpiece. When many other women were crying out passionate cheers that could not be restrained at all, these two were silent, hardly smiling. He had left the chamber when he had finished his address—with shoulders bowed and hands outstretched to the scores who pressed forward—before they stirred. And then the Senators—"the wilful few" like the rest of them—filed back to the Senate Chamber to set about the business of giving birth and being to the resolution — the Flood-Martin Resolution—that is to be a declaration of war. And at last, when the House had adjourned, when the autos were humming and the cavalry, wheeling, had trotted in the direction where, away from the salvos of the thousands, had gone the President with his two motorcycle men, like shadows, beside his car, and a car full of secret service men behind them, people poured across the open space, up to the galleries, into this place now international.

IT seems strangely inadequate—this place where history had been made. It seems more and more inadequate to those who sit in its galleries day after day handling, habitually, vital things. When one considers a little it seems that this rather small room, by all the laws of consequence and proportion, should be a vast room—many hundreds of rooms in one. Was it not a touchstone, this Monday night, for all the allied nations and for all posterity? They met in spirit there, with the spirit of the President. For the President came so swiftly, spoke so wonderfully, he became here as he has become to the nation—a spirit calling us to give and give.

Perhaps that is why this room seems inadequate—it is somehow too small for ideals so large! Perhaps that is why—because we turn from material to spiritual things and are grateful; why, in spite of all the spoliation of material things—we revere the Presidents, the war Presidents, who invoked in us efforts toward higher ideals that were for us undiscovered. Perhaps that is why we honor so highly the Presidents who have led us to war!

Somehow President Wilson lends himself to the picture of a spirit leading a nation out of bondage. Physically, he seems to us here, as already to the rest of the nation, hardly more actual than Lincoln. For his is spiritual rather than physical or personal strength. Physically he is so quick, so direct, so expeditious; spiritually, mentally, he is so pervading, so powerful, with mental reach so comprehensive, that people, even the callous ones here who see him near and often, have come somehow almost to deify him. I have heard him since Monday called often the God-man. He awes. Mr. Roosevelt inspires! Mr. Taft, with his smiles, approves!

THE House cheered him—gave him a greeting such as no President ever got there; then, at last, after three minutes of resounding enthusiasm with the galleries standing, Speaker Clark brought down his gavel and the President began in a voice hardly above a conversational tone—a voice nevertheless that carried perfectly to the furthest corner of that hushed assemblage—hushed till the President said that the country would not choose the path of submission and suffer "the most sacred rights of the nation and of the people to be ignored or violated." Then an unusual thing happened, something more unusual, even, than the fact that the dignified Senate, with its old men and its crippled men, was about to haul out and wave little flags! Down in the front was Chief Justice White, his face intent, his great frame tingling as he sat there alert, following every word of the President, following every word until the sentence mentioned above was uttered, and then his great hands struck in applause, his colleagues joined with him, in that small chamber the whole world seemed suddenly to be expressing its applause—the whole world save the two women in the Executive Gallery, one or two members of the Diplomatic Corps, who were puzzled perhaps about propriety, and the "wilful men" from the Senate, tho even a few of them deserted their supernal ideals of being Christians conquered and jumped upon and submarined and sunk. But La Follette stood with his arms across his chest and his head sunk forward—like a pouting Delilah—and neither Cummins nor Stone showed any enthusiasm at all. Stone was sitting in the second row, resting his head on his hands, listening with a grim face. Only once was anything coming out of these of the "wilful men." Near the close of the President's address, when the President said, "It is a fearful thing to lead this great people into war," Senator La Follette cleared his throat twice. It is becoming clear, it is becoming increasingly clearer that he cannot be a Senator long. He spoils the picture here somehow; he is discordant spiritually, with mind and manner according ill. La Follette, one can easily imagine, is sin-

cere; Stone, one as easily imagines, is insincere.

Two days went by. These two are in the Senate this Wednesday, the 4th of April—the month in which three times we have declared war on a foreign power. And now there is another memorable scene.

IMAGINE the Senate, with its galleries full, the walls around the floor lined with secretaries and others, among them the Congresswoman, for the House has convened until the morrow. Secretary McAdoo comes, goes. Representative Longworth, bald, going a more certain pace than of yore, comes, rests in the back row, goes. Borah, with kindly face always full of play, moves about. Lodge, now as always for the innocents of the Senate an older Mephistopheles, in the second to last row; and there, near the center, at the foot of the aisle, La Follette, the Great Objurgator—short, stocky, with great shoulders, a great head with a shock of bristling hair backthrown from a brow full and flushed. He is there on the carpet!—as we shall see—striking hard with his fists closed hard, speaking hoarsely, resting against a desk now and then, and, then resuming the speech in which he had already referred to the President as a man of "wilful disposition" dominating the Congress. He cries out in behalf of fairness for minorities—fairness from the press, from everyone, at a time of all times like this.

"A member of Parliament visiting America," he says, "notes that the United States in time of peace is less fair to minorities than is England in time of war. We in America shall lose our democracy when we cease to listen to minorities. For a minority of one party may be the majority of a later party, because this minority really represents the will of the people. David Lloyd George himself was the leader of the minority in the House of Commons during the Boer War."

But the determination of the Senate members had already been demonstrated. In one speech after another members—Southern ones, Western ones especially—had cried for war. One exclaims: "There is no use talking about it. War is here!"

Another takes it up: "No man ever tried for peace as nobly as Woodrow Wilson. He has tried diplomacy. He has reasoned. He has expostulated. He has exhibited patience more than any man I have ever known." And another: "Let us not deceive ourselves. Liberty is not to survive if it does nothing but go around in night cap and slippers, looking for comfort." Then come knocks for the philosophy of nonresistance, and more of the philosophy of war.

So the Senator from Wisconsin is speaking against tremendous odds—hoarsely, desperately crying out for peace, denouncing England and the Allies, speaking now and then directly for pro-Germans, denouncing all the long manipulation of things by the Administration, crying out that the gist of all the submarine trouble is the assertion that we did not protest England's sowing of the North Sea with mines. "If you think you can escape the consequences of that act, you fellow Senators, you may do it thru a ruthless majority, but you will have covered this Administration with shame and the history of the country with shame."

"We have been actively aiding—actually, morally," he went on, "to starve the civil population of Germany!"

There are objections, remonstrances, doubt. He seems to establish his arguments a little with some; there are some who halt, considering. But a Senator who has given his views once is ever loath to change them. It would be a Senator of courage who would dare. They feel uncomfortable, perhaps, recollecting that often have they heard that what England has accomplished by diplomacy, Germany has failed to accomplish by the submarines — with the result that now we face war! At last, with his voice rasping and high, the Senator cries out that on the record this Congress "*dares not* to make war!" That if it does it will all be due to a blunder!

"La Follette has made a great speech," said a man in the Press Gallery, at last. Perhaps they ask, those who have remained in their seats on the floor of the Senate, whether overlooking war with one country that offended us, if the facts of the Wisconsin Senator were correct, is any reason why we should not defend ourselves against a country that offends us more?

Perhaps those Senators and others who have left the chamber are saying that the royalty that precipitated all the world woe can merit no commendation, do no good work in the world again! Perhaps there are others, sanguine, hopeful men, who say that they care naught about what acts of friendship Germany in the past has done. The future is the thing!

AND then Senator Williams, one-time leader of a minority in the House, took the floor. His sharp, critical, grandfatherly glance met that of the Objurgator as La Follette left the floor before the storm bound to break on the head of a man who seemed like one apart.

And then—from the reproving, lovable grandfather:

"I have heard a speech pro-German. I have heard a speech pro-Goth, pro-Vandal, anti-President, anti-American people! I have heard his criticism of the Entente Powers. . . . I fully expected him to defend the invasion of Belgium. . . . The Senator from Wisconsin has made a eulogy of the German people—not one word has he had for the American people." And then sadly: "I loved the Senator from Wisconsin, in a way, until recently! But he has made a speech absolutely worthy of von Holweg—but one that von Holweg is too intelligent to utter even in the German Reichstag! . . . O God! For a little common sense in a wide and desolate world! I have lost patience forever with any American who spends three hours in plaudits of the enemy—the common enemy—the enemy of the human race, and here in the Senate of the United States has not one word for the American President, the American Congress, the American people, who have done nothing but suffer one insult and another! . . . I am getting tired of lies. I am getting tired of hearing that this is a Wall Street war. That's a lie. Yes, as one of my colleagues here says—it's a Wall Street lie! Wall Street did not sink the 'Lusitania'! . . . War is bad. . . ." Then followed glowing assertions of loyalty to *la belle France*, to England. Then "You raised your boy to be honorable, to keep from going to war as long as he can with honor. . . . There are some things worse than war, some things worse than death! One of them is living with your worse self all your days . . ." Senator Stone, just in front of him, slinks further down in his chair, twisting at his right ear. "It burns," I hear a man behind me saying. "He has a bad face—a wicked, a vile face!"

BUT the tide has turned and is running more torrential than ever before. John Sharp Williams has turned the tide—it is swirling past the mossy old Senators and the German ones in the stream that runs to the deepest truth. There is no turning back now.

Senator Husting of Wisconsin speaks patriotically. Then Hardwick of Georgia with "patriotism"; the evening galleries are filling. Secretary Lansing is in the Capitol, Assistant Secretary Phillips is in the Diplomatic Gallery, Mr. Polk, Dr. Ritter, in the lower left hand corner—in the gallery with some of those from the Belgian Embassy. And the floor itself is crowded.

Then Cummins of Iowa, skillful, logical; Pittman, slender, deadly earnest, overwhelmed with sentiment—Dr. Ritter seems to lean forward, marveling at it, while Senator Stone settles down into his seat further so that his pink face is looking at the moon. Then James, the bald giant from Kentucky, averring that "a tyrant threatens not only those across the sea, but us," then speaking for war, speaking with fervor of the Southerners and sons of Southerners. Borah—full of feeling, direct, speaking with pity of the Germans in America who are loyal yet must suffer many a hurt in the months to come.

Harding, of Ohio, asserting faith in the American press, disavowing aught that is said to the effect that this is a war by the munitions makers, then "It is my impression that it is none of our business what kind of a government another people has so long as they are content. But much depends upon the individuals who govern it. . . . I would prefer this to be a war that speaks for the majesty of a people of popular government who can finally come to the crucial test where we are willing to get together and wage a conflict for the maintenance of their rights

The Declaration of War

Whereas, The Imperial German Government has committed repeated acts of war against the Government and the people of the United States of America; therefore, be it

Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of war between the United States and the Imperial German Government, which has thus been thrust upon the United States, is hereby formally declared; and

That the President be, and he is hereby, authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on war against the Imperial German Government; and to bring the conflict to a successful termination all the resources of the country are hereby pledged by the Congress of the United States.

and the preservation of the covenants inherited from our fathers . . . not for humanity's sake, great as that is, but for the honor of the Republic."

And Smoot of Utah, tall, solemn: "God bless the action taken by the Senate this day. O Father, preserve our Government and hasten the day when liberty will be enjoyed by the peoples of this earth!"

And then murmurs, dronings by the reading clerk, eleven o'clock and the call of the roll.

By a vote of all but six the Senate has declared itself for war!

And now the third act.

In the Buff and Gold chamber of the Capitol, where the President addrest the world, for fourteen hours we have debated war till at last one pleads "Vote! vote! for soon it will be Good Friday and there are those who will say that this bill is a Calvary."

The clock moves on toward twelve.

Peaceful Cooper of Wisconsin began the discussion hours and hours ago. Harrison of Mississippi cried out against him, demanding war, "What have we done that we should forget the teachings of our fathers?" Others followed him in the same high spirit.

Old Joe Cannon listened intently, and then declared: "This situation is God given. We must take it as it is. There is only one way. I shall vote for this resolution."

Claude Kitchin of North Carolina, the leader of the majority and the message bearer of the President, pleads that from sleepless nights thru which he has shuddered at the thought of war he has come to the conclusion that no matter what the cost may be he will vote against the resolution to declare war.

The House applauds.

White haired General Sherwood, the oldest man in the House, a hero of the Civil War, pleading for peace, stands out among the rest. Heflin of Alabama assails Kitchin and is himself assailed hotly by a little man, Burnett, who must be led aside at last by the Sergeant at Arms with his mace, which is used now for the first time in the memory of many. The cry begins to come oftener and oftener, after scores have spoken, "Vote! vote!" A few patriots more persist in speaking, each for five minutes.

There comes another cry from the waiting crowd, "Vote before Good Friday!"

Amendments are offered prohibiting the sending abroad of troops unless they have specially volunteered for that service or specific permission has been given by Congress. Suddenly a voice announces that another day has come, "This is Good Friday, gentlemen, the day that Christ died on Calvary for the redemption of the world. Is this Calvary where a nation dies to bring peace on earth, good will to men?"

As one o'clock comes around there are more calls for a vote, tho the calls come less often now as the end of all these hours of debate draws near.

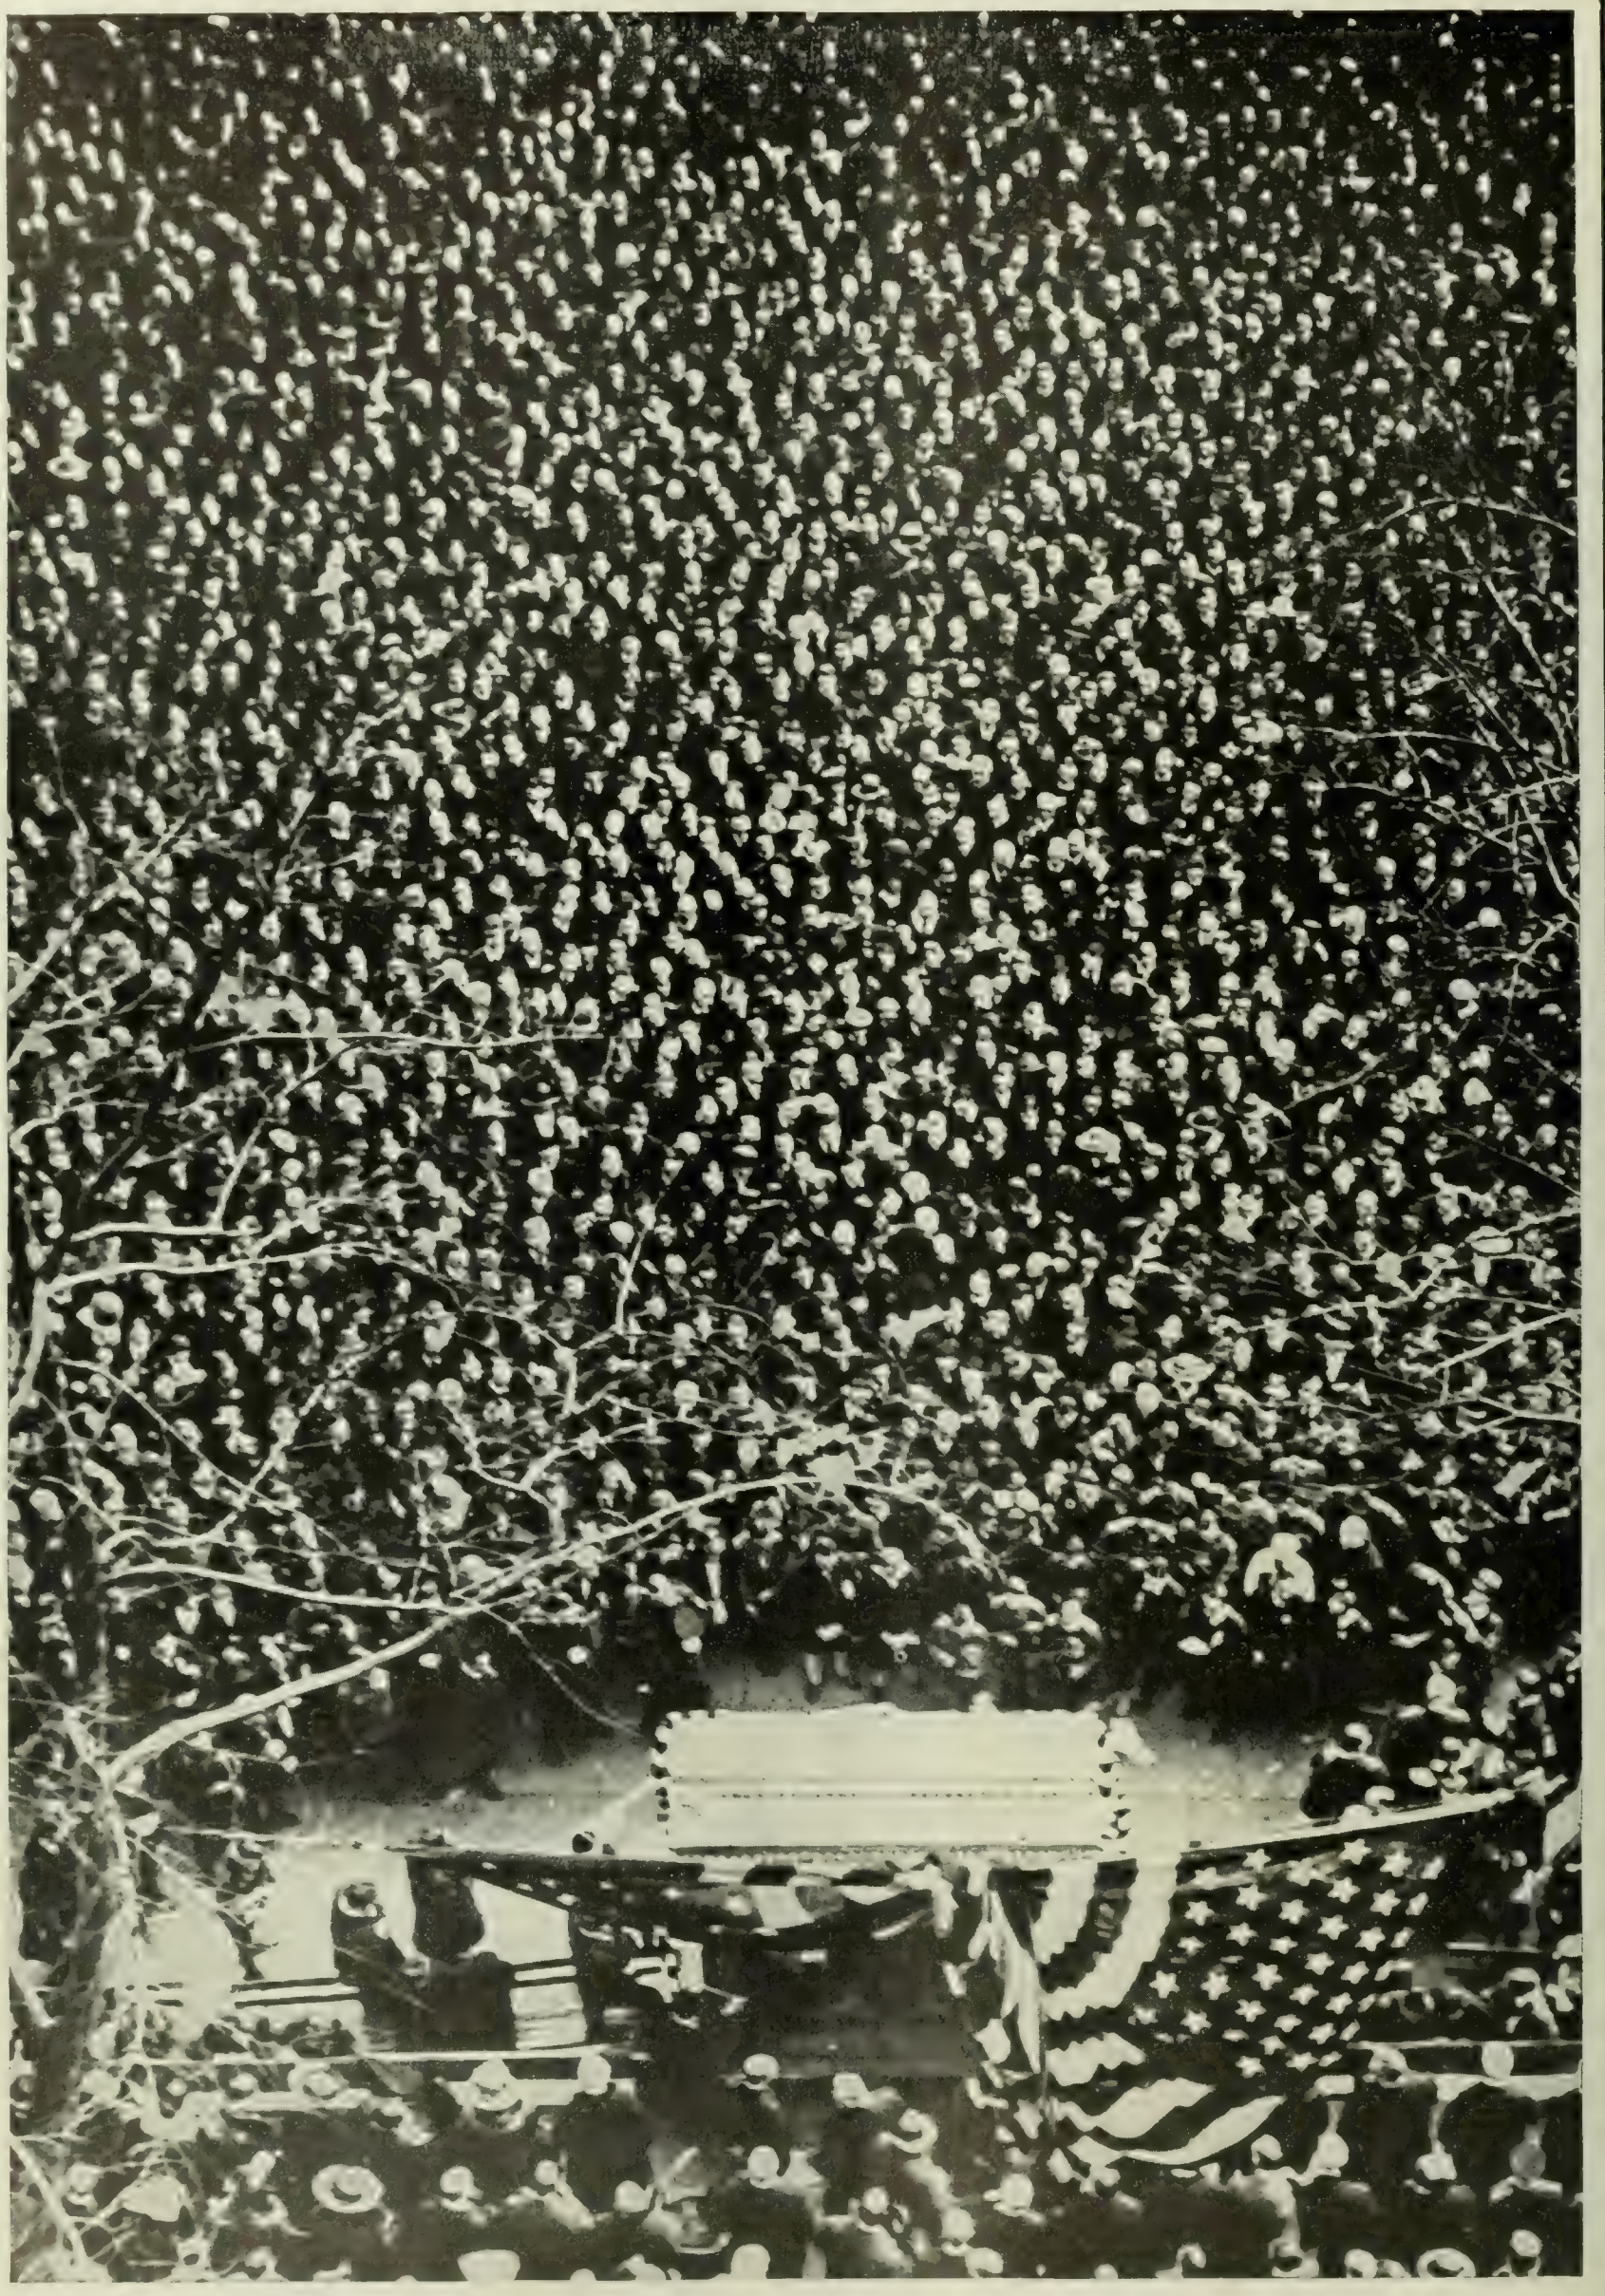
During all those hours pacifists have had manliness and enthusiasm on their side, but there has come no one like the good man in the quiet White House far up the Avenue to define what it means to the world, no one to say that this nation must be the New Redeemer.

It is 2:30 now and more calls of "Vote! vote!" are heard. Speaker Clark has come back to the chair. The last of the amendments has been killed. Every Congressman and the one Congresswoman are in their seats. At three o'clock, as the roll call proceeds, the suspense becomes more difficult to bear. At last the Clerk calls out "Miss Rankin, Miss Rankin." There is no answer. The one woman in blue in the back row among the men touches her handkerchief to her eyes. There is a pause.

At last the Clerk calls again, "Miss Rankin," and again, "Miss Rankin." Then the woman rises and in a voice full of emotion says simply, "I want to stand by my country, but I cannot vote for war."

The roll call has at last been completed and at fourteen minutes past three the vote is announced. 373 to 50.

War!



Washington, D. C.

"WARS ARE FOR YOUTH TO WAGE"

By Morris Gilbert

Wars are for youth to wage; for youth alone
Can fling the unsullied ore of his tomorrow
Into the crucible that flames today;
Bringing his metal, splendent in the assay,
To give its heart for lesser gold to borrow,
And for the giving let the gift atone.

Wars are for youth to wage; not even death
Can make of war a greater thing than youth,
So that when it comes walking in the dawn
Some lad will laugh, rejoicing to be gone
In witness to the youngest ageless truth
That honor is more beautiful than breath.

THE SPIRIT OF '17

INDEPENDENCE HALL, IN PHILADELPHIA, WAS AGAIN THE FOCUS OF THE COUNTRY'S PATRIOTISM WHEN THIS GREAT MASS MEETING GATHERED TO ENDORSE THE DECLARATION OF WAR WITH GERMANY

DON'T "MUDDLE THRU"

BY SYDNEY BROOKS

Independent readers have long been familiar with Mr. Brooks's salient comment on the interrelations of British and American affairs. Just a year ago, in The Independent of April 17, 1916, he presented his conviction that the United States must shortly enter the war on the side of the Allies "to rescue humanity, to safeguard democracy and to lay broad and deep the foundations of future peace." Now with the fulfillment of that prophecy just achieved he urges upon this country the practical lessons which we can learn from England's experience in the first year of war.—THE EDITOR.

THIS war, like every war, is one of "don'ts"; and most of them, I should say, are applicable to America. Particularly the "don'ts" that we have accumulated in Great Britain. I take it for granted that pretty nearly every detail of our successes and our failures in setting about this tremendous business of war is known to the authorities at Washington, and has been diligently collected, weighed and sifted by the American representatives and attachés in England. There is more for the United States to learn from British experience than from the experience of any other belligerent. That is not because we have been uniformly efficient in all our enterprizes. It is because America today is pretty much as Great Britain was in August, 1914, a commercial, easy-going country, without universal military service, and confronted with the task of putting itself on a war footing.

There are, it is true, some not inconsiderable differences in the respective situations of the two countries. First, Great Britain, when the war broke out, was in a far more advanced stage of preparedness than is America today. Our fleet, the decisive factor in the whole struggle, was as ready as the German army. Our expeditionary force of 160,000 men was also ready and half of it was sent to France at once, fully armed and organized. Neither on its naval nor its military side is America, so far as I can judge, anything like so well equipt. Secondly, the call upon us came at no more than a fortnight's notice, while you have had two and a half years in which to meet it. Thirdly, the effort required from the United States can scarcely, as things are, amount to even one-tenth of the effort that Great Britain has been compelled to put forth.

There is no likelihood of Americans being obliged to shift the whole basis of their political, social and industrial life in order to strip themselves for a fight for existence. This is not, so far as America is concerned, a fight for existence. It is a crusade for democracy, for freedom, for the principles of right dealing between nations. And this distinction must necessarily affect both the character and the scope of America's endeavors. In the first year of the war 2,000,000 men in the British Isles voluntarily enlisted. That would be numerically equivalent to an American army of 4,500,000. Nobody expects that a year from now 4,500,000 Americans or even half that number will be serving with the colors. And before conscription came into force 5,000,000 men in the United Kingdom had joined up. America would have to raise an army of over 11,000,000 to parallel that achievement; and it is highly improbable she will be called upon even to attempt anything of the sort.

When a nation puts forth its whole strength in order to convert itself into a military power of the first rank many things are necessary, many consequences follow, which do not arise when only about half of the national strength is being devoted to that purpose. The United States, for instance, unlike the other belligerents, may not find itself under any serious compulsion to alter either the personnel or the form of its government, or to take under national control practically the whole engineering and chemical industry of the country, or to commandeer metals, lathes, machinery and public utilities right and left, or to regulate by acts of Congress the price of food and of other essential commodities, or to introduce any system of rationing the population, or to restrict in any material degree the ordinary liberties of its citizens, or to make any extensive arrangements for the internment of enemy aliens. It is not even certain, tho I presume and hope it is likely, that America will have to grapple with the problems of organizing and transporting an army for service overseas. These and a score of similar contingencies may never occur at all; and the war may continue to be a picturesque side issue to American life and not the deadly and engulfing whole of it.

TAKE A CENSUS FIRST

BUT I will assume, in order to bring out some of the more obvious lessons of British experience, that the United States, having entered the war, will throw her full power and all her resources into waging it. On this supposition how should she set about the business with the least confusion and the greatest efficiency? The first step that should be taken, if British experience goes for anything, is to ascertain the number of men of military age in the United States and their occupations. This is equally essential whether you adopt compulsory service or continue to rely upon the voluntary system. It sounds a huge undertaking—this of taking a census of all the men of the country between the ages of 18 and 41—but with good organization it could be done and the results classified in a month. We took a register of all the men and of all the women, too, in the United Kingdom between the ages of 15 and 65 in much less time than that; and we did it without creating any new machinery and with practically no disturbance that affected the normal life of the country.

More than one state in the Union has recently passed bills authorizing some such register, but unless there is absolute uniformity in an undertaking of this kind confusion is bound to result. What would seem to be the best method would be the preparation of a card or form by the military authorities at Washington. This would be sent round to the governors of the different states, who in their turn would distribute it among the mayors in the cities and the governing rural bodies. By appealing widely for voluntary workers and entrusting them with the task of leaving the cards at every house, of collecting them and of seeing that they were properly filled in, a roster of the entire man power of the country could be rapidly compiled and its results checked and collated.

YOU would then know where you were. You would have before you the name, address, age and employment of every potential soldier in every administrative district from Maine to California. At the same time—this is a much simpler affair—each state would be well advised in taking a census of its industrial resources and of the trades and businesses that were carried on within its borders. There are some industries, such as railroading, agriculture and munition making, so vital either to military success or to national maintenance that few or no workers can be spared from them for the army.

The War Department would naturally draw up a list of the trades of the country in the order of their national importance and for the purpose of striking a fair balance between military and commercial needs. It would then be able, after going thru the particulars and statistics furnished by the governors of the states, to determine in round figures how many men should be furnished by each state and from what occupations they should be drawn.

In this way there would be avoided one of the biggest mistakes that Great Britain, and for the matter of that all the other belligerents, have committed in this war—the mistake of training men to fight who, it was afterwards found, would have been more usefully employed in carrying on their ordinary trade. The odds are that a skilled foreman, an expert machinist and a man who has been proved to possess the executive, managerial and organizing head is doing work of greater na-

tional value by remaining where he is than by being allowed to follow his impulse and enlist.

We found in Great Britain that the business of raising recruits is best left in civilian hands. It involves so many social and industrial implications and complexities that the professional soldier is apt to bungle it. If it were decided, for instance, that 500,000 men ought to be supplied by the state of New York, the task of getting them should be handed over to the Governor, who again should devolve as much of it as possible upon the local authorities. Americans are such expert campaigners that the work of arousing enthusiasm by meetings, posters, advertisements and parades would present very few difficulties to them. It would be like a Presidential election with all parties working together for the same object. The danger, indeed, would be that that object would be accomplished but too successfully and that volunteers would offer themselves in numbers far beyond the capacity of the soldiers to handle.

That danger we incurred in Great Britain. So completely was the military organization swamped by the rush of recruits that the standards of enlistment had to be raised in order to check the flow. The flow was checked, but so also was the enthusiasm to enlist. The country, indeed, got it into its head that no more men were needed and that the War Office was already satisfied—why, if that were not so, should it discourage recruiting?—and a titanic effort had afterwards to be made in order to revive the original ardor.

Americans can avoid this blunder altogether by adopting what came to be known in England as Lord Derby's scheme—a scheme that in my judgment is an essential part of any system of raising an army by voluntary methods. Lord Derby divided the men of military age into forty-six groups, half of them representing the bachelors and the other half the married men between the ages of 18 and 41, a group for each year. Under his plan the men who volunteered and had passed the medical examination and been placed in the group to which they belonged were not sent off at once to the colors. Instead they were told to go home and carry on their customary trades and professions till the military authorities were ready to receive them at one of the training camps.

The advantage of this way of doing things is that the soldiers can then call up each group when they want to, and that there is no risk, or ought to be none, of witnessing the distressing spectacle which was all too common in Great Britain in the first year or so of the war—the spectacle of thousands and tens of thousands of volunteers without arms or equipment or officers to instruct them. The group system of enlistment reduces the disturbance to civil life and business to a minimum and enables the military authorities to cut their coat according to their cloth. I take it that in America you are even shorter of officers and of arms today than we were thirty months ago. If that is so it is peculiarly important that the military organizations in the different states should not be overwhelmed by recruits. The first rule of scientific recruiting is to enlist no man who would be more useful to the nation if he remained working at his ordinary trade. And the second is to pass on no man to the military authorities until they are ready to receive and train him.

AND training in this connection means more than having officers on hand to drill him. It means the organization of camps and of everything that pertains thereto. It means tents, huts, billeting quarters in near-by towns or villages, food and forage. Under a businesslike system of recruiting the Governor of each state, while the census of man power was being taken, would be consulting with the military authorities as to how many camps should be pitched and where; would be entering into contracts for their construction; would be arranging with the mayors and other elected officers for the provision of recruiting halls thruout the state and would be planning the ways and means of feeding the troops and clothing them. These in general are matters that civilians manage a great deal better than soldiers.

Women's work in particular is something that outside of the Red Cross the average military man who has not been educated in the necessities of a great modern war is apt to despise. Yet every belligerent has learned in the past two years that you cannot wage war without women.

How far the services of American women will be needed in the present struggle cannot as yet be foretold. Probably they will not be called upon to anything like the extent that the women of Europe have been to take the place of men in factories and offices. But as nurses, makers of the bandages, dressings and comforts required by the wounded, cooks for the home camps, and managers of relief societies for looking after the victims of the war, there is an immense field open to them; and I can imagine nothing more immediately useful than for the Red Cross to extend its organization to every town in the country.

DON'TS

AN Englishman who has watched at close range the experience of his own country during the past thirty months must necessarily be a walking dictionary of "Don'ts"; and if he were to speak frankly he would address to any nation that was just entering the war some such admonitions as these:

(1) Don't try to run a war with a party government or even with one deliberately composed of men of all parties. Run it with a war government, with a government that is composed of the most efficient administrators and the shrewdest advisers you can lay your hands on, without the least regard to whatever party labels they used to wear in the little days of peace.

(2) Don't establish a censorship of the press for any other purpose than to conceal naval and military intelligence that would be useful to the enemy. A censorship that is used to cloak official shortcomings, to suppress criticism and to veil the realities of war from the people is something that no democracy should tolerate.

(3) Don't hesitate to call your rulers to account when they seem to be flying in the face of common sense. The charge that you are thereby "hampering the executive" or "impairing the unity of the nation" is usually a cloak for official incompetence. For instance, if you find your ablest soldier suddenly shelved by the Administration and banished to an inconspicuous post, where his talents are as good as wasted, insist upon an explanation and see that you get it.

(4) Don't be ashamed to utilize the experience of other countries. Two of the most useful weapons that America has furnished to the Allies, for example, are the submarine chasers, of which we in Great Britain have purchased some 550 from one firm, the Submarine Boat Corporation, and the Lewis machine gun, by which every British soldier swears, which has stood the test of two and half years actual warfare, and some 60,000 of which have been served out to the Allied troops. Both the submarine chasers, which we have used so successfully, and the Lewis machine gun, which is practically the only gun of its kind that our men carry with them in an attack, can be and are being manufactured in the United States in large quantities and for early delivery. Neither of them may be an ideal invention. The point is that they can be got at once, that they have been thoroly tried out by one or other of the Allied governments and that if the American authorities were to decide on another type of submarine chaser or another type of machine gun they might easily find that, apart from the inevitable delays in obtaining them, they were sacrificing tested and serviceable and available implements of war to something that looked better on paper but did not work so well in practice and could not in any event be manufactured for many months. These are the sort of questions in which we in Great Britain have constantly found the judgment of the common-sense layman to be better than that of the technical expert.

(5) Don't forget that the attitude of Labor is all important and that Labor is most likely to throw itself wholeheartedly into the national cause when it is convinced that its patriotism is not being exploited for private profit and that it is working for the nation and not for the benefit of an individual corporation. In Great Britain we have found that the readiest way to instil this conviction was to annex to the state a very large proportion of the profits on war contracts.

THE JOB HIGHER UP

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

A MAN of forty-five, employed in a large business, was lately heard grumbling and complaining in a most distressing manner.

"What's the use of working for this company? I've been here twenty years, and I haven't had one real promotion. The only time they raised my pay was when I married and set up housekeeping—and they didn't seem to want to raise me even then.

"A dozen fellows have been boosted over my head. My department boss came here only five years ago, and was below me when he came. It's darned unpleasant to have to take orders from a man who was a clerk under you before he got a pull somewhere and landed a first-rate job. And yesterday he had his salary shoved up again.

"The high cost of living has pinched my family so that we can't get along decently on my wages. The wife is sickly and all worn out; the children are ashamed to go to school with their old patched clothes; I never ask my friends home any more—the place is too shabby. And it's all the company's fault. Why don't they give a good man a square deal? If I knew where to get another job, I wouldn't be here another day. The whole scheme of employment in this country is rotten. I'm sick of it. The anarchists are the only people worth following."

Hearing such talk, I knew there must be somewhere a great misunderstanding — all enmity is merely ambiguity. So I began to investigate. Happening to know a leading official of the company, I went to him for the inside facts—having first gained his promise not to discharge the employee with anarchistic sentiments. "What's wrong with this man—or is the fault with the company, and the man right?" I asked.

The official went to a big filing cabinet, drew forth a card, read the contents, and then spoke. "We have here an efficiency record of all our employees, with scientific reasons why they should, or should not, be promoted. Let me give you some facts regarding the man who complained of the company. He is not progressive — he hates new methods and objects to new ideas. He complains at overtime — he would rather leave a job in the middle than stay five minutes past closing hour. He has a mean disposition—other employees do not like him. He never offers to help a fellow workman out of a hard pinch. He does not care to read the new trade books and magazines in the company's library. He will not study in leisure time for self-advancement, tho the company has offered to pay half the tuition cost of the best mail course in his line. He very freely criticizes the men higher up—always in their absence, however; but as for *constructive* criticism and unselfish cooperation, he was never known to give it. He allows prejudice and personal interest to warp his judgment and throttle his ambition. He looks half-sick most of the time, evidently being too lazy or self-indulgent to master the laws of health. He stays away from the gatherings of employees, planned for their enjoyment and profit; he seems to have no real interest here excepting on pay-day."

"Then why do you keep him at all?" I interrupted. "Well," the official replied, "he is a fairly good routine worker, and we happen to know that his wife is a remarkably fine woman, with a heartbreaking struggle to make ends meet. This company, like most of the big corporations, would rather be kind and fair to its employees than strictly just to itself. And this employee, like millions of other employees, would rather complain of his lot and pity himself like a spoiled child than work long enough, think hard enough, plan far enough to earn a better place and bigger salary. We don't promote our men. They promote themselves. We merely help them up, when they want help—and pay them more, when they earn more. The employees in a modern concern always do the promoting. The employer merely changes the figures on the price-tag."

So now, when I hear an alleged man grumbling at his "boss," at hard times, at unfair competition, I do not sympathize with him. I study him, as an archæological specimen of boneheaded folly and cave-man egotism.

FROM personal statements of leading Americans — the great industrial, financial and professional figures of the country, I have gathered a few recipes for self-promotion that our ambitious readers may use profitably.

First of all must be the realization that business promotion does not "happen." The man who outruns you in the race for the top did a lot of hard training in secret. The world measures him at his goal—but Fate measured him thru his grilling. To be envious or critical or sour when a fellow succeeds while you fail is merely to handicap yourself the more. The man who does not climb is a mental or moral cripple. He needs cure—not commiseration.

Perhaps you have wondered why promotion did not come as you expected; nearly every worker has to face disappointment of this kind repeatedly. Ask yourself this question: "*Why* have I not reached a place of influence and affluence twice as good as the one I hold?" Keep that *Why* eternally before you, till you know what is wrong with you. Then ask another question: "*How* can I redeem the faults and prevent the mistakes of the past—how can I do the kind of work that earns promotion, commands promotion?" You may say there is no chance where you are—the town, or the concern, or the men in the concern, may be too small. Rubbish! Don't you know that the heads of some of the largest corporations in the world sprang from a community so petty and restricted that hardly anybody in the next county knew it existed? Not where you came from, but where you are going is your place of residence. A man with a cosmopolitan mind may live twenty miles from the nearest store—and be on his way to the top of a national enterprize. Your life plan creates your life position.

THE first way to get ahead is to look behind. Something has kept you down. What? Something in your physical, mental or moral make-up has been a hurdle that you could not jump. It may be weakness, or surliness, or sickness, or laziness, or pride, or extravagance, or disloyalty, or unreliability, or stupidity, or a bad habit, or old-fogyism, or worry, or unhappy home life, or lack of vision to see and power to grasp opportunity. When a horse falls down in a race, the rider locates the trouble and takes precautions against the recurrence of it. When you fall down, as every man does who keeps going, aren't you worth as much to yourself as a race-horse would be to a jockey? Each personal fault is a nail in your foot — don't blame the track, pull the nail.

Extend your analysis further. When a man you know takes a higher position, catalog the reasons. Ask him, or his chief, why the promotion came. Also, conversely, when a man you know loses a job, or takes a lower one, or gets a cut in pay, or makes a business failure—find the cause. Prepare a complete list of these elements of promotion, and of retrogression, for your own guidance and frequent study.

Train yourself to see yourself thru the eyes of your employer. Constantly remind yourself that in the business battle your personality is nothing, your effectuality is everything. Make your employer's interests your own, rather than expecting him to make yours his. He is looking for some one he can trust, as well as he would trust himself. Your brain without your heart is merely a machine—and machines are never promoted. The paradox of personal advancement is that when you think first of yourself you lose ground, but when you think first of your customer and employer you find a mysterious force pushing you on and up.

Invest a little money in your own future. Don't ask your employer to bear all the cost of your efficiency training. There seems to be a general impression among both mental and manual workers that there is a law forbidding an employee to spend his own money for the improvement of his own work. This, I assure you, is not the case. Why should your company pay the whole expense of modernizing you, when the lifelong advantage in skill and earning power will be yours? Apportion at least three per cent of your annual income to your pro-
